Sheets.—The demand for both Black and Galvanized Sheets continues in unabated activity and scarcity is becoming more pronounced. Jobbers who have Sheets in stock can get almost any price they ask. There is some talk of foreign Sheets coming into this market, as they can be laid down here and sold at a profit at to-day's prices. The independent Sheet mills are running right along and making a mint of money. The American Sheet Steel Company are steadily increasing their output of Sheets and have Wellsville and Hyde Park running full, nonunion. Prices are very strong and moving upward. New York jobbers are quoting No. 27 One Pass Cold Rolled Soft Steel Sheets at about 4.10c. to 4.15c., and Galvanized Sheets at 60 to 60 and 5 per cent. off the list.

Chicago advices are as follows: The mills in operation are overloaded with business and unable to make definite promises relative to deliveries. Large buyers are turning to jobbers and placing orders for all they can secure. Many inquiries are being received from far Eastern points. Buyers are taking what they can get and are not exacting as to particular sizes or gauges. Jobbers quote No. 27 Black Sheets at prices ranging from 3.80c. to 4c., but from present indications few Sheets will be available at the inside price at the end of this week. Galvanized Sheets are selling at 60 and 10 to 65 and stocks are running low. It is difficult to get standard sizes. Tin Plates are scarcer than ever. The local stocks of Coke Plates are practically exhausted.

Old Metals.—The demand for Old Metals generally is rather light. The Scrap Iron market is affected by the

molders' strike. Prices show no quotable change, however. Dealers are paying about the following for moderate sized lots, delivered at New York or corresponding points:

Heavy Copper	per lb.	14¾c.
Light and Tinned Copper	per lb.	13¼c.
Heavy Brass	per lb.	10 c.
Light Brass	per lb.	8 c.
Lead	per lb.	4 c.
Tea Lead	per lb.	3½c.
Zinc	per lb.	2¾c.
No. 1 Pewter	per lb.	18½c.
No. 2 Pewter	per lb.	9 c.
Tin Plate Scrap, per gross ton		$6.00
Wrought Iron Scrap, per gross ton		$10.50 to 11.00
Heavy Cast Scrap, per gross ton		10.00 to 10.25
Stove Plate Scrap, per gross ton		7.00 to 7.50
Burnt Iron, per gross ton		5.00 to 5.50

THE PIG IRON MARKET.

NEW YORK.—Very little has been done in this market, and the situation continues puzzling. Buyers are operating only from hand to mouth. We quote: Lehigh, Schuylkill and Virginia Irons, No. 1, $16 to $17.50; No. 2 X, $14.75 to $15.75; No. 2 Plain, $14 to $14.50; Tennessee and Alabama brands, No. 1 Foundry, $14.50 to $15; No. 2 Foundry, $14 to $14.50; No. 1 Soft, $14.50 to $15; No. 2 Soft, $14 to $14.50; No. 3 Foundry, $13.25 to $13.50; No. 4 Foundry, $12.75 to $13.25.

CHICAGO.—Purchasing is being done on a conservative scale. The foundrymen who are most employed and for whose products the sharpest demand exists are simply purchasing enough to insure them from being cramped for supplies. Small purchases of Foundry Pig Iron are being made, but in every case the buyer is urgent for quick delivery. The foundries are all so short of stock that as soon as the molders' strike is settled it is expected that considerable buying will be done. Prices show no change. The local furnaces are still so well supplied with orders that they are not accumulating stock, while Southern makers seem to be doing so much better in other markets that they are exerting no pressure in this district. We quote as follows:

Lake Superior Charcoal	$17.00 to $18.00
Local Coke Foundry, No. 1	15.50 to 16.00
Local Coke Foundry, No. 2	15.00 to 15.50
Local Coke Foundry, No. 3	14.50 to 15.00
Local Scotch, No. 1	15.75 to 16.25
Ohio Strong Softeners, No. 1	16.00 to 16.50
Southern Silvery, according to Silicon	14.90 to 15.15
Southern Coke, No. 1	14.65 to 14.90
Southern Coke, No. 2	14.15 to 14.40
Southern Coke, No. 3	13.65 to 13.90
Southern Coke, No. 1 Soft	14.65 to 14.90
Southern Coke, No. 2 Soft	14.15 to 14.40

PHILADELPHIA.—The market remains in just about the same condition as noted in our last report. Inquiries are numerous, prices unchanged and sales are very fair, considering the circumstances. The chances appear to favor the expectation of an active demand, providing that satisfactory arrangements could be made with labor, but without that it is hardly likely that any large orders will be placed. Most of the business entered during the week has been for deliveries during August and September, the later months being comparatively neglected. There is quite a scarcity of Iron at local furnaces, and deliveries on all grades are very much behind. For the present, therefore, prices remain firm at last week's figures, as follows, for city and nearby deliveries, and 25c. to 50c. less at points within a radius of 100 miles or so South or West: No. 1 X Foundry, $15.50 to $16; No. 2 X Foundry, $15 to $15.25; No. 2 Plain, $14.25 to $14.75.

PITTSBURGH.—The Bessemer Iron market is neglected and there has been nothing done since our last report. Foundry Iron is dull and prices are weak and lower. We quote: Bessemer Pig, nominally $16; No. 1 Foundry, $14.50 to $14.75; No. 2, $14 to $14.25; No. 3, $13.50 to $13.75, all f.o.b. cars Pittsburgh.

CINCINNATI.—The market for Pig Iron has shown but little life throughout the week. It is generally believed that the impending Steel strike is having a depressing effect; buyers are fighting shy, and in some cases are withdrawing inquiries for fair sized lots. There have been some fair sized sales of Foundry Iron, but what the tonnage has gained in this direction it has more than lost in the decrease in number of smaller transactions. As an offset to this weakening in influence Southern furnaces are understood to have entered into an agreement as to prices to hold good until further notice. This agreement is upon the basis of the following figures, Birmingham: No. 2, $10.50; No. 3, $10. In spite of this the feeling is a little pessimistic, and doubts are being freely expressed as to the duration of the agreement. The situation is an uncertain one, and accurate quotations hard to arrive at. We give the market the benefit of doubt, and quote the agreement figures. We quote, f.o.b. Cincinnati:

Southern Coke, No. 1	$13.50 to $13.75
Southern Coke, No. 2	13.00 to 13.25
Southern Coke, No. 3	12.50 to 12.75
Southern Coke, No. 4	12.00 to 12.25
Southern Coke, No. 1 Soft	13.50 to 13.75
Southern Coke, No. 2 Soft	13.00 to 13.25
Southern Coke, Gray Forge	12.00 to 12.25
Southern Coke, Mottled	12.00 to 12.25
Ohio Silvery, No. 1	15.50 to 16.00
Ohio Silvery, No. 2	14.50 to 15.00
Lake Superior Coke, No. 1	14.50 to 15.00
Lake Superior Coke, No. 2	14.00 to 14.50
Lake Superior Coke, No. 3	13.50 to 14.00

CHICAGO REPORT.

Scrap Iron and Steel.—Little demand exists for anything except Turnings, which are scarce. Dealers quote the following buying prices, in carload lots, Chicago delivery:

	Per net ton.
Country Wrought Scrap	$10.50 to $11.00
Machinery Cast	10.00 to ....
Malleable Cast	10.00 to 11.00
Stove Plate (free from burnt)	7.00 to 7.50
Burnt Iron and Grate Bars	5.50 to 6.00
Sheet Iron and Hoops	6.00 to 7.00
Plow Steel	9.00 to 10.00
Breaking Stock	9.00 to 9.50
No. 2, such as Shovels, Hoes, &c	.... to 7.00
Old Boilers—whole (Iron)	.... to 7.00
Old Boilers (Iron) cut in single Sheets and Rings	9.50 to 10.00
Old Gas Pipe and Boiler Tubes	10.00 to 10.50
Cast Borings	4.00 to 4.25
Turnings	8.50 to 9.00
Horseshoes	11.00 to ....

Old Metals.—The only change made is to greater dullness. Dealers quote buying prices on small lots as follows:

	Per lb.
Copper Wire and Heavy	14½c.
Copper Bottoms	13¼c.
Copper Clips	14 c.
Red Brass	13¼c.
Yellow Brass	10 c.
Red Brass Borings	11½c.
Yellow Brass Borings	9 c.
Light Brass	7½c.
Pipe Lead	4 c.
Tea Lead	3½c.
Zinc	2¾c.
Pewter, No. 1	19 c.
Pewter, No. 2	10 c.

Old Rubber.—The movement is exceedingly light. Buying prices are as follows:

	Per net ton.	Per lb.
Garden Hose	$23.00	.....
Air Brake Hose	42.00	.....
Rubber Shoes	....	7¾c.
Rubber Car Springs	....	4¾c.
Inside Bicycle Tubing	....	21 c.
Outside Tubing	....	7¼c.

Rags.—Buying price of good country Mixed Rags, Chicago delivery, is 70c. to 80c. per 100 lbs., in any quantities.

Anthracite Coal.—Trade is quiet, as usual at the opening of the month. The schedule for carload lots is as follows:

	Grate.	Egg and Stove.
Chicago	$5.75	$6.00
Milwaukee, Wis	5.75	6.00
St. Louis	6.25	6.50
Kansas City, Mo	8.25	8.50

A discount of 10c. from these figures is allowed on all Coal ordered to be shipped in August.

THE NEW YORK ALUMINUM COMPANY of Fishkill-on-Hudson, N. Y., have been incorporated with a capital of $5000. Herman Behlen and Constantine Pilz of Fort Wadsworth, Staten Island, and A. M. Kuhn of Brooklyn are the directors named.

THE HARDWARE TRADE.

The trade is feeling in several directions the effect of the strike among the Steel workers. There is increasing difficulty in getting certain kinds of goods the manufacture of which is interfered with by scarcity of material. The Tin Plate market is much affected in this way and practically all goods in the production of which Sheets are used. Other lines also are suffering in a similar manner, though not to so great an extent. The tone of the market continues strong and prices as a general rule are well maintained, with something of a tendency toward higher values. The volume of business is excellent, and the demand is evidently stimulated by the fear of a possible shortage of goods, owing to the continuance of the strike or to the absorption of goods in consequence of the activity of business. There is naturally some uneasiness in regard to the effect of labor agitations, but the trade are generally taking a hopeful view of affairs, anticipating that the existing disturbance will not be of long continuance. Stocks generally in hands of manufacturers and merchants are fair, but not heavy, the character of the demand being such as to prevent accumulations in warehouses or stores. The retail trade are buying freely, most merchants finding that business conditions justify their keeping stocks up and pushing trade with enterprise.

NOTES ON PRICES.

Wrought Iron Pipe.--The continued scarcity of Pipe is having its effect upon the prices quoted by the jobbers and manufacturers in all sections of the country. At a meeting of the jobbers in Steam Supplies, which was held in New York City on Tuesday, prices for Merchant Pipe, Black and Galvanized, were advanced 5 per cent. on all sizes. This advance, it was said, was due entirely to the scarcity now prevailing, and unless the present indications change in the immediate future there will be another advance within a very short time. The local trade is absolutely without a full line of sizes. The greatest scarcity is noticed in the ¾, 1 and 1¼ inch sizes. The 2-inch Pipe is also commanding a premium for prompt shipments. If the threatened closing down of the National Tube Company's mills is carried out it will mean a cutting off of two-thirds of the present supply of Pipe. This will seriously hamper heating and plumbing operations all over the United States.

Steel Clad Bathtubs.—The local manufacturers of Bathtubs into the manufacture of which sheet steel enters have advanced prices another 5 per cent. this week. The All Steel Enameled Tub is now within 10 per cent. of the cost of the Steel Clad Copper Lined Tub, and the conditions are such at the present time that within a few weeks it probably will be impossible to obtain any of either style Tubs. The fact that the price of Steel Clad Tubs is now very close to that of Enameled Tubs has not curtailed the sale of them to any appreciable extent. This is owing to the fact that it is almost impossible to procure a Cast Iron Enameled Tub. There is no possibility of the cast iron enameling plants catching up with their orders before the first of the year. Instances are cited of jobbers who have orders for Cast Iron Enameled Tubs which were placed in February and March of this year, and which have not, up to the present time, been filled, and there is no prospect of their getting them much before the middle of the coming month. The manufacturers claim that all orders are being taken in rotation, and that the entire country is suffering in a similar manner to that of the local jobbing trade.

Plumbers' Brass Work.—The advance which the manufacturers of Plumbers' Brass Work made on July 29 is being rigidly adhered to by all of the manufacturers and jobbers in the immediate neighborhood. The jobbing trade find no difficulty whatever in getting the advanced prices for whatever Brass Goods they have on hand, and there is considerable of a trade noticed among the jobbers, as they are compelled to buy from each other to a greater extent than at any other time within the past five or six years. As the jobbers notice the scarcity of Brass Work among the local trade they consequently stiffen prices on whatever goods they may have in stock. The outlook is favorable for a continued active demand for Brass Goods, but it is not thought that prices in this line will go any higher in the near future, unless Copper prices should make a radical advance, which is unlikely. Manufacturers generally are not booking orders for delivery within six weeks or two months, having their early capacity fully bespoken.

Tin and Enameled Ware.—The effect of the strike at the mills is becoming apparent in a marked stiffening of the market for Sheet Metal Household Ware. This week the prices of Tinware and Enameled Ware were advanced 10 per cent. at a meeting in New York of the manufacturers who are members of the association covering this line of product. Should the strike be prolonged there will probably be a further advance before long. Stocks of finished goods are comparatively light, and those manufacturers who do not make their own Tin Plates and Sheets are said to be carrying little more material than will last them for a month or so. Consequently a shortage of goods is among the possibilities of the future.

Building Papers.—The market in Building Papers is fairly steady, dealers getting the best prices they can, which is in a measure contingent on the amount of material a buyer can use and how well posted and shrewd he is in buying, a condition that frequently makes a difference in price of from $1 to $5 a ton on Tarred Roofing Felt. This material has recently been offered at $24 per ton for No. 2 Tarred Felt; Two-Ply Roofing, 108 square feet, 40 cents per roll; Three-Ply Roofing, 108 square feet, 60 cents per roll, which, if the weight is up to standard, would put the two latter on a basis of $20 a ton, f.o.b. works in Pennsylvania. There are some local disturbances where exceptional prices are made, one of which is a contest in Chicago between one of the oldest companies in the business and the youngest manufacturing coal tar products, which has caused some round lots of 500 tons or more to be sold in the Northwest for delivery at lake ports at $20 a ton for Tarred Felt Roofing.

Poultry Netting Staples.—Somewhat higher prices are ruling for Poultry Netting Staples, owing principally to the expiration of contracts which were made at a comparatively low figure.

Stove Pipe and Elbows.—Owing to the strike in the Sheet and Tin Plate mills, which has caused a shortage and heavy increase in the price of Sheets and Plates, most of the manufacturers of Stove Pipe, Furnace Pipe, Elbows and kindred goods have withdrawn their quotations and announce that quotations will be made only from day to day. The demand for this class of goods is very heavy at this season and the threatened shortage of material used in their manufacture has impelled consumers to rush in orders, which the dealers and manufacturers find it difficult to fill. The outlook favors considerably higher prices in all goods made of Sheets or Tin Plates.

Wire Nails.—The demand for Wire Nails in the New York market keeps up remarkably well for the season and prices are unchanged. Small lots from store are quoted at $2.60 per keg.

Cut Nails.—Cut Nails are moving in about the same volume as for some time past. Small lots from store are quoted at $2.18 to $2.25 per keg.

Wire.—There is a good demand and the mills are still somewhat behind in deliveries. Prices are firm, Plain Wire in a retail way being quoted at 2.60 cents per pound, and Galvanized at 3 cents.

White Lead.—The market for White Lead in Oil continues quiet, which is not an unexpected condition at this season. Quite an inquiry is reported for fall delivery, but in the present condition of the Linseed Oil market grinders are not inclined to name prices acceptable to large purchasers. Quotations are unchanged from those given for some weeks past.

Linseed Oil.—Buying is confined to small lots to cover immediate requirements for Linseed Oil. Buyers are looking for lower prices, but meanwhile quotations are unchanged, City Raw in a retail way ruling at 83 to 84

cents per gallon. Boiled Oil is 2 cents per gallon advance on Raw.

Spirits Turpentine.—An advance in the price of Turpentine in Southern markets has caused higher local quotations. This has curtailed buying, which is confined to small lots. The market is firm, small lots of Turpentine being quoted at 84 to 84½ cents per gallon.

TRADE NOTES.

THE STAR METAL STAMPING COMPANY of Davenport, Iowa, have been incorporated with a capital of $10,000. J. D. Bollman, M. M. Benedict and W. F. Lerch are the incorporators.

THE EMPIRE BRASS WORKS of Chicago, Ill., have been incorporated with a capital of $2500. The new company will engage in Iron and Brass founding. Richard H. Mathes, T. A. Breen and F. B. Murray are the incorporators.

THE SWARTS METAL REFINING COMPANY, manufacturers of Babbitt Metal, Solder, &c., and dealers in Old Metals, 20 North Desplaines street, Chicago, made an assignment on the 5th inst. to the Chicago Title & Trust Company for the benefit of their creditors. The company had been in existence for several years, and conducted a large business in their line. The president of the company is Seymour Swarts, who has long been engaged in the trade in Old Metals.

THE annual meeting of the stockholders of the Bristol Brass & Clock Company, Bristol, Conn., was held on the 24th ult. The following Board of Directors were chosen: J. H. Welch, Pierce N. Welch, New Haven; Henry F. English, New Haven; George S. Brown, New Britain; J. R. Holley, George W. Mitchell and Charles S. Treadway. The directors elected the following officers: President, J. Hart Welch of Forestville; secretary and treasurer, Julian R. Holley; assistant treasurer, George S. Brown.

THE WHITTAKER & WEBER MFG. COMPANY, St. Louis, Mo., manufacturers of Tinware, have increased their capital stock from $50,000 to $100,000.

The World's Coal Production.

The Board of Trade of Great Britain has issued a report on the production of coal in the various countries of the world. It is explained that the totals for the year 1900 are necessarily in many cases estimates only, as the definitive returns are not yet available for all countries. The following is a statement of the output of the principal coal producing countries for the past five years:

(000's *omitted.*)

Country.	1900. Tons.	1899. Tons.	1898. Tons.	1897. Tons.	1896. Tons.
United Kingdom	225,181	220.095	202,055	202,130	195,361
United States	245,422	226,554	196,406	178,930	171,416
Germany	109,225	101,460	96,310	91,055	85,690
France	32,587	32,256	31,826	30,337	28,750
Belgium	23,352	22,072	22,088	21,492	21,252
Russia	....	14,565	12,185	11,171	9,351
Austria-Hungary	....	12,694	12,186	11,611	11,033
Spain	2,773	2,565	2,434	2,011	1,853
Japan	....	6,722	6,696	5,188	5,020
India	....	4,937	4,606	4,063	3,848
New South Wales	5,507	4,597	4,706	4,384	3,910
Canada	4,761	4,506	3,726	3,380	3,344

It will be seen that the United Kingdom has in the past two years given way to the United States as the largest coal producer. The report states that the total production of the world is about 650,000,000 tons per annum, of which the United Kingdom produces rather more than a third, and the United Kingdom and the United States together account for nearly three-quarters.

JNO. H. BAND, JR., has bought Jno. H. Bryant's half interest in the Bryant & Boud Company, Cameron, Texas, a corporation with a capital stock of $35,000, Mr. Bryant retiring. The business will be continued as heretofore under the same name, with the following officers: Jno. H. Bond, Jr., president; E. Sanders, vice-president and general manager; M. S. Bond, secretary and treasurer; William Clifton being manager of the furniture department. The three latter have long been connected with the business and have been allowed to acquire some of the stock. At the annual meeting of the new directors a report was made showing that the past year had been a prosperous one for the company. The concern handle Hardware, Stoves, Tinware, Crockery, Buggies and Wagons, Agricultural Implements, Furniture, &c.

J. L. BROWNE, Indianola, Iowa, has disposed of his stock of Hardware, Stoves, Tinware, Farm Implements, Sporting Goods, Wagons, Buggies, &c., to McCoy Sons & Pollock. The new proprietors have enlarged the stock formerly carried and increased the capacity of their tin shop.

C. M. Schwab has approved the plans for the building designed to house the new industrial school which he will present to the borough of Homestead, Pa. The building, which is to cost $50,000, will be a substantial three-story and basement fire proof structure of brick, stone and steel, with concrete floors, 63 x 98 feet in area. It is expected to be finished and ready for use within a year.

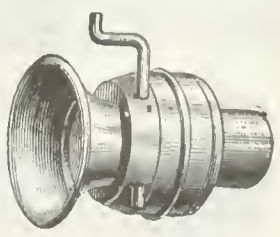
CATALOGUES ON APPLICATION.



DECISION OF THE UNITED STATES CIRCUIT COURT

SUSTAINING

Lalance & Grosjean Mfg. Co.'s Label.

This Label was originated and is used by us to distinguish our ABSOLUTELY PURE

Agate Nickel-Steel Ware

from other goods, containing either

ARSENIC, LEAD OR ANTIMONY

in the enamel coating.

The Court, limiting its decision to the use of the label only, rules as follows, under date of April, 15, 1901: "Complainants may take a preliminary injunction against the use of the labels, Exhibit G (of the ***National Enameling and Stamping Co.***) or of any similar labels, which by the collocation of size, colors, shape, spacing and lettering may present as close a resemblance to complainants' label Exhibit F (see copy of label adjoining) as do the said labels. Exhibit G (on Granite Ware)."

Notice to the Trade:

The trade is hereby notified that any sales of the so-called "Granite Iron or Steel Ware" under labels like our rectangular labels referred to in above decision, is a direct infringement of our rights as established by the above adjudication and entitles us to claim damages.

Notwithstanding reports to the contrary, we are ***NOT*** members of any "Trust" or "Association," nor have we entered into any "Gentlemen's Agreement" regarding prices on Tinned, Galvanized, Japanned or Enameled Wares, or any other goods we manufacture.

LALANCE & GROSJEAN MFG. CO.,

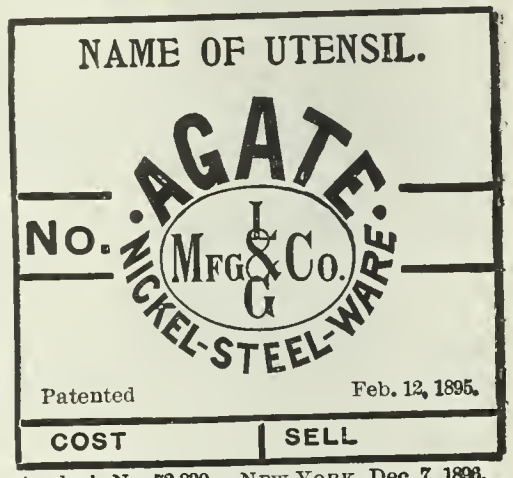
CHICAGO. NEW YORK. BOSTON.

This is a copy of the LABEL, which is printed on BLUE paper and pasted on each piece of GENUINE

AGATE NICKEL-STEEL WARE

as a guarantee of

ABSOLUTE PURITY.



Analysis No. 72,339. NEW YORK, Dec. 7, 1896.

We have made a careful examination of a sample of "Agate Nickel Steel Ware" received from The Lalance & Grosjean Mfg. Co., Nov. 30, 1896.

The enamel coating is homogeneous, of extra thickness, and great purity.

It is *entirely free from arsenic, lead* and *antimony*—metals so often found in enameled goods.

Very respectfully,
STILLWELL & GLADDING,
Chemists to the New York Produce Exchange.

Pierre de P. Ricketts, E.M., Ph.D. John H. Banks, E.M., Ph.D.
Analysis No. 14,180. NEW YORK, May 5, 1897.
LALANCE & GROSJEAN MFG. CO.

GENTLEMEN:—As requested by you, we purchased in the open market a sample of "Agate Nickel Steel Ware" and have made a careful chemical analysis of the enamel covering of the same.

We find this enamel is *absolutely pure* and *free from Arsenic, Antimony, Lead* and *other substances injurious to health.* We can therefore recommend it for all culinary and drinking purposes. Respectfully yours,
RICKETTS & BANKS,
Chemists to the N. Y. Metal Exchange.

Guaranteed Double Coated and Absolutely Pure

Dietz Nos. 1 and 2

Blizzard Dash Lamp

(COLD BLAST)

FOR KEROSENE.

These are our well liked Nos. 1 and 2 Blizzard, made with reflectors for use as Dash Lamps. They are made on the new COLD BLAST PRINCIPLE, give an extra fine light, and will stay alight in ANY WIND.

They are very convenient, combination Lanterns, and can be used as Hand Lanterns, Wall Lamps or Dash Lamps, and are fitted with the same convenient Side Lift as our regular Blizzard Lanterns. For use on the dash, each lamp is provided with a strong spring to clasp over the dash.

No. 1 is japanned blue, is fitted with our patent Bull's-eye lens on perforated plate, takes a 5/8-in. Burner and Blizzard Globe, and holds oil to burn 14½ hours.

No. 2 is japanned blue, takes a 1-inch Burner and Blizzard Globe, and holds oil to burn 19 hours. The oil pots of these lanterns are drawn from tinned sheet steel, and are re-tinned after being shaped. This adds largely to their lasting qualities.

All DIETZ LANTERNS are SAFE and RELIABLE.

Where a Dash Lantern is required, giving a large light, these are unequaled.

FOR SALE BY

ALL LIVE JOBBERS.

If you handle lanterns send to us for a catalogue and to your jobber for prices.

Making Old Rooms Look Like New.

If that old room of yours could talk, it would say, "Finish me with one of Berger's 'Classik' Metal Ceilings."

If you don't happen to have such a room, get some one who does have one to refinish it with this artistic and lasting material

You can make a nice thing out of it by furnishing the material and also handling the work of putting it on

There are lots of opportunities for profitable business in this direction, and it will pay you to make a special effort to get it.

"BERGER'S Classik" TRADE MARK METAL CEILINGS

make old rooms look like new. They give them a handsome and artistic appearance.

Another strong point is their remarkable durability—a room finished with this material is finished to stay.

Our great variety of patterns enables us to meet the requirements of all kinds and sizes of rooms

If you do not know just what we can do for you in our line, it will pay you to find out.

Write us to-day for catalogue and full particulars.

THE
Edwards Manufacturing Co.
COVINGTON, KY.

The New Metal Worker Pattern Book.

425 Pages. 744 Illustrations.
Size 10 x 13 Inches.

A new treatise on pattern cutting as applied to all branches of sheet metal work.

Cloth Bound, Price $5.

This work contains a collection of **218** problems and an elaborate explanation of the principles of pattern cutting, including Triangulation.

It embodies the problems of the former Metal Worker Pattern Book, all of which have been revised, and many of which have been entirely rewritten and solved by more approved methods. To these have been added **75** new problems and much other new material and explanatory matter, making this work a model of completeness in every respect.

ARRANGEMENT.

In point of arrangement the new work far surpasses the former one in that the problems are classified under three different heads, and simply indexed, and also that by means of a table of contents any required department of the work can be easily found.

CONTENTS.

While Chapter VI, comprising the greater part of the work, is devoted to the solution of problems, the five preceding chapters thoroughly explain the principles of pattern cutting, and place the student in possession of the preliminary information necessary to a thorough understanding of the subject.

SUMMARY OF CONTENTS.

I. Terms and Definitions—15 pages.
II. Drawing Instruments and Materials—13 pages.
III. Linear Drawing—6 pages.
IV. Geometrical Problems—35 pages.
V. PRINCIPLES OF PATTERN CUTTING—25 pages.
VI. PATTERN PROBLEMS (3 Sections)—325 pages.
1. MITER CUTTING,
2. FLARING WORK,
3. TRIANGULATION.

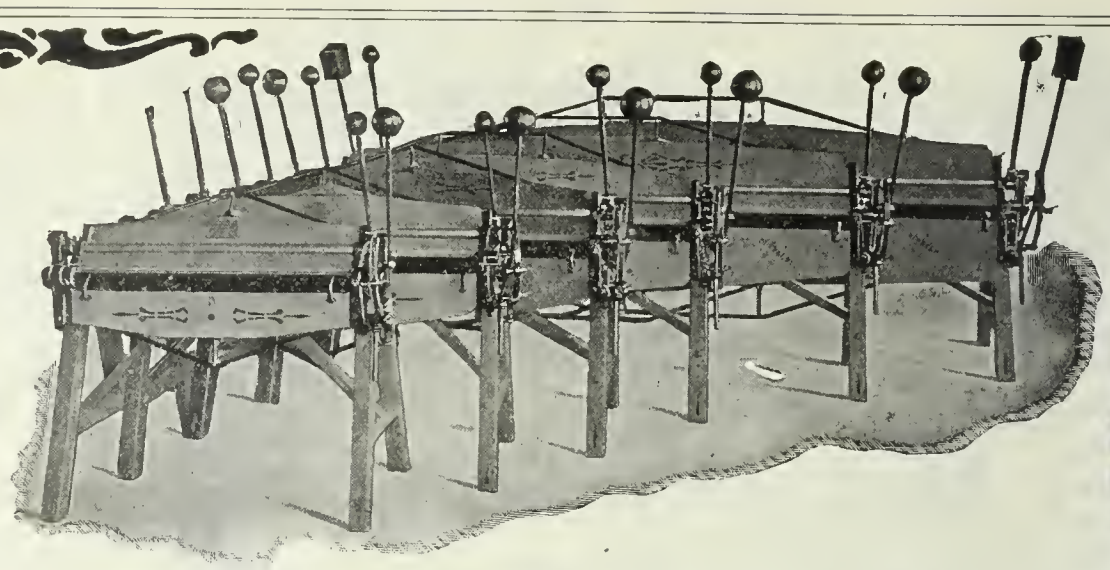
All Tinners, Cornice Makers and Sheet Metal Workers should be provided with a copy of

The New Metal Worker Pattern Book.

Price $5, post or expressage paid.

DAVID WILLIAMS COMPANY,
PUBLISHERS,
232-238 William St., New York.

The Double Truss Cornice Brake.



All the different sizes in which we make this practical machine are herewith illustrated.

This brake costs only half as much as an all-metal brake.

It is made mostly of hard maple.

It is just as good as an iron brake in every respect—much better in some ways. Beside the 50% saved in the first cost our brake will save money in its use.

It is light and can easily be carried from place to place.

By shaping or bending work in the building where it is to be used all the trouble and expense of handling formed-up work is saved.

Write for prices.

MONARCH CINDERELLA

FOR HARD COAL.

In the Monarch Cinderella will be found one of the most perfect high grade, medium priced, base burning double heaters offered to the trade.

Every modern and desirable improvement is embodied in its construction. We believe the careful buyer will acknowledge that there is not a better stove in its class.

Every point has been studied to make it the best; and for ingenious, effective simplicity in construction it stands without a peer.

Best Workmanship, Best Materials, Silver Nickel.

We would be pleased to send our catalogues.

Pittsburgh Stove & Range Company,

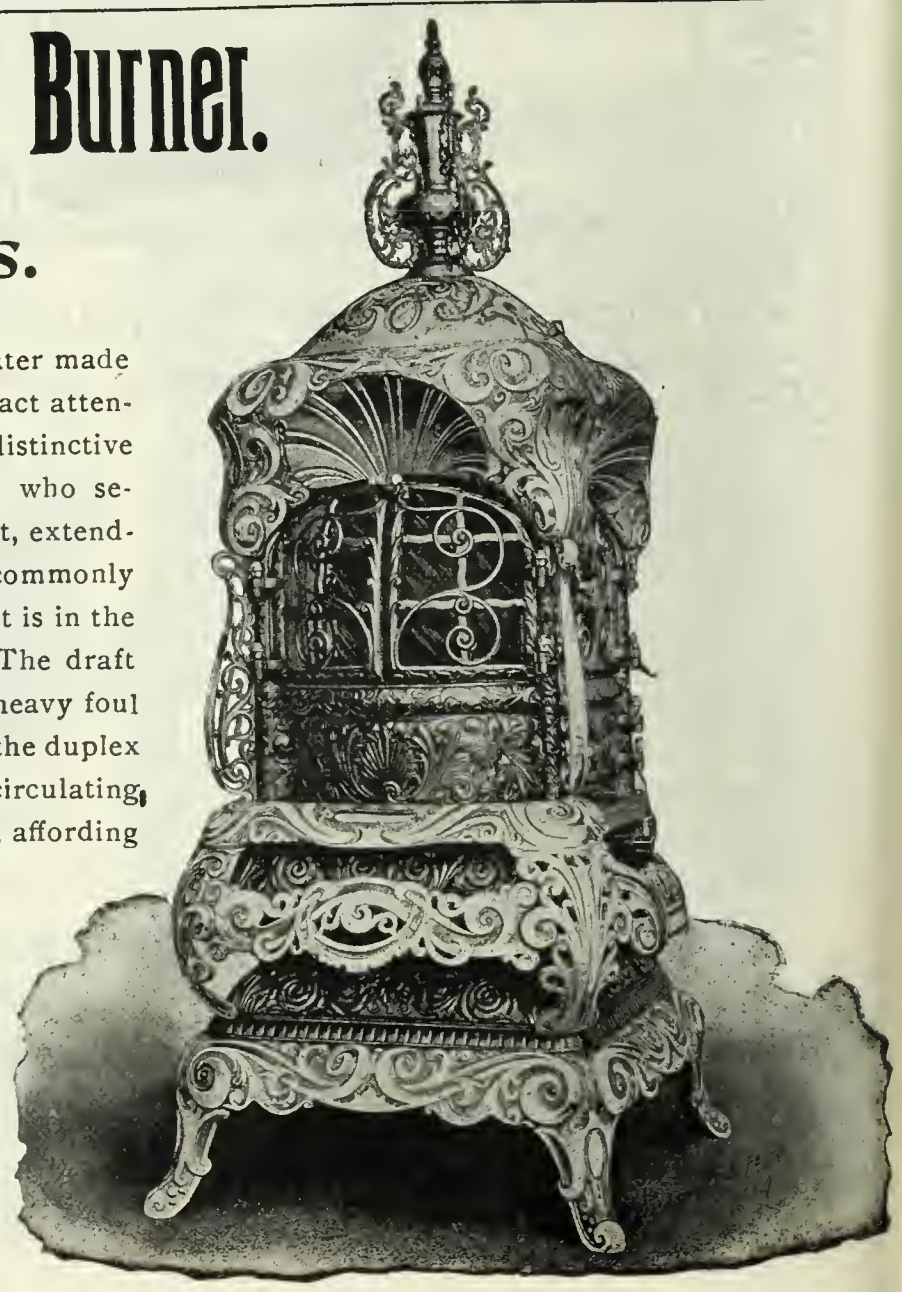
PITTSBURGH, PA.

WESTERN SALES AGENT, W. D. Sager, 38 and 40 Michigan St., Chicago, Ill.

The Monitor Base Burner.

High Art Series.

It is without doubt the most powerful heater made and its rich and graceful appearance will attract attention at once. The novel construction and distinctive features offer every advantage to the dealer who secures the agency. The diving flue is in front, extending entire width of stove, being what is commonly known as a sheet flue, thus the greatest heat is in the front of the stove where it is most needed. The draft is taken in through the bottom, carrying the heavy foul air which settles near the floor. Grate is of the duplex pattern with outer shaking ring. Two large circulating flues are fitted in rear corners of the stove, affording ample circulation for heating evenly the largest room. Send for new Catalog and secure the agency without delay.



The Wm. Resor & Co.,

CINCINNATI, U. S. A.

CRAWFORD OAK

The latest and most stylish. It will outsell all others in your town. The firepot is extra deep and nearly straight; keeps fire well. Triangular or draw-centre grates. Corrugated perforated disc for wood burning.

The ashpit is so deep that the grates are durable; there is an ashpan, a real ashpan, four and a half inches deep.

Smoke collars at top and back; use either.

Three diameters of body, 13, 15, 18 inch; and the 18 inch is also made extra high; four sizes in all.

Handsome circulars to give your customers, and show posters for your store.

The best grade of New England workmanship.

Write us if you can handle this Oak, and we will send full description and will try to interest you as to prices.

Model Steel Range

For Hard Coal, Soft Coal or Wood.

They are **Models** of all the good things, useful and beautiful, that can be embodied in a modern range. Their popularity, on account of their many good points, has led many imitators to copy them as near as they dare, but as the oven doors, dampers, fire-box and other features are covered by patents, the imitations are still behind in the race, so far as construction and operation are concerned, and we feel confident that a comparison will result in a most favorable impression as to our claim that they are **Models of Beauty** and just the one range above all others that it will pay the dealer to handle. The large and constantly growing trade we enjoy on the **Model Steel Range** has been built up purely on its merits and not through a lot of extravagant "fake" advertising.

BRIGHTON AIR-TIGHT HOT BLAST.

Patent Applied for.

SOMETHING NEW!

THIS is not an every day "Air Tight Stove" that almost every stove foundry makes. While the general construction is the same, the principle is different.

This stove is furnished with a blow pipe fastened to inside of feed door and extends inside to the center of fire pot and is controlled by a screw register on outside of feed door.

DIRECTIONS FOR USING:

Close up all openings below feed door and regulate your fire entirely by screw register in the feed door.

By following these instructions you will produce more heat with this stove and consume less fuel than with any other stove made.

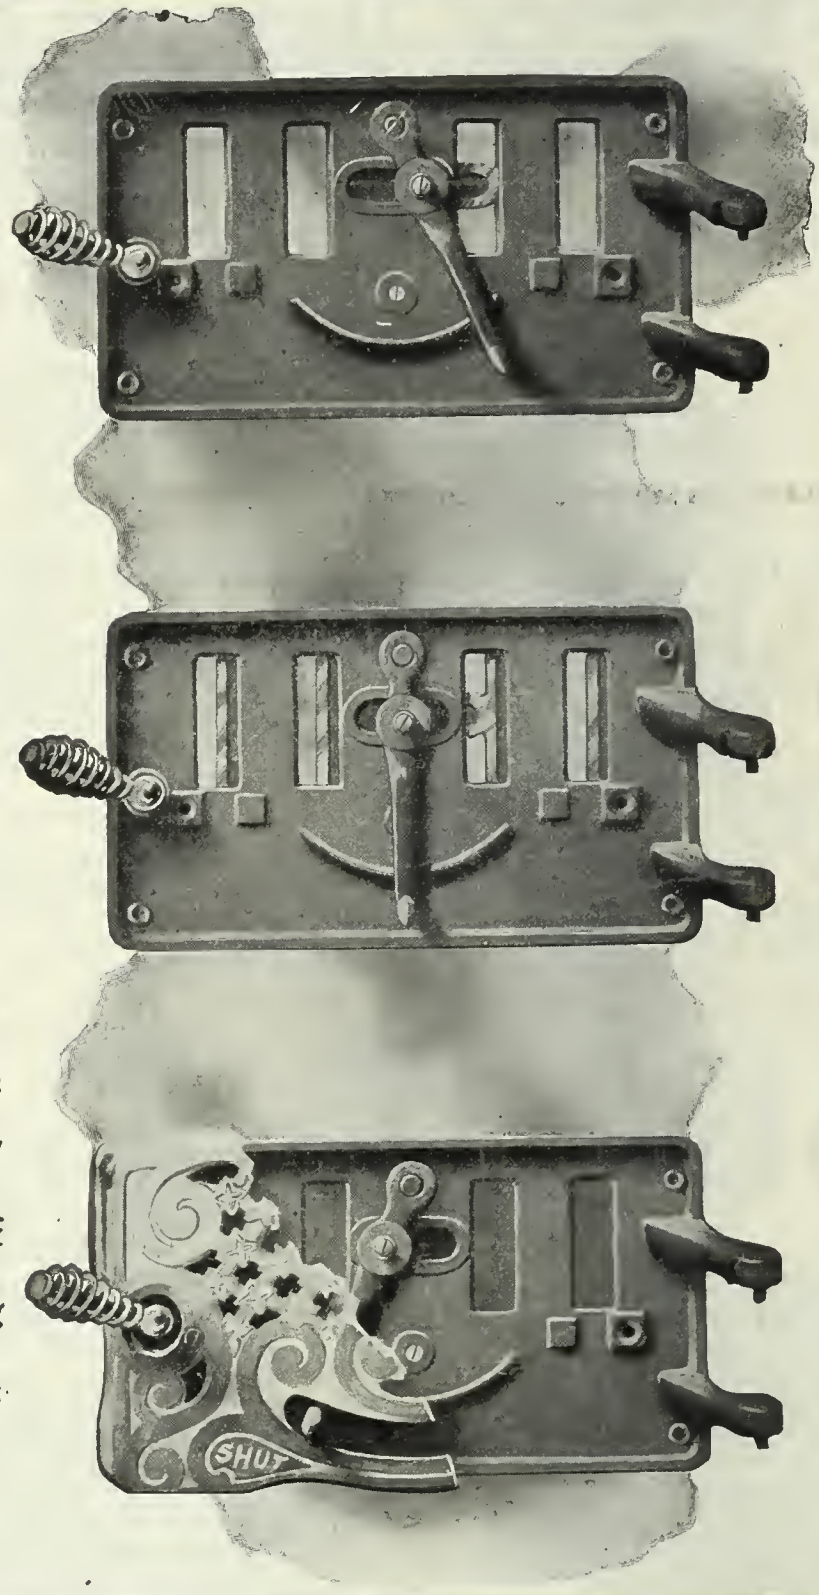
Moore's Air-Tight Heater

M TRADE MARK

The Air-Tightness of an Air-Tight Stove Consists in Its Being Air-Tight



The above simple fact is frequently lost sight of in the meaningless use of the word air-tight, loosely applied to many stoves regardless of the fit-ness of their joints. Much of the secret of the success of MOORE'S AIR-TIGHT HEATER lies in the perfection of the base door, all the joints being mechanically ground to within $\frac{1}{1000}$ of an inch of actual contact.

Furnace Heating.

A Practical and Comprehensive Treatise on Warming Buildings with Hot Air, by William G. Snow, with an Appendix on Furnace Fittings. 170 pages; size, 6 x 9 inches. Cloth bound. Price, **$1.50.**

This is the only book that has been brought out which presents a systematic and reliable treatment of the warm air furnace system of heating.

It deals with the various types of furnaces, their construction, proper location and setting, together with furnace fittings, and all matters pertaining to the installation of furnaces and to effective and economical heating by warm air. The subject is discussed for the first time by a competent author possessed of a scientific education and a practical training, who presents positive rules, based on a long experience, for guidance in designing furnace systems for dwellings and other buildings where this popular method is employed. The various details of furnace work are described simply and at such length that the volume will be valuable to all who are in any way interested in the subject. It is recommended to practical furnacemen, to architects, builders and house owners, and to tinners and plumbers in suburban sections who do furnace work. To all these it will prove a reliable text-book and guide.

PARTIAL SUMMARY OF CONTENTS BY CHAPTERS.

Chapter I.—Furnaces—Is devoted to Furnace Construction—The Relative Proportion of Furnace Parts—Secondary Heating Surface—Economy and Efficiency—Heating Capacity and Exposed Wall Surface—Manufacturers' Ratings of Their Own Productions, etc.

Chapter II.—House Heating—Compares Furnaces and other apparatus, and describes Method of Setting Brick and Portable Furnaces—Location and Area of Cold Air Supply—Cold Air Rooms and Air Filters—Return Ducts and Air Circulation—Size of Hot Air Pipes—Location of Registers, etc.

Chapter III.—The Combination System—Discusses Heating Distant Rooms with Radiators—Balancing the System—Location of Water Heater in Furnace—Capacity of Water Heaters—Size of Radiators, etc.

Chapter IV.—Air—Deals with the Necessity of Ventilation—Water Needed to Moisten Air—Expansion of Air—Velocity of Air in Tubes, etc.

Chapter V.—Heating and Ventilation of Buildings—Considers the Size of Furnaces Required—Fresh Air Room and Supply—Air Circulation—Size of Flues—Use of Stack Heaters—Size of Heating Coils in Vent Flues, etc.

Chapter VI.—Heating of Public Buildings, Churches and Stores—Is given to the Size of Furnaces Required—Grate Surface in Ventilated Buildings—Air Supply—Size of Heating and Ventilating Flues—Size of Stack Heater, etc.

Chapter VII.—Fan-Furnace Combination System—Is devoted to Positive Warm Currents from Fan Systems—Location of Fan and Driving Apparatus—How Good Furnaces are Aided by Fans—Types and Efficiency of Fans—Area of Ducts and Flues, etc.

Chapter VIII.—Temperature Control.

Chapter IX.—Estimate and Contract Blanks.

Chapter X.—Value of Fuels. The Proper Size for Furnace Chimneys—with tables.

APPENDIX.

Furnace Fittings.—A section of 45 pages dealing with the Making of Furnace Casings—Metal Cold Air Boxes—Making Furnace Bonnets and Collars—Making Pipe and Elbows—Register Boxes and Stack Shoes, etc.

Sent postpaid on receipt of price, $1.50.

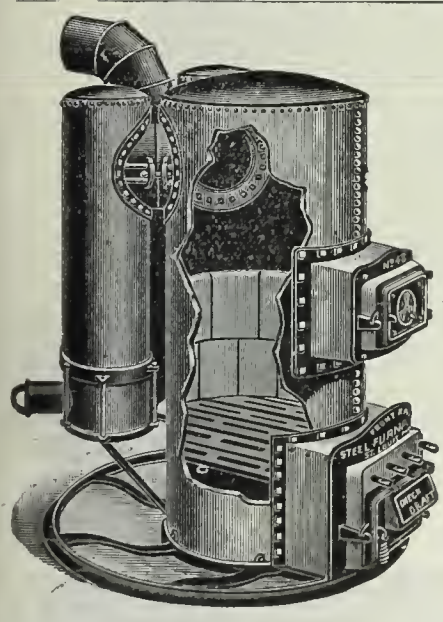
Where's the Man or Woman who has never heard of

Magee HEATERS ?

☞Cut shows one of the famous **MAGEE BOSTON HEATERS**—for warm air or warm-air-hot-water combination. They're built to wear. Gas-tight and dust-tight. Have brick lined fire pot—linings that last for years. "Dock-Ash" revolving grate. Furnace is easiest to take care of, furnishes uniform, steady fire, and heats greatest amount of space with given amount of fuel.

Magee Furnace Co.,
32-38 Union St., Boston.



Front Rank Hot Air Furnaces

are built on vertical lines; air comes in direct contact with entire heating surface.

The Front Rank Fire Chamber is one solid sheet of closely riveted steel; being lined above the fire lines with genuine fire clay tiling it is the most durable made.

The radiators are very large and have an unusual area of heating surface in comparison with the size of fire pot.

These furnaces burn hard or soft coal or coke. We also make wood burning furnaces.

Send for our catalogue, it will give you a better idea of what we make.

FRONT RANK STEEL FURNACE CO.,

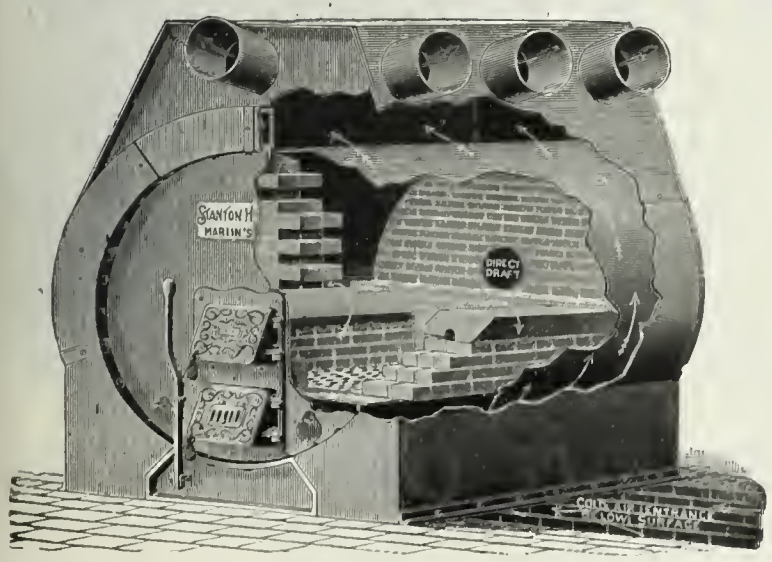
The Stanton Seamless Heater,

PORTABLE CASED.



LOUISVILLE, KY., Apl. 5th, 1901.

THE STANTON HEATER CO.,
Martin's Ferry, Ohio.

Gentlemen:—Your favor of the 3d inst. is received asking our experience with the Stanton Heater which you put in for us during the fall of 1899. In reply we will say that it gives us pleasure to express our entire satisfaction with this Furnace. While we have had no severe weather this winter there have been several quite cold snaps, but our offices have been very comfortably heated, and our coal bill (Pittsburgh coal) has been quite moderate compared with other Heaters we have used.

The satisfaction the Heater has given us can be best expressed by saying that we have not heard the Furnace mentioned once this winter. You can see, therefore, that we have had absolutely no cause for complaint.

Yours very truly

190 Reed St., **L. J. MUELLER FURNACE CO.,** MILWAUKEE, WIS.

OVER $200,000,000 spent yearly in the United States alone for advertising.

There are some things that the price you pay is wholly determined by what the sellers think they can obtain through sentiment attached to an extensively advertised name.

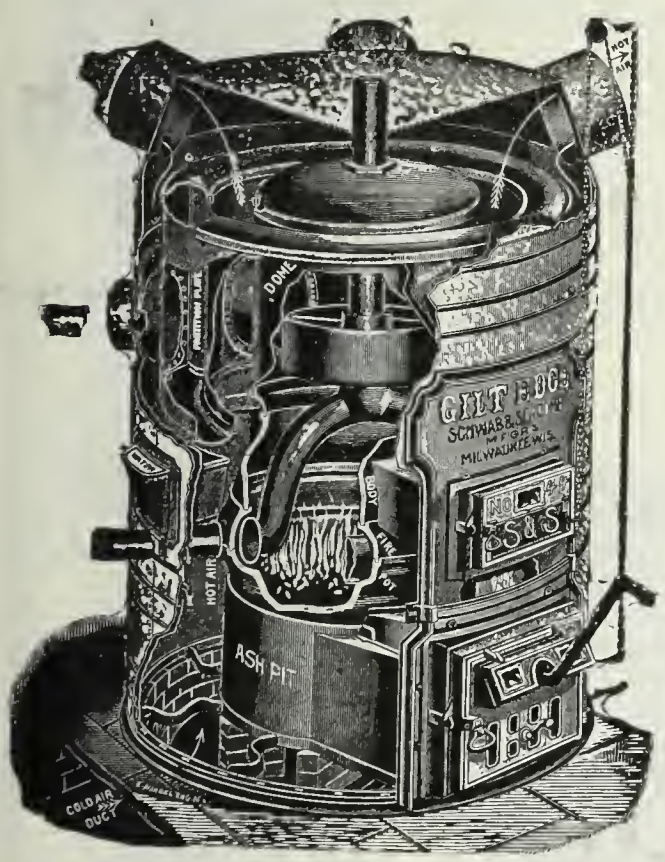
Remove the name from the front and some Furnaces wouldn't sell for $40 that are commonly held at $80.

No part of the price you pay for a "DIGHTON" helps to maintain the dignity of a large city store.

The price you pay for the "DIGHTON" is for real FURNACE VALUE ALONE and the results you can obtain with it.

It is equal in every way, and better in many ways than others you pay twice what we charge for the "DIGHTON."

DIGHTON FURNACE CO., Taunton, Mass.



UTILIZED radiating surface, that is economy. Sectional fire pots from 1 in. to 2 in. thick and other parts in proportion, that is durability. Positive gas-tight joints, that is necessary to health. These, with all other improvements for ease of management, are combined in the Gilt Edge Furnaces. They are made for all kinds of fuel, and are the very best.

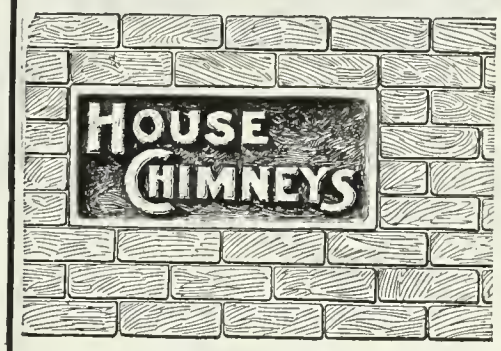
A 62-PAGE PAMPHLET

Comprising a Series of Articles and Letters on *Chimney Troubles and Their Remedies* published under the title



Contains a compilation from the columns of THE METAL WORKER, of articles and correspondence relating to house chimneys, defective flues, and kindred topics, comprising a source of information of the most practical and reliable nature, on overcoming difficulties which occur in the working of chimneys, flues, etc.

To all who are interested in flues and drafts, in their relation to stoves, furnaces and house heating apparatus, this book will prove instructive and helpful.

The Contents are as follows

Page.

POINTS ON CHIMNEYS - 7–32
An illustrated article by J. L. Bixby, Jr., describing many details in chimneys, which cause trouble, and giving remedies. An important table is presented, of the sizes of chimneys required in dwelling houses, based upon the amount of work to be done.

DEFECTIVE FLUES - - - 33–35
This article presents information resulting from a wide, practical experience of the writer, and gives sound advice on some of the details of chimney construction.

HOW TO IMPROVE A WEAK CHIMNEY - - - - - - 36–40

VARIOUS FORMS OF VENTILATORS or CHIMNEY TOPS 41–45

CONDENSATION IN STOVE PIPES - - - - - - - 46, 47

SMOKE PIPE FOR WOOD FURNACES - - - - 48

REMEDYING DOWN DRAFT IN CHIMNEY - - - - 49–51

CONNECTED FLUES DESTROY DRAFT - - - - - - 52–55

FAILS TO BAKE ON BOTTOM 56–62

40 good Illustrations help to make the Text clear.

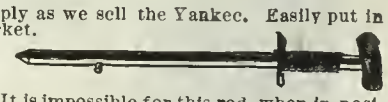
The YANKEE Hot Air DAMPER (Improved All Steel.)

THE YANKEE EXCELS.

Above All—Cheapness—a dealer cannot possibly make dampers as cheaply as we sell the Yankee. Easily put in and taken out of pipes. Stiffest, quickest-working and neatest damper on the market.

ROD POINTS: Has wood enameled handle. Wood handle cannot come off. Washer and spring cannot fall off the rod. Same size of holes are punched on each side of pipe. Rod is made of ¼ inch cold-rolled steel and slips into damper very smoothly. **Sample sent to any Dealer without charge.**



It is impossible for this rod, when in position, to move either way.

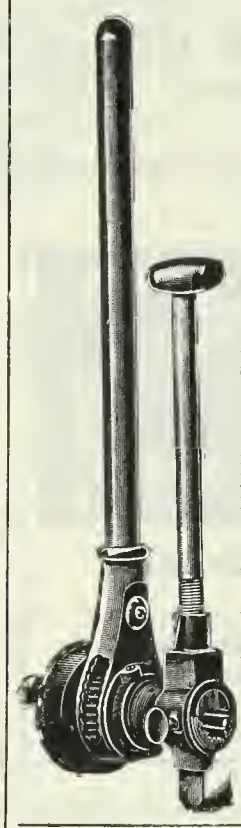
CLAYTON & LAMBERT MFG. CO. Detroit, Mich

The Climax
RATCHET STOCK



Is an indispensable tool for conveniently threading iron pipe in ditches, under floors, in corners, over head, etc With this tool threads can be cut without removing whole lengths of pipe. This tool is provided with a strong vise which securely grips the pipe and by means of the leading thread the die is forced on pipe and the thread is cut. It is made of malleable iron and steel, and while light in weight, making it convenient to carry, is very strong and rigid. The advantages of this tool make it absolutely indispensable to Plumbers, Steam and Gas Pipe Fitters, Gas and Water Companies, Machinists, etc It takes standard size dies, which are extra if furnished.

No. 1 threads ¼ to 1 in pipe. takes 2 or 2½ in. die, $10.00
No. 2 threads 1 to 4 in. pipe, takes 2½, 3 and 4 in. die, $17.00

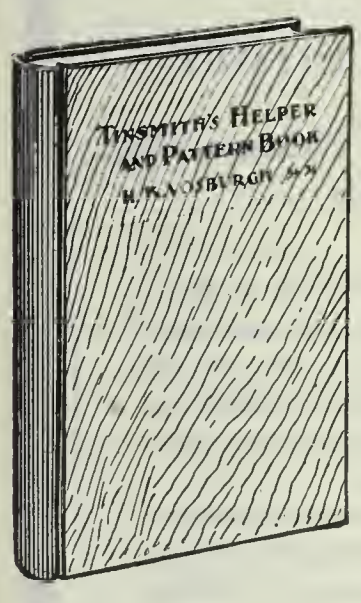
TINSMITHS' HELPER AND PATTERN BOOK.

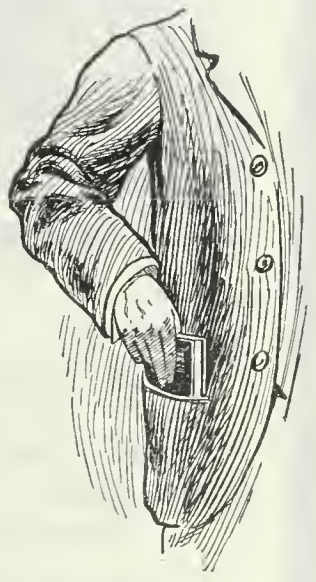
With Useful Rules, Diagrams and Tables. By H. K. VosBurgh.
Revised Edition, 120 Pages, 53 Figures, Size 4½ x 6¾ Inches,
Cloth Bound. Price, $1.00.



We present a new and improved edition of this useful book, believing it to be one of the most important assistants to tinners and other mechanics that is published. The diagrams and patterns are now illustrated by means of new engravings, greatly improving the appearance of the book. The tables, rules and recipes have been carefully revised, these, with important additional tables, being printed from new type.

This edition is priuted on fine paper, aud bound durably in cloth, in a convenient pocket size.

The Tinsmiths' Helper is not intended to be a comprehensive treatise on sheet metal pattern cutting, which field is covered only by "The New Metal Worker Pattern Book," but it contains a collection of patterns of the most common occurrence, described in the plainest way. It meets the requirement of a simple hand-book for young tinners, and will be an invaluable aid to all sheet metal workers for the compilation of tables and rules alone. A list of the contents is given below.



DIAGRAMS AND PATTERNS.

To Find the Center of an Arc.
To Describe an Octagon Within a Given Square.
To Describe an Octagon Within a Given Circle.

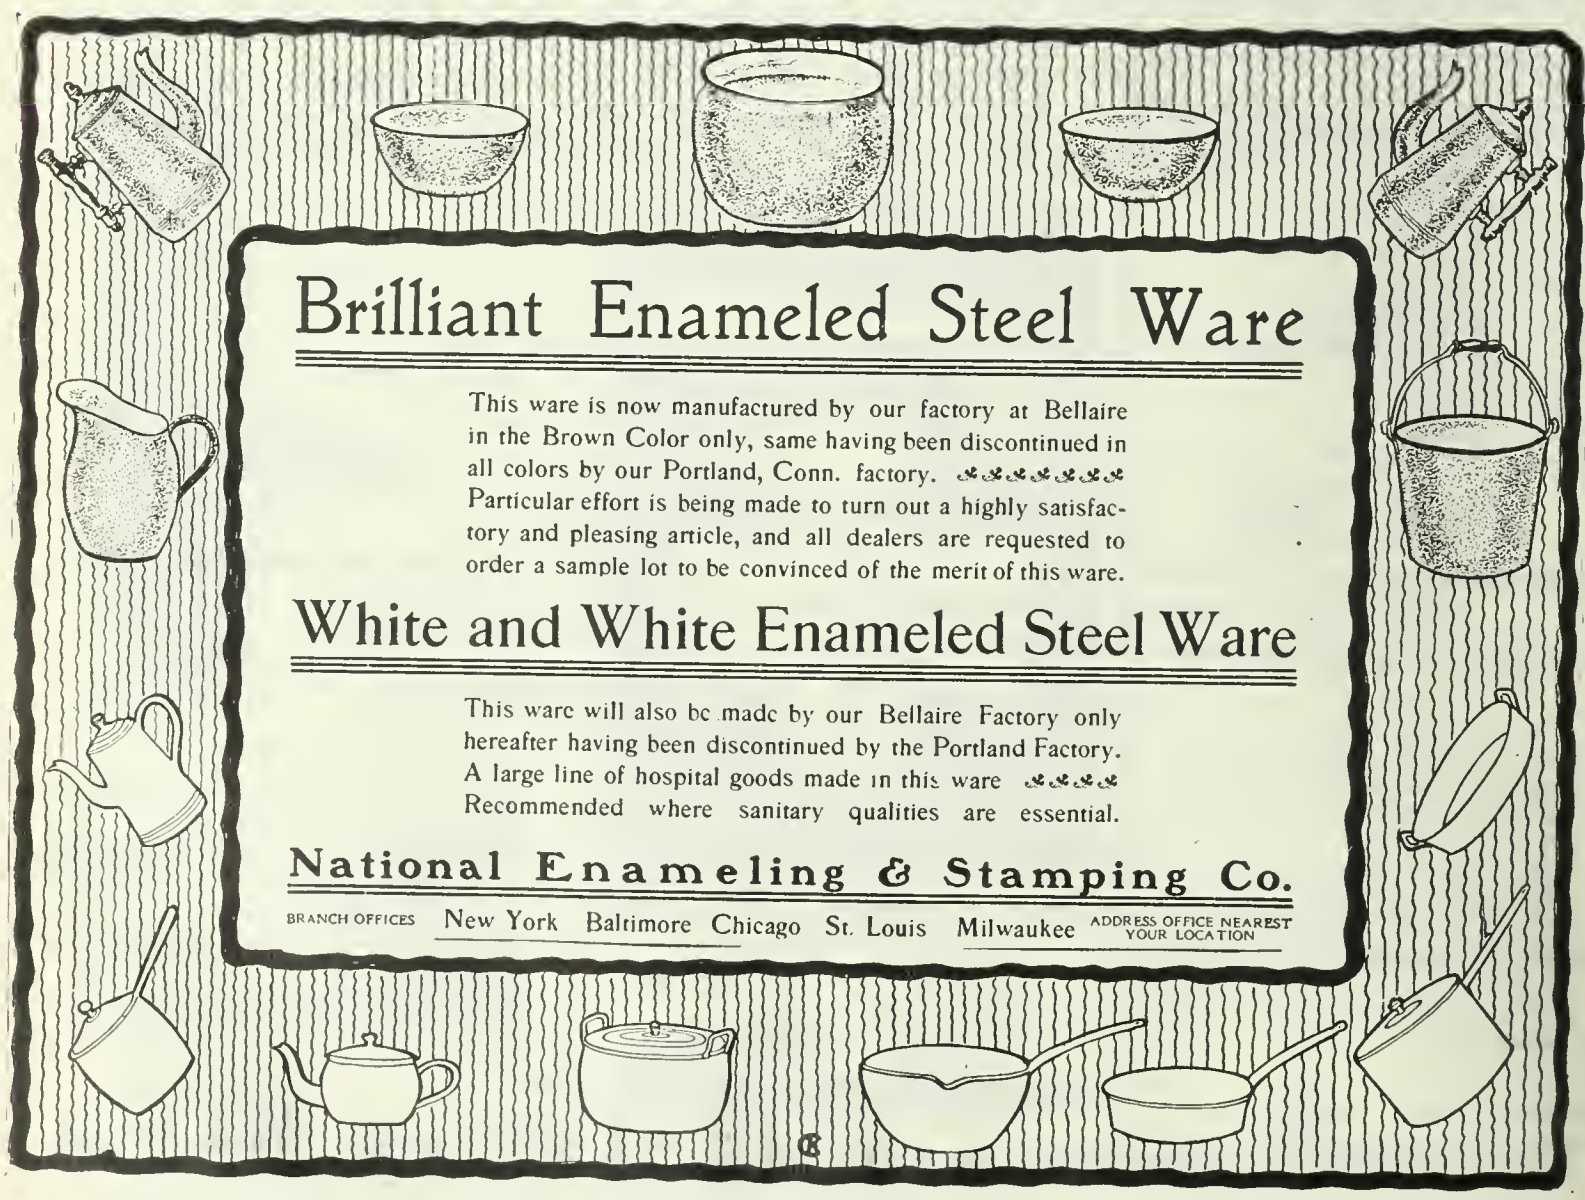
The Kelsey Warm Air Generator

SEE OUR EXHIBIT AT THE PAN-AMERICAN EXPOSITION.

World's Columbian Exposition, Chicago, 1893, Award, With Medals.

For a new and original, and very efficient form of Warm Air Heater, in which heavy cast iron sections, with corrugated sides, through which is circulated the fresh air, form the fire box and combustion chamber, and are exposed on all sides and throughout their length to the fire and hot gases, thus exposing an exceptionally large surface to the fire.

For the means whereby the warm air may be directed in separate and independent channels, and distributed in such proportions as to insure uniformity of heating in different parts of a building.



Brilliant Enameled Steel Ware

This ware is now manufactured by our factory at Bellaire in the Brown Color only, same having been discontinued in all colors by our Portland, Conn. factory. Particular effort is being made to turn out a highly satisfactory and pleasing article, and all dealers are requested to order a sample lot to be convinced of the merit of this ware.

White and White Enameled Steel Ware

This ware will also be made by our Bellaire Factory only hereafter having been discontinued by the Portland Factory. A large line of hospital goods made in this ware Recommended where sanitary qualities are essential.

Prices on the Up Grade.

For sixteen months, beginning with March of last year, the general level of values of staple goods in this country pretty steadily declined. The high water mark of prices was reached in February, 1900, since which date a downward reaction has been in operation, touching the low water mark in June of this year. There are strong indications, however, that a definite period has been set to the dropping tendency of values, for, according to *Bradstreet's*, the general level of staple prices in July and August has again turned upward with a gain of 1.5 per cent. over the June mark. Compared with January 1, this year, the loss on August 1 showed only one-half of 1 per cent, so that practically all the decline of this year has been recovered. Moreover, prices in several lines, notably in iron and steel manufactures, corn and cotton, have risen materially since the beginning of August, owing to strikes and shortage of materials and crops. Consequently it is safe to assume that the present general level of staple prices is the highest of the year. The recent strengthening of values has been made more or less general, affecting widely separated lines of products, such as the leading cereals, cotton goods, leather, petroleum, anthracite, coal and coke, wool, tin plates, sheet iron, provisions and building materials, and including a large number of the articles used by the trades represented by this paper. In the plumbing and heating trades, particularly, prices of many kinds of supplies have risen sharply in the past two or three months. Almost everything in this line made of iron or steel has stiffened in value of late, as those who carefully follow our weekly trade reports cannot fail to have noticed, and the tendency is still upward. As it is a healthy advance, based upon the law of supply and demand, the chances are that higher prices will be the rule for some time to come.

The Social Element in Business.

A very healthy tone is often given to trade simply through a better understanding between manufacturers, which is based on personal acquaintance and informal meetings in a social way. Competition is frequently much more strenuous and unreasonable than it needs to be simply because the parties are strangers to one another and perhaps animated by a spirit of needless animosity. Not infrequently a manufacturer is surprised to find how amiable a person and how good a companion is one whom he has only known as a rival in trade. Competition must necessarily, under the laws of trade, remain competition, but it often loses its bitterness and something of its intensity, and becomes less unreasonable, because of personal relations between the parties. The influence of this better understanding between manufacturers is frequently seen in the market without being recognized. We have in mind a leading line of goods in which competition between manufacturers, both East and West, has long been so fierce as to result in bringing prices down to an unprofitable level. Attempts at formal combination had often been made which were repetitions of the old story, the agreements being made only to be broken. Altogether the situation was unsatisfactory and little money was made. A different condition of things now prevails. An understanding in regard to the extreme price at which orders should be accepted for present and future delivery has been reached and is being lived up to. This desirable state of things, we are advised, has been brought about by social meetings of the manufacturers, who have recently had several outings, thus utilizing the summer season for vacation purposes which contributed directly to business success. Those who are thus brought together regard themselves as members of a club, of the very existence of which the trade are unaware, but of which the improved condition of the market in this line is a direct outcome.

The pig iron statistics of *The Iron Age* for August 1 show that the output of the blast furnaces declined from 310,950 tons weekly on July 1 to 303,847 tons on August 1, although the number of furnaces in blast increased from 249 to 257 during the month. This is partly accounted for by the fact that the production of many furnaces was a little below the normal. The stocks of pig iron reported by makers remained practically stationary, being given as 387,329 tons on August 1, as compared with 392,598 tons on July 1. This shows that the consumption is taking care of the current output, large as that is. In the Pittsburgh district the pig iron market has weakened, owing to the fact that buying by the United States Steel Corporation has virtually ceased for some time to come. Otherwise the steel strike has not affected the market so far to any appreciable degree.

A fact which is not quite generally appreciated by those engaged in mechanical and similar pursuits is that the monopoly granted by patents for inventions is becoming more valuable. The consumption of all articles, due to the very rapid growth in the population and in the industrial strength of this country, makes controlling patents more and more capable of producing a larger revenue. As we expand our export trade in manufactures even consumers in distant countries can be made to pay tribute. We know of instances where recent improvements upon epoch making older inventions have fetched more money than the original inventor ever dreamt of securing.

The Society of German Engineers has undertaken an important work in the preparation of a trilingual technical dictionary, designed to comprehend all the terms used in the technical sciences. This publication, under

the name of Technolexicon, will include three languages, English, German and French, and will give all the known technical words and expressions in use, with the source of each. The society has secured the services of the well-known German lexicographer, Dr. Herbert Jansen, as editor, and has established an office at 49 Dorotheen strasse, Berlin, N. W. The co-operation of all technical and trade societies or associations is desired by the publishers in the preparation of this *magnum opus*.

The managers of the World's Fair, to be held at St. Louis, Mo., in 1903, in celebration of the centennial of the Louisiana Purchase, are pushing things in a very vigorous manner. From all accounts the projected exposition is a colossal enterprise. It is to be thoroughly international in its scope and all the nations of the world will be invited by the President to participate in displaying their natural and artificial products. According to the plans the exposition will cover nearly 1000 acres of land and will exceed in size and cost the Columbian Exposition in Chicago. A large sum of money was appropriated by Congress in aid of the enterprise and the State of Missouri, the city of St. Louis and private capital have all come forward with unprecedented liberality in support of the undertaking. There seems every justification for the claim of its promoters that the St. Louis World's Fair will take a place among the finest of the world's industrial expositions.

The Railroad Commission having ordered a reduction of the freight rates on fuel oil in Texas after August 29, the coal operators have begun a fight against the Beaumont oil producers and propose to reduce the price of coal and lignite throughout the part of the State where oil is likely to be used for fuel to a figure that they expect will shut out oil competition. The capacity of the Beaumont oil wells is estimated to aggregate about 1,500,000 barrels of fuel oil daily. This output is equal to about 350,000 tons of coal, while the annual coal production of the State is only about 4,400,000 tons. The oil producers say they are ready to meet any competition and that they can put the price of fuel oil down to 10 cents a barrel, if necessary, and still make a profit. At present the ruling price is 30 cents a barrel. Consequently the profits of the oil men must be enormous.

The Elder-Dempster Line of transatlantic steamers has made a remarkably generous offer to British trades unions which has been accepted by several of the unions The line has offered free passages to the United States and back again to official delegates of any trades union who will visit this country for the purpose of obtaining information as to the conditions of labor and employment which prevail here, and for ascertaining what advantages the American manufacturers possess over the British in tools, labor saving machinery and appliances and for investigating the natural and artificial facilities that are available on the American Continent. The opportunity is a splendid one for British workmen to get an insight into the industrial life and methods obtaining in this country.

CAREFUL BUYING FOR PLUMBERS AND METAL WORKERS.

The following letter touches upon a practical subject which we take pleasure in referring to our readers:

I am doing a nice little business as plumber and metal worker and manage to make it pay so that most every year I have a little to lay by or put into the business. I have never given much attention to buying my goods, paying about what the houses with whom I deal ask, but, of course, look out that they do not impose on me. On the whole, I think they treat me about right. I have just been talking with a man doing the same kind of business in another town, who tells me that he often saves 10 per cent. or more on many goods by looking into the matter carefully and buying where he can do the best. He is certainly buying lower than I do on some lines.

What I want to know is, will it pay me to try to get lower prices. Will I stand as well with my jobbers and manufacturers? It will, of course, take some of my time which might perhaps be better spent.

If I get some one to help me in this department it will cost something. Will it on the whole pay me to give better attention to this department of my business?

Perhaps some of our readers, among whom there must be many good business men, can help me with their advice. ENTERPRISE.

We invite a frank discussion of this important subject, and shall be glad if the trade will discuss it freely. Their answers will be given without name or address, unless they request otherwise.

Pan-American Exhibit of International Correspondence Schools.

The display of the International Correspondence Schools, Scranton, Pa., at the Pan-American Exposition, Buffalo, has just been completed, and compares very favorably with the surrounding exhibits of other educational institutions. It is situated in the northeast corner of the Liberal Arts Building, where an inclosure has been erected for all educational work.

The exhibit occupies three cases. The lower part of the cases contains complete sets of bound volumes, above which are arranged three cases containing about 100 cards on which are mounted samples of students' drawing plates, photographs of the different departments of the schools, and practical examples of students' instruction papers and original designs executed after studying the courses of the institution. Above the cases of drawing plates is a high screen covered with red burlap, across the top of which, in large brass letters, the title, "International Correspondence Schools, Scranton, Pa.," is inscribed. In the center of the screen is the framed certificate awarded by the Franklin Institute of Philadelphia, on each side of which is a tablet describing the schools' methods and what they accomplish.

The electrical outfit, drawing outfit and blow pipe outfit form conspicuous features of the arrangement between the tablets and the top of the cases containing the cards, and small signs, or labels, over each inform the visitor that one of these outfits is furnished to each student in certain courses. Sample question papers, and students' written replies thereto, in the various subjects taught show the method of examining the student and the character and appearance of his replies to these examination papers, and drawing plates from all the courses representing the elementary and advanced work of students demonstrate the progress that can be made by this system.

New Publication.

GUIDE TO BRONZING AND ENAMELING. By James Croke. Price 25 cents. Size, 5½ x 7 inches; 37 pages.

This little book, which in a second and revised edition has just been published, should be of special interest to steam fitters, as it is largely devoted to the decoration of radiators. The first section deals generally with the subject of bronzing, and gold, copper, brass, aluminum and silver bronzes, with information regarding their various qualities, and the liquids and methods that must be used to apply them so as to preserve their color, especially when used on radiators. Suggestions are also given for the use of bronzes of different colors together to get the best effect. Patent bronzes and paints are also discussed. The use of gold paint and picture frame gilding and bronzing by dipping are explained, as well as bronzing for printers. Another section of the book is devoted to enamels and enameling, as applied to furniture, terra cotta articles, picture frames, and to bathtubs and radiators, with instructions how to mix the different colored enamels to get the desired tint. The coating of articles with enamels, commonly known as japanning, is explained, with instructions about the use of ovens and their proper temperature.

STOVE MAKERS AT THE ASTOR HOUSE.

On Tuesday President H. T. Richardson presided over a meeting of the New York City Stove, Range and Furnace Manufacturers' Association at the Astor House, at which most of the members were present. Those who were prevented from attending sent letters expressing regret for their absence and their readiness to carry into effect any action taken. The meeting was marked by the prompt disposition of all subjects presented, and the opinion was generally expressed by those present that the promising outlook for the stove trade which existed last spring gave every evidence of a present realization.

The operation of the emergency measures for meeting competition was amply discussed. While in some instances the action of the association had been mistaken for a break in prices, it was found that, on the whole, it had strengthened the market, and, with the other influences of the association, had been the means of getting better prices and profits for the entire trade.

After some discussion regarding the scarcity of sheet iron and its increased cost, with the probability of further advances, a net advance was decided upon in the price of sheet iron cylinder stoves. There is a strong probability that a further increase will be made in the price of these goods, for the present advance is only about one-third of the reduction made last spring, and as it is the same on stoves of all sizes, it does not cover the recent increases in the cost of material on the larger sizes. It is further pointed out that manufacturers of sheet iron goods in other lines are pursuing the more rational course of advancing their prices in consonance with the rise in the cost of material and the growing scarcity of the same. It is understood that the advance just made on cylinder stoves was a compromise, and it is regarded as likely that if it is well supported a further advance will soon be announced on the grounds above outlined. In the meantime some of the members will advance their prices independently, on the dictates of sound business principles.

The Acme Gas Stove Catalogue.

H. Adler Company, Pittsburgh, Pa., are just distributing a 42-page catalogue, 9 x 6 inches in size, devoted to gas stoves and burners and bearing a front cover design showing two children just out of bed and warming themselves before an open gas fire. The catalogue presents a variety of gas heating apparatus, some of which are of the stove type and others of the open fire character, with asbestos reflectors. The first stove shown is the Monogram, which is an entirely new design of the closed type for natural gas. The body is made of blue steel embossed with appropriate ornamentations, having cast iron doors and ornaments and made for 3-inch flue connections. It is followed by the Acme natural gas stove, which has been improved by the addition of a burner which is said to increase the capacity of the stove three-fold. The Acme gas radiator is a new production made with four, six and eight tubes, 19 and 30 inches high, finished in planished iron with black or bronze base. The Acme and Westminster are copper reflector stoves, while the Duquesne and Tunis are stoves which burn with an illuminating flame and have a perforated body. The Angeles is a natural gas reflector stove, with an asbestos back. The Continental and Yorktown are two new styles of open front gas fires, the Continental being finished entirely in black and the Yorktown having ornamental cast iron top and legs.

The Acme line are open front stoves in different styles of finish, adapted for the use of natural gas or artificial gas. Under the name Acme a variety of natural gas fire place heaters are presented. One page is devoted to the Acme natural gas hot air furnace, made in different sizes adapted for from one to four registers. The last pages of the catalogue show a variety of designs in polished brass fronts for natural gas fires. The Acme gas oven and the Acme and Perfect gas cookers and Acme hot plates complete the catalogue, which also includes a telegraphic code for the convenience of customers.

The Welcome Flat Ranges.

The Syracuse Stove Works, Syracuse, N. Y., and 231 Water street, New York City, are distributing two ten-page folders, one devoted to the Kernan Welcome and the other to the Junior Welcome ranges. The Kernan Welcome range is designed to meet the requirements of the trade, catering to a high class of residence work. It is made with the oven 16, 18 and 20 inches square and with covers 7, 8 and 9 inches in diameter. Both ends of this range are finished in cabinet style, adding to its attractive appearance. The ovens are equipped with a heat indicator and the fire box with water back of ample heating capacity and grates that can be readily removed through the ash pit door. The range is designed for using either a vertical or a horizontal boiler, supported on upright brackets which also support either warming shelves or hot closets. Gas cooking attachments and low closets are also provided. The range is adapted for setting against enamel brick backs or between brick jambs. A feature of the circular devoted to this range is the completeness of the dimensions and information given.

The second circular shows the Junior Welcome range in a variety of styles by means of half-tone engravings. It is presented with brackets supporting horizontal boiler and warming shelf, with a closet, and also with a high shelf and gas attachments. The Junior Welcome Range is also made with low closets and some styles are provided with ash sifter and ash pan.

The Stewart Catalogues.

The Fuller & Warren Company, Troy, N. Y., have adopted a somewhat novel and convenient form of bringing their various stoves and ranges to the attention of the trade. They are sending out a package of ten separate catalogues in covers of different color, each being devoted to one of their special lines of goods. Three catalogues cover ranges adapted for builders' use. Among these is the F. & W. Co. Stewart, made in one size with an 18-inch removable square ventilated oven of wrought steel. It is of sheet flue construction, so that all the six cooking holes on the top are effective, and has a labor saving grate and a water back of ample capacity. The Ideal Stewart is another single oven range, of sheet flue construction with a special direct draft damper and with ovens 18 and 20 inches square, provided with oven door thermometer. It is equipped with an ash pan and the grate is so arranged that it can be readily removed through the ash door. The F. & W. Co. double oven range, is made with ovens 12½ x 20 inches and 14 inches high with drop oven doors. The flue constructions and pipe connections are such that it is claimed both ovens bake exactly alike. Special broiling facilities are provided by having a large open front grate and a drop broiling door so that a broiler can be used directly in front of the fire without interfering with other cooking.

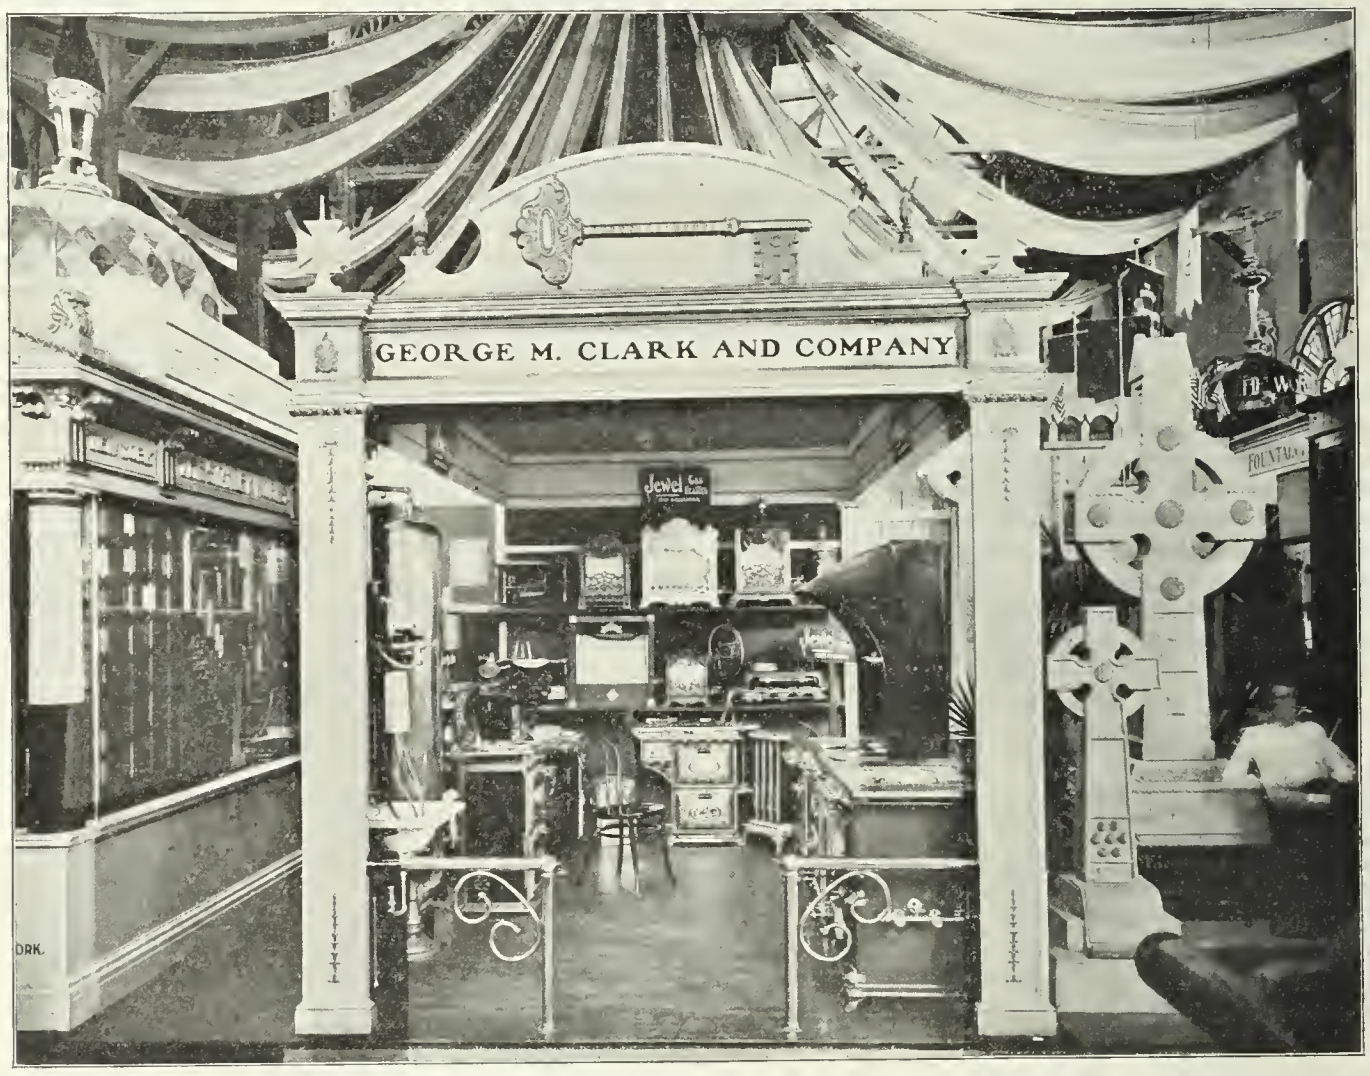
A little catalogue devoted to the P. P. Stewart range presents a picture of Mr. Stewart, who for 31 years gave his attention to perfecting and developing the celebrated Stewart stoves. This is a square portable range of handsome design, elaborately nickel trimmed and made with end ash pit, high shelf and reservoir. The oven is surrounded on five sides by flues to insure its heating, and has a heat indicator in the oven door. The Diamond Stewart is a range of similar attractions, while the Crown Stewart and the Model Stewart are ranges well calculated to meet the demands of a high grade custom trade. The Stewart Oak and the Splendid Oak are handsome examples of this popular form of heating stove, the Stewart Oak being also made with a double heating attachment for heating an upper room. The Matchless Oak, a stove of less elaborate ornamentation, will be recognized by the trade as an old favorite.

THE NEW HOME FURNACE COMPANY, Norwalk, Conn., are distributing circulars showing the New Home Furnace and the Rémond French Ranges.

George M. Clark & Co.'s Pan-American Exhibit.

An illustration is presented herewith of the exhibit by George M. Clark & Co., 72 to 76 Lake street, Chicago, at the Pan-American Exposition at Buffalo. The exhibit is located in the Manufactures and Liberal Arts Building. This exhibit is housed in a pavilion built on original designs and of very attractive appearance. Columns are arranged in front, which support a heavy cornice and architrave. The capitals of the columns are highly ornamental. A curved panel on the top of the front bears the company's trade-mark key, carved in relief. The exhibit is inclosed by a heavy railing of brass tubing.

This exhibit is stated to be the largest and best gas stove exhibit made at the exposition. It consists of instantaneous and circulating water heaters, gas ranges, gas heating stoves and gasoline stoves. All these goods are of the company's standard patterns and finishes, and have been selected to show the character and extent of their products, without the addition of any special decorations for the purpose of attractiug attention. Their new instantaneous and portable heater and all the gas stoves are connected for practical operation, natural gas being furnished by the exposition for this purpose. Visitors can thus observe the manner in which the heater and the gas stoves are operated. They are, of course, adapted to the use of manufactured as well as natural gas. The company have an attendant constantly in charge since the opening of the exposition, who has entertained many visitors and taken a large number of orders.



George M. Clark & Co.'s Pan-American Exhibit.

PRESIDENT CHARLES O. LYON of the Thatcher Furnace Company, 240 Water street, New York, is agaiu at his office, haviug returned from a sojourn of several months abroad, looking hearty and well prepared for the fall rush of business. Along with the company's new Rauge, Furnace and Boiler catalogues, and the extensions recently made to their plant at Newark, N. J., prompt shipments will be another iuducement to the trade to deal generously with the Thatcher line.

Royal Stoves and Ranges.

Bergstrom Bros. & Co., Neenah, Wis., display their customary enterprise and good taste in the fine new catalogue just issued, showing the numerous good things in tue stove line which they are presenting to the trade for the coming season. This catalogue comprises 88 pages. The engravings are considerably above the average found in trade catalogues, while the other features of the publication are such as to make it a worthy specimen of catalogue printing. They give the first place in this catalogue to the Iona line of steel ranges, designed for coal aud wood. This line, it is stated, has every desirable feature of modern steel range construction, and no expense in pattern work has been spared to produce a range of rich design and attractive appearance. This range is made in a great variety of sizes and is shown in all styles. The Falcon line of steel ranges comes next. This is a new four-hole range of the best material and workmanship, designed for hard or soft coal or wood, and is made in four sizes. The Hector steel range is a new four-hole range, also of high grade, designed for wood enly and made in four sizes.

The firm have brought out two patterns of steel cooking stoves, the Index, intended for coal and wood, and the Target, for wood ouly, each made in four sizes. A very fine assortment of cast ranges is shown, consisting ef the Pilgrim and Dresden four-hole ranges, for coal and wood, and the Linwood, Beacon and Arcade four-hole ranges, all for wood only. These ranges are illustrated in all the usual styles and are made in a sufficient number of sizes to meet the requirements of the trade. The cast cook stoves shown consist of the Pontiac and Idaho, designed for coal and wood; the Chippewa, Oregon and Record for wood only, and the Iron Duke, a large hotel and camp stove for wood or coal.

The heating stoves illustrated embrace constructions representing all the standard styles. They consist of the

Royal Elmhurst, an entirely new hard coal base burner, having a reflector top and profusely decorated with nickel; the Elmhurst surface burner for hard coal, which has long been a favorite with their customers; the Royal Oak, the Royal Rival, a new smoke consuming hot blast heater, intended for hard or soft coal or lignite; the Spark, direct draft for wood; the Royal Winner, a new line of air tight stoves for wood or coal, and the Emperor, a very large heavy box stove for wood or soft coal.

Gold Coin Stoves and Ranges.

The annual catalogue for 1901 of the Gold Coin Stove Company of Troy, N. Y., is just being distributed. It is 11 x 7½ inches in size, bound in a dark blue and bearing the Gold Coin trade-mark on the front cover. The usual greeting is extended to the trade, followed by special information in reference to terms, shipments and repairs. It is also stated that a liberal supply of advertising matter will be furnished those who sell the Gold Coin line. The first four pages of the catalogue are devoted to the Model Gold Coin, a high grade square range which is presented as entirely new for 1901. A feature of this range is the absence of too elaborate ornamentation, affording opportunity to contrast the design with the smoothness of the castings. It is provided with a handsome nickel name plate and attractive nickel ornamentation. The range is made with cabinet shelf, a high top shelf and a large reservoir and has an end ash pit. The fire box is equipped with a grate of the labor saving type, arranged to be removed through the ash pit door without disturbing the linings or the water front. The range is made with 18 and 20 inch oven, and with 6, 8 or 9 inch holes. It is followed by the Grand Gold Coin and Novel Gold Coin, which are large high grade ranges. The 394 series Gold Coin are made with both right and left-hand fire chambers and are provided with all of the usual conveniences of end ash pit, high shelf and reservoir. The Home Gold Coin is made with six 8-inch holes and oven 20 inches square, elaborately trimmed with nickel, designed to meet all the requirements of the trade for a low priced range. The Novel Gold Coin and the Home Gold Coin ranges are also made with four holes on the top. The Gold Coin range and the Gold Coin cooking stove with high shelf and reservoir are also shown.

The Gold Coin ventiduct base burner, a handsome square parlor heater liberally trimmed with nickel and having full mica illuminations, is designed for use as a single or a double heater. The Magic Gold Coin is another of the company's ventiduct base burners and is made in three different sizes. Their line of oak stoves includes the Twentieth Century Gold Coin, which has a large feed door used to effect a large illuminating front with reflector top. It is elaborately nickel trimmed and has a special form of ash pit hearth. This stove is made in three sizes, having 16, 18 and 20 inch fire pots, and it can be furnished with a magazine when desired. The Standard Gold Coin is a stove of very attractive design, but less elaborately ornamented, and the Gold Coin Oak is a substantial oak stove of the regular type. The Gold Coin wood parlor stove, made for burning 21 and 23 inch wood, is a heater of elaborate design, full nickel trimmed. An oval sheet iron air tight stove is also made bearing the name Gold Coin, also the Ajax, a box stove for burning wood from 18 to 36 inches long.

The Weir Stove Company, Taunton, Mass., are sending out a pretty booklet devoted to the Glenwood Hotel Range. It is bound in a light brown cover, having a design in green and yellow showing a hotel in the mountains. This Range is made of cast iron with a large fire chamber, provided with a water back extending across the back and partly along two sides, and has a triplex grate. Immediately above the fire is one large ring cover with four 9-inch boiler holes over each oven. The ovens are large and the doors are equipped with the Glenwood Oven Indicator. The Range is made with large flues, so that its operation is said to be certain. It has a high warming shelf and planished iron canopies are furnished for carrying the heat and odors from the kitchen.

ODD PLATES.

Francis Kernan of the International Heater Company, Utica, N. Y., is spending a few days in New York at 231 Water street, the office and salesroom of the Syracuse Stove Works, assisting C. W. Richards in the absence of Joseph Kernan, who is enjoying a vacation.

President John B. Jones of the Utica Heater Company, Utica, N. Y., was a recent visitor at *The Metal Worker* office.

W. H. Colebrook Sons & Co., Syracuse, N. Y., are distributing a desk blotter representing a baseball player in the attitude of soliciting judgment. Similarly the concern invite the trade to test so as to be able to pass judgment on Colebrook's Furnace Cement and Stove Putty.

The Outing Stove Company, Silex, Mo., are putting on the market two knock down sheet iron Camp Stoves that are light and readily carried, and which are said to bake and cook for a party of eight with little fuel of almost any kind and do the work quickly.

The Kirk-Latty Mfg. Company, Cleveland, Ohio, inform us that they have let the contract for the erection of another story to a portion of their factory, which will give them an additional floor space of 275 x 50 feet. They are also contemplating extensive improvements and enlargement to their office. The company make an extensive variety of Stove Bolts, Stove Rods and Stove and Tinsmiths' Rivets, besides a large line of Carriage and Tire Bolts, Tacks, special Nails, Machine Screws and Nuts.

The Girard Stove & Repair Company have been organized with foundry at Girard, Ohio, to make all kinds of Stove Repairs and small job work.

The Los Angeles Stove & Mfg. Company is the name of a concern who have been recently organized at Los Angeles, Cal., with a capital stock of $25,000. The directors include E. H. Knapp, W. F. Giles, J. M. Merritt, G. S. Porter and M. E. Porter.

B. B. Christie, Dayton, Ohio, has recently been granted a patent on a Natural Gas Hot Air Furnace which is also adapted for using oil for fuel. The Furnace was under test during the past winter, showing, it is said, a high efficiency. It is called the Gas King, and Mr. Christie is now prepared to contract with manufacturers to make the Furnace on a royalty.

The Culter & Proctor Stove Company of Peoria, Ill., resumed operations in all departments of their works on Monday, August 12, after a shut down of four weeks for inventory and repairs.

It is stated that J. D. Hanks has organized a stock company at Rome, Ga., for the manufacture of Stoves. We understand that the capacity of the new works will be 40 Stoves per day.

MICHIGAN RETAIL HARDWARE DEALERS' ASSOCIATION.

The sixth annual convention of the Michigan Retail Hardware Dealers' Association was called to order at 10 o'clock Wednesday morning at the Hotel Cadillac, Detroit, by G. W. Hubbard, president of the association. The formal welcome of the association to the hospitality of Detroit was extended by the Hon. W. C. Maybury, Mayor of the city, in an eloquent address, to which a felicitous response was made by the president.

The convention was attended by a good delegation of members and was regarded as a success. The association was shown to be in excellent condition and doing its work well. Merchants who are actively identified with the movement refer with enthusiasm to what is being accomplished, as the rights of retailers are beginning to be recognized and respected. At the same time the opinion is freely expressed that the principal usefulness of the State association is to support and strengthen the National, as only by such an organization can retail interests be so represented and unified as to insure their recognition by manufacturers and jobbers.

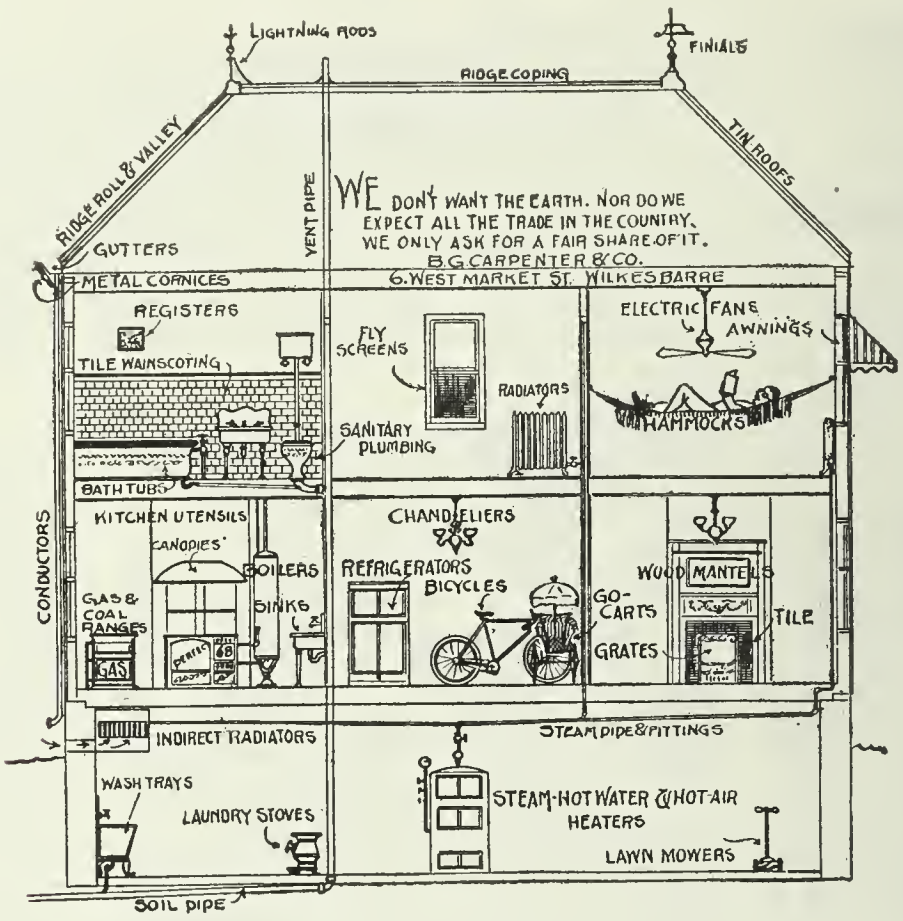
The National Association of Retail Hardware Dealers was represented by Irving A. Sibley of South Bend, Ind.

The report of the secretary, Fred. H. Cozzens of Detroit, showed that at the close of the last convention the association had a membership of 300. Since that time six had been received by mail. Of this number 179 have paid their dues up to July 1, leaving 64 in arrears for 1901, 16 in arrears for 1900 and 1901, and 47 who have absolutely withdrawn since the last meeting, which leaves the total membership, counting in all who have not absolutely withdrawn, 259. The financial statement showed a net credit balance of over $200 in addition to the convention collections.

Papers were read on "Credits and Collections," by R. J. Cleland of the Commercial Credit Company, Detroit and Grand Rapids, and on "Store and Window Dressing and the Best Methods of Keeping Stock in Order," by Henry C. Weber of Detroit, treasurer of the association.

A Unique Dodger.

Novel and effective advertising methods are of perennial interest to the wide awake retailer, consequently when anything fresh or striking appears in this line it is worth while making it known for the benefit of those whose bump of originality, perhaps, is not so largely developed as is that of the author of the novelty. The unique "dodger" which forms the accompanying illustration is one of these novelties. It is used by B. G. Carpenter & Co. of 6 West Market street, Wilkes-Barre, Pa., who inclose it in all their statements, letters, packages, &c., and who say they have found it an exceedingly effective trade getter. The cut is printed without other matter of any kind on a square piece of paper, 5 inches in size. The special point about it is that it is a self explanatory object lesson, pointing out the various lines of goods handled by the firm and applicable to the construction and equipment of the home from the cellar to roof cresting.



A Unique Dodger.

FRED. J. MEYERS MFG. COMPANY, Hamilton, Ohio, have issued a new illustrated catalogue showing various designs and styles of Nursery Fenders and Spark and Stove Guards. They are prepared to make to order any size or description of these goods.

National Enameling & Stamping Company.

The stockholders of the National Enameling & Stamping Company have voted to issue bonds to the amount of $2,500,000 of 5 per cent. bonds, which the St. Louis Trust Company have agreed to buy. On July 1, 1901, the total mortgage and floating debt of the company amounted approximately to $2,650,000, of which $525,000 is represented by mortgages which were upon two of the smaller plants of the company at the time they were acquired, and the balance of $2,125,000 represents bills payable. The proceeds from the sale of bonds, together with balance on hand, will satisfy all the obligations of the company and leave a surplus. The company have liquid assets consisting of cash, merchandise, bills and accounts receivable to the amount of upward of $5,200,000. Under the terms of the mortgage 10 per cent. of the entire issue of bonds is to be paid off annually at par. The business year of the company has been changed from January 1 to July 1, for the sake of convenience in stock taking and shutting down the mills. The cost of the steel plant and rolling mills at Granite City and St. Louis, now completed, and the extensions and improvements in the other plants of the company, for which no stock has been issued, amounts to $2,500,000. The steel plant and rolling mills were not completed and put into full operation until about six months ago. The report of the National Enameling & Stamping Company as of June 29, 1901, follows:

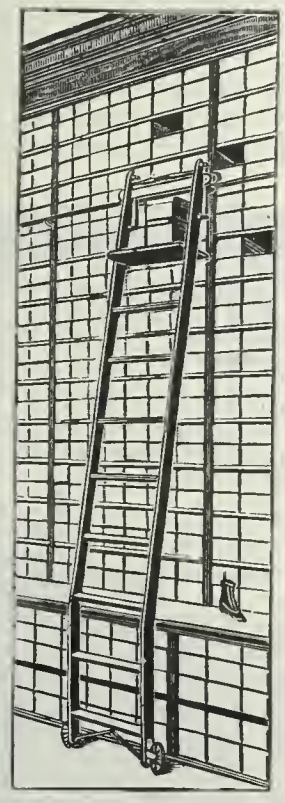
The results of the operations during the period show a profit of		$1,127,505.99
Out of which dividends have been paid on the 7 per cent. preferred stock, absorbing		817,068.00
Leaving a balance of		$310,437.99
Which added to the balance to the credit of profit and loss account, at December 31, 1899, of	$831,876.59	
Less sundry adjustments made during the year 1900, appertaining to the results of 1899	31,897.31	
		799,979.28
Makes the net surplus at date		$1,110,417.27

THE UNION MFG. COMPANY, Buffalo, N. Y., have a headquarters in New York City at 853 Broadway, where full information about the Union Grinders can be obtained from Charles McCutchen, their representative. These Grinders are well adapted to the use of Stove dealers, as they are run by foot power and the emery

wheels quickly remove the fins and burrs from castings. They are also convenient for grinding tools.

A New Milbradt Rolling Step Ladder.

The accompanying cut illustrates a rolling step ladder brought out by G. A. Milbradt & Co., St. Louis, Mo. Wheels rolling on a hard wood track are attached to the top of the ladder, the wheels being arranged to slide up and down, so as to allow the ladder to adjust itself to any unevenness of the floor, and also to permit the lower



A New Milbradt Rolling Step Ladder.

end of the ladder to be set in close to the shelving out of the way when not in use. The track is screwed to the edge of the shelf, even with the top, so as not to block up any space. The track is simply to guide the ladder. Wheels rolling on the floor are attached at the lower end of the ladder, but no track is used there. It is explained that the ladder is especially adapted to shelving not strongly built, as the entire weight of the ladder and of the operator rests on the floor; also that the ladder runs satisfactorily on a sloping floor.

The Rollman Apple Cutter and Corer.

The apple cutter and corer shown by the accompanying cuts is made with a frame of cast iron, tinned. The

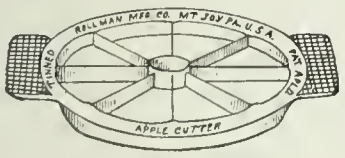


Fig. 1.—The Rollman Apple Cutter and Corer.

blades are securely soldered in so as to make a strong tool for the purpose intended. No. 7 cutter, the one shown in the illustrations, cuts apples into eighths and

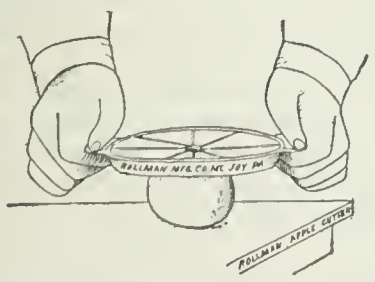

Fig. 2.—The Cutter Held on the Top of the Apple.

is designed for general use, while the No. 9, not illustrated, cuts apples into twelfths and is intended for the use of bakers and for pie baking. The Rollman apple-cutter and corer is shown in Fig. 1. Fig. 2 illustrates it held in position on top of the apple, preparatory to its being pressed down to cut and core the apple, as shown in Fig. 3. The device is put on the market by the Rollman Mfg. Company, Mount Joy, Pa., who are also man-

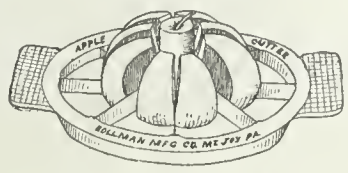

Fig. 3.—The Apple Cut and Cored.

ufacturers of the Rollman peach stoner, which is described as stoning freestone peaches without disfiguring or loss of juice.

Stove and Hardware Dealers.

E. A. Wood has bought the Hardware and Stove business formerly conducted by John Wood in Gifford, Ill.

The wholesale and retail Hardware, Stove and House Furnishing Goods stock of Farrar-Welshons Hardware Company, Pittsburgh, Pa., was damaged by fire a short time since.

Browder & Browder have succeeded Phelps & Miller in the retail Hardware, Stove, Tinware, Agricultural Implement and Sporting Goods business in Albion, Neb.

Davis, Hunt & Collister, Cleveland, Ohio, have incorporated their business under the style of the Davis, Hunt & Collister Company, with a capital of $65,000. The officers of the corporation are: E. P. Hunt, president; J. H. Collister, vice-president and treasurer, and E. L. Davis, secretary. The company do a wholesale and retail business in Hardware, Stoves, Tinware, Agricultural Implements, Sporting Goods, &c.

C. F. Thompson, Redwood Falls, Minn., has disposed of his Hardware, Stove, Sporting Goods and plumbing business to E. A. Pease, who will continue at the old stand.

J. F. Horn is successor to E. T. Booher in the Hardware, Stove, Tinware and Agricultural Implement business in Jerico, Mo.

Wm. H. Pollard has bought the Hardware and Stove business at Whittier, Iowa, formerly conducted by H. H. Mount.

Wadleigh & Fundis have succeeded Dorner & Wadleigh in the Hardware, Stove, Farm Implement and Sporting Goods business in Centralia, Kan.

Fuss & Harrison have lately engaged in the Hardware, Tinware and Agricultural Implement business in Perth, Kan. In the fall they are expecting to add the sale of Stoves.

F. D. Ross, retailer of Hardware, Stoves, Tinware, Agricultural Implements, &c., New Orleans, La., has been succeeded by F. D. Ross & Co.

James H. Johnston, Hardware, plumbing, &c., Washington, N. J., has just opened branch shops in Stewartsville, under the management of Fred. Boyd, and at Oxford, under the management of Albert Major.

Bernstock Brothers, Wrightsville, Pa., in addition to their Stove and Tinware business, have entered into a new line of trade. They have purchased the charter of, and are now operating, the line of boats plying on the Susquehanna River between Wrightsville and Columbia, Pa., and are reported to be doing a thriving business. Their new store in Wrightsville for the display of Stoves and Tinware has just been completed, and is a model of its kind.

The W. D. Parlin Hardware Company have been incorporated at Natick, Mass. The officers are: W. D. Parlin, president; Lloyd Brown, treasurer, and Richard Foley, clerk. W. A. Foley will be manager of the Framingham store, L. L. Howe manager of Builders' Supplies and H. R. Fittz manager of the plumbing department. Some of the men have been in the employ of the company from 12 to 35 years, and during the comparatively short time the Framingham store has been owned by Mr. Parlin the business has greatly increased.

THE BOILER TRADE.

The usual dull period, with all of its courage testing annoyances, has passed for this year, so far as the boiler trade is concerned. Reports from all sourees indicate that the movement of stock is well under way and that the outlook is brighter as the latter and better half of the year goes on its course. The best feature of the present situation in the trade is that the contractors, to a large extent, are satisfied, while the prices ruling bring a satisfactory return for the enterprise that has established this branch of trade on a popular basis. This is largely due to the frequent meetings of the boiler manufacturers and their agreement on a course that has been carried out and vindicated by the healthy tone apparent in the trade as a whole.

In spots there is evidence of sharp competition between those who are established and seek to hold their trade and those who are seeking trade and desire to gain a foothold. In such instances prices are sometimes quoted that are quite at variance with those generally prevailing; but no really serious inroads have been made. It is in order to suggest, however, that the threadbare custom of price cutting for the purpose of introducing goods should be abandoned and some more ingenious method be adopted that would benefit the whole trade. On the whole, prices of boilers have ruled firm and regular throughout the year, notwithstanding an energetic presentation of arguments for changes. Unless the demand for boilers should become manifestly in excess of the stocks in hand and the producing capacity, it is hardly probable that an advance in prices will be made. At the same time there is little likelihood of any recession from the present level of values.

RADIATION.

The movement in radiation is seldom in accordance with the conditions in the boiler trade, because much radiation is used in large buildings in which exhaust steam from the power plant is used for heating. Consequently a very different set of influences govern this trade. During the year many changes in prices have occurred, all the later movements having an upward trend. It is only a month since the last advance, yet a further advance of approximately 10 per cent. on all styles of radiators was announced on Wednesday of this week. There is a feeling in the trade that this is not the end and should the fall bring an overwhelming demand for radiation a further rise in prices is regarded as more than probable. Advances in the fall have not been uncommon in this branch of trade and contractors will do well to follow a course that will protect any bids they may make.

Already there are complaiuts that orders for specially popular goods, or for special sizes, are not shipped as promptly as has been expected at this season, and in some quarters this is taken as an indication of what may be expected later on. All the radiator plants are running, and during the year extensions and new equipment have been made to some that will substantially increase the producing capacity. When fully available these extensions may obviate any difficulty in securing radiation promptly at the hight of the season.

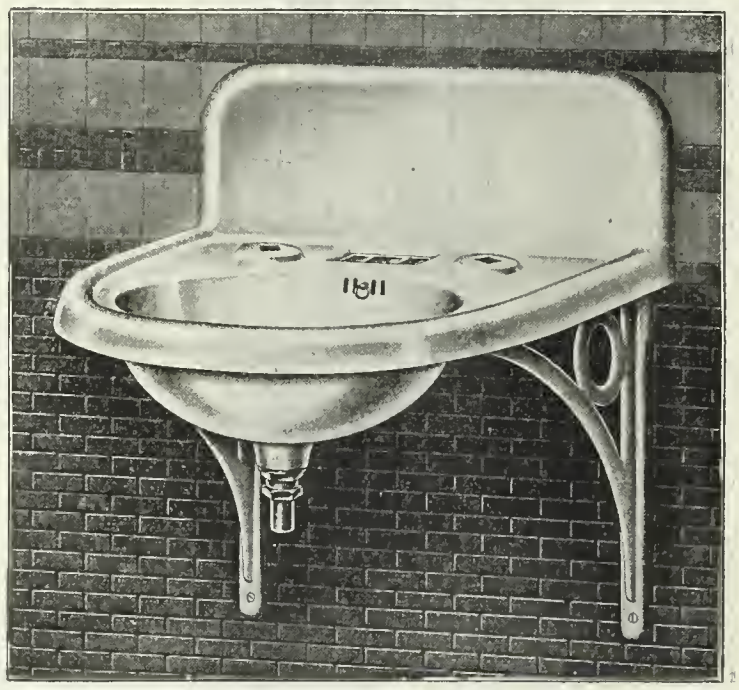
PIPE AND FITTINGS.

There has been a scarcity of pipe and fittings during the year, with prices ruling high as compared with a few years back and continuing very stiff. A new element of strength has been infused into the market by the strike among the steel workers, which is very likely to increase the scarcity of the smaller sizes of pipe and induce still higher prices.

This condition already has had the effect of shutting the steam fitters out of competition for heating smaller buildings, particularly residences, where heretofore they have had an even chance with the hot air furnace trade. It is pointed out by some contractors that the pipe alone for such jobs costs nearly double what it did some time since and with the advance in other fixtures the price which now must be put on such work often makes the consideration of a steam or hot water heating plant out of the question. Contractors, however, are sending in orders freely and seem to be well occupied with work on which they can compete successfully.

Enameled Iron Half-Circle One-Piece Lavatory

The Sanitary Enameling Company, Milwaukee, Wis., have just placed on the market their new line of patent enameled iron goods. An illustration is given herewith of their porcelain enameled iron half-circle one-piece lavatory. It has a countersunk slab and an oval basin. The size of the slab is 18½ x 21 inches; basin, 11 x 14 inches; hight of back, 8 inches; size of roll rim on the back, 1½ inches. This lavatory has a sanitary nickel plated brass soap tray, countersunk into the slab, directly above the overflow, into which all water from the soap drains, leaving the slab and basin perfectly clean. The tray can be easily removed, allowing the overflow chamber to be cleaned, making a thoroughly sanitary article. They have issued an illustrated circular, which gives illustrations of their oblong, half-circle and corner lava-



Enameled Iron Half-Circle One-Piece Lavatory.

tories, as well as of their porcelain enameled iron square kitchen sinks, which are made in 21 sizes.

A New Radiator Catalogue.

The third catalogue of the Fowler Radiator & Mfg. Company, Johnstown, Pa., which has just been issued, is a very fine example of the printer's art. It consists of 20 pages of enameled surface paper printed in two colors and bound in a gray cover bearing a design in lemon color with the address of company and two sections of the Solus radiator in blue. The introduction states that since their last catalogue was issued the capacity of the company's plant has been more than doubled and the equipment and facilities for shipment improved accordingly, while the capacity and quality of their goods are claimed to be second to none. A page is devoted to special instructions designed to avoid errors in ordering. The first half of the catalogue is devoted to the Solus, a three-column radiator of pleasing design made in all the usual hights and for use both as direct and semi-direct radiators. These radiators are furnished curved for bay windows and in all the usual forms. A view of the base for the semi-direct radiators is presented and also a table giving the size of fresh air inlet openings, one base being used for either back or bottom inlet. The last part of the catalogue shows some of the various styles in which the Imperial wall radiator can be furnished. This radiator is of handsome appearance and is designed to take the place of the wall coil so long in use. It is adapted for both steam and hot water work. Special ells are furnished for connecting the Imperial sections in bay windows of different angles.

J. J. KIMBALL, Philmont, N. Y., has the heating contract for the Reformed Church at that place, which is being enlarged and remodeled this season. He uses a Palace Regent Boiler.

The Climax Gasoline Gas Generator.

The Climax gas machine, made by the Climax Nut, Lock & Mfg. Company of St. Louis, has been accepted by the local board of the Underwriters' Association and now has the same privileges in the city as gasoline en-

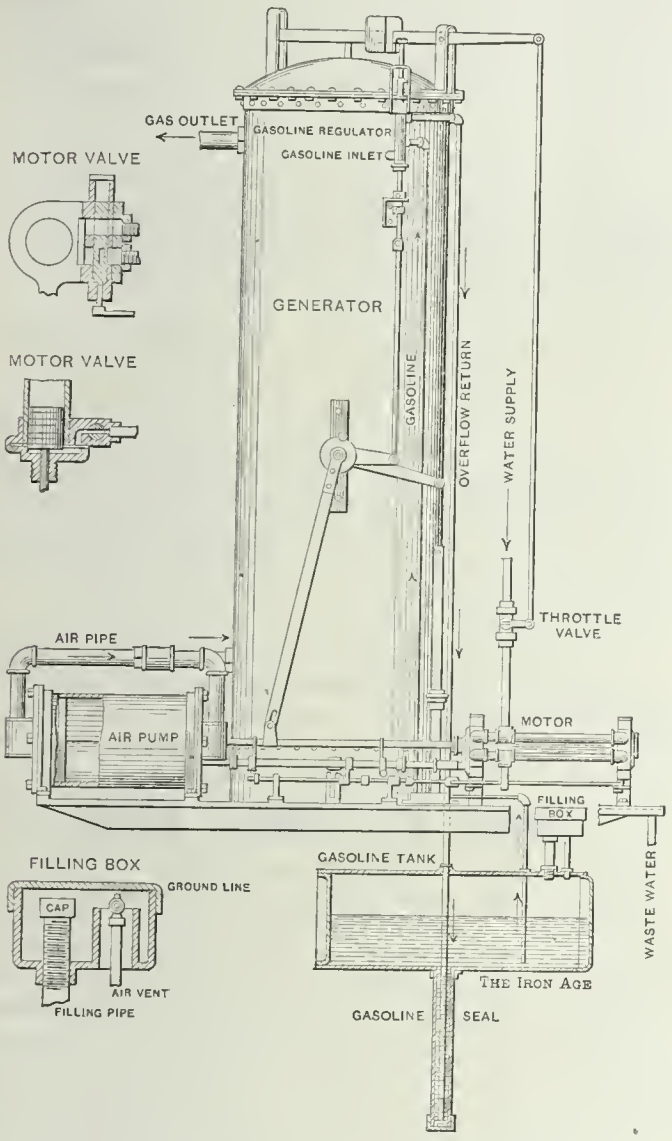


Fig. 1.—The Climax Gasoline Gas Generator.

gines. Heretofore this machine has been very much handicapped owing to the fact that the insurance companies would not permit its use, the objection being raised on account of the tank in which the gasoline was stored, no objection being made to the machine itself.

As will be noted from the accompanying illustrations the machine consists of two pumps, operated by either steam or water motor at ordinary city pressure. One pump takes gasoline from a reservoir and sprays it into the top of a large cylinder filled with excelsior, which serves as an absorbent material and furnishes an evaporating surface. The other pump forces air into the bottom of the cylinder and up through the mass of excelsior, which is just moistened with gasoline from the spray above. The air laden with gasoline vapor is forced to the top of the cylinder. The resultant gas is then piped off in the usual way. The pressure within the evaporating cylinder is automatically controlled and the relative amount of air and gasoline is also adjusted by varying the stroke of the gasoline pump. The arrangement is such that gas is only generated as it is used. Should a 200-light plant be in full operation and all at once 199 of the lamps be turned out the machine would stop until the one lamp left burning had consumed the excess of gas before it automatically started itself again.

Prof. F. S. Nipher of Washington University, St. Louis, has made a thorough test of this machine. In the course of his report he states: "The gasoline was continually pumped from the bottom of the reservoir and the evaporation was always complete. No liquid gasoline could ever be drawn off at the bottom of the evaporating cylinder. The gas was very uniform in quality and the operation of the entire plant was very satisfactory.

"In making the time tests one lamp only was used. This is a disadvantage which is against the plant, as losses from leakage would have been no greater if the plant had been worked to its full capacity of 250 lamps. The candle-power of the lamps was measured against a 16-candle incandescent lamp, which was from time to time standardized by means of English sperm candles. The voltage of this lamp could be very accurately set so that it gave a fixed and known candle-power. The lamps were tried with various mantles, and the candle-power could easily be raised to 275 candles. This was done by increasing the pressure by means of the sliding weight on the lever controlling the water supply. The lamps were usually at 75 candles. By increasing the pressure the candle-power was run up to 385 candles.

"One run lasting for several hours with the plant at its full capacity was made. There was no appreciable lowering of the temperature of the cylinder in which the evaporation takes place. It is found that mantles used in the flame of this gas do not deteriorate with use, as they do with city gas. One mantle was used during the two months' test, and at the close it was in good condition. It was not injured by laying it upon its side upon the hand. It was much more elastic than mantles used in city gas. For this reason such mantles can be used in this gas under a much higher pressure

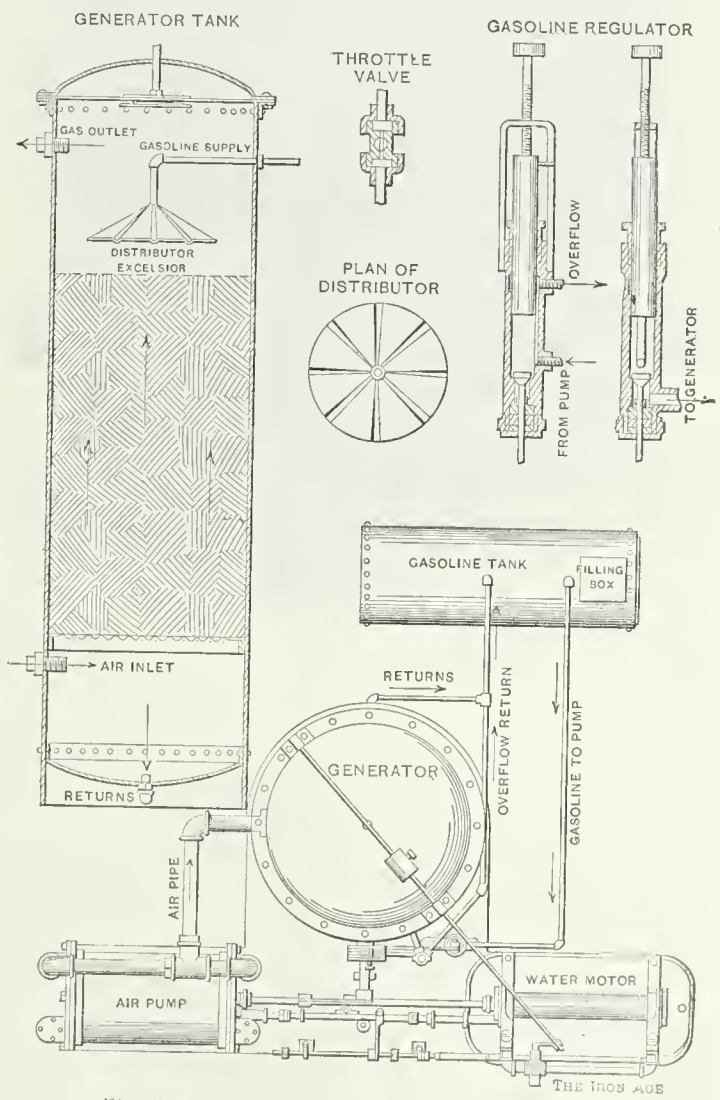

Fig. 2.—The Climax Gasoline Gas Machine.

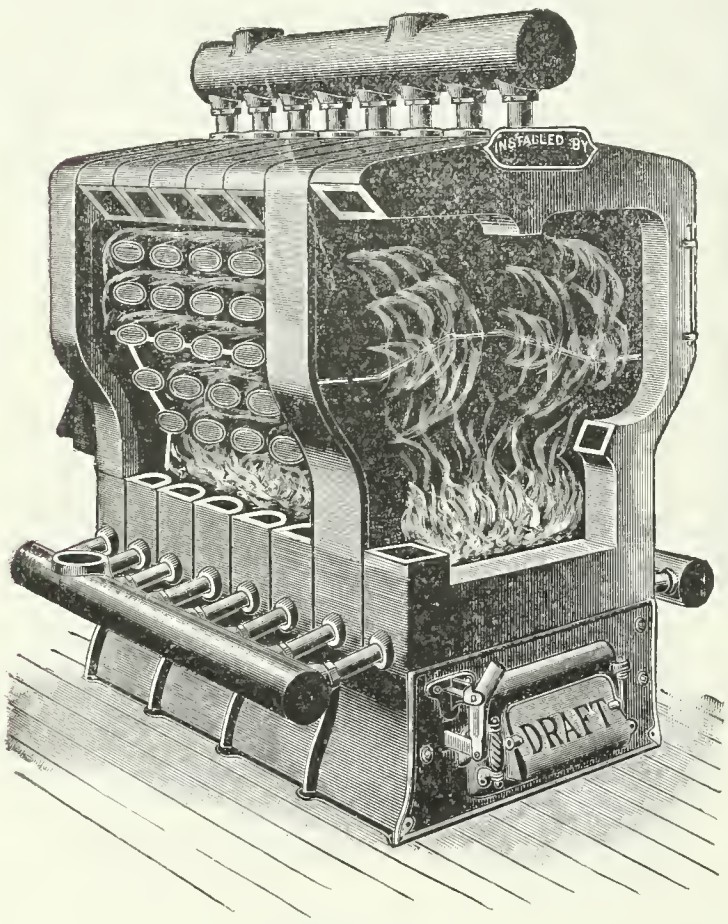
than would be feasible with city gas. When burning a single 75-candle lamp it was found that 1 gallon of gasoline would last 55 hours.

"The gas from this machine was also examined for heating purposes and found to be very satisfactory. The combustion is complete and the heat required for cooking and for use in combustion furnaces can be easily attained."

WILLIAM ARNOT, plumber and steam fitter, of Carthage, N. Y., has just closed a contract for heating Lyman Dunlap's new business block in that city with steam, using a No. 8 Carton C Boiler. Mr. Arnot reports a good trade also at his shop at Thousand Island Park.

The Imico Boiler.

The Illinois Malleable Iron Company, 30-32 West Monroe street, Chicago, Ill., who are well known to the heating trade through their special pipe fittings, are entering upon a more extensive field and have brought out a line of new steam and hot water heaters bearing the name Imico. The boilers are of the vertical sectional type having return flues and the screw nipple is used for connecting the sections. In the construction of the sections the crown sheet is raised to the bottom of the third inclined waterway so that a large fire surface is presented and the upper flues are arranged to secure a fire travel that will economize heat and thoroughly heat the water in the upper part of the boiler or steam chamber. The sections give an increased width to the boiler above the fire chamber and thus provide ample flues and preserve a proper proportion between the fire and the flue surface in the boiler. In the large sizes the sections are made in two halves connected at the top with a sunk



The Imico Boiler.

header from which the flow pipes are taken. A return header is used at each side at the bottom.

A substantial cast iron base made in sections supports the sections and also contains a shaking and dumping grate made open to allow the air to enter the fire freely to promote combustion and with two sets of levers in the large sizes each working one-half of the grate. The boilers are provided with check drafts and the ash doors are made with lift dampers adapted to thermostatic control of the fire so as to maintain an even temperature in a building. The boilers are equipped with grates 24 and 36 inches wide in 18 sizes rated to carry from 750 to 6400 square feet of direct hot water radiation and 475 to 4000 feet of steam radiation, the mains to be counted as radiation. Large doors are provided, those giving access to the flues facilitating the work of cleaning them. A new catalogue has been prepared giving views of the different sections of the boilers, and all the dimensions needed by the steam fitter to prepare for setting them.

The National Pipe Bending Company, New Haven, Conn., manufacturers of National Feed Water Heaters and Coolers and benders of pipe, have awarded the contract for the construction of a two-story brick addition, 100 x 60 feet, to their plant. The building is intended for an addition to the brass and copper coiling department, and will cost about $15,000.

New York City Notes.

The Outing Committee of Manhattan Branch of the Master Plumbers' Association have made final arrangements for the games to be held August 28. These will include a 100 yards dash, fat men's race of 100 yards, limited to those over 195 pounds in weight, a two-hour fishing match, 200 yards swimming match, shooting match, quoit pitching, baseball, football, Celtic rules, tug of war between New York and Brooklyn, and a boat race. Good and substantial prizes will be given by the committee.

* * *

If Wardman Bissert, lately convicted of bribery as a police officer, had stuck to plumbing, which trade he learned in the shops of F. Ehrhart, he would not be in the uncomfortable position he occupies to-day.

* * *

Trade still continues brisk, with trouble in getting certain lines of material.

* * *

Manhattan Branch is making a fight against unlicensed plumbers and has several cases now in court. The Law Committee has divided the city into districts, with sub-committees in each district, to further this work and, upon investigation of the cases submitted, is taking up the prosecution of the offenders.

* * *

Rockaway is the summer resort frequented by the plumbers and enough members can be met on the morning trains coming from there to more than make a quorum at a meeting.

Heating and Plumbing Notes.

The International Heater Company, Utica, N. Y., are distributing a series of six cards, any one of which should make a lasting impression on the prospective purchaser of an Acetylene lighting apparatus. They are issued in the interest of the Drake Acetylene Gas Generator and extend an invitation to get the company's Catalogue D, devoted to this apparatus. The cards are illustrated and tritely worded "A Tank Full of Sunbeams," "Artificial Sunlight," "We Sell Daylight," and "Night Radiante" are a few of the phrases used. They are well calculated to aid those who are canvassing for the sale of Acetylene Generators and should be popular with the trade.

A. D. Naylor & Co., Oakland, Md., have secured the contracts for heating by steam the public school building and the Ravenscroft Block at Oakland, Md. They will use the American Boiler.

The Metal Worker acknowledges the courtesy of an invitation to attend the Rhode Island Master Plumbers' Association outing at Hauterive, East Providence, August 13.

An announcement which will be of especial interest to the plumbers' trade and other users of Chain is that made by the Bridgeport Chain Company, Bridgeport, Conn., of the placing on the market of an Alloyed-Aluminum Chain. The Chain, it is claimed, has the required strength and is finished with a surface resembling silvered brass and will not rust. The price is the same as for brass, and as compared with nickel, for which it is used as a substitute, it is cheaper. Its advantages are obvious for tank chains, wash trays, bathtubs and similar purposes.

James Gallagher, Allentown, Pa., has the contract for heating the hotel of the Hon. H. E. Crilly and will use a No. 703 Bright Idea Steam Boiler. The plant has been designed on the vapor system of steam heating, using the apparatus of the Vapor Steam Heater Company of York, Pa. The order for the Boiler was placed at 111 Fifth avenue, the New York office of the Gurney Heater Mfg. Company of Boston, Mass.

Myers & Mahoney, Portland, Maine, bid $1582 and secured the contract for plumbing a public bath establishment in that city. There will be eleven shower baths and a wash bowl put into the auditorium basement, connected with two boilers each of 500 gallons capacity. There will also be a water closet.

JOSEPH WRIGHT of the firm of Bennett & Wright, dealers in plumbing and steam goods, Toronto, Canada, who has recently returned from a trip abroad, reports the plumbing on the European Continent to be very much behind Canadian plumbing and that of England at least 25 years behind.

THE annual convention of the United Association of Journeymen Plumbers, Gas Fitters, Steam Fitters and Fitters' Helpers of the United States and Canada will be held in Buffalo, N. Y., from August 19 to 25. There are 260 local associations affiliated with the United Association, with a membership of over 15,000. There are locals in Havana, Cuba, Canada and Honolulu, besides those in the United States. The first convention of the association was held in Washington on October 11, 1889, and the body has met annually since then. The arrangements for the Buffalo convention give the delegates plenty of time to visit the exposition. The indications are that the attendance will be much larger than at any previous convention of the association.

W. E. MAHONEY, sanitary and heating engineer, Hartford, Conn., is overhauling the hot water heating of a block on Florence street for Harvey & Lewis. He is also heating with a Princeton Hot Water Heater, made by the J. H. McLain Company, Canton, Ohio, J. M. Ney's block on Asylum street, and has the heating of a house on Vernon street for Dr. Griswold. Among his other contracts is one for overhauling the plumbing in the residence of Amos Whitney on Farmington avenue. Mr. Mahoney has just taken the agency for the Bruce Acetylene Gas Generator.

C. L. GRANT, Hartford, Conn., contractor for artesian wells, has recently completed a 6-inch well for D. F. Burns, which is 263 feet deep, with a supply of 20 gallons per minute; also a well at Goodwin Park 250 feet deep, both of which flow above the surface of the ground. Mr. Grant has just commenced work on a well for St. Andrew's School at Salisbury, and also one for the Aislie Mills, at Hanover, Conn.

THE heating by hot air of the new Spencer Borden, Jr., residence at Interlachen has been let to John Dixon of Fall River, Mass., who will use a Glenwood Furnace made by the Weir Stove Company of Taunton, Mass.

LAW & HAWXHURST, Providence, R. I., are installing independent gas and electric fixtures in two new fire stations on Douglas and Laurel Hill avenues, in that city. They are also placing combination fixtures in the new residence of Daniel Burrows.

"MODERN BATH ROOMS," is the title of a beautifully designed and artistically executed book issued by the Standard Sanitary Mfg. Company, Pittsburgh, Pa., printed on fine enameled paper with embossed cover. It is intended for the use of home builders or those about to remodel their present dwellings. In addition to this it is equally valuable to contractors in enabling them to make quick calculations as to the expense of sanitary equipment.

THE contract for the heating plant at Simpson College, Indianola, has been let to the Cutler Company of West Grand avenue, Des Moines, Iowa.

A LARGE contract has just been secured by E. R. Clark, Hartford, Conn., for Aermotor Wind Mills, Tanks, &c., to erect two 10,000-gallon cypress water tanks on 30-foot galvanized steel towers in connection with the new Tuberculosis Hospital on Cedar Mountain. He has recently set up an Aermotor Wind Mill and 3000-gallon Tank on steel tower at the Retreat Farm on New Britain avenue, Hartford, and a Denney Improved Ericsson Hot Air Pumping Engine and Tank on steel tower at the Retreat Cottage on Cedar Mountain; also a similar plant for the Fenwick Golf Club at Fenwick.

BIDS will be received until August 19 by C. H. Dudley, Hallowell, Maine, for a hot water heating plant for a new dormitory at the Maine Industrial School for Girls.

A LARGE steam heating plant for the Pennsylvania Training School is being erected near Elwyn Station, Media, Pa., from which pipes will be laid in a system of tunnels to the different buildings. This will save the hauling of coal up a steep incline, which has always been a matter of heavy expense. Jos. C. Seal of Media has the contract.

THE Board of Supervisors of Redding, Cal., will receive bids until September 7 for a heating and ventilating system for the High School Building at that place.

THE plant of the Iowa Mfg. Company, Oskaloosa, Iowa, was destroyed by fire on August 15. The loss was partly covered by insurance. The plant will be rebuilt at once and orders for heating and plumbing supplies will be shipped at an early date. The company's Soil Pipe plant is expected to be in partial operation by September 1.

A PLUMBER of Hudson, Mass., who was arrested some time ago on complaint of the Board of Health for not observing the regulations of the board, was discharged by Judge McDonald. The complaint stated that the plumber did not have his plumbing tested. In giving his decision in favor of the defendant, Judge McDonald said that the laws passed by the Legislature did not give Boards of Health power to make rules without authority from the town.

GEORGE W. MINOR, Waterbury, Conn., will shortly move his plumbing and heating business to new quarters in the fine new block which is being erected at the corner of Bank and Grand streets, where he will occupy two stores, as well as the second floor, which will be utilized as a work shop. It will be equipped with an elevator, &c. Mr. Minor has just completed the plumbing of the new residence of C. N. Hall on Buck's Hill and has the heating of a new house in Waterville for George L. Jenks, and the plumbing of a three-family house for C. H. Percy.

L. H. & C. D. TOWNSEND, Oneonta, N. Y., are at work putting two large Carton Boilers in the Court House at Cooperstown, N. Y. A feature of this job that is a little unusual is the carrying steam from this building 100 feet underground to the new County Clerk's Building to heat that also. The firm have also a contract for heating a residence at South Kortright, using a Palace Regent Boiler.

THE NEVIN'S IRON WORKS, Lowville, N. Y., have just finished equipping the County Buildings at that place with a modern steam laundry. This is probably as complete an outfit as can be found in Northern New York They are now at work upon the installation of a heating plant in the Asylum and County Building. This requires two large Carton C Boilers.

THE NATIONAL TUBE COMPANY'S foreign shipments of Iron Pipe, made through Eastern ports during July, aggregated over 4500 tons, as against some 1650 tons shipped in June. The heaviest shipments went to Europe, where nearly 3000 tons were forwarded. The Pipe was sent to Belgium, Holland, Germany, Italy, Denmark, Norway and Great Britain. Australia took over 500 tons, and Mexico, South Africa, South America, India and China received the balance.

THE LUDLOW VALVE MFG. COMPANY, Troy, N. Y., have nearly completed a large extension to the foundry and machine shop, which will increase the present capacity about one-quarter. When finished employment will be given to about 100 more men, increasing the force to about 500 men.

A CONTRACT has been made by the School Board of Camden, Maine, with the Fuller-Warren Company of Boston to put a ventilating system into the Elm Street School House and give also additional heating facilities.

THE Board of Directors of the Rapides Hotel, Alexandria, La., have contracted with C. W. Smart of Carbondale, Ill., to put in a steam heater in the building, to cost $3000.

H. T. ROWE, Reading, Pa., has received the contract to equip ten houses, erected by Deem Bros., with all of the latest improved nickel plumbing and other improvements. Besides the above he is finishing seven houses for Jacob B. Schaeffer and placing the hot water system of heating in 24 houses erected by Rehr & Hinnershitz in Reading.

A CORRESPONDENT at Norfolk, Va., calls attention to an erroneous item printed in these columns last week to the effect that a plumber of that city had lost a suit

bronght by him against the master plumbers of Norfolk on the charge of maintaining a "trust" and applying a boycott to the damage of his business. The suit in question was not brought against the Master Plumbers' Association of Norfolk, but against the local Sheet Metal Workers' Association, the complainant having no grievance against the plumbers. Verdict was rendered in favor of the defendants.

THE summer meeting of the British Institution of Heating and Ventilating Engineers was held at Dublin, Ireland, July 23 and 24, at the home of the president, W. R. Maguire, who is a member of the American Society of Heating and Ventilating Engineers. The president's address was a broad discussion of the field of the heating engineer and what had been done in it by societies. It was the most important paper of the meeting, as some of the technical papers were held over until the next meeting in London. At the dinner given by the Irish members D. M. Nesbit proposed a toast to the American Society of Heating and Ventilating Engineers, which was replied to by R. E. Atkinson. Both of these gentlemen are members of the American society and have many friends in this country.

THE Department of Public Safety of Pittsburgh, Pa., has sent to every architect and plumber in the city a copy of the new law relating to the examination and licensing of plumbers. This law places additional restrictions on the plumbers' trade. Detailed plans of all house work must be filed with the Bureau of Plumbing and House Drainage, and the law specifies, in a general way, the manner in which all work must be done.

IRVING & BATEMAN, Philadelphia, Pa., will install an $18,000 high pressure water tube boiler plant and steam heating and ventilating apparatus at John Stafford's new $250,000 apartment house at Thirteenth and Walnut streets. They will also put in a heating system at the Friends' Meeting House, Main and Coulter streets, Germantown.

New Firms and Changes.

THE GENERAL LIGHTING APPLIANCE COMPANY of St. Louis, Mo., have been incorporated, with a captal stock of $10,000, by Gustav E. Pleus, Alfred E. Einstein, Fred N. Eckerle and Jos. Ross.

L. W. LYON has purchased the entire stock of plumbing materials and tools of G. R. Thorley, Atlantic, Iowa, and, in association with his father, will open a plumbing shop at Fourth and Chestnut streets.

Jos. B. GANTZ has gone into the plumbing business on East Main street, Mt. Joy, Pa.

THE MUTUAL GAS REGULATOR COMPANY have been incorporated, with a capital of $20,000, at Baltimore, Md., for the manufacture of Gas Saving Appliances, by John H. Cann, C. E. Cole, G. W. Myers and others.

THE WHITNEY PLUMBING COMPANY of St. Louis, Mo., have been incorporated with a capital stock of $3000. Henry Whitney holds 3 shares, Arthur E. Whitney 13, Cornelius V. Whitney 13 and John H. Curric 1 share.

Artificial Leather.

United States Consul-General Hughes, at Coburg, Germany, reports that, according to the German press, fibroleum, a new artificial leather, has just been invented by a Frenchman. It consists of pieces of refuse skins and hides, cut exceedingly small, which are put into a vat filled with an intensely alkaline solution. After the mass has become pulpy it is taken out of the vat, placed in a specially constructed machine, and after undergoing treatment therein is again taken out and put through a paper making machine. The resulting paper like substance is cut into large sheets, which are laid one upon another, in lots from 100 to 1000, and put into a hydraulic press to remove all moisture. The article is strong and pliable, and can be pressed or molded into all kinds of shapes and patterns. It is said to make the best kind of wall paper. Decorators who have used this article speak of it in the highest terms.

FLASHINGS.

THE JACKSON IRON & TIN PLATE COMPANY of Clarksburg, W. Va., whose incorporation was recently referred to, have selected a site and completed arrangements to build their plant.

THE CARNAHAN STAMPING & CAN COMPANY of Canton, Ohio, were recently incorporated under the laws of New Jersey with a capital of $300,000, for the purpose of rolling, stamping, tinning and enameling all kinds of metal. The incorporators are Edward A. Langenbach, Millard F. Taylor and Wm. M. Blecker.

THE new tin mill at the plant of the Lalance & Grosjean Mfg. Company, Harrisburg, Pa., has been started up. The plant now contains four tin and one sheet mill. Enough orders are already on hand to keep the entire works busy until January next.

THE HEEKIN CAN COMPANY of Columbus, Ohio, have been incorporated, with a capital of $100,000, to manufacture all kinds of Tin Cans. The company will be operated independently of the combination and will employ about 100 men. They have acquired a factory building 70 x 200 feet at Third and Lock streets, and will equip it with the most improved machinery.

N. M. CARTIER & SONS, Providence, R. I., have a large number of Gravel Roofing contracts on hand, including the Sacred Heart School at Pawtucket, 75 squares; car barns at Plancow and Rochester, N. H., 105 squares each; school house in Rochester, 85 squares; Rhode Island State Armory at Westerly, 40 squares; City Hospital, Newport, 40 squares; Hicks Boiler Works, 85 squares, &c.

A REPORT from Monessen, Pa., says that an addition is to be made to the American Tin Plate Company's plant at that place, which will enlarge the works from 12 to 24 mills.

THE TOWNLEY METAL COMPANY, Walnut and Second streets, Kansas City, Mo., in a little folder they are sending to the trade, call special attention to the T. M. C. Old Style Treble Coated Terne Plates. These Plates are made specially for the concern from high quality American soft steel and are double dipped by hand process, being given a very heavy coating, amounting, it is claimed, to 20 per cent. of the total weight of the Plate. A view of the company's new building is presented on the front page.

ISAAC S. SHREVE. sheet iron and metal worker, Tacony, Philadelphia, Pa., has just completed extensive additions to his store and dwelling. An additional story has been put on the building and other improvements to facilitate business have been made.

THE PROVIDENCE CORNICE COMPANY, Providence, R. I., have the contract for the Cornice work and Skylights on the Brown University Administration Building and the metal work for the two car barns which Maguire & Penniman are building in New Hampshire. They have also the contract for the Sheet Metal work for 20 houses which A. C. J. Leonard is building in Mapleville.

THE POPE TIN PLATE COMPANY of Pittsburgh have applied for a charter under the laws of West Virginia, with a capital of $500,000. The incorporators are Charles E. Pope, Frank B. Pope, E. W. Mudge and John F. Kraft, all of Pittsburgh. The new concern propose to build a Tin Plate plant, but their plans are not yet fully defined.

SOME Pittsburgh capitalists have organized the Carnegie Sheet Steel Company, and will build a plant at that place for the manufacture of Sheets. It will probably be a four-mill plant, and work is to be pushed as fast as possible. The directors of the new company are Robert G. Gillespie, W. H. Skivington, D. R. Torrence, Joseph R. Paull and T. Bissell Everson. Some of these parties are connected with the Carnegie Tube Company, who are building a Tube mill at Carnegie.

C. W. HUNT, for some years with the Youngstown Specialty & Mfg. Company, at Youngstown, Ohio, who were taken over by the American Can Company, has gone to San Francisco, Cal., to take charge of the Western plants of that concern.

Patterns for Ship Ventilating Cowl.

We are in receipt of the following very interesting article on the subject indicated from M. H. Cilley of the Mare Island Navy Yard, California:

I recently read an article in the June number of *Marine Engineering* by Mr. Stanley on "Standardizing Ships' Ventilating Cowls," and having seen nothing in *The Metal Worker* along these lines, I would like to submit what we term a standard cowl for the consideration of those of the readers likely to be interested in such matters. This cowl, I believe, is better proportioned and can be cheaper made than the style referred to as laid down by Mr. Stanley. The method which I use to establish the outline of the cowl is, I believe, original, with the exception possibly of the radius of the throat, which is determined in exactly the same way as by Mr. Stanley. This method is explained in connection with Fig. 1 as follows:

We start by erecting a line perpendicular to the base line from point A, extending it indefinitely. The diameter of the base, assuming it to be 14 inches, is marked off to the right of this line, establishing point B. The radius of the throat is next determined by taking one-fourth the diameter of the base, or 3½ inches, which is marked off on the base line to the right from point B to point C. From C erect a line with an inclination to the right of 82 degrees from the base line. With one leg of the dividers at C and with radius 3½ inches, or B C, draw the throat line until it intersects the inclined line at point D. The mouth of the cowl is laid off on the inclined line from point D, and is found by taking twice the diameter of the base, which gives us 28 inches. With this distance from point D we establish point E. We are now ready to draw the radius of the back, which is taken as one and one-half times the diameter of the base, in this case 21 inches. With this radius and one leg of the dividers at point E, the other should be so located that when the arc defining the back is drawn the vertical line, erected from the base line at point A, will be tangent to it. We now have the outline of the cowl complete.

This method, in the form of a formula, assuming B to represent base; T, throat; M, mouth, and R, radius of back, would read: B = 14 inches; T = ¼ B, or 3½ inches; M = 2 B, or 28 inches; R = 1½ B, or 21 inches. The back and throat lines are now divided into four equal parts and these points connected by lines, as in Fig. 2, thus dividing the surface into four sections, each section of which is developed by triangulation. The development of one section will serve to show the method employed in all.

To avoid confusion of lines we will transfer the bottom section, as in Fig. 3, where A G and 1 7 represent the section. Bisect A G and 1 7, and with these points as centers draw a semicircle on each side, which will represent a half plan of each end of the section. Divide these semicircles into a convenient number of equal parts, in this case six. Project these points to the elevation by lines in the semicircle A G. Letter these lines A, B, C, &c. Now to avoid confusion in the semicircle 1 7 number the lines 1, 2, 3, &c. Divide the elevation into triangles by connecting 1 and B, B and 2, 2 and C, C and 3, 3 and D, and so on, until all the points have been connected. Beginning with the line 1 A, letter and number each line, as B′ 2′, C′ 3′, D′ 4′, &c. At any convenient place draw a straight line and erect a line perpendicular to it. Take the length of the line B′ and transfer it to this line, as shown, and likewise take the line B in the plan and transfer it to the base line, as in Fig. 4. By connecting these two points we now have a right angled triangle, and the hypotenuse, or line B², is the true length of B′ in elevation. We now erect another perpendicular line and transfer the length of the line marked 2′ to it, as shown. Take the length of the line 2 in plan of small end and transfer it to line B in plan of large end. Take the difference in length of these two lines and mark it off on the base line from the intersection of the perpendicular line, as at 2 B. Connect these two points and we have another right angled triangle, of which the hypotenuse, or line 2², is the true

Fig. 1.—Elevation in Outline.

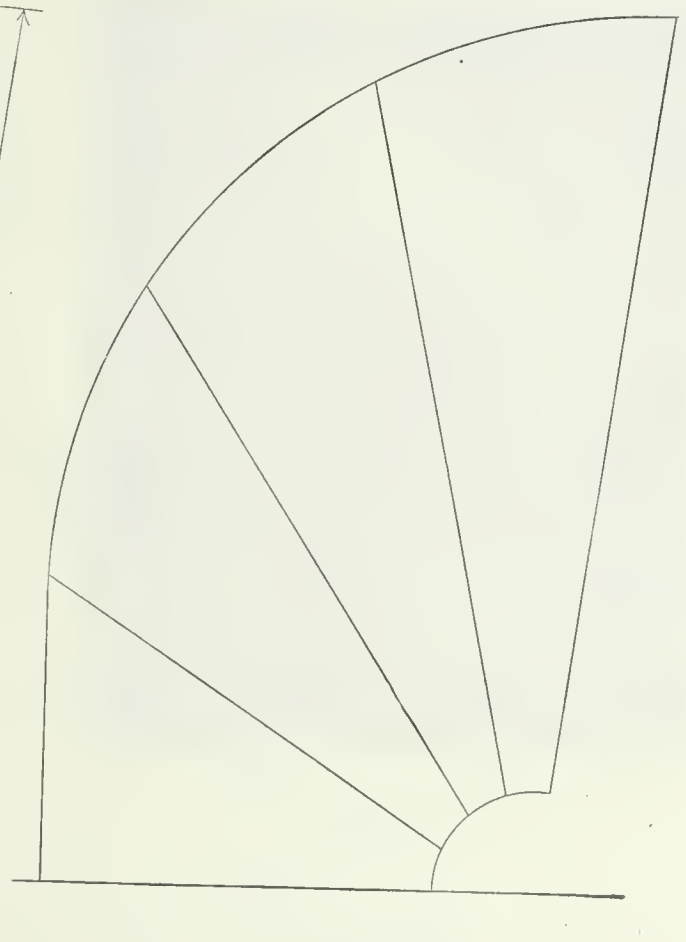


Fig. 2.—Showing Divisions of Cowl.

PATTERNS FOR SHIP VENTILATING COWL.

length of line 2′ in elevatiou. This process is now repeated by erecting another perpendicular and transferring the leugth of line C′ to it, and taking the difference in length of lines 2 and C and transferring it to the base line as before. The points beiug connected, we have another right angled triangle, the hypotenuse, or C^2, beiug the true length of C′ iu elevation.

This process is repeated until all the true lengths of the different triangles have been found, after which we are ready to proceed with the development of the pattern. Accordingly, in any convenient place, draw a liue of indefinite leugth. On this line lay off the distance from 1 to A in elevation, this being the true length of the center line. Next, with the poiut A as center and

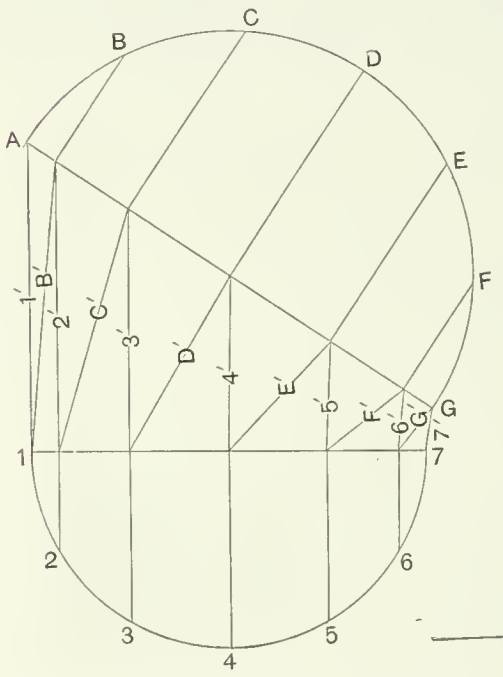

Fig. 3.—Development of One Section.

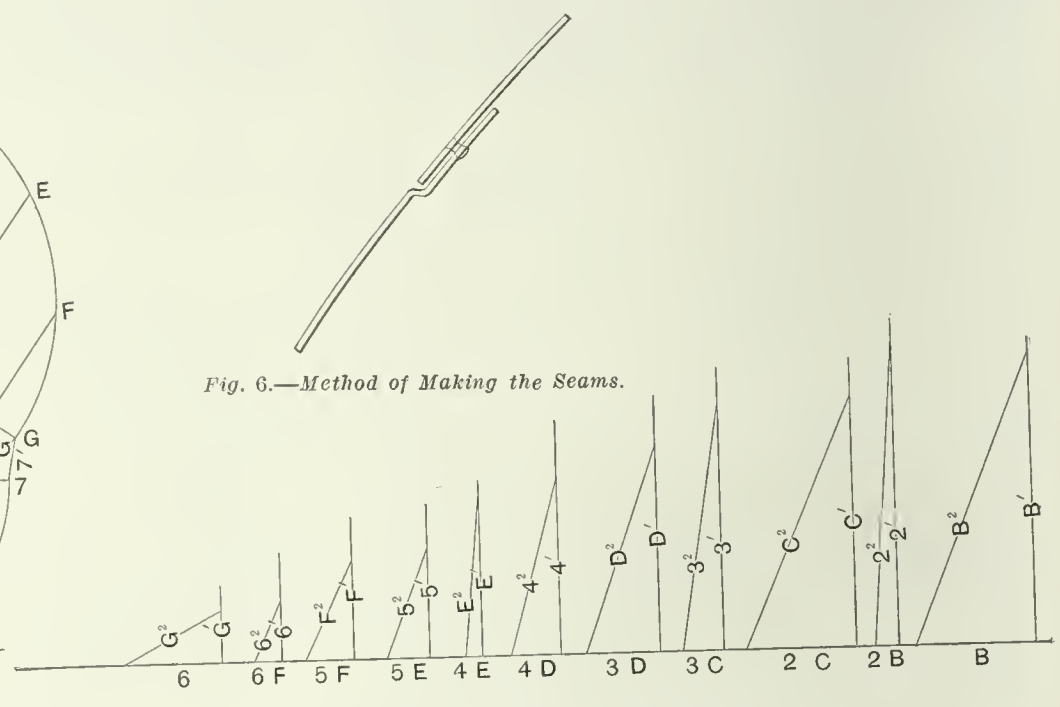

Fig. 4.—Determining Lengths of Lines in the Elevation.

the top of one section will be smaller than the bottom of the next, so as to allow them to be assembled without too much stretching.

The cowls we have made have been raised with a raising hammer until the center line at the back formed a true arc, gradually diminishing each side of the center. We also countersink the rivets and make the seams as shown at Fig. 6. The seam is soldered on the outside and the surplus solder scraped off, which leaves the cowl perfectly smooth outside, while the three seams iuside have a tendency to reinforce and stiffen the cowl. It is also further reinforced by finishing around the mouth with a suitable sized bead iron, the rivets being countersunk to conform to the rest of the cowl.

Fig. 6.—Method of Making the Seams.

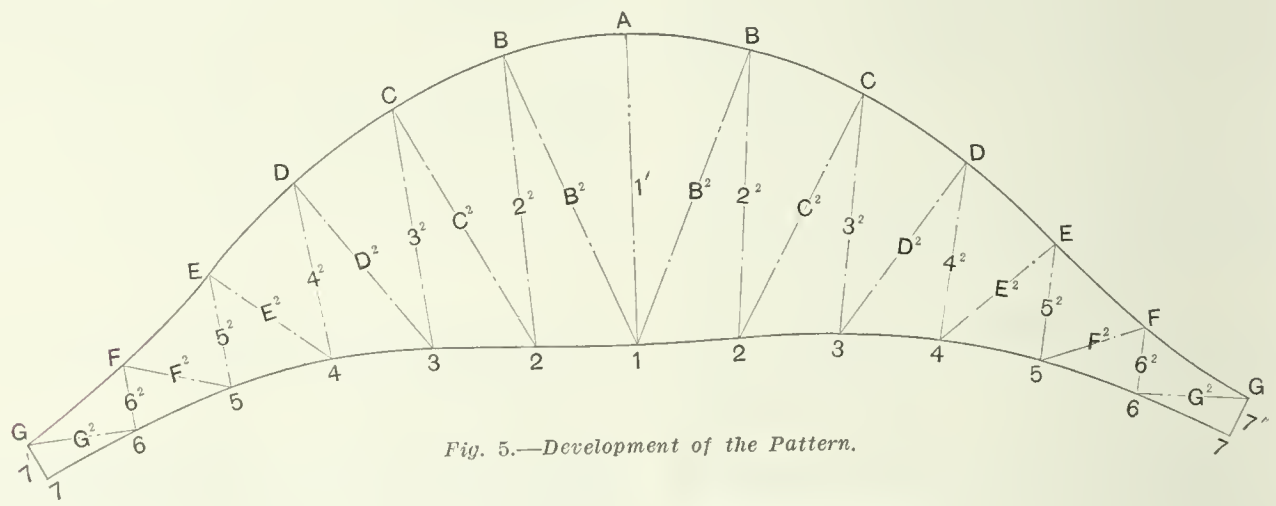

Fig. 5.—Development of the Pattern.

PATTERNS FOR SHIP VENTILATING COWL.

with a radius equal to one of the spacings in the large semicircle, or half plan of top, as A to B, describe an arc of indefinite length. Then, with a radius equal to the length of the hypotenuse of the triangle that represents the true length of the line B′, as at B^2, and with 1 as center, intersect the arc, as at B. Then, with 1 as center and radius equal to 1 2 in plan, describe another arc and intersect, as at 2, with a radius equal to the hypotenuse of the next triangle, using B as center. This process is repeated until the true lengths of all the triangles have been used, finishing with the liue G 7 of elevation, which is showu in its true length in that place. A liue traced through these points gives us the development of the required pattern, minus the necessary laps.

This line is termed the rivet line, the necessary holes being laid off on it. Considerable care is necessary in the spacing of these holes iu the different patterns, also in transferring the different sections, due allowance being made for the thickness of material. Consequently

The material which we use is galvanized steel. We find this to be much superior in regard to lasting qualities to planished iron or black steel.

I also inclose two photographs, Figs. 7 and 8, showing an exceptionally large cowl that we made some time ago, the diameter of the base being 37 inches, and consequently the mouth was 74 inches. Owing to our having no sheets larger than 36 x 96 inches we departed from our rule of four pieces, as will be noticed from an inspection of the pictures.

The New Castle Stamping Company, New Castle, Pa., recently organized, have selected a site on which to build their factory. The building will include an enameling department 80 x 300 feet, a machine shop and stamping department 80 x 206 feet and a pickling house 50 x 75 feet; also a boiler house and a number of small buildings.

RETAIL STOVE AND SHEET METAL WORKERS' ASSOCIATION OF NORFOLK, VA.

In our issue of June 15, 1901, reference was made to a suit that had been filed in Norfolk, Va., by W. J. Hickey of that city, doing busiuess as the Norfolk Plumbing & Tinning Company, against the Retail Stove and Sheet Metal Workers' Association of Norfolk, Portsmouth aud Berkly, Va., for $20,000 damages, on the alleged ground that the firms composing the association had declared a boycott against him and had injured his business by agreeing not to sell materials to him exeept at a prohibitive price fixed by themselves. This case was decided on July 30 by Judge Martin, sitting in the Law and Chancery Court of Norfolk, in favor of the defendants.

In this connection we print the following interesting communicatiou regarding the Retail Stove and Sheet Metal Workers' Association of Norfolk, Portsmouth and Berkly, received from W. H. Barnard & Co. of Norfolk:

This association was formed two years ago, has steadily grown ever since and has become very strong. It was orgauized, as its name indicates, in the interest of the retail stove and sheet metal workers, and only those conducting a sheet metal business are eligible to membership. Among some of its advantages are the following: No member of the association is allowed to do a job for auy geueral contractor without requiring a bond for the payment of his coutract; or, in the absence of such bond, he must notify the owner of the building, in writing, before he commences his work, that he shall hold him responsible for the amount of his contract. The result of this feature has been that not a dollar has been lost to any member of the associatiou on account of the failure or misfortune of the general contractor.

Another good feature of this association is a rule that the members shall not put up any furnaces, ranges, corniice work, tin plate or any other material furnished by the owner, or not furnished by themselves. They also have a rule not to employ any apprentice boy who has worked for any other member of the association who cannot show a written discharge from his previous employer. Many similar good rules are observed, but one of the most happy results is that this organizatiou has discouraged and almost completely put a stop to the practice of itinerant tinners doing job work on their own account. The members are brought together in close, friendly relations, and those who were two years ago viciously and ruinously competing with each other are to-day co-operating with each other. A condition now exists of co-operation instead of competition. Workmen who have habitually loafed aud cheated their employers at their sweet will cannot now do so with impunity.

That this association has accomplished these results without the aid of a natioual association is remarkable, and the members are to be cougratulated that they have stood the fire of a vigorous lawsuit and come out triumphant. We have all over the United States State and natioual associations of hardware dealers and master plumbers and kindred associations, but this is the only association of master sheet metal workers that has come to our notice. That such should be the case is to be regretted.

The Norfolk association is desirous of extendiug its orgauization to other cities throughout the State, and we believe the principle ought to be extended throughout the country. A national society of master sheet metal workers snould certainly exist. It is a painful fact that the credit of this character of business has sadly degenerated in years past, and it is a strong probability that the extension of such associatious as this at Norfolk would uot only strengthen the credit of the members of the trade, but would meet the approval and indorsement of the mauufacturers and jobbers from whom they get their supplies.

M. W. Bohn, the secretary of the Norfolk, Va., association, will cheerfully furnish information in reference to the workiug of the association.

Fig. 7.—Front View of Large Cowl.

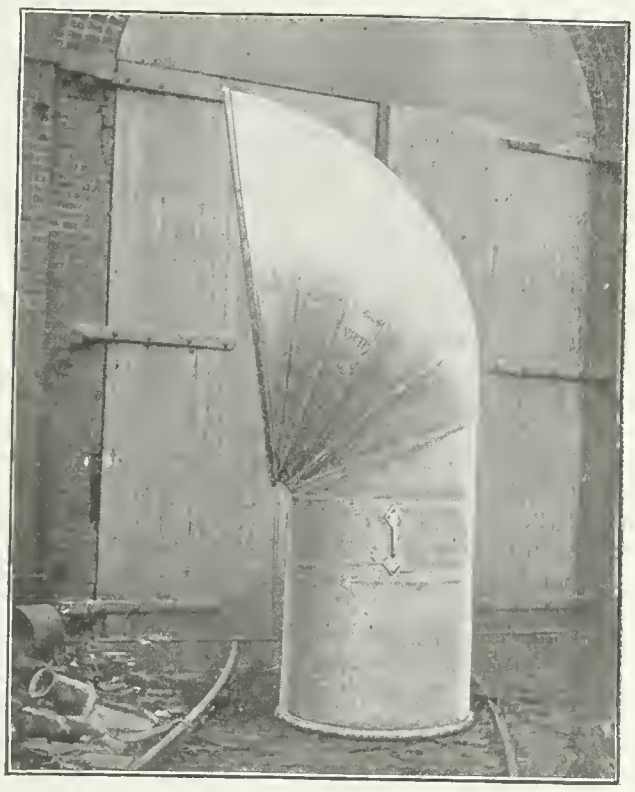

Fig. 8.—Side View of Large Cowl.

PATTERNS FOR SHIP VENTILATING COWL.

It is reported that Pittsburgh capitalists have organized the Carnegie Sheet Steel Company and will build a plant at that place for the maunfacture of Sheets. It will probably be a four-mill plant. The directors of the new company are Robert G. Gillespie, W. H. Skivington, D. R. Torrence, Joseph R. Paull aud T. Bissell Everson. Some of these parties are connected with the Carnegie Tube Company, recently organized, who are building a Tube mill at Carnegie.

We are in receipt of a copy of a paper entitled "A Course of Instruction in Mechanical Drawing," by L. S. Randolph, M.E., professor of mechanical engineering at the Virginia Agricultural and Mechanical College, Blacksburg, Va., preseuted at the fourteenth anuual conveution of the Association of American Agricultural Colleges and Experiment Stations. In his paper Professor Randolph gives an interesting statement of the methods adopted by him in conducting the important department of mechanical drawing instruction in the institution with which he is connected.

The Steel Workers' Strike.

The general strike order issued by President Shaffer of the Amalgamated Association went into effect last Saturday night. But the result was not equal to the expectations expressed last week by the leaders of the association. Not more than half a dozen plants are now idle that were at work before the order was issued. The number of men who have obeyed the latest edict of Mr. Shaffer is comparatively small, and the prediction that the operations of the United States Steel Corporation would be fatally crippled by the going out of a majority of the workmen has not been justified by the event. The fact that most of the Amalgamated employees of the Federal Steel Company in the Chicago and Milwaukee districts decided by a large vote to continue at work, in spite of strong pressure to get them to go out, is a severe blow to the interests of the strikers.

The National Tube Company have been crippled to some extent by the shut down of two or three of their skelp mills and also by the closing down of the Riverside Tube plant at Wheeling, W. Va. All the other tube mills of the National Tube Company, however, are unorganized and are therefore not affected by the strike, and are running to full capacity.

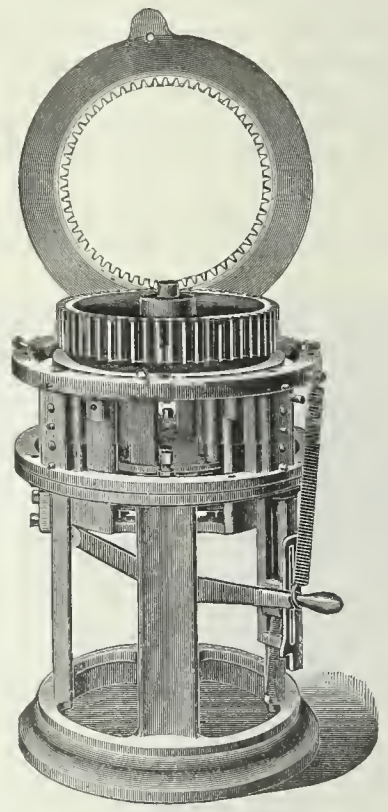
The situation in the sheet mills has not undergone material change since last week. All the nonunion mills of the American Sheet Steel Company in the Kiskiminetas Valley—namely, Leechburg, Saltsburg, Vandergrift, Old Meadow, Apollo, Scottdale and Hyde Park—are running to full capacity, and enable the American Sheet Steel Company, in connection with the Wellsville works, to turn out fully 65 per cent. of their capacity in sheets. There has been some talk of the Wood works at McKeesport being dismantled and taken to Vandergrift, and while this may have been contemplated, it is believed the strike will be ended in a short time, making such a step unnecessary. It is a fact, however, that the officials of the United States Steel Corporation are much chagrined at the attitude assumed by the city officials in McKeesport since the strike started, and will not likely extend their works in that city until they have more encouragement to do so. The Chartiers Works of the American Sheet Steel Company, at Carnegie, were opened on Tuesday, and the men given an opportunity to go back to work, which they refused, and the mill will be removed to Vandergrift.

No attempt has yet been made by the American Tin Plate Company to start their mills, all of which are idle with the exception of the Monessen works. This plant continues to run full, and with so much success that the officials of the American Tin Plate Company have about decided to very much enlarge the capacity of the plant, and in addition will likely remove several other plants to Monessen. One of the plants that is likely to be taken there is the Beaver works at Lisbon, Ohio. The American Tin Plate Company are importing a large quantity of black plate from the other side, which will be distributed among three or four works and dipped. The members of the International Protective Association of Tin Plate Workers are to vote this week on whether they will work up this black plate, and the impression is they will agree to do so. There is not the best of feeling between the Association of Tin Plate Workers and the Amalgamated Association, and it is not believed the former will go out of its way to serve the interests of the latter. The Crescent plant of the American Tin Plate Company, at Cleveland, resumed operations as a nonunion mill, one-half the trains being put into operation.

The duration of the strike is still a matter of conjecture. Late advices from Pittsburgh seem to indicate that a strong feeling is growing among some of the leaders of the Amalgamated Association that efforts should be made to end it, but President Shaffer denies that a settlement is near. Regardless of how long the strike lasts, however, it can be set down as a certainty that the United States Steel Corporation will refuse to recognize as an organization the men who have violated their contracts. This means that in the future all the mills of the American Steel Hoop Company, the American Sheet Steel Company and the American Tin Plate Company will likely be run with nonunion men.

The Standard Round Molding Machine.

In the standard round molding machine made by the Wm. H. Eddy Company of Worcester, Mass., the stripping frame is worked by a lever which is operated by

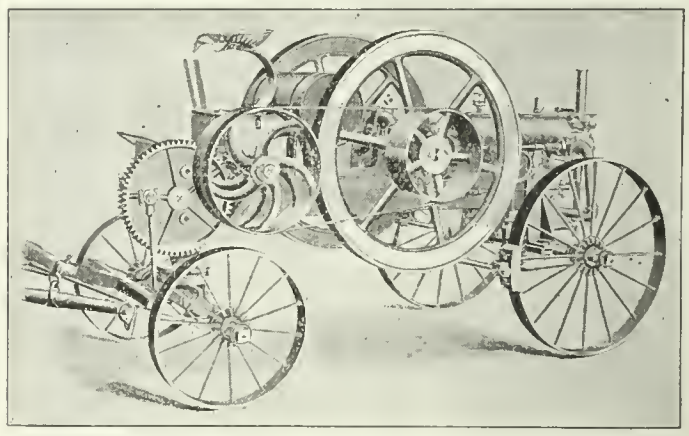


The Standard Round Molding Machine.

the foot. A screw adjustment is provided for the drop and adjustment of the pattern in the stripping plate. These machines are built in sizes from 12 inches and upward.

The Sterling Portable Gasoline Engine with Pumping Gears.

A portable gasoline engine having a pumping jack mounted on the front end of the frame has been designed by the Charter Gas Engine Company of Sterling, Ill. The gear is operated by a belt running from the pulley on the engine shaft to the tight and loose pulleys on the pinion shaft. This attachment is intended for



The Sterling Portable Gasoline Engine with Pumping Gears.

use on large ranches where the wells are located at different points on the ranch. Instead of having a pumping jack at each well, the engine is hauled to the wells, the pump rod connected to the working head in the well, and as much water pumped as desired, when the outfit is disconnected and moved to another well. By throwing off the pump belt the engine can be used in the ordinary way wherever power is demanded.

THE LETTER BOX.

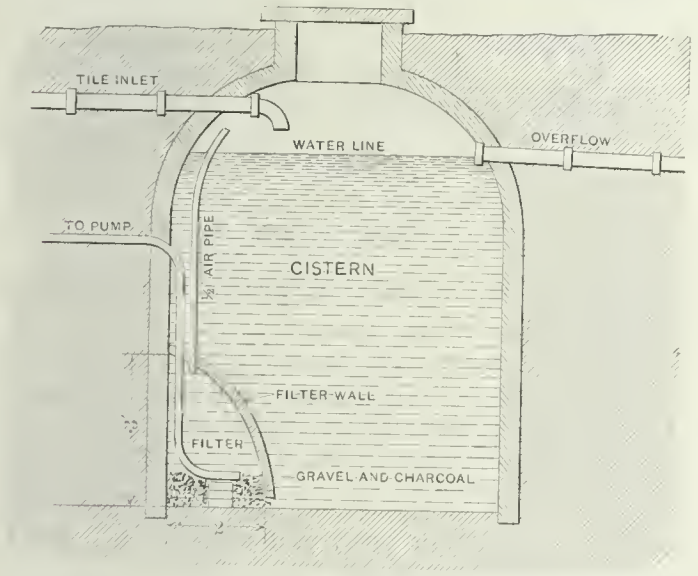
Inquiries in regard to practical questions of general interest are invited, in reply to which we shall be glad to receive suggestions and information from our readers.

Correspondents are requested in all cases to give their names and addresses, which will not, however, be published or disclosed without their consent.

CISTERN FILTER.

From A. H. Phillips, Glen Cove, L. I.—In answer to the inquiry of "E. L. S.," in *The Metal Worker* of July 20, I give herewith a sketch of a kind of cistern filter which I have found very satisfactory in a number of years' experience. Although I have used it in connection with round cisterns, it can readily be used in connection with filters of other shapes. The cistern should be built of the desired size and coated on the inside with cement mortar ½ inch thick. The cistern should be allowed to stand until it is hard and dry enough to hold a man's weight and then some short boards should be placed in the bottom to stand on.

Now is the time to start the filter. It is best when made to occupy but a small section of a round cistern and to assume a beehive shape. After a few courses of brick have been laid, place three bricks in the middle of the filter chamber for the pump pipe to rest on; then take a pail of gravel and a pail of charcoal broken about the size of black walnuts and pour it into the chamber



Cistern Filter.

and spread it around so that the top of the bricks is above the charcoal and gravel. Place the perforated end of the pump pipe on the brick, as shown in the cut, and continue the filter wall, arching it over through the side wall of the cistern. Don't coat the filter chamber when finished with the cement mortar. The brick will filter the water. Have the pump pipe pass out of the cistern wall just before the arch is turned to form the top. The inlet pipe and the outlet pipe should connect with the cistern near the crown of the arch and the inlet pipe should always be a few inches higher than the outlet pipe. Tile pipe should be used for both of these connections so that they can be cemented securely to the wall. The connections in the tile pipe should be calked with oakum to prevent the cement used in filling the hub from entering the pipe and obstructing it. There is an advantage in having an air pipe of ½-inch galvanized iron or lead pipe run from the top of the filter chamber to the point above the water line in the cistern and having the upper end protected by a wire guard.

The filter chamber should extend in from the cement wall about 2 feet at the widest point, and should extend up so as to connect with the side wall of the cistern about 3 feet above the bottom. Galvanized pipe is best for the pump pipe. If lead pipe is used care should be taken in making the bend, and also in protecting the pipe against sagging from its own weight. The pipe should also be filled with sand so that it will not flatten out at the point where it is bent.

Such a filter arrangement with gravel and charcoal and air pipe will keep the water in the cistern pure and sweet. The cistern should be made with a mouth at the top large enough so that a man can readily enter. The opening should be covered with a flat stone laid in cement. This will enable the cistern to be cleaned. In the course of four or five years the filter wall should be taken down and cleaned carefully and new charcoal placed in it after the chamber and bricks have been thoroughly cleaned.

From F. F., Enterprise, Fla.—In answer to the inquiry of "E. L. S." in *The Metal Worker* of July 20, I give the following description of the filter I have built in my cistern and which works splendidly. I built on the bottom of the cistern a square chamber 24 inches each way and 18 inches high, using coarse, soft brick and mortar. I laid strips of 1½ x ¼ inch iron across the top to support the top of the chamber. The pump pipe was run into the chamber and cemented tight, so that the water had to filter through the bricks to reach it. The water that comes from the pump is very clear. It is a simple matter to clean off the outside of this filter chamber occasionally, and should the bricks get very foul it would be a small job to make the chamber again of new bricks. This has not been necessary as yet with mine, but I have cleaned the cistern frequently on the principle that cleanliness is a virtue.

PAINT THE ROOF BEFORE IT RUSTS.

From M. M. C., Millbrook, N. Y.—Several years ago I saw something in *The Metal Worker* about not allowing a tin roof to rust before painting it, and having mislaid the copy would be glad to see something on this subject again.

Answer.—The probable reason many tin roofs are allowed to rust is because the paint on being applied holds better than if an attempt was made to paint the roof as soon as completed. A little time also allows the rosin used in soldering to crack off and permit the paint, when applied, to cover the tin in all places. In coating the plates with tin, palm oil has been largely used as a flux, and as long as this grease is on the surface the paint for the protection of the tin does not get down to the material and is likely to peel off or readily scrape off. A correspondent, in a former issue, states that it is a simple matter to give the roof a wash with turpentine, which will remove all the greasy substance. If the bulk of the rosin with which the roof has been soldered is scraped off previous to this turpentine wash there will not be enough rosin left to interfere with the paint adhering directly to the metal.

Different experienced men make the following remarks about allowing a new tin roof to rust. One says: To allow a new tin roof to become rusty before being painted is like closing up the bunghole of a barrel while the liquid is flowing off from the spigot. A rough surface secures the paint better but gives the tin a start toward rusting and the rust will sooner or later destroy it." Another says: "After an experience of 30 years, my advice in the matter of roof painting is, to begin with, a new roof should not be allowed to accumulate any rust before painting." Another expert points out that if a layer of hydrated oxide (ordinary rust) be allowed to form, the successive coats of paint will peel off, their separation from the tin being merely a question of time, during which time the rust has been spreading under the paint. From this it may be readily inferred that an iron surface, even though coated with tin, should not be left exposed to the weather until rust has formed before painting, because, once started, its action is liable to continue even though paint be applied.

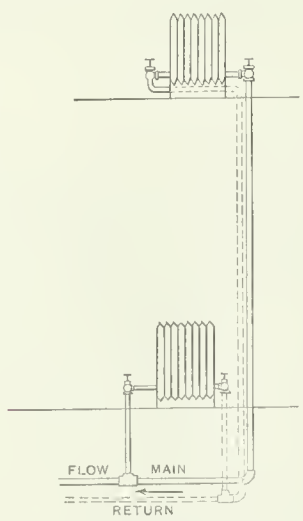
Regarding the time that should elapse after a tin roof is laid before it is painted, much depends on circumstances. If the tin is greasy from the palm oil flux so as to render the paint liable to peel off, the roof may be left exposed until the oil has been washed off, although some roofers recommend that as soon as a roof is finished the rosin should be removed and the surface should be washed with turpentine, benzine or an alkali, to remove all traces of the palm oil or other grease. Another method is to sprinkle sand over the roof and sweep it off with

a broom. In localities near the sea coast, where coal is largely used for fuel, tin plate exposed to the weather is soon corroded, and when the cheaper grades of roofing plates are used the surface soon becomes covered with a rust. Consequently it is advisable to clean the roof so that a good paint will adhere and paint it as soon as possible.

An expert roofer points out that the value of a paint is in its oil, and economy consists in purchasing a good oil paint, the best and purest to be obtained. He says that the use of 15 to 20 per cent. of a pure fish oil, free from any adulteration with kerosene or coal oil, will not detract from the value of a pure linseed oil. The principal reason for the adulteration is that the more plastic the first coat is the more durable, but the greater the tendency to crack the second coat. The weather coat should always be more flexible, containing more non-drying oil. But a man of good judgment will discriminate. The most flexible, in the true sense, of good oils is boiled oil, but if too thick it will stand mixing with raw oil or with turpentine. As a priming coat, such oil mixed with a little red lead, if not put on too thick, will stick tight to the roof. A little boiled oil thoroughly mixed with raw oil increases its elasticity but probably increases the chances that the paint will wrinkle and curl a little, although if care be taken in mixing and in using it any such effect should be so small as to be imperceptible. There is a strong reason for using more or less of boiled oil—that is, if the pigment, particularly lead pigment, will the more thoroughly unite with and harden the oil.

HOW SHOULD RADIATOR BE CONNECTED?

From V. I. C., Brooklyn, N. Y.—In answer to the inquiry of "I. R." in *The Metal Worker* of August 10, I would advise against the use of a twin ell. I think that the hottest water would "short circuit" through one or the other of the radiators. A far better way to connect the radiators is shown in the accompanying sketch. The supply to the first-floor radiator is taken off the floor main before the end is reached in order to insure a supply of hot water entering it. If a twin ell was used on the end of the main the hottest water would go to the highest point, which is the radiator on the second floor, and this would probably interfere with the heating of the radiator on the first floor. The method of connecting



How Should Radiator Be Connected?

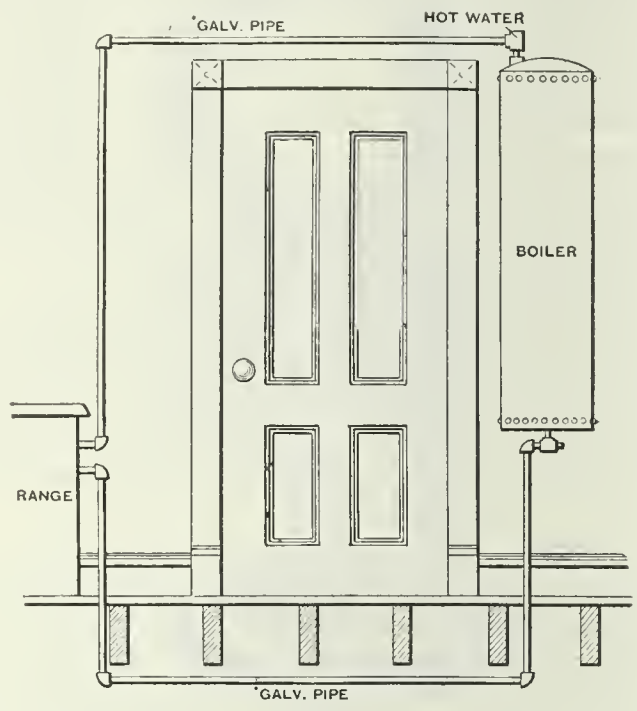
radiators used under such conditions by most of the steam fitters of my acquaintance is as shown in the sketch. There may be other equally good methods, and I hope those who use them will show them up.

SETTING HORIZONTAL HOT WATER TANKS.

From H. and C., Pittsfield, Maine.—I would like to know the best way to set a 300-gallon horizontal hot water tank in a cellar. I have set it on brick piers and am told that this is not right. I would like to know what is right, and wish that the readers of *The Metal Worker* would give me some information on the subject.

CONNECTING RANGE AND BOILER WITH DOOR BETWEEN.

From C. R. L., Rumford Falls, Maine.—I have a customer who wishes me to put the plumbing in his house, and wants the range boiler in the bathroom, which is on the same floor as range. The doors, however, come so that one pipe must be run up over the door and the other under the floor. I do not know how



Connecting Range and Boiler with Door Between.

to pipe it so that circulation will be sure. Some say it cannot be done.

Answer.—A contributor to a former issue of *The Metal Worker* furnished the sketch shown herewith in reply to a similar inquiry, saying: "I believe boilers were connected in this manner long before the 'side coupling' was used on the boiler. If 1-inch pipe is used and the upper pipe is graded to let air escape to the hot water service pipe, there will be no trouble about the circulation. It would be well to have a tee for a draw off cock where one of the ells is used in the cellar. If the cellar is very cold, the supply of hot water may be reduced or the pipe frozen if it is not wrapped or covered to prevent loss of heat. Such a connection will furnish hot water very quickly without the delay of heating all the water in the boiler."

CAN THE RUST BE AVOIDED?

From E. W., New York.—I have a rod iron testing pot; to heat the water by steam. When I do not work at it and leave the water in it for half an hour, the pot is full of rust. I would like a remedy for it.

Note.—We have printed our correspondent's inquiry as we received it, hoping that some one may understand his difficulty and be able to suggest a remedy. Perhaps, however, we have misread his letter, as we do not know what he means by a "rod iron testing pot to heat water by steam."

WHO MAKES REGISTER CLIPS?

From T. R. Freeman, Sioux Falls, S. D.—I would like to learn where I can get little iron clips to hold registers in place. They screw on the outside of the register into the border.

The fire loss of the United States for July again showed a heavy total. According to the New York *Journal of Commerce* the aggregate loss amounted to $15,740,000, which is abnormally large for July. The June loss was $9,500,000. The total for the seven months ended June 30 has reached $104,675,000.

TRADE REPORT.

MARKET SUMMARY.

Pig Tin is dull and ½c. lower in price.

Copper continues quiet and without change.

Pig Lead is unchanged.

Spelter is dull and weak.

Hallett's Antimony is ¼c. lower in price.

Nickel remains firm and scarce.

Aluminum is in active demand at former prices.

Tin Plates are scarce and prices high and stiffening.

Sheets are in active demand and scarce supply, with prices nominal.

Planished Iron Sheets are becoming scarce and prices are advancing.

Sheet Copper is in good demand and firm in price.

Pig Iron is weaker in some quarters, but without notable change.

Hardware prices are well maintained and the volume of trade is good.

Plumbers' Supplies are still moving in good volume and are strong in price.

Wrought Iron Pipe has been advanced this week by jobbers from 12½ to 20 per cent.

Malleable Fittings were marked up 10 per cent.

Plumbers' Brass Work is in sharp demand, with prices very firm.

Enameled Bathtubs are still very scarce.

Plumbers' Wood Work of good quality is also very scarce and prices strong.

Radiation has been advanced 10 per cent. in price.

Wire Nails are moving in good volume, with prices unchanged.

Wire continues in active demand and is firm in price.

Mixed Paints have been advanced 10c. per gallon.

Linseed Oil has declined 10c. per gallon.

Spirits Turpentine is ½c. a gallon lower.

METAL MARKET.

NEW YORK, August 16, 1901.

Pig Tin.—During the entire week business has been dull. Spot Tin has sold in a small way only, and prices have declined about ½c., the market closing weak and tame. Jobbers quote Straits Pig in small lots at 27¾c. to 28c. per lb. Large arrivals will be due here next week, and this, with the falling off in consumption due to the idleness of the Tin Plate mills, serves to depress the market.

C. S. Tronch & Co., New York, have issued the following American statistics of Pig Tin:

	Tons.
Estimated stocks on spot, New York, Philadelphia and Boston, July 1	1,512
Actual arrivals during July, New York, Philadelphia and Boston	1,756
Total	3,268
Estimated consumption during July	2,400
Estimated stocks on spot, New York, Philadelphia and Boston, August 1	868
Actual afloat from East Indies, shipments to August 1	2,200
Actual afloat from England, shipments to August 1	410
Actual afloat from Holland, shipments to August 1	Nil.
Total visible supply, August 1	3,478
As against July 1	4,068
As against June 1	5,427

Copper.—Demand is of moderate proportions and the market largely nominal, but without quotable change. Small lots of Lake Ingot continue to be quoted at 17¼c. to 17½c. per lb., and Casting Copper at 16¾c. to 17c. Exports thus far this month are the smallest on record, amounting to barely 1500 tons, as against the total of 13,849 tons for August of last year. Imports since the first of this month amounted to about 2800 tons, and this is the first time on record when the imports were almost double the amount of the exports. Domestic production for July was 21,985 tons, as against 22,401 tons in June. For the first seven months of this year the output was 155,379 tons, a falling off of 2200 tons as compared with the corresponding period of last year.

Sheet Copper.—The manufacturers of Sheet Copper report a good, steady demand. A considerable amount of Copper is going into the numerous large new buildings that are going up in various parts of the country. Probably more of this material is being used this season in architectural work than ever before. Prices are firmly held on the basis of 21c. per lb. from store.

Pig Lead.—There is no change in this market, and a quiet, steady business is being transacted at the prices ruling for some time past. Small lots of American Pig are quoted at 4.60c. to 4.62½c. per lb. St. Louis market is quiet and unchanged.

Spelter—Is extremely dull at unchanged prices, good Western brands, in small lots, being quoted at 4.45c. to 4.50c. per lb.

Sheet Zinc.—The demand for Sheet Zinc is of about the usual proportions. Jobbers quote 600-lb. cask lots at 6¾c. per lb. and smaller quantities at 7¼c.

Antimony.—A fair demand is noted. Cookson's, in small parcels, is quoted at 10½c. to 11c. per lb., but Hallett's has declined ¼c. to 8½c. to 9¼c.

Nickel—Is firm and unchanged. Small lots are quoted nominally at 60c. to 65c. per lb.

Aluminum.—A good demand at former prices is reported for this metal. No. 1 Ingot, guaranteed 99 per cent. pure, in small lots, is quoted at 37c. per lb. and 100-lb. lots 35c.

Tin Plates.—The market presents no new features, except that the scarcity of Plates is more pronounced than ever. The available supplies in jobbers' hands are being rapidly depleted, and very high premiums are being paid for such goods as can be secured. Nothing is coming in from the mills. Prices are entirely nominal and cannot be quoted with any degree of accuracy. As an indication of the situation, however, it may be mentioned that $7 to $7.25 per box is about the lowest figure at which American Bessemer Coke Plates, 1 C, 14 x 20, can be bought in New York. As high as $8 is said to have been paid cheerfully for these Plates in some instances. The outlook is regarded as quite serious should the strike be prolonged. The market for Welsh Plates was advanced again this week about 10c. a box. About 8000 boxes arrived from Liverpool during the week. Another steamer from Swansea is due here on Saturday, and it is expected that she will carry fully as large a cargo as last week's steamer, which had 27,000 boxes aboard. The fact that a portion of these shipments are to be re-exported in their manufactured state should, however, not be lost sight of, and the balance is believed to have been already sold to manufacturing consumers.

Sheets.—The Sheet market displays almost as great a condition of stringency as that for Tin Plates. There is no alleviation of the scarcity that has been experienced for several weeks past, and it is more likely to grow worse than better in the near future. There is a very active demand, with the active mills oversold, and any one who has Sheets to ship out promptly can get almost any price. The idle mills have taken a considerable output out of the market for the time being, and, although some new capacity is coming into operation, it will be some time before it will give any appreciable relief to the situation. Galvanized Sheets are even harder to get than Black. The closing down of the Dewees Wood mill at McKeesport, and the merely par-

tial operation of the only other plant making Planished Iron Sheets, that at Wellsville, Ohio, has caused a marked scarcity of that material, which is becoming felt by the users of Planished Sheets, and prices are going up. New York jobbers are quoting No. 27 One Pass Cold Rolled Stoft Steel Sheets at about 4.10c. to 4.15c., and Galvanized Sheets at 60 per cent. off the list.

Chicago advices are as follows: The Western trade in Sheets is mainly from store. Prices have not materially advanced during the last week, though there is much irregularity in quotations, conditions widely varying with both buyers and sellers. While some stocks are practically exhausted, there are others that are yet in good shape. Though demand is quite large, No. 27 Black is quoted from 3.80c. to 4c. For Galvanized 65 per cent. is a common quotation. Sales have been made as high as 60 and 5. There are now practically no stocks of Tin Plates remaining, the sales of the past two weeks having cleaned up everything in sight.

THE PIG IRON MARKET.

New York.—In the metropolitan district very little new business is reported and sellers seem somewhat eager to get orders for future delivery on their books. Prices are unchanged, although the pressure to market on the part of some Southern sellers has ceased. We quote: Lehigh, Schuylkill and Virginia Irons, No. 1, $16 to $17.50; No. 2 X, $14.75 to $15.75; No. 2 Plain, $14 to $14.50; Tennessee and Alabama brands, No. 1 Foundry, $14.50 to $15; No. 2 Foundry, $14 to $14.50; No. 1 Soft, $14.50 to $15; No. 2 Soft, $14 to $14.50; No. 3 Foundry, $13.25 to $13.50; No. 4 Foundry, $12.75 to $13.25.

Chicago.—The tone of the market may be slightly firmer. Quotations have not advanced, but there is an absence of concessions previously granted. A number of smaller Southern producers have practically withdrawn from the market for shipments within 60 or 90 days. Another reason for the slightly better feeling is that little Iron is on track, producers having obeyed the usual rule of limiting shipments to barest needs on the eve of a possible strike. There is little or no Iron that is pressing for sale. The molders' strike, however, continues to dull the demand locally and buying on the whole is moderate. We quote as follows:

Lake Superior Charcoal	$17.00 to $18.00
Local Coke Foundry, No. 1	15.50 to 16.00
Local Coke Foundry, No. 2	15.00 to 15.50
Local Coke Foundry, No. 3	14.50 to 15.00
Local Scotch, No. 1	15.75 to 16.25
Ohio Strong Softeners, No. 1	16.00 to 16.50
Southern Silvery, according to Silicon.	14.90 to 15.15
Southern Coke, No. 1	14.65 to 14.90
Southern Coke, No. 2	14.15 to 14.40
Southern Coke, No. 3	13.65 to 13.90
Southern Coke, No. 1 Soft	14.65 to 14.90
Southern Coke, No. 2 Soft	14.15 to 14.40

Philadelphia.—The outcome of the week's business has not been unfavorable to the selling interests. Sales have been in fair volume. Inquiries for quotations and short options on good sized lots give the impression that there is a considerable amount of business approaching maturity, and that all the Iron that is being made will for some time to come find a ready market without making a new list of quotations. Prices are steady to firm, as quoted in our last—viz., as follows for city and nearby deliveries, and 25c. to 50c. less at points within a radius of 100 miles or so South or West: No. 1 X Foundry, $15.50 to $16; No. 2 X Foundry, $15 to $15.25; No. 2 Plain, $14.25 to $14.75.

Pittsburgh.—The Bessemer Iron market is absolutely lifeless and there has been nothing done since our last report. There has been little if any Iron sold for September, and if the strike runs into next month the leading Steel interest will hardly need any Iron on account of some of their mills being closed. Some of the Eastern furnaces are offering Iron in this market at low prices. Foundry Iron is very dull and the tone of the market is weak. We quote: Bessemer Iron, $15.75 to $16; No. 1 Foundry, $14.50; No. 2, $14 to $14.25, and No. 3, $13.50 to $13.75, Pittsburgh.

Cincinnati.—In the territory immediately tributary to Cincinnati the Pig Iron trade has been tolerably quiet throughout the past week. Judging from the amount of inquiry in sight trading will continue slack for the present. The situation has not become any more simple than it was a week ago. One thing, however, is certain—that the asking prices for Iron and the figures at which it is actually being sold are 25c. to 50c. higher than they were two weeks ago. We quote, f.o.b. Cincinnati:

Southern Coke, No. 1	$13.50 to $13.75
Southern Coke, No. 2	13.00 to 13.25
Southern Coke, No. 3	12.50 to 12.75
Southern Coke, No. 4	12.00 to 12.25
Southern Coke, No. 1 Soft	13.50 to 13.75
Southern Coke, No. 2 Soft	13.00 to 13.25
Southern Coke, Gray Forge	12.00 to 12.25
Southern Coke, Mottled	12.00 to 12.25
Ohio Silvery, No. 1	15.50 to 16.00
Ohio Silvery, No. 2	14.50 to 15.00
Lake Superior Coke, No. 1	14.50 to 15.00

CHICAGO REPORT.

Scrap Iron and Steel.—The market remains in about the same condition as noted in our last report. Consumers are pretty well stocked up. Dealers quote the following buying prices, in carload lots, Chicago delivery:

	Per net ton.
Country Wrought Scrap	$10.50 to $11.00
Machinery Cast	10.00 to ....
Malleable Cast	10.00 to 11.00
Stove Plate (free from burnt)	7.00 to 7.50
Burnt Iron and Grate Bars	5.50 to 6.00
Sheet Iron and Hoops	6.00 to 7.00
Plow Steel	9.00 to 10.00
Breaking Stock	9.00 to 9.50
No. 2, such as Shovels, Hoes, &c	.... to 7.00
Old Boilers—whole (Iron)	.... to 7.00
Old Boilers (Iron) cut in single Sheets and Rings	9.50 to 10.00
Old Gas Pipe and Boiler Tubes	10.00 to 10.50
Cast Borings	4.00 to 4.25
Turnings	8.50 to 9.00
Horseshoes	11.00 to ....

Old Metals.—The market is dull and unchanged and without feature of any kind. Dealers quote buying prices on small lots as follows:

	Per lb.
Copper Wire and Heavy	14½c.
Copper Bottoms	13¼c.
Copper Clips	14 c.
Red Brass	13¼c.
Yellow Brass	10 c.
Red Brass Borings	11½c.
Yellow Brass Borings	9 c.
Light Brass	7½c.
Pipe Lead	4 c.
Tea Lead	3½c.
Zinc	2¾c.
Pewter, No. 1	19 c.
Pewter, No. 2	10 c.

Old Rubber.—The demand for Old Rubber is very light, and there is but little doing in this market. Buying prices are as follows:

	Per net ton.	Per lb.
Garden Hose	$23.00	.....
Air Brake Hose	42.00	.....
Rubber Shoes	....	7¾c.
Rubber Car Springs	....	4¾c.
Inside Bicycle Tubing	....	21 c.
Outside Tubing	....	7¼c.

Rags.—Buying price of good country Mixed Rags, Chicago delivery, is 70c. to 80c. per 100 lbs., in any quantities.

Anthracite Coal.—Business has been very light during the past week and no change is looked for at present. The schedule for carload lots is as follows:

	Grate.	Egg and Stove.
Chicago	$5.75	$6.00
Milwaukee, Wis	5.75	6.00
St. Louis	6.20	6.45
Kansas City, Mo	8.25	8.50

A discount of 10c. from these figures is allowed on all Coal ordered to be shipped in August.

It is again reported that efforts to combine the manufacturers of Black Lead or Plumbago Crucibles in the United States are being made. This is the third attempt that has been made in the last year or so, the former ones being failures. It is now said that options have been secured on all of the plants, with one exception, and a conditional agreement has been made with that company.

The Jeffrey Mfg. Company, Columbus, Ohio, are sending out an attractive booklet of 24 pages, printed in two colors and illustrated with half-tone engravings, devoted to Conveying Apparatus and Elevators adapted for carrying ore, metal, coal or manufactured articles from one point to another.

THE HARDWARE TRADE.

The strike among the steel workers is having a somewhat stimulating effect upon the hardware business generally. Manufacturers not producing their own raw material complain of trouble in obtaining it, and are behind on orders for their finished products. Notwithstanding the hopeful view taken by the trade of the outcome of the labor disturbance, uneasiness has been caused by the fear that goods would be difficult to get when wanted, and that prices might advance. In anticipation of these conditions and of a large fall trade, jobbers are placing orders for larger quantities of goods and ordering earlier than usual. Prices are remarkably even considering the demand and the scarcity in many lines of goods. Few changes have taken place in values, and the market is, as a rule, firm.

NOTES ON PRICES.

Plumbers' Supplies.—Trade with most of the jobbing houses keeps up in wonderfully good volume for this normally dull season, although there are indications of a let up in business here and there, owing to the vacation season being at its hight. A subject of universal complaint is the scarcity of many kinds of goods and the difficulty of obtaining prompt shipments from the manufacturers. This has reached an acute stage in some quarters, where operations are being seriously hampered through the inability of contractors to obtain materials. All the plants turning out Plumbers' and Steam Fitters' Supplies are running full, showing that the current consumption of these goods must be enormous. Prices, under the circumstances, are naturally very strong, and the trade are becoming inured to the announcement of advances which are made from week to week.

Plumbers' Earthen Ware.—The Trenton Potteries Company, who are the largest manufacturers of Solid Porcelain Bathtubs, Lavatories, Laundry Trays, Kitchen and Pantry Sinks, &c., have issued, under date of August 15, new price-lists and discounts on their Ideal goods. The reason given for issuing the new list is that the old list did not in all cases bear the proper relations to the cost and selling prices, due to the fact that the list was compiled during the experimental stages of the manufacture of this grade of Sanitary Pottery. The new prices in many cases will vary very little from those heretofore quoted, but some articles have been advanced in proportion to the cost, so that the list, as a whole, is more evenly balanced, and, it is believed, will be accepted as the standard list for some years to come. Notice is called to the fact that the prices for Bathtub Frames have been materially reduced, while the cost price has been charged for packages on all other goods. The Trenton Potteries Company are making extensive improvements in their Ideal plant, and before the close of the year their production in Solid Porcelain Goods will be increased fully 50 per cent.. The increased facilities will thus enable them to execute orders very promptly.

Lead Traps, &c.—The manufacturers of Lead Traps, Bends, Ferrules, &c., have issued the following notice to the trade regarding packages and deliveries:

As the deliveries on Lead Traps, Bends, Ferrules, Drum Traps, Combination Bends and Ferrules, &c., are not apparently understood by the trade, we desire to say that the following conditions are applicable to all orders for these goods at the present time. On shipments to jobbers only, at jobbing points, all freight will be allowed. On shipments direct to customers to other than jobbing points there will be no freight allowance, and all packages will be charged.

Wrought Iron Pipe and Malleable Fittings.—On Tuesday, August 13, the jobbers and manufacturers in Steam and Hot Water Supplies in this vicinity issued prices on Wrought Iron Pipe, Black and Galvanized, and also on Malleable Fittings, Black and Galvanized, which show advances ranging from 10 to 20 per cent., according to the sizes. The advance in Pipe, it is understood, is brought about entirely by the strike, and is due to the fact that little or no Pipe is procurable at the mills. The most radical advance was in Galvanized Pipe of the smaller sizes—*i. e.*, from ⅛ to ½ inch. These sizes have been advanced fully 20 per cent. and are, it is said, unobtainable at these high prices, there being practically no ½-inch Pipe in the market. The local galvanizing plants are two months behind with their orders. The trouble with the galvanizing plants is due chiefly to the extremely long spell of hot weather recently experienced. The difference in cost to the jobbers between Pipe which they bought at the mills in the black state and had galvanized at a local plant and similar Pipe bought at the mills, already galvanized, was so considerable that nearly all the local jobbers resorted to this method of procuring their Galvanized Pipe, thereby further congesting business at the galvanizing plants. The scarcity of Galvanized Pipe is now so pronounced that prices are at least 30 per cent. higher to-day than they were two weeks ago. The price on small Black Pipe and large Galvanized Pipe advanced from 12½ to 15 per cent., according to the sizes. The advance in the price of small Black Pipe is due to the fact that very few of the independent manufacturers are making sizes smaller than ½-inch, consequently there is a scarcity of these goods. The same conditions applying to small Galvanized Pipe are applicable to large galvanized, but not to such a marked extent, owing to the fact that the independent mills are making the large sizes in black. Large sized Black Pipe has advanced about 10 per cent. It is quite likely that, in the course of the next few weeks, there will be another material advance made by the jobbers. A rumor is current in the trade that the largest manufacturing interest have notified the jobbing trade that they will advance prices on the 25th of the month, and that the advance will be of a sweeping character. Meanwhile, they are giving the jobbing trade an opportunity to feel the market and ascertain what business there is in sight and to what extent they can maintain the advance when it is made. The prices on Malleable Fittings were advanced 10 per cent. This was done conjointly by the manufacturers and the jobbers alike. The advance made by the manufacturers approximated 7½ per cent. over previous quotations. This advance of the manufacturers, taken in conjunction with the scarcity of Malleable Fittings, incited the jobbing trade to raise their prices 10 per cent. There will be no difficulty whatever in holding these prices.

Plumbers' Brass Work.—The situation in the Brass Work market, with the exception of a marked scarcity of the goods, remains unchanged. Prices are much steadier than they were a week ago. Stocks are running very low and the local jobbing trade is experiencing a continued run on all kinds of Plumbers' Brass Work.

Enameled Bathtubs.—The market for Enameled Bathtubs is still in the same condition of stringency. Prices at the foundries are still unchanged. The jobbing trade is realizing large profits on the goods which they have on hand, much more than they were two weeks ago. This is entirely due to the fact that no one jobber has a complete stock of sizes. There is considerable trading of sizes among the jobbers, and those who have any quantity at all are realizing as much from their sales to the jobbing trade as they heretofore did from the plumbers. The jobbers, having entered into contracts with the plumbers, are compelled to furnish the goods, and the other jobbing houses which have the goods on hand, knowing of this condition of affairs, are making their competitors pay them premium prices for their wants. There is absolutely no relief in sight and the present condition of affairs cannot be altered much before the first of the year. It is said that New York City alone is using 400 bathtubs a day, and there are not more than 300 a day coming in. This includes all shipments arriving at New York City. This estimate of the amount of Tubs reaching New York is said to be very conservative. The scarcity of Steel Sheets, from which Steel Clad Tubs are made, has advanced prices on this class of Tubs to such an extent that it brings them within a short distance of the cost of the Enameled Iron Tubs.

Plumbers' Wood Work.—Plumbers' Wood Work of the better qualities still remains scarce in this market. The plants which are manufacturing the better grades of Wood Work are four months behind with their orders and there seems no likelihood of their catching up within any appreciable time. There is no scarcity whatever of the inferior grades of Wood Work, and it is this class of goods alone which is at all procurable. This is the harvest time for the manufacturers of the cheap Wood Work which is now being turned out. This class of goods commands a ready sale in speculative building. It looks all right when it is sold, but it has no lasting qualities. Tanks made from this class of wood are generally lined with light weight copper and are trimmed with fixings of a very inferior grade. Still they are Tanks and answer the purpose for which they are made—*i e.*, to trim the bathroom and help sell the house for the builder. Houses trimmed with goods of this kind are very generally overhauled immediately after they are sold, the owners putting in plumbing material of first-class quality.

Wire Nails.—The distribution of Wire Nails is satisfactory. Orders are for fair quantities and are frequent. Small lots at store, New York, are quoted at $2.60 per keg.

Cut Nails.—The demand for Cut Nails from territory tributary to New York continues fair and without change. Small lots from store rule at $2.18 to $2.25 per keg.

Wire.—The volume of business in Plain Wire contiuues heavy and some of the mills are still unable to make prompt deliveries as wanted. The toue of the market is strong. Plain Wire, in a retail way, is quoted at 2.60 cents and Galvanized at 3 cents.

Bundy Radiators.—The price ou Buudy Perfect Indirect Radiation was advanced, 5th iust., 5 per ceut. The Bundy School Climax Indirect Radiator, slip nipple conuection, coutinues at the same price as quoted on the Perfect, July 15.

Window Glass.—The local demand for Window Glass is limited to small lots. Stocks in manufacturers' and jobbers' hands are larger than was anticipated for this season. To afford an opportunity for stocks to be considerably reduced, it is probable that the American aud Independent companies will defer starting their factories, at least until October 1. When the fall demand sets iu higher prices are looked for.

Paints.—Some of the larger manufacturers of Mixed Paiuts have aunounced a 10 cents per gallon advance in price, based on the high cost of Linseed Oil and of Tin. Since the advance in the price of Paints, Oil has declined 10 cents per gallon.

White Lead.—The decline in Linseed Oil has affected the demand for White Lead in Oil unfavorably and unsettled the market to some extent, although prices are not quotably lower.

Linseed Oil.—On August 16 the price of Linseed Oil was reduced 10 cents per gallon. The new crop of Flax Seed has begun coming in from the Southwest, and, although the crop is comparatively small and of inferior quality, it caused a decline in the price of Seed. Three or four weeks will probably elapse before the size of the Western crop of Seed can be accurately estimated. The future of the Oil market depends entirely upon Seed. A further decline in Oil would not be a surprise to the trade. City Raw Oil, in a retail way, now rules at 73 to 74 cents per gallon. Boiled Oil is 2 cents per gallon advance on Raw.

Spirits Turpentine.—A comparatively light demand has characterized the local Turpentine market. Orders have been for small lots at lower prices than last week. Retail quotations have been reduced ½ cent to 37½ to 38 cents per gallon.

Cotton made the biggest record of any American product in value of exports during the fiscal year 1900-1901, scoring a total of $313,673,443, according to the official statistics of the Treasury Departmeut. The best previous cotton export year was 1891, when $290,712,900 worth was sent abroad. In quantity the exports of the past year were not so great as in 1895, 1898 or 1899, but the price was so much better that the value of exports in 1901 exceeded by mauy millions that of the years of the greatest movement, as measured in pounds. The aggregate value of the cotton exports in the last ten years is more than $2,000,000,000.

TRADE NOTES.

The J. E. Burleson Mica Company have been incorporated at Marion, N. C., to mine and manufacture Mica, with works at Spruce Pine, N. C. J. E. Burleson of Spruee Piue is president and L. J. P. Cutlar of Marion secretary and treasurer of the company.

The American Brass Company, the new owners of the Chicago Brass Works, Kenosha, Wis., have beguu the ereetion of an additional Rod manufaeturing department, 30 x 100 feet, which will enable them to greatly increase the output of the plant.

St. Petersburg has been planning to eelebrate the two hundredth anniversary of the foundation of the city by an exposition in 1903. Minister De Witte, however, has decided that the time is too short for such an important undertaking as that planued and it will be deferred until 1913, which will be 200 years after the Russian capital was removed to St. Petersburg.

ABOUT ESTIMATE BOOKS

For Plumbers and Heating Men

Your Contract and Estimate Record Book for Plumbers is one of the best books that ever came into our house and we would not be without it for three times the amount it cost. We can figure without omitting anything with accuracy at a very short time. We think that every plumber should not be without this valuable book.
W. C. BENNETT & CO., Haverhill, Mass.

We have used an estimate book for three years and could not do without one. Would say that yours is far superior to any yet used and can cheerfully recommend it.
W. R. PARK & SON, Taunton, Mass.

A great advantage. Prevents the tearing out of small items, which amount to more than the cost of the book in a very short time.
CHAS. W. COOMBS, Lawrence, Mass.

Your Contract and Estimate Record Book has been of great use to me in both the saving of money and labor, and I would highly recommend it to any or all master plumbers.
THOMAS P. DOHERTY, Taunton, Mass.

These testimonials are a few of many, and indicate both that a well arranged estimate book, which provides complete lists of items to be figured upon, is a time, labor and money saver, and that the *"CONTRACT AND ESTIMATE RECORD BOOKS"* come up to this requirement.

THE EDITIONS ARE AS FOLLOWS:

CONTRACT AND ESTIMATE RECORD BOOK FOR PLUMBERS

OFFICE EDITION.

200 Pages. Arranged for 100 Estimates. Size 8 x 11 inches. Cloth bound, **$1.50**
500 Pages. Arranged for 250 Estimates. Size 8 x 11 inches. Cloth bound, **$2.50**

POCKET EDITION.

200 Pages. Arranged for 50 Estimates. Size 3½ x 8 in. (oblong). Flexible cloth binding, **$0.50**

CONTRACT AND ESTIMATE RECORD BOOK FOR STEAM AND HOT WATER HEATING

200 Pages. Arranged for 100 Estimates. 7 x 12 inches. Cloth bound, **$1.50**

NOTE. The omission of one item in an estimate on a plumbing or heating job might result in the loss of all profit. These books provide a reliable, accurate, business-like record, and a sure means of avoiding loss due to mistakes and omissions.

Sent prepaid on receipt of price.

Sheet Metal Pattern Drafting

A course of instruction by mail for tinsmiths, coppersmiths, plumbers, sheet-iron workers, furnace workers, skylight makers and others that will enable a student to "strike out" working patterns for all kinds of sheet metal work. This is what a student says:

His Course More Than Paid for Itself

I am a tinsmith, and consider your course in Sheet Metal Pattern Drafting one of the best investments I ever made. Before I was half through I had realized from it more than the money paid for the whole course.

M. E. TOBIAS,
63 Fifteenth St.,

A Few Points About
The Dover Elbow:

No unsightly seams or corrugations standing out to give it a bunched appearance.
The outside can be polished, as it presents a smooth, even appearance.
The seams are folded on the inside.
No corrugations to reduce diameter and collect soot.
No seams to corrode and rust.
It is made on a scientific principle. It is the same diameter as the pipe.
It is handsome. It is strong. It is the best elbow on the market.

Making Old Rooms Look Like New.

If that old room of yours could talk, it would say, "Finish me with one of Berger's 'Classik' Metal Ceilings."

If you don't happen to have such a room, get some one who does have one to refinish it with this artistic and lasting material

You can make a nice thing out of it by furnishing the material and also handling the work of putting it on

There are lots of opportunities for profitable business in this direction, and it will pay you to make a special effort to get it.

"BERGER'S Classik" METAL CEILINGS

make old rooms look like new. They give them a handsome and artistic appearance.

Another strong point is their remarkable durability—a room finished with this material is finished to stay.

Our great variety of patterns enables us to meet the requirements of all kinds and sizes of rooms

If you do not know just what we can do for you in our line, it will pay you to find out.

Write us to-day for catalogue and full particulars.

JAMES H. WATSON ESTATE, - - Crawfordsville, Ind.

The New Metal Worker Pattern Book.

425 Pages. 744 Illustrations.
Size 10 x 13 Inches.

A new treatise on pattern cutting as applied to all branches of sheet metal work.

Cloth Bound, Price $5.

This work contains a collection of **218** problems and an elaborate explanation of the principles of pattern cutting, including Triangulation.

It embodies the problems of the former Metal Worker Pattern Book, all of which have been revised, and many of which have been entirely rewritten and solved by more approved methods. To these have been added **75** new problems and much other new material and explanatory matter, making this work a model of completeness in every respect.

ARRANGEMENT.

In point of arrangement the new work far surpasses the former one in that the problems are classified under three different heads, and simply indexed, and also that by means of a table of contents any required department of the work can be easily found.

CONTENTS.

While Chapter VI, comprising the greater part of the work, is devoted to the solution of problems, the five preceding chapters thoroughly explain the principles of pattern cutting, and place the student in possession of the preliminary information necessary to a thorough understanding of the subject.

SUMMARY OF CONTENTS.

I. **Terms and Definitions—15 pages.**
II. **Drawing Instruments and Materials—13 pages.**
III. **Linear Drawing—6 pages.**
IV. **Geometrical Problems—35 pages.**
V. **PRINCIPLES OF PATTERN CUTTING—25 pages.**
VI. **PATTERN PROBLEMS (3 Sections)—325 pages.**
1. MITER CUTTING,
2. FLARING WORK,
3. TRIANGULATION.

All Tinners, Cornice Makers and Sheet Metal Workers should be provided with a copy of

The New Metal Worker Pattern Book.

Price $5, post or expressage paid.

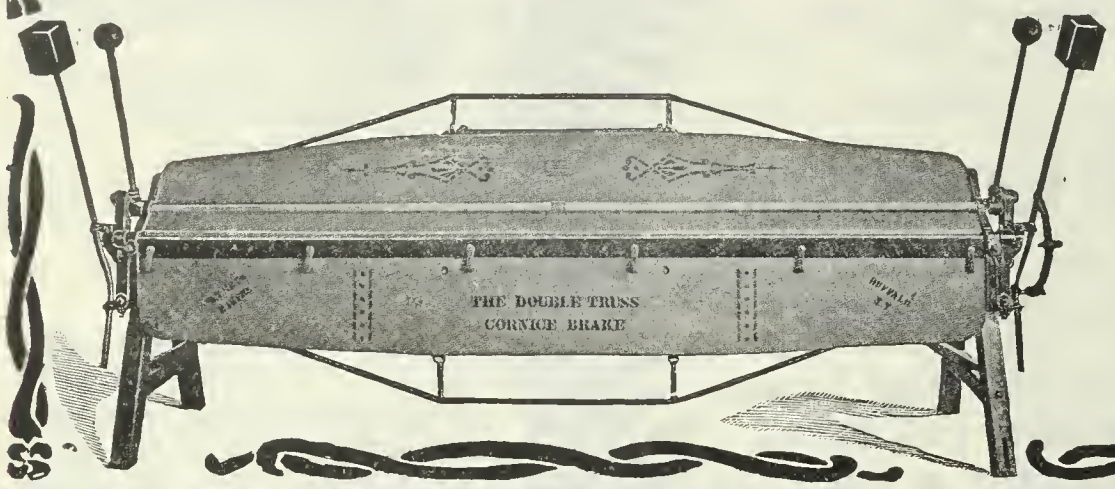
THE DOUBLE TRUSS CORNICE BRAKE.

This is the most practical brake on the market.
It is the most practical because, in the first place, it is lower in price than any other Cornice brake that will do perfect work.
Secondly, because its practical construction enables you to use it to the most profitable advantage.
When you hear about a good thing in your line of business, investigate it. Turn on it the light of reason and consider its money-making possibilities.



Let us send you information regarding our double edge on front leaf, for making fine members and corrugations.

The Double Truss Cornice Brake Co.,

THE ETNA FURNACE

Is a furnace worth talking about and selling.

It is the result of twenty years' experience in hot air practice, and knowing the wants and the requirements necessary to produce successful, satisfying results we made the Etna accordingly.

The Etna contains many strong, practical features not found in the majority of others. We feel satisfied they will meet the approval of every dealer who has been up against the heating problem and encountered its difficulties. We have smoothed out some of the rough places.

READ THE CATALOGUE. SENT FOR THE ASKING.

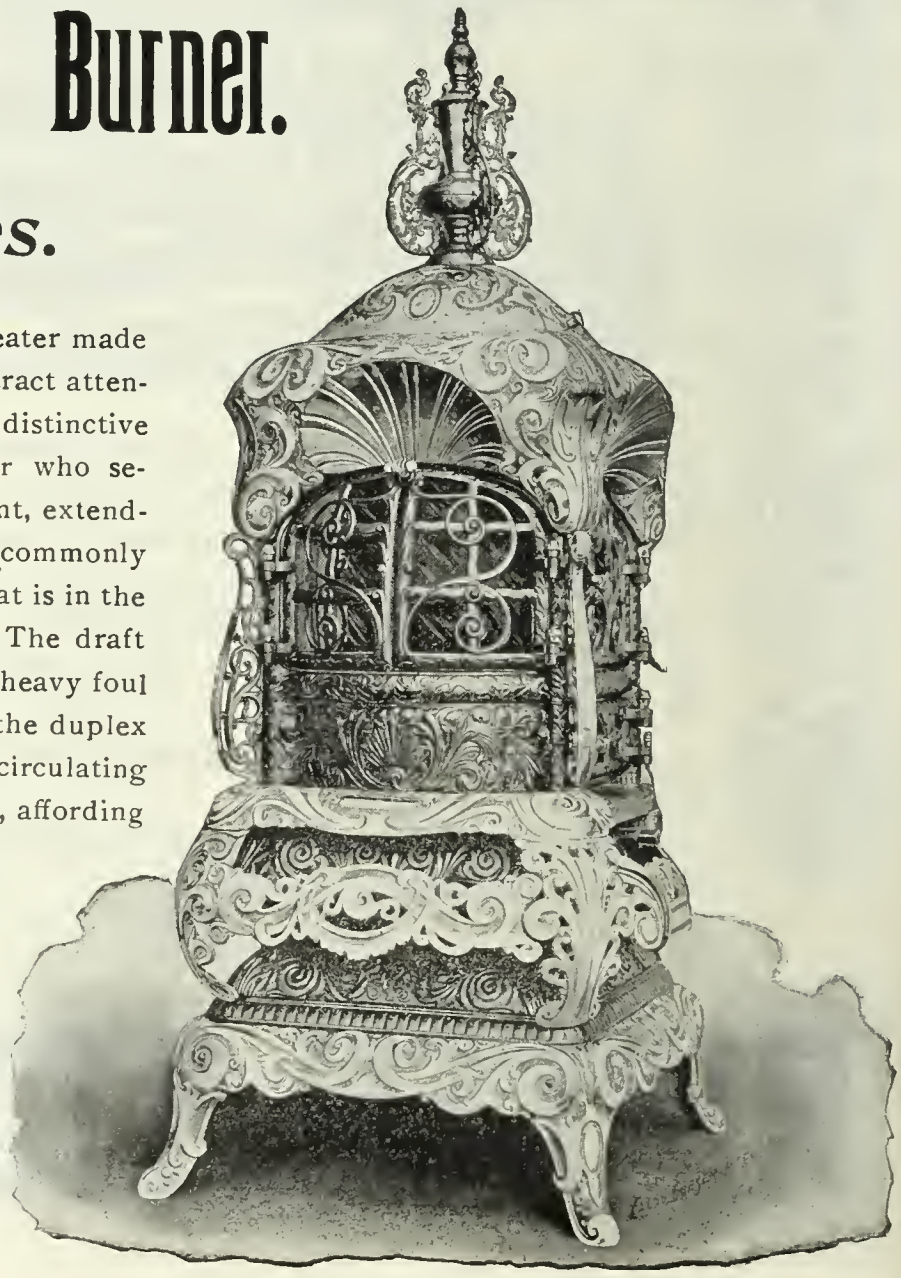
Pittsburgh Stove & Range Company

PITTSBURGH, U. S. A.

The Monitor Base Burner.

High Art Series.

It is without doubt the most powerful heater made and its rich and graceful appearance will attract attention at once. The novel construction and distinctive features offer every advantage to the dealer who secures the agency. The diving flue is in front, extending entire width of stove, being what is commonly known as a sheet flue, thus the greatest heat is in the front of the stove where it is most needed. The draft is taken in through the bottom, carrying the heavy foul air which settles near the floor. Grate is of the duplex pattern with outer shaking ring. Two large circulating flues are fitted in rear corners of the stove, affording ample circulation for heating evenly the largest room. Send for new Catalog and secure the agency without delay.



The Wm. Resor & Co.,

CINCINNATI, U. S. A.

CRAWFORD OAK

This Oak has a deeper firepot than most others, and keeps fire longer. It has a roomy ashpit and a real ash-pan. The ashpan is four and a half inches deep.

Every part of this Oak is well made and fully warranted. The best nickel-plating that can be bought for money.

Cold air check register, mica panels and showy ebonized brass trimmed urn. The base nickeled if desired.

Triangular or draw-center grates; disc grates for wood. Firepots single or double. Pipe collars top or back.

This Oak is made in three diameters, 13, 15, 18 inch body; the 18 inch is also made extra high; four sizes in all.

Our prices may interest you, and if you will write, we will send complete circular and make a bid for your business.

232 Quarry St., PHILADELPHIA, PA.

New Leader Furnace

POINTS OF CONSTRUCTION

ASH-PIT has great depth, with flush front. Full sized door.

Grate in full view, making the removal of ashes very easy—*not so with low ash-pit doors.*

Not a square inch of solid substance to obstruct the draft, avoiding clinker formation.

Grate is easily taken apart as there are no bolts used. The cutting off of corroded bolts takes time and costs money.

By simply removing the plate in front of the cogs the bars can be replaced by unhooking them from the yokes. This is a new and desirable feature.

Feed Dome is made in one solid casting from fire pit to radiator and offers a large surface for the direct rays of the fire.

Fire Pot is made in two sections, heavy and particularly durable.

Dust Flue is placed in front of the furnace and extends from ash-pit to feed dome. It is large and has a damper

Radiator is mounted with best quality refined steel.

5 SIZES:

20, 22, 24, 26, 28 in. fire pot.

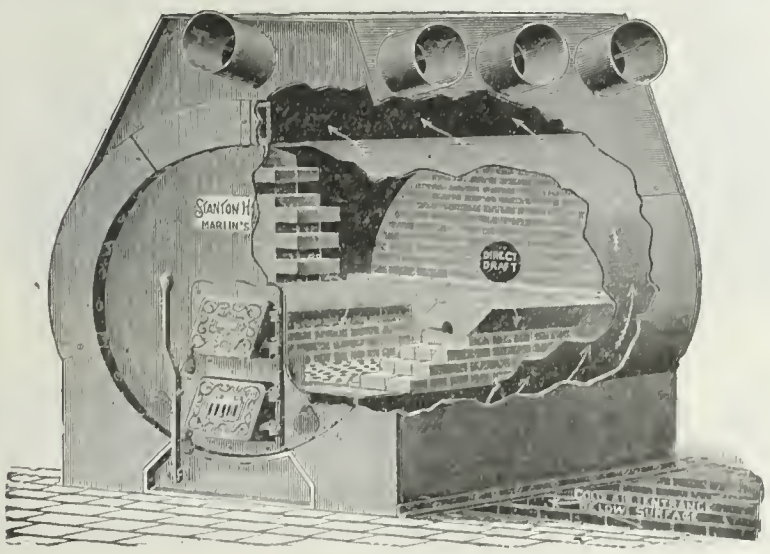
The Stanton Seamless Heater,

PORTABLE CASED.



LOUISVILLE, KY., Apl. 5th, 1901.

THE STANTON HEATER CO.,
Martin's Ferry, Ohio.

Gentlemen:—Your favor of the 3d inst. is received asking our experience with the Stanton Heater which you put in for us during the fall of 1899. In reply we will say that it gives us pleasure to express our entire satisfaction with this Furnace. While we have had no severe weather this winter there have been several quite cold snaps, but our offices have been very comfortably heated, and our coal bill (Pittsburgh coal) has been quite moderate compared with other Heaters we have used.

The satisfaction the Heater has given us can be best expressed by saying that we have not heard the Furnace mentioned once this winter. You can see, therefore, that we have had absolutely no cause for complaint.

Yours very truly

KEWANEE BOILER COMPANY

Home Office and Factory,

KEWANEE, ILLINOIS.

Chicago Store, 169 Lake St.

THE MOGUL FURNACE

Diameter of fire pot	19½ inches.
Height to top of elbow	56 "
Height to bottom of pipe collar	46 "
Diameter of ring where casing fits	31½ "
Weight	800 pounds.

Last year we had a demand for our No. 1 MOGUL to be used as a furnace and the satisfaction it gave in use was so great that we decided, this year, to make it in regular furnace form and at a price that would bring it within the reach of small householders and all kinds of storekeepers or others having large rooms to heat It is made with regular furnace joints for cement from the bottom up; also provided with draw center anti-clinker grate, which can be taken out and replaced through the ash pit. The fire pot has fingers at the bottom on the inside to assist in grinding up the cinder and cleaning the fire.

The No. 20 MOGUL is offered, not to take the place of a large high priced furnace, but to take the place of smaller ones, as well as fill a place that even smaller furnaces do not fill because they are too light and small as well as too complicated and high priced. It is plain and very heavy, with few joints, will do the work and outlast a number of the light furnaces that cost double the money GET OUR PRICE, it is no higher than is asked for a good stove, and you will GET OUR MOGUL, which is cheaper to operate than a hard coal base burner that heats only one room, while the MOGUL will heat a whole house comfortably in all parts.

Bright Idea Steam Boiler.

Nothing Equal to It.

It was Goethe, yon recollect, who declared that "to find some one who thinks as I do strengthens my belief." Well, here's what one individual who has thoroughly tested the

GURNEY

"Bright Idea" Heater

thinks of it: "My honse is large and exposed, but I can heat the whole of it with the mercury at zero outside. I believe there is nothing equal to the 'Gurney' for heating a house."

If such testimony were rare, of course it would carry less weight, but when we assure you that we have on file hundreds of letters of the same tenor, it seems almost impossible for you not to comprehend the excellence of the "Gurney" Heaters.

But, having comprehended it, why not make use of it? Become our agent and then you'll share its benefits. For just so long as merit finds appreciation, just so long are "Gurney" Heaters bound to sell in increasing numbers.

circulation of heat is obtained in said rooms.

The Crown Warm Air Furnace

With Return Flue Cast Iron Radiator is especially designed for soft coal. The special feature of this furnace is the front spray blast. This conducts the air through a heavy pipe running from the top of the ash-pit to the under side of the feed-neck, where it is introduced between two highly heated plates and forced over the top of the fire. This furnace saves fuel. It burns hard coal, soft coal, wood or gas. It is a great heat producer.

Junior Crown Furnace.

The New Crown Warm Air Furnace.

Entirely new. A "Heavy Duty" furnace, being very powerful, staunchly made, and moderate in price. Just the furnace to tackle the severest use of Soft Coal with. Just the furnace to tackle the severest use of Hard Coal with. The simplest and most durable furnace for soft or hard coal ever made. The drum of this furnace made of extra heavy steel and closely riveted. It is mounted with hollow rods, admitting the free circulation of air and entirely preventing them from burning out. The drum at the top of the fire pot is reinforced with an inside steel or cast rim of sufficient height and thickness to completely protect the lower part of the drum from destruction by the severest use of either hard or soft coal. The peculiar construction of the drum top enables the gases produced by combustion to unite with the supply of highly heated air and become consumed before leaving the furnace.

The most practical, durable heater on the market at anywhere near its cost.

FIRE BOX BODY made in one piece, corrugated, is very heavy and cannot break or warp.

RADIATOR with heavy cast iron heads, heavy plate iron shell and hot air flues, has extra large radiating surface and is self cleaning. Every part of radiating surface is directly exposed to fire, allowing no possibility of creosote in the apparatus. No wood grate. Fuel burns on the ashes in the only practical, economical way.

3 SIZES, PORTABLE OR BRICK SET.

Nos. 36, 42 and 48, for 3, 3½ and 4 ft. wood.

Thousands in use in all sections of the country. Testimonials and full particulars sent on application to the manufacturers.

Keeping Labor Contracts.

The statement of the South Chicago steel workers in justification of their refusal to strike at the demand of the President of the Amalgamated Association forms a refreshing contrast to the action of those other workers who were found ready to violate the contracts they had entered into with their employers. In refutation of the specious argument that the sale of the Illinois Steel Company to the United States Steel Corporation dissolved the contract made with the first named concern, the men say that they have taken legal advice on the matter which satisfies them that Mr. Shaffer's claim is without foundation. Having used this legal argument in support of their position, they turn to the moral aspect of the question and quote statements made by prominent labor leaders, including President Shaffer himself, upholding "the sacredness of labor contracts," and emphasizing the binding character of just such solemn agreements as that of the South Chicago steel workers with the Illinois Steel Company. The principles of union labor, the statement concludes, are as dear to the men who make it as to any men in the country who earn their living by honest toil, but they do not think they "should be expected to violate every rule of business integrity and personal honor for a matter of sentiment." Prophetic vision is not needed to foresee that these Chicago men who refuse to strike because they have a contract with their employers, which they feel in honor bound to observe, will be found in the long run to have done vastly more for the cause of organized labor than Mr. Shaffer and his associates have done.

Pay More Attention to Collections.

While reports from all quarters indicate that liberal shipments of goods are being made to stove dealers, furnacemen, steam fitters and plumbers, it is also apparent that collections are slow. This means that the buyers of goods in these lines are busily attending to the details of their mechanical work, which gives positive results. Such a view, which is too often taken, leads, however, to carelessness and frequently to absolute negligence in attending to other and equally important details of a business. One of the most important of these details is a close scrutiny of all contracts to see that they provide for payments at stated periods for the work done. It is also requisite that the proprietor himself, or his collector, be on hand at such times prepared to exact that clause of the contract as unflinchingly as the customer exacts the perfection of every detail of his work. Similar care must be taken with every sale made where credit is given. It cannot be too strongly impressed upon every employee of the shop that the one thing necessary to success in business is prompt payment. The proprietor must rise above his just pride in good mechanical work and pay attention to the more important work of arranging for the collection of his bills. He can hire good supervisors of his mechanical work, who will require but little overlooking, but he cannot easily hire men to manage his business so that it will pay and be a success. Such men, as a rule, are in business for themselves. If necessary, it is better to take a little less work, in order to secure the time required for arranging for prompt payments, wherever credit is given, by rendering bills punctually with a courteous mention of the agreed upon date of payment. It is a good plan to inclose with the bills a request for examination of items asking that any errors found be reported at once. This will require some study of methods and the cultivation of tact in their application. In fact it is a new trade that must be thoroughly mastered in order to avoid the troubles entailed by overdue bills, disputed accounts, suits and loss of capital, labor and material. Such troubles are sure to follow slipshod, easy going, careless methods and cause constant misunderstanding and ill feeling between the tradesman and his customers. They also lead to a reputation for slow pay and make it difficult to buy at the best prices and to get goods when they are scarce. The remedy for slow collections and bad bills is to arrange for a time of payment and to be on hand at the time. It is extravagance to be obliged to hire a lawyer to make collections.

The Vindication of Vandergrift.

The present crisis has splendidly vindicated the work which George G. McMurtry has done at Vandergrift, Pa., since the days when the Apollo strike first led him into it. Mr. McMurtry, now the president of the American Sheet Steel Company, undismayed by the experience at Pullman and at other places in this country, determined to establish an industrial town at Vandergrift, in connection with the great sheet mill built there by what was then the Apollo Iron & Steel Company. He determined that not alone should close and direct relations be established between the men and the management, based on mutual esteem and a reciprocal recognition of rights, but that the surroundings of the town be absolutely healthy and attractive in other respects. At the old plant at Apollo the Amalgamated Association had been completely defeated. At the new Vandergrift works a nonunion mill was established. The management strove for absolute fair dealing and for the principle of promoting individual men on their merits. Mr. McMurtry studied industrial towns abroad, and, we understand, obtained many valuable hints at Essen. He was exceedingly careful, however, to eliminate even the slightest suspicion of paternalism. The model community which he has established has prospered exceedingly. It is composed almost entirely of native born Americans, 95 per cent. of the men having been taken from the adjoining farming section. It is not a surprise that Mr. McMurtry has been proud of his achievement,

particularly since the enterprise as such has been quite remunerative. His creation of a model industrial town, peopled by men untrammeled by affiliations with labor unions, has, however, now brought to him the crowning vindication. His men have stood by him, and by the principle of frank and cordial relations between employer and employed. The men of Vandergrift have practically unanimously continued to work. The influence of the example in the valley of which it is the fairest gem has been such that it harbors a group of nonunion works which have proved of the greatest importance to the large organization, and have to some extent been the nursery of skilled men for other plants. With such a splendid proof of the value of an industrial town laid out on modern lines, and of a management fostering close relations with the men based on absolutely fair dealing, it is to be hoped that in the future Vandergrift will have the distinction of being only the oldest of a series of similar communities.

The Scarcity of Sheet Metal.

The strike of the steel workers, of course, will bear most heavily upon the men themselves and those dependent upon them; but the American people generally, the consumers, will also have to suffer by reason of the enhanced prices of many kinds of goods. Already the fact that a strike is on and that they will have to help pay for it has been brought home to the public by a sharp advance in the price of all household goods made of sheet iron or steel. By the shutting off of nearly the entire production of tin plates many of the manufacturers of tinware are left short of material with which to fill their orders for goods, and the restriction in the output of sheets has placed some of the makers of enameled and galvanized ware in a similar position. Stocks of these goods in the market are quite limited, as the demand has been unusually brisk all through the present season, and the factories generally were behind in their deliveries before the strike closed up the mills. While there is not likely to be any famine of tinware and enameled ware, for the largest interests in this line make their own tin plates and sheets and are running their factories full with a big output, the cutting off of a portion of the productive capacity at a time when the demand is in excess of the supply is liable to create some scarcity. This scarcity, indeed, is already apparent, and upon it is based the increase in the price of goods, as well as upon the higher prices ruling for the raw material. And prices are likely to mount still higher before they recede, for, whatever may be the duration of the strike, the fact remains that for some time ahead the market will be short of material. Even if the mills should resume operation at an early date, which at this writing appears improbable, months must elapse before the manufacturers could catch up with their orders. The fact that black plate is being imported from Wales to be tinned at the domestic tin plate works may bring a slight relief to the situation, but it will not prevent an increase in the price of tinware, for it is being bought from the Welsh makers at a price considerably above that at which the plates could be made on this side. The outlook for all kinds of sheet metal goods indicates high prices and a short supply for at least the rest of this year.

The meeting of the Michigan Retail Hardware Dealers' Association, held last week in Detroit, is a good example of the beneficial results of such gatherings. There is abundant evidence that the coming together of merchants cultivates the spirit of fraternity and tends to diminish the antagonisms which often characterize the relations of competitors. In the case of the Michigan association substantial good to the trade at large was accomplished in the modifications of laws which were found to work hardship and imperil credits. At such gatherings of broad and enterprising merchants many practical suggestions are brought out which can be applied with advantage to the conduct of business, and those who have attended the meetings go back to their work amply repaid for the time thus expended. At the Detroit convention the reports presented in regard to the progress made in combating the competition of department stores and catalogue houses were encouraging.

Commenting in a recent interview upon the steel workers' strike, Archbishop Ireland of St. Paul gave expression to a fundamental principle of American life when he said that the right of every man to work if he wished to must under no circumstances be interfered with. If there is one thing more than another that is of the essence of true Americanism it is the right of every man to earn a living by any legitimate means available. The public at large will not stand for a coercion which seeks to prevent any one from working who wishes to do so. For this reason the attitude of the Amalgamated Association toward nonunion workers cannot command the sympathy of the great mass of the people. And no strike which does not secure the approval of the public can ever succeed. This is a fact that seems to have been overlooked or ignored by the leaders of the present steel strike.

It is generally supposed that the use of natural gas is a modern custom, but Dr. Day, in *Mining and Metallurgy*, points out that natural gas was used by fire worshipers on the Apsheron peninsula, which runs out into the Caspian Sea, 600 years before the Christian era. It is probable that fire worship originated in that vicinity. It is likely that the gas burned as sacred fires for more than 1000 years, a tribute not only to the zeal of the worshipers, but to the early recognition of natural gas as a constant burning fuel which required no attention.

A special interest attaches to the statistics given in the report of the Building Department of New York City for the second quarter of this year, inasmuch as they reflect to some extent the first results of the workings of the new Tenement House law, which went into effect during the period covered by the report. It is shown that in the three months ended June 30 over 21,000 violations of the building law were reported. Of this number over 7000 buildings were reported for defective construction and materials, and 565 for violations of the provision of the law requiring open courts in place of the old air shafts. More than 6000 buildings were reported for insufficient protection against fire and over 2000 for defective plumbing. This showing would appear to indicate that a vigorous effort is being made to enforce the new law.

Reports from Charleston, S. C., indicate that rapid progress is being made in the work of preparation for the South Carolina Interstate and West Indian Exposition, to be held in that city from December, 1901, to June, 1902. The construction of the buildings is well under way and the grounds are being graded and laid out in a manner that promises especially attractive and artistic surroundings for the forthcoming show. The main building will be a magnificent Cotton Palace, which, together with the Transportation Building and the Machinery Palace, will form a fine group of buildings in the Court of Palaces on the north bank of Lake Juanita.

FURNACE CASINGS AND PIPING.

Ordinarily the furnace season does not open in full activity as early as the stove and range season. Special attention is drawn to this fact this year owing to the condition of the market for sheet iron and tin plate. The supply of these materials is not great, and in view of the strike at the mills it is not probable that it soon can be replenished so that much needed material can be had at the time it is wanted. Failure to secure it means a loss of both profit and prestige, as well as disappointment to good customers. The furnace houses generally have used every effort to secure a stock of both galvanized and black sheet iron for furnace casings and linings in order that their customers may be able to fill their orders, and the houses making furnace pipe and fittings have also made up stock and provided tin plate for making more so as to lend assistance to the furnace contractors.

It is important now that local furnacemeu make a canvass among prospective customers and inform themselves as to how many furnaces they may need and what tin plate or made up fittings are likely to be required, so that they may make the necessary arrangements to secure what they need. It is not enough this year to wait until the weather forces customers to make their wants known. They must be canvassed or trade will be lost. Many orders can be captured and arrangements may be made for the goods early enough to secure them when needed if something is done in the way of judicious advertising and visiting around among those whose apparatus is in poor condition. The furnaceman must not let other branches of his business interfere with his furnace trade, but should be on the alert or his sales will fall off owing to inability to get goods, and loss of sales of course will entail shrinkage of profits.

The Extent of the Mueller Line of Furnaces.

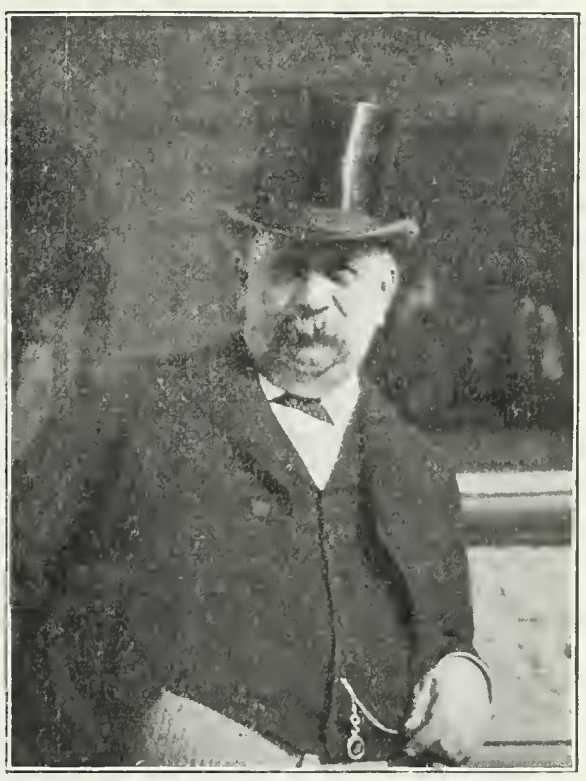
The L. J. Mueller Company, Milwaukee, Wis., are manufacturers of such a variety of furnaces that all requirements of the furnacc heating trade can easily be filled from their line. The constructions which they offer comprise a double radiator all cast furnace, for hard or soft coal, in seven sizes portable and six sizes brick set; a return flue radiator all cast furnace, for soft or hard coal, in four sizes portable and three sizes brick set; a return flue radiator all cast furnace, with air blast attachment, for soft coal, in four sizes portable and three sizes brick set; a tubular steel plate radiator furnace, for hard coal, in three sizes, either portable or brick set; a return flue steel plate radiator furnace, for hard coal, in five sizes portable and four sizes brick set; a return flue steel plate radiator furnace, for wood or coal, in five sizes, portable; a double return flue steel plate radiator furnace, with deeply corrugated fire box, for 4-foot wood, in two sizes, portable or brick set; a double flue steel plate radiator furnace, with plain fire box, for 4-foot wood, in one size, portable or brick set; a return flue steel plate radiator furnace, for 3 or 4 foot wood, in two sizes, portable or brick set; a very large school and church furnace, in one size for hard coal, one size for soft coal and one size for long wood, all brick set.

The company are also manufacturers of a hot water heator, which can be applied to all their coal furnaces and thus convert them into combination hot air and hot water heaters. This heater consists of a bell suspended over the fire, connocted with a coil of wrought pipe which passes rouud the inside of the fire pot, thus securing rapid and positive water circulation under any condition of the fire. The water heater is made in a variety of sizes, which will carry from 125 to 650 square feet of radiator surface. This statement will indicate to the trade quite conclusively the exteusive facilities offered by the company for handling any class of work required in the line of furnace heating.

A CATALOGUE issued by the Stophenson Mfg. Company of 537 Wood street, Pittsburgh, Pa., shows an interesting line of Gas Ranges, which are offered under the name Zenith. The constructive features include movable oven aud burners, oven thermometer, brass water coil, and a plate glass mirror in the lower outside oven shelf, this being intended to show the cook how to regulate the gas under the back oven without the necessity of stooping down. The Ranges are made right and left hand for using natural gas as a fuel aud have water heater attachment. A rather odd construction is the Zenith Gas Furnace, which is said to have a capacity sufficient to heat a hall of ordinary size and two to three rooms. The other goods in the catalogue include the Zenith Gas Laundry Stove and the Zenith two and three burner Hot Plates.

J. Leslie Miller.

J. Leslie Miller, president of the William Miller Range & Furnace Company of Ciucinnati, Ohio, whose portrait is presented herewith, died on August 13 from a stroke of apoplexy at his home at Avondale. He had returned on the previous day from a farm which he owned at Milford, Ohio, and complained of illness, which



J. LESLIE MILLER.

yielded to treatmeut. The seizure which terminated his life came quite suddenly, however, 24 hours later. Mr. Miller was born in West Virginia and was 59 years old at the time of his death. He went to Cincinuati about 40 years ago and secured a position as bookkeeper with the William Miller Range & Furnace Compauy. Later on he was made a partner in the coucern aud on the death of William Miller became the president. He was a veterau of the Civil War and very prominent in the business community of his city. His genial dispositlon made for him mauy friends, by whom he will be greatly missed. A widow and two sons survive him.

Fifty Furnace "Ads."

Furnacemen who use their local papers for advertising to extend their business will find a help in preparing their copy in "Fifty Furnace, Steam and Hot Wator Heater Ads.," issued by H. P. Townley, Terre Haute, Ind. Mr. Townley has used them for his own business and proved their value. The ads. are printed on slips, some with cuts aud some composed entirely of text, and are worded and displayed so as to attract attention and give a good impression of furnace heating, which is what is required to bring the buyer to the store of a furnaceman. They can be used *verbatim* or modified to suit. Mr. Townley published "100 Steel Range Ads." last year, and the demand for those induced the preparation of the series of furnace "ads.," which sells for 50 cents.

The Walker & Pratt Mfg. Company

of 31-35 Union street, Boston, Mass., have issued a leaflet relating to their new Crawford oak stove, which is intended for burning wood or coal. It is of handsome exterior, nickel being rather elaborately employed in its ornamentation. In its construction the fire pot is very deep and heavy, the grates are strong and durable and easily replaced when worn out, and the ash pan is of large size. The manufacturers refer to the fact that there are two styles of coal grates—draw center and triangular. The wood grate, which is ribbed and grooved, may be used by itself or placed over the coal grate. There is ample clinker space for poking and slicing the bottom of the fire, the draft wicket is operated by a screw and closes air tight, being quickly opened to full size for clinkering or shaking the grate. The body of the stove is of heavy steel tightly fitted top and bottom. Accompanying the leaflet is another carrying a half-tone picture representing the company's foundry in summer. They say that during the summer they have been very busy, getting ready for a large fall trade. They have extended their mounting shop, where castings are assorted, inspected and put together into stoves, the extension being 100 x 112 feet in size, and is full already. They have enlarged their nickel plating department, although it was entirely new three years ago. The company state that their pattern shop has been rushed all summer as never before, that their new goods are almost ready, and that in a few days they will have something interesting to show the trade. As sheet steel is scarce and high the manufacturers suggest that Crawford Oaks should be ordered at once.

The Round Oak Year Book for 1901.

We have received a copy of an unusually handsome catalogue just issued by the Estate of P. D. Beckwith, Dowagiac, Mich., manufacturers of Round Oak stoves, ranges and furnaces. This publication is entitled "Round Oak Year Book," the appropriate name which has been selected for the company's annual catalogue. The catalogue is almost square in shape, being 7¼ x 7½ inches. It contains 138 pages. On the front cover is a portrait in colors of the now famous Indian, Doe-Wah-Jack. The cover, by the way, is a striking imitation of birch bark, the back page bearing Indian illustrations. The frontispiece is a fine illustration of the Round Oak stove plant and offices, which gives a good conception of the great extent of the manufacturing operations of the estate.

The place of honor in the catalogue is appropriately given to the Round Oak heating stove, on which the success of this establishment is founded. This stove is shown with and without a hot blast, with and without a magazine, and with a casing which converts it into a room heater for heating very large rooms. All Round Oak stoves are made with a single piece bottom, with extra large ash pit. The feed and draft doors are ground on, and all joints are air tight. A double fire pot is provided for coal, with a cone grate at the bottom, preventing the formation of clinkers. The hot blast draft is formed by an extension of the fire bowl, which also protects the lower end of the sheet iron body. Malleable iron legs, fitted and bolted solidly to the bottom, are used with all these heating stoves to prevent the breakage of legs. If a leg gets bent it is easily straightened. These stoves are made in a full variety of sizes, and are furnished in either plain or decorated finish. A new heater has been brought out, named the Beckwith air tight, intended for either coal or wood, and fitted with a hot blast of the same characater as that used in the Round Oak stoves. This air tight is substantially made, being intended to outlast two or three of the ordinary air tights. It is made in four sizes. The clinkerless coal fixture and the single piece air tight bottom, which are strong points of Round Oak stoves, are specially illustrated.

Illustrations and descriptions of the Round Oak planished steel range occupy 22 pages. This range is made of Wood's planished steel, and is presented to the trade as a high grade specimen of tight fitting, superior material and artistic ornamentation. It is made with four or six holes, is adapted to either coal or wood, is furnished in all the usual styles and is made in seven sizes.

Cast ranges require 38 pages for their proper presentation. The Round Oak cast range is a new and exceptionally handsome range, which has been most carefully designed and is a specimen of the best workmanship. This range is made for coal or wood, with either four or six holes, and in all the usual styles. Other ranges shown are the Round Oak Kitchener, Round Oak Standard and Round Oak Special, all adapted to either coal or wood and furnished in a sufficient variety of sizes.

Cooking stoves form a department of ten pages. Here are shown the Round Oak Standard and the Round Oak, both of which are high class stoves, finely finished and mounted in full Round Oak styles.

The Round Oak furnace has won for itself a reputation for efficiency as a high class heating apparatus. The full line of these furnaces is illustrated in 28 pages. Including the return flue Round Oak furnaces, 12 different sizes are shown. A water heating combination manufactured by this establishment can be attached in any of these sizes except No. 2. The Round Oak furnace has many special points on which the highest intelligence in the manufacture of heating apparatus has been applied, in order to secure the best results in point of economy of fuel and efficiency of heat producing qualities. The furnace department of the catalogue gives full directions for setting furnaces, and a great deal of other valuable information which will be appreciated by practical furnacemen.

The William Resor & Company

of Cincinnati, Ohio, are distributing among their friends in the trade a 16-page pamphlet calling attention to a few of the many Monitor stoves, ranges and heaters which they manufacture. The selection shown is intended to give a good idea of the character of the entire line, which stands to-day on a reputation extending back over a period of 60 years. The statement is made that the Monitor steel range is made in 243 different styles and sizes. The bodies are made of planished or polished steel in four sizes, while the oven openings are 14, 16, 18 and 20 inches wide and 20 inches deep. They are closely riveted by hand with steeple head boiler rivets and are lined with asbestos held in place by another plate of steel, thus practically making a three-ply wall, which is air tight. The grate is of the duplex pattern, and when reversed and the end linings removed, makes a commodious wood fire box on which an extension can be added to take wood 24 inches long. The little pamphlet shows in addition to the Monitor range the Monitor base burner for hard coal, a number of the art series with front sheet flue and offered in three sizes, the Monitor Oak in its new dress for 1901, the Monitor hot blast for coal, also offered in three sizes, and the Peerless Oak.

The Forbes Furnace for 1901.

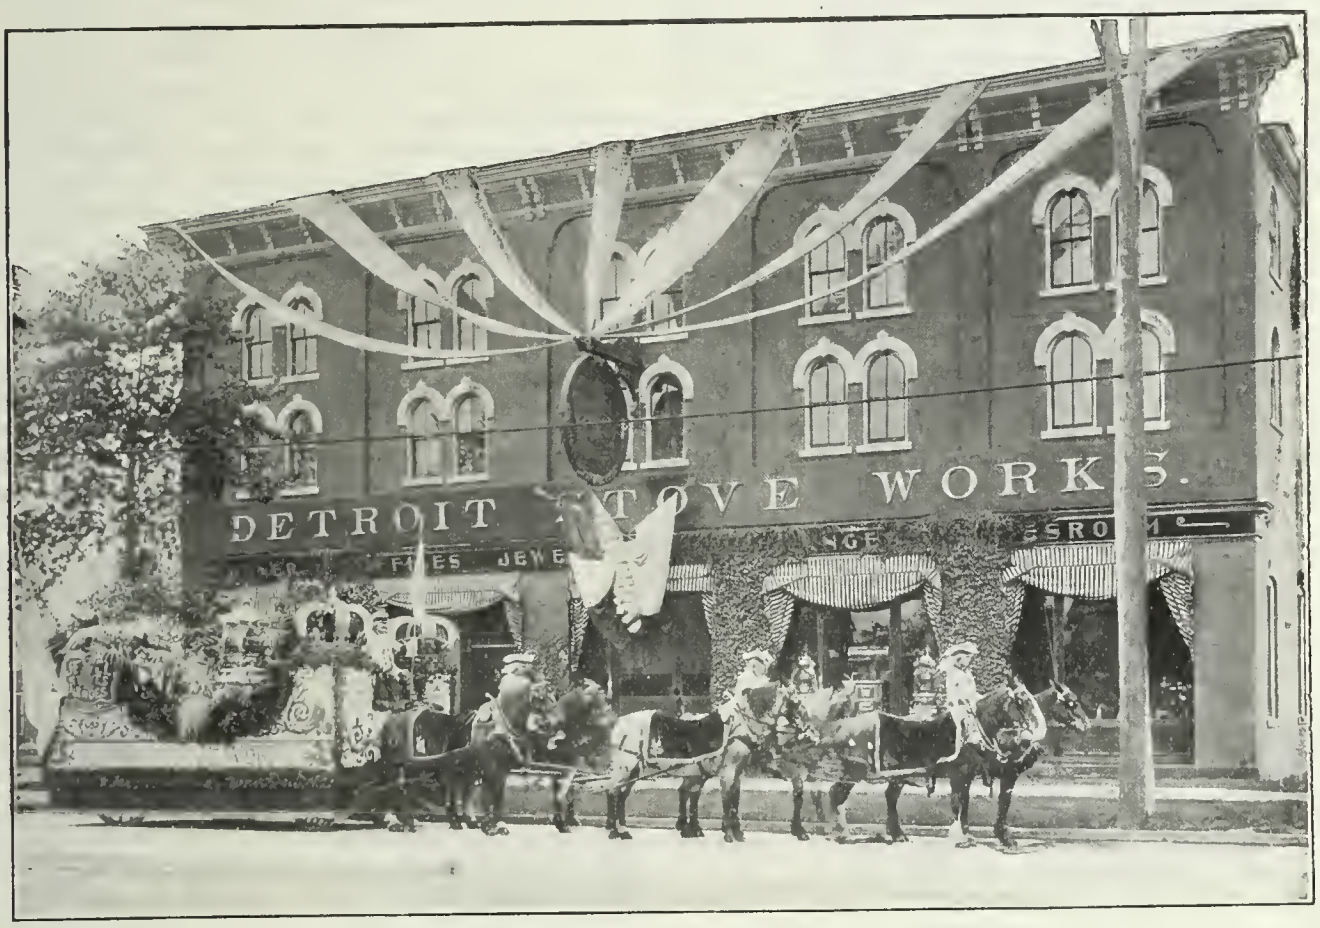
The Tubular Heating & Ventilating Company, 228 Quarry street, Philadelphia, Pa., are distributing an eight-page folder printed in brown devoted to the Forbes improved warm air furnace. Half-tone engravings show the furnace and the ash pit with the grate. The furnace has the usual combustion chamber, and the gases rising from it are made to take a downward course through a tubular radiator, by which construction a large heating surface is presented. A notable improvement has been made in the Forbes furnace for this year which greatly simplifies the method of cleaning the manifolds. The openings in the manifolds have been enlarged for cleaning, but are reduced by suitable caps when the furnace is in use. The smoke pipe is arranged to be easily removed so as to facilitate the cleaning away of any accumulation of soot, dust or ashes at the outlet. Several minor changes have also been made for the greater convenience of the furnaceman in setting the furnace up, and also for its operation. The folder contains some testimonial letters and a table giving full dimensions of the six different sizes in which the furnace is made.

Meeting of Vapor Stove Men.

The Vapor Stove Manufacturers' Association held their fifteenth annual meeting at Little Mountain, Ohio, on Tuesday, the 13th inst. A large representation of the trade was present and the leading topic of discussion was that of prices. The strike in the iron and steel trades is not without its influence upon the cost of producing vapor stoves, owing to the amount of sheet steel employed, and in view of the uncertainty of the outlook it was decided to defer action on prices until October, when it is hoped that matters will be in a more settled shape and manufacturers can proceed intelligently. The selection of officers will not occur until the fall meeting of the association, the place for holding which has not yet been announced.

Detroit's Bicentenary Celebration.

The citizens of Detroit recently celebrated the founding of the city by the French explorer Cadillac, features of the occasion being parades of a most attractive nature. The bicentenary industrial parade occurred on July 25, when the leading manufacturers were represented by floats, many of which were of a most elaborate character. In the accompanying illustration, which is made directly from a photograph taken for the purpose, we show the appearance of the handsomo float used by the Detroit Stove Works on that occasion. The float was drawn by six horses with mounted postillions in costume, while on the float were Jewel stoves, having for the central feature a handsome nickel plated parlor heater.



Float Used by Detroit Stove Works in Bicentenary Parade, July 25, 1901.

Sunshine Stoves and Ranges.

We have received from the Reading Stove Works, Orr, Painter & Co., proprietors, of Reading, Pa., a copy of a very attractive catalogue of 102 pages, illustrating the leading lines of their Sunshine stovos and ranges. Tho pages measure 8¾ x 11¼ inches and afford opportunity for the use of one large cut or several small ones upon a page, together with more or less descriptive matter. The binding is in covers of a unique design, while accompanying tho volume is a leaf, carrying this greeting to the stove trade: "We hand you herewith catalogue of cooking goods made at the Sunshine Stove Shop. You doubtless have our furnace book, "Comfort in Cold Weather," and we shall shortly forward a catalogue of heating stoves. The complete Sunshine line will he represented in the four books, 'Ranges and Cooking Goods,' 'Portable Heating Stoves,' 'Furnaces,' 'Steam and Hot Water Heaters'—everything a dealer can need and the best." The title page carries a list of the officers and directors of the company and the location of their hranches and three foundries. Backing this page is a *fac-simile* of the guarantee which the makers give with every Sunshine stove.

In offering the catalogue the makers refer to the new lines which have been added since the last edition was issued, the most prominent being the Colonial Sunshine and the Mystic Sunshine ranges. The former is referred to by the manufacturers as a "superb combination of the best things in one excellent cooking apparatus. Into its mechanism has been introduced every feature of improvement which experience has demonstrated to be of value to the user." In its external treatment rich effects have been produced by a combination of nickel parts with the black surfaces of the stove. The manufacturers point out that the Othello range still occupies a place of honor in the catalogue, where it is shown in a variety of styles and sizes. The New Sunshine for hard or soft coal or for wood is a heavy, durable construction, having Shear's patent pedal attachment, top oven plate, inlaid with a nonconducting composition, large ash pan, interlocking long center, ventilated oven, heavy covers, high closets, tea shelves, &c. A handsome construction is the Domestic Sunshine, which is referred to as a semiportable range. In design it is referred to as being original, unique and artistic. It is made in a number of styles and sizes and is adapted to meet the most exacting requirements.

The latter part of the catalogue is devoted to a combination line of cooks and ranges, which cannot fail to prove of special interest to the wide awake and enterprising dealer. Tho designs throughout are up to date and embody all the improvements helonging to cooking stoves and ranges. The combination secured through the interchangeable parts and the same character of ornamentation is such as to render the line more than ordinarily attractive to the dealer. These goods include the Household, Peerless, Herald, Linden and Laurel Sunshine ranges, and the Harvest and the Maple Sunshine cook stoves.

A CHICAGO PAPER MAKES IMPORTANT DISCOVERIES.

It is surprising how many things can happen in a trade without the people principally interested knowing anything about it until they are informed by a daily paper. The Chicago *Chronicle*, which is a journal of high standing aud of undoubtedly wide circulation and great influence, gives an illustration of this fact in its issue of the 21st inst. Under the display head in large type of "Stoves Reach High Price" it prints a long article in which the statement is made that stoves have advanced 25 per cent. in price because of the steel strike. This is very important news to stove dealers, if true. Following is the introduction to the article:

Stoves are rising in prices and the man who must make a purchase in that line this fall will be obliged to pay more than he has for some years. This is a direct result of the steel strike. Steel plate ranges, oil heaters and the heating stoves usually known as oak stoves will lead in the high prices on account of the large amount of steel used in their manufacture.

Poor persons especially will be affected by this rise. They are the ones still dependent upon large stoves for cooking and heating purposes. In the fashionable apartment houses, where huge furnaces managed by engineers heat all the rooms, and the little cooking is done on a small gas range, the housekeeper will hardly realize that stoves cost more than heretofore. But among the poor and among those of the poorer middle classes whose homes are heated by coal stoves, while the cooking is done on big ranges, the rise in prices will be keenly felt. Many are known to have put off the time of buying a new stove from season to season until now the old one is so completely out of repair that a purchase is mandatory.

One of the points set forth in this extract is correct, namely, that a large amount of steel is used in the manufacture of steel ranges, oil heaters and oak stoves. The price of steel sheets has advanced very materially because of the strike in the sheet mills and the great scarcity thus caused. If the large manufacturers had not supplied themselves with good stocks of sheets in advance of their requirements, they would now be obliged to pay prices much higher than those prevailing through the spring months, when contracts are usually placed for supplies of this character. Those manufacturers who purchase in small quantities are feeling the scarcity and dearness of sheets and are in a rather unfortunate position to do business in competition with others who laid in large stocks and thus hope to be able to keep themselves supplied through the stove buying season. The probabilities are conceded to be in favor of higher prices on steel ranges and other cooking and heating appliances mainly constructed of steel sheets, but thus far the *Chronicle* is the only authority for the statement that an advance has actually been made.

This writer, however, is not satisfied with endeavoring to scare the trade on account of the strike in the sheet mills, but holds up the apparition of the possibility of a molders' strike. It is true that the machinery molders in Chicago are striking at the present time and that quite a number of foundries have been closed on this account for some weeks. The machinery molders, however, are a distinct class from stove molders and are governed by a totally different set of rules and agreements. The writer in the *Chronicle* may see some reason why the stove molders should become disaffected because of the trouble between the machinery molders and their employers, but no one in the stove trade is able to trace any such relationship. Nevertheless, the point must be admitted that if the stove molders should strike the price of stoves would be advanced on account of the shortage in goods which would then occur. His statement on this subject is as follows:

If the molders' strike in some parts of the country should at this season be extended to the molders in the stove works, it is said by retailers that the price of stoves would reach a record-breaking mark. Many of the firms have contracts which cover their trade for the first demand of the fall. But if the strike spreads the manufacturers would be unable to meet the demand from the retailers for their second supply of goods, which would send the prices soaring. Jobbers of whom the retailers buy have only a small supply of stoves and furnishings in stock, just enough to cover the contracts which they have already made. Prices on these goods will remain the same, but it is thought safe to predict that if a shortage in the market is in sight for the second orders for the season retailers will look far enough ahead to raise the prices on the goods already in stock so as to make them go as far as possible.

The richest part of the whole statement is yet to follow. The extracts previously given are of a general and not a specific character. The author of the article it seems actually found, or says he found, a local dealer who states that prices are 25 per cent. higher than they were a year ago. The statement is as follows:

In endeavoring to make contracts for future goods in the stove line one of the local dealers says that he has found prices 25 per cent. higher than they were a year ago. If the South Chicago men do not go on strike he says Chicago will not suffer so greatly, though the supply would doubtless be limited. If the strikers stay out until next year he declares a high-water mark will be reached.

This local dealer must be a very bright man indeed, as he says that Chicago will not suffer so greatly if the South Chicago men do not go on strike. It happens that the "South Chicago men" to whom he refers are producers of steel billets and rails. How a reduction in the output of the steel billets and rails can affect the supply and price of stoves is a question which can safely be left for solution to the writer on a trade subject in a daily paper.

ODD PLATES.

The annual outing of the employees of Abendroth Brothers at their foundry at Port Chester, N. Y., was held at Edwards' Hill, Rye Beach, on Saturday, August 10. About 200 were in attendance, with Foreman John F. Mills in charge. A brass band furnished music, and games entertained the holiday makers until the clambake and shore dinner was announced. A number of subcommittees assisted in making the third annual outing a day of delight and a happy recollection.

A. C. Barstow of the Barstow Stove Company, Providence, R. I., sailed for Europe last Saturday on the steamer "Potsdam" of the North American Line. R. W. Hillman, manager of the company's New York house, was among those who were at the pier to wish Mr. Barstow a pleasant journey.

The J. W. Paxson Company, Philadelphia, have secured the contract for a complete foundry equipment to be shipped to Cuba.

The Auer Register Company of Toledo, Ohio, have been incorporated with a capital of $30,000. The officers of the company are George Auer, president, and B. E. Acheson, secretary and treasurer. New headquarters have been secured on Smead avenue and Bancroft street, where the concern will occupy a brick structure 40 x 150 feet, two stories in hight, with machine shop 40 x 40 feet and engine and boiler house 25 x 40 feet. As the premises adjoin the L. S. & M. D. Railroad, ample shipping facilities will be available. The Auer Register, although upon the market but for a comparatively brief period, has met with exceptional favor wherever introduced.

It is stated that owing to the rush of orders the Reading Stove Works at Reading, Pa., on August 10 operated their plant on a Saturday for the first time in a long period. We understand that the company are doing a heavy business at present and regard the trade outlook as very favorable.

The Pennsylvania Stove Company of Sharon, Pa., have recently secured the buildings of the bathtub works at Ellwood City and will fit them up for the manufacture of Cast and Wrought Iron Stoves and Ranges. About 200 men will be employed.

Further particulars concerning the fire which on the morning of August 2 visited the works of the Gem City Stove Company, Dayton, Ohio, show that the mounting room and nickel plating department were entirely destroyed, but that their foundries and large four-story warehouse escaped injury, together with their stock of Stoves. They have made arrangements for a temporary mounting room and nickel plating department, and will be able to fill all orders for Clermont Cooking and Heating Stoves promptly on receipt. On account of the machinery used in making their new Steel Range being destroyed by fire they will be unable to fill any orders for it at present. We understand that the company intend putting up new buildings to replace

those destroyed by fire, the plans and specifications being about completed. One building will be 60 x 200 feet in area, four stories and basement in hight, and will be used for mounting purposes. The other structure will be 45 x 100 feet in size, two stories in hight, and will be used for engine room, including nickel plating and cleaning department. When the new buildings are completed the company will be in a position to take care of an increased trade.

How to save fuel in heating a house is a very important question, as most folks know, but the Kelsey Furnace Company of Syracuse, N. Y., are sending through the mails a card which gives the necessary explanation. They state that the only way to heat a large block is by a steam boiler, but that with all other buildings the most economical system is by a Kelsey Warm Air Generator. The company make the strong claim that "the Kelsey has more than double the heating surface in contact with the fire than any other heating apparatus of equal grate surface."

THE BUCKWALTER STOVE COMPANY of Royersford, Pa., are sending out a four-page folder illustrating and describing their Canopy Special Range, which is made with four sizes of oven and seven sizes of top. It is referred to as combining in its make up all the best features of Range construction. The fire box fixtures are heavy to insure durability, and the duplex grate is used, this being removed through the ash pit without disturbing the linings or water front. The top of the Range is extra large and the ash pit is supplied with commodious ash pan. The water front is of large capacity and the tank of the reservoir is made of heavy copper tinned on the inside, although the manufacturers state they can furnish a cast enameled tank when ordered. The company are just placing this Range on the market and are confident it will meet with wide popularity.

THE Stove trade will deeply sympathize with Felix Kahn of the firm of F. & L. Kahn & Bros., Hamilton, Ohio, in the tragic death of his wife, which occurred August 14 at Atlantic City. Mrs. Kahn had been suffering from nervous prostration and while temporarily deranged from illness took her own life.

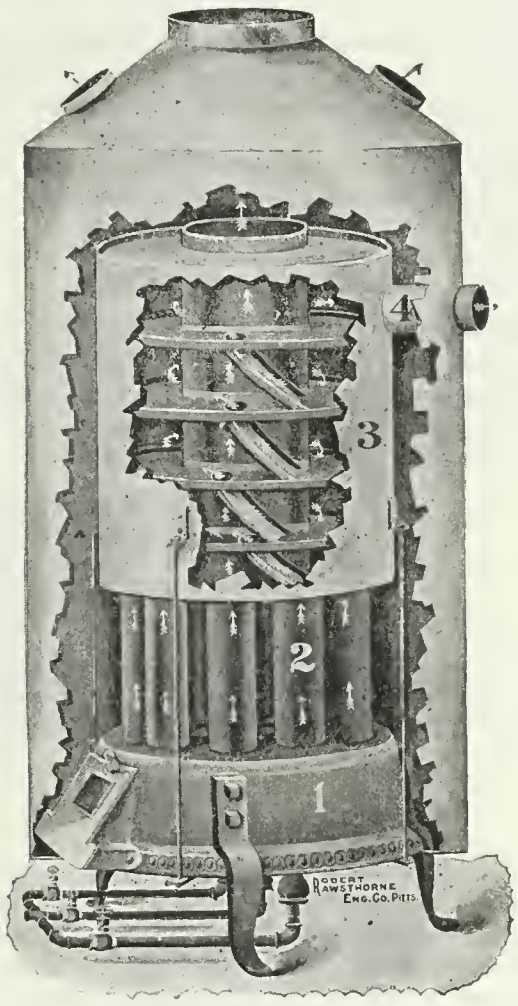
AYLING BROS., manufacturers of the A B Stove Polish, have removed their works and offices from 828 Milwaukee avenue to 14 Haddon avenue, near Milwaukee avenue, Chicago. They have built a fine two-story brick factory especially for their purposes, and have equipped it with the most modern apparatus for turning out their specialties. In their new location the firm will enjoy much greater facilities than at their old factory. The A B Polish is manufactured in liquid and dry form and also as a paste. They also manufacture the Brilliant King Oil Metal Polish for cleaning nickel plate and other metals, as well as glass; the Carbon Diamond Paste Stove Polish and Brunswick Black Stove Pipe Enamel for all iron work. The firm will be pleased to furnish a free sample of their A B Polish to those who address Department B, Ayling Bros., 14 Haddon avenue, Chicago.

THE MAKIN-KELSEY HEATING & MFG. COMPANY, Philadelphia, Pa., are installing for St. Peter's P. E. Church, Germantown, Pa., the Kelsey system of heating and ventilating in the main church and Sunday school, two separate buildings. They are also installing the system in a number of large suburban and city dwellings.

WE have received from the Michigan Stove Company specimens of advertising matter with which they are supplying their agents. One is a sheet of music entitled "The World Contains but One." This is a beautiful ballad, the words being composed by Barney Fagan. Another consists of a sheet of ordinary wrapping paper which bears on it an announcement having the appearance of being executed with an ordinary marking brush. This announcement calls attention to Garland Stoves and Ranges, and is designed to be used in the front of a store for the purpose of attracting shoppers, an object which it will undoubtedly accomplish. The third is a gorgeously colored sign for the use of storekeepers. The sign bears the legend, "If you don't see what you want, ask for it." This sign has also on it the Garland trademark, which effectively assists in the decoration.

A Natural Gas Furnace.

In the accompanying illustration we present a broken view of the Acme hot air furnace for using gas fuel, made by the H. Adler Company, 241 First avenue, Pittsburgh, Pa. It is designed for heating shops, halls, stores and lodge rooms, being specially adapted for such work. It is also adapted for placing in a basement for heating with the usual hot air pipes and is said to have a capacity of from one to six small rooms. The circular fire box is made of cast iron, insuring lasting qualities, and it contains three powerful cast iron burners adapted for burning from 10 to 25 feet of gas and arranged so that one or all may be used as required. The tubes and upper and interior drums are made of heavy sheet steel and expose 4000 square inches of heating surface over which the products of combustion travel more than 18



A Natural Gas Furnace.

feet in their passage to the outlet. The air supply is taken at the bottom and rises through the central drum and between the outer drum and the casing. The best materials and workmanship are used in the construction, and the operation is claimed to be both economical and effective when properly set.

Michigan Retail Hardware Dealers' Association.

At the sixth annual convention of the Michigan Retail Hardware Dealers' Association, held last week in Detroit, the following officers were elected:

President, Henry C. Minnic, Eaton Rapids.
Vice-President, G. W. Bruske, Saginaw.
Secretary, Fred. H. Cozzens, Detroit.
Treasurer, Henry C. Weber, Detroit.
Executive Committee for Two Years: Samuel Winchester, Jackson; Fred. J. Cook, Fowlerville; C. E. Pipp, Otsego; A. Harshaw, Delray; A. J. Scott, Marine City.

Mr. Bock of Battle Creek made an eloquent appeal for the selection of that city as the scene of the next convention, but Detroit was the choice of the majority and was again chosen.

JOHN J. MEEGAN, who has opened a Hardware, House Furnishing and Stove store at 404 Elk street, Buffalo, N. Y., would like catalogues from the trade of goods in his line.

Short Methods in Figures.

BY C. G. AMBLER.

So many articles of Hardware are sold at list and discount that it is desirable to use short methods as much as possible in reckoning the net cost and selling price.

DISCOUNTS.

Every Hardwareman knows that the net figures are found quicker by multiplying the list by the net cost per cent. than by subtracting the amount discounted from the list. For example, if we have 60 and 10 per cent., instead of finding 60 per cent. of the list and subtracting that from the list, then deducting 10 per cent. of the remainder, we would say that a discount of 60 per cent. leaves 40 per cent. of the list, and 10 per cent. more discount reduces it to 36 per cent., which is the net cost per cent.

Thus, if we have Files listed at $13.50 per dozen, the net price at the above discount will be 36 per cent. of $13.50, or $4.86. Another kind, at $14.75 list, would net $5.31. This method is especially helpful in case it is necessary to reckon the prices of a number of articles at the same discount, but listed differently, as when making price-lists or marking goods from the invoice. It is of still greater convenience as a preliminary step in getting the net price of a single article.

DETERMINING THE NET OF A SINGLE ARTICLE.

The net price of a single article listed by the dozen may be found by multiplying the list by one-twelfth of the cost per cent. for a dozen. Of course the rule may be used as well for any fraction of a dozen. If it is required to know the net price of one File at $13.50 per dozen, less 60 and 10, having found that the net cost per dozen is 36 per cent. of the list, it follows that one will be one-twelfth as much, or 3 per cent. of the list, which is 41 cents, taking the nearest whole number, as customary where fractions occur. At 40 and 15 per cent. the result is for a dozen 51 per cent. of the list, or $6.89; a single article 4¼ per cent., or 58 cents.

Sometimes the net per cent. single cost will be readily converted into a more convenient common fraction. Thus, at 10 per cent. discount, the net cost per cent. being 7½, and as the ratio to the number of dimes of the list price is ten times as great, the equivalent will be 75 per cent., or, expressed in a common fraction, three-fourths of the number of dimes per dozen list. This is the same in effect as taking three-fourths of the list and cutting off the right hand figure, but involves less figures. At $13.50 list the result would therefore be three-fourths of 135, which is $1.01. Using the same list in each of the following examples, we find in like manner that with 20 per cent. discount, the net per cent. single cost being 6 2-3, the result in cents is 66 2-3 per cent., or two-thirds of 135, which is 90 cents.

SOME EXAMPLES.

At 25 % discount it is 6¼ % of list, or ⅝ of 135, which is 85.
At 40 % discount it is 5 % of list, or ½ of 135, which is 68.
At 50 and 10 % discount it is 3¾ % of list, or ⅜ of 135, which is 51.
At 60 % discount it is 3 1-3 % of list, or 1-3 of 135, which is 45.
At 70 % discount it is 2½ % of list, or ¼ of 135, which is 34.
At 85 % discount it is 1¼ % of list, or ⅛ of 135, which is 17.

It will be seen that the same common fractions are obtained more quickly by dividing the single cost per cent. by ten. I have introduced the percentage of dimes as an explanation of the principle.

COMBINATION DISCOUNTS.

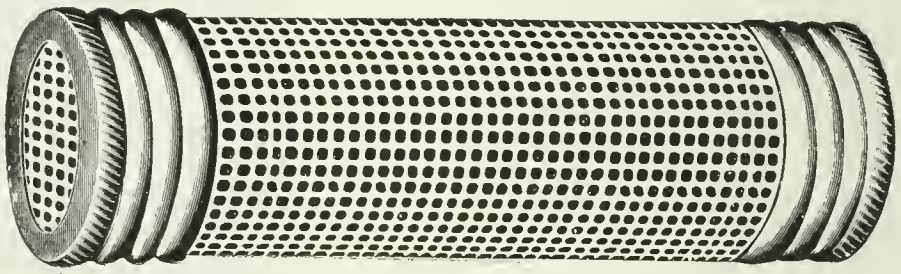
There are a number of combination discounts which are equivalent to the above and, therefore, will work out the same results. For example, 40 per cent. equals 25 and 20, or 20 and 16 2-3 and 10, or 33 1-3 and 10. They will be recognized as they are used, and a complete list of them will be found in "Ladd's Discount Book." By the use of the above method one can, after a little practice, give the net single price almost instantly upon knowing the list and discount, and usually without the aid of a pencil

WHERE REPETITIONS OCCUR.

Again, when there occurs in the discount a repetition, as, for example, of several tens, it is not necessary to make a complete calculation for each, but by either finding the net cost per cent., or, as in some cases it may be more convenient, having found the first amount to be deducted, each succeeding amount will decrease regularly by the rate per cent. last used. Subtract the sum of the amounts thus found, counting as a cent each fraction exceeding ½ cent. Given $4.58, less three 10's and 5 per cent., we have, first subtraction, 46 cents; second, 10 per cent less, or 41 cents; third, 37 cents; fourth (one-half of 37, less 10 per cent.), 17; total, $1.41, which, being deducted from $4.58, leaves $3.17. Another example: $18.63, less 25 and three 10's, gives, first, $4.66; second ($1.86, less 25 per cent.), $1.40; third, $1.26; fourth, $1.14; total, $8.46; remainder, $10.17.

SURFACE MEASURE.

Customers, especially the ladies, when given a price per square foot, frequently ask the price per yard of Wire Cloth. The answer, which may be given readily, will be, for every cent per square foot one-fourth as many cents as there are inches in width, because each inch of width gives one-fourth of a square foot to the yard of length. Thus, 30-inch Wire Cloth at 3 cents per square foot would be three-fourths of 30, or 22½ cents, per linear or running yard. Of course, in reckoning the value of your sale, some fractions of the yard are not convenient. In such cases find the surface measure, but not as some clerks do, by the long and tedious process of finding the number of square inches and reducing that to feet. The use of duodecimals is much shorter. Clerks who have not learned that method will be well repaid if they will spend the little time required in learning it.



The Harrington Tea Percolator.

The Harrington Tea Percolator.

The tea percolator herewith shown is put on the market by O. W. Burritt & Brother, Weedsport, N. Y. It is formed of a perforated nickel plated cylinder 4 inches in length, and about 1 inch in diameter. Perforated screw caps are fitted at each end. In use either cap is unscrewed, tea or coffee put in, the cap replaced, and the percolator put in the pot. The advantage of using the percolator consists in the absence of dregs or grounds from the poured beverage. The device is recommended by the manufacturers for use by housekeepers, fishermen, hunters, campers, picnickers, &c.

WHEELER & EASUM are successors to the Shelf Hardware and Stove business formerly conducted by Wheeler & Thompson, Clarendon, Texas.

THE MILLS SCREW TOP MILK CAN COMPANY of Baltimore, Md., have been incorporated with a capital stock of $5000 by Ezekiel Mills, Jr., Wm. B. Briggs and J. Booker Clift, to manufacture a patented Milk Can.

Rochester Furnace and Sheet Metal Association's Outing.

The annual outing of the Rochester (N. Y.) Furnace, Sheet Metal and Roofers' Association took place on Thursday, August 15. The members to the number of 40 took the picturesque Glen Haven Railroad and a steamer to the Newport House. Unfortunately the day was unfavorable for out of door enjoyment, owing to a persistent rain, but the cheery welcome of Mine Host Sours helped to drive away the gloom induced by the weather conditions. Brother Barrett's birthday, which, somehow, always falls on the picnic day, was first celebrated in royal style, and it was remarked that Mr. Barrett seems to get no older in these succeeding anniversaries. The rest of the morning was pleasantly spent in social intercourse.

Dinner being announced at 1.30, the members and their friends proceeded to do ample justice to the good things provided. After dinner the party enjoyed a number of impromptu talks in response to toasts. A fine programme of sports which had been planned by the committee for the afternoon had to be abandoned owing to the inclement weather. A number of useful and ornamental prizes had been donated by the wholesale houses for the different events. The time to return came all too soon. The intention was to go from Newport via steamer to Sea Breeze and Charlotte, from which place cars would take the party to the city. But owing to a break down of the boat at Sea Breeze the return to the city was made by way of Glen Haven. The sentiment of all on separating was, "If it did rain we had a good time any way," and all felt that they were closer knit together by the outing.

Guessing Amount of Sales.

The Geo. W. Peck Company of Bath, N. Y., celebrated the close of 25 years of business by a guessing contest

The Geo. W. Peck Co.

1875 TWENTY FIVE YEARS OF STEADILY INCREASING TRADE! 1900

SALES 1875. $4,321 16. // SALES 1899 $166,929 60

1875 at Savona.
1881 at Prattsburgh.
1883 at Prattsburgh and Pulteney.
1886 at Prattsburgh, Pulteney and Cohocton.
1888 at Prattsburgh, Pulteney, Cohocton and Bath.
1893 at Prattsburgh, Pulteney, Cohocton, Bath and Bradford.
1899 at Prattsburgh, Cohocton, Bath, Bradford and Hornellsville.
1900 at Prattsburgh, Cohocton, Bath, Bradford, Hornellsville and Dansville.

To Our Friends and Customers

We will celebrate the close of our twenty-five years of business by giving away four prizes, cash value $150.00, as follows: One to the married lady, one to the married man, one to the unmarried lady and one to the unmarried man, who will guess the nearest to our total sales for the twenty-five years from 1875 to Jan. 1st, 1901, in all of our stores as listed above. All guesses must be in not later than December 25th, 1900. No guesses allowed after that time. All have an equal chance, as each store will not be computed until after January 1, 1901, and sales continue for one week after all guesses are in and footed and sealed. Every person is entitled to one guess, and every person balancing their account is entitled to another, and every purchase entitles the person making it to another.

CONTEST COMMENCES OCT 1, 1900.
LIST OF PRIZES OTHER SIDE.

No. 8627 GUESSES _____

No. 8627 GUESSES _____

Announcement of Guessing Contest.

as to the amount of their sales during that period and down to December 31, 1900. Four prizes were offered, the cash value of which was $150. They included a Range for a married lady; a Buggy for a married man; a Sewing Machine for a single lady, and a Bicycle for a single man. The accompanying cut shows in greatly reduced size the form of the circular announcing the guessing contest. Illustrations of the prizes offered were given on the other side.

As will be seen the business was established in 1875 at Savona, since which time the company have opened one store after another, until they now conduct six stores in as many places.

With a view to helping contestants, the circular supplied information as to the sales for the years 1875 and 1899.

CONDITIONS OF CONTEST.

The first person in the different classes that guessed nearest to the total sales for 25 years in all the stores was entitled to the prize in his or her class.

Every person was entitled to one guess; every person balancing their account was entitled to another guess, and every purchase made entitled the person making it to another guess.

RESULT.

The number of guesses made was about 18,000, varying from about $500,000 to $12,000,000. The actual amount of sales for the whole period was $1,748,163.54, the sales for 1900 being $160,787.92.

The contest was a decided success. It created more interest than the company had hoped for, and resulted in a good increase of business at the different stores.

GROWTH OF THE BUSINESS.

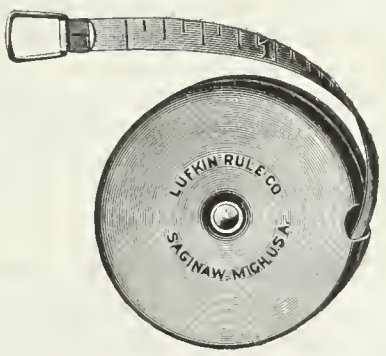
The following table shows the sales each year since the business was established:

Year.	Amount.	Year.	Amount.
1875	$4,321.16	1888	$63,915.49
1876	4,704.56	1889	79,857.69
1877	6,532.22	1890	86,321.98
1878	8,910.20	1891	114,723.90
1879	9,763.46	1892	124,639.89
1880	10,982.23	1893	144,761.17
1881	13,116.42	1894	106,741.92
1882	18,509.13	1895	111,929.00
1883	26,303.58	1896	103,236.19
1884	28,341.12	1897	95,933.49
1885	32,055.47	1898	140,534.43
1886	37,970.14	1899	166,860.62
1887	46,410.16	1900	160,787.92
Total			$1,748,163.54

It is interesting to note that the company's business has grown from 1875 to the present time on the profits without the addition of outside capital. It is estimated also that about $50,000 over and above all expenses and salaries has been drawn out. This is a striking illustration of what can be accomplished by industry and enterprise.

Pocket Linen Tapes.

The Lufkin Rule Company, Saginaw, Mich., and 280 Broadway, New York, have recently added to their extensive line of measuring tapes (which includes also 18 sizes and styles of pocket steel tapes) two series of pocket linen tapes, as here illustrated. One of the peculiarities



Pocket Linen Tape.

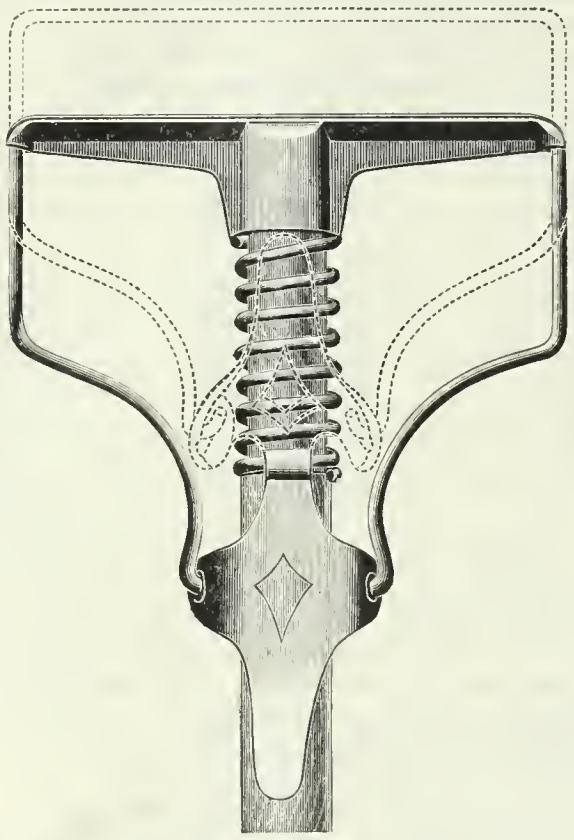
of the goods is the construction of the cases, which are made of polished and nickeled brass with rounded edges, having a spring wind and center stop. They are put together with a screw and can be readily taken apart and reassembled if necessary. The mechanism is entirely new, simple, durable and not likely to get out of order. The tape itself is of pure linen, heavily coated with water proof enamel. One group, with ¼-inch tape, is made in 36, 60 and 72 inch lengths. Another group, with 5-16-inch tape, can be furnished in 36, 60, 72 and 96 inch lengths, both styles being marked on one side in inches and eighths. The sizes of the cases are ⅜ x 1⅜, 1⅝, 1¾ and 2 inches, respectively. They are put up six of a size in a neat pasteboard box.

F. E. Myers & Bro., the well-known manufacturers of Pumps and Hay Tools, Ashland, Ohio, tendered their employees a picnic on the 10th inst. It was the first affair of the kind given by the company, and in view of the pleasure and enjoyment which characterized it, it will doubtless be an annual fixture hereafter. The picnic was held at Chippewa Lake, 17 cars being used to transport the employees and their wives or sweet-

hearts. The company's employees number nearly 400, and altogether about 1000 persons enjoyed the lavish hospitality of the firm.

The Gem Mop Head.

The Arcade Mfg. Company, Freeport, Ill., are bringing out the new mop head which is here illustrated. This device has an ingenious arrangement for firmly



The Gem Mop Head.

holding the cloth. The illustration shows the mop head in position for operation. The dotted lines show the position of the wire frame when holding the mop head opened for the purpose of inserting or removing the cloth. The wire frame is operated by means of a lever made of sheet steel, held in position by a coil spring to which one end of it is attached. This adjustment is operated freely, making the mop head, it is remarked, neat, simple, compact and reliable in action.

Emmert's Universal Vise.

The accompanying cuts show some of the positions in which the Emmert's Universal vise can be used. It is referred to as many vises in one combination. There are 30 fixed positions to the vise, and it can also be

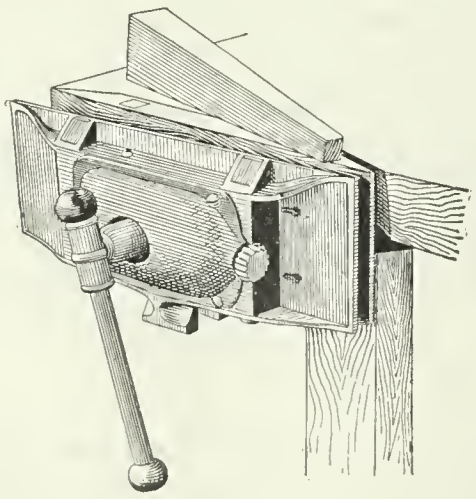


Fig. 1.—Emmert's Universal Vise.

stopped at any point between the fixed positions at which the mechanic wishes to hold his work. It can reach any point in the arc of a circle and can be raised or lowered to suit the convenience and will of the mechanic. The jaws are both right and left and measure 9 x 18 x ½ inches. In Fig. 1 the vise is shown in its normal position on a bench, with the jaw at an angle

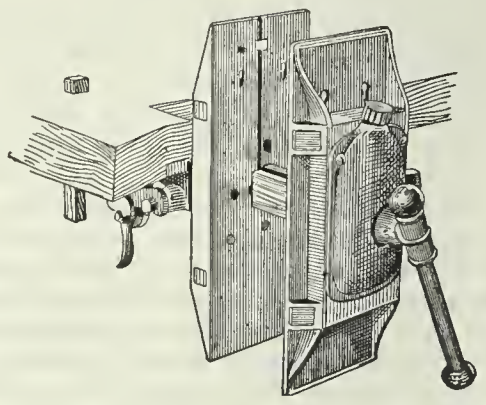

Fig. 2.—Emmert Vises Reversed.

for tapering work. In Fig. 2 the vise is reversed to hold work above the bench. One pair of the small auxiliary jaws are shown in Fig. 3 holding circular work, and in

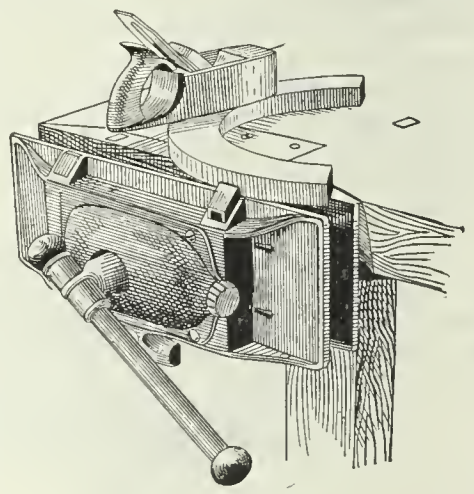

Fig. 3.—Auxiliary Jaws Holding Circular Work.

Flg. 4 two pieces are being held in position to be fastened together. It is explained that when work is once gripped it is not necessary to loosen it, but that the

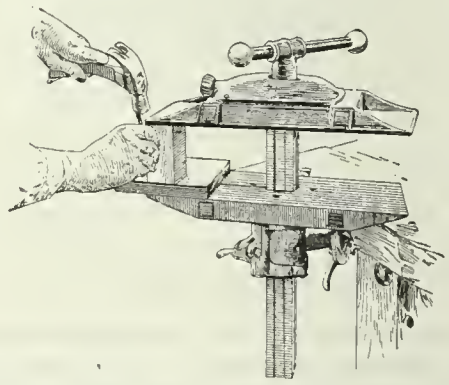

Fig. 4.—Holding Two Pieces in Position.

vise and work together are swung into varlous convenient positions until all of a series of operations have been completed. The vise is manufactured by the Emmert Mfg. Company, Waynesboro, Pa.

THE SLOWE MFG. COMPANY, 909 Walnut street, Philadelphia, Pa., have recently incorporated with a capital of $2500, the officers being Charles P. Slowe, president; Richard J. Warrick, vice-president; Eugene T. Hinson, treasurer, and J. W. Harris, secretary. The general manager is C. P. Slowe. The company manufacture the Slowe Hood and Fume Conveyor for kitchen and laboratory use. The company propose to build a plant in the near future, but at present the article is being manufactured on a commission basis.

A Plumbers' Collection Agency.

W. W. Mathews of the plumbing firm of Mathews & Edwards, Niagara Falls, N. Y., appeared before a recent meeting of the Board of Public Works and asked that body to take some action to assist the licensed plumbers of the city to collect their money when work is done for Individuals in putting in water taps, closets, bathtubs, &c.

In making application for water service the applicant agrees with the city through the Superintendent of the Water Department to engage a licensed plumber to put in the service plpes, &c., and to pay for the same. Mr. Mathews claims, however, that the people will not pay for the plumbing after it is done and he wants the clty to take some action to force them to settle. He stated that in return the plumbers would report all cases of fraud practiced on the Water Department. Mr. Mathews' request being entirely out of the jurisdiction of the board, they could do nothing for him.

The Abner Acetylene Generators.

A new 42-page catalogue in a drab cover, 4½ x 9 inches in size, is being distrlbuted by the Abner Acetylene Gas Company, 32-36 La Salle street, Chicago, Ill., in the interest of their Abner generators. In the first few pages considerable information is given about acetylene gas, its generation and the different types of apparatus for the purpose that will make the catalogue useful to those who take up the sale of this increaslngly popular lighting system. In the Abner generator the carbide is placed in a feed hopper and is automatically fed to the generating chamber as the gas holder rises and falls under the generation and consumption of the gas. Before enterlng the service pipes the gas passes through a purifier and the pressure ls controlled by a regulator. A large body of water is provided in the generating chamber to prevent overheating and to insure a gas of low temperature.

Sectional views of the apparatus are presented and detailed explanation is given of the construction, together with rules for its operatlon. The apparatus seems very slmple and it is claimed that excellent service can be secured when the management is left to the average servant. A long list is given of plants supplying 1000 burners and less in use in various States, as well as pictures of houses, churches and factories in which the Abner lighting system is installed, together with testlmonial letters from owners. The catalogue also shows acetylene gas burners and cooking ranges.

Newark, N. J., Plumbers' Outing.

The Committee of Arrangements for the annual outing of the Master Plumbers' Association of Newark, N. J., have heretofore heard nothing but praises for the admirable manner in which all they have planned has been carried to perfection without hitch or friction of any kind. On Saturday, August 17, the committee, composed of A. Seldon Walker, Ira Budd, F. J. Sturn, R. J. O'Crowley, E. M. Sterling and E. A. Bleythlng, lost some of their past prestige by getting the association and its guests stuck in the mud. They were to enjoy a clambake and shore dinner at New Dorp, Staten Island, but when they reached a point where the appetizing odors had just been wafted to them, thoy found they were "so near and yet so far." Flnally they left the ship, took to the boats and assailed the dinnor with an ardor that soon put all in a happy frame of mind. The outing of 1901 will long be remembered and that, too, with plcasure.

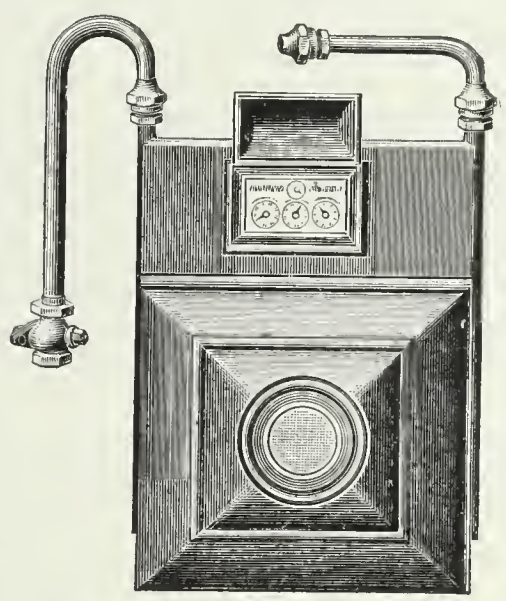
The Gorton Boilers.

The Gorton & Lidgerwood Company, 96 Liberty street, New York, report an increasing trade on the Gorton side feed boilers, particularly those furnished with a cast iron water leg section. These are numbered 34, 34½, 35 and 35½ for steam, and 44, 44½, 45 and 45½ for hot water. By the use of the cast iron water leg the cost of production is reduced and a practically wrought iron boiler with all of the features of strength and a large surface is presented at a price that compares favorably with the price of the all cast iron boilers. The boilers mentioned are of the sizes most in demand by steam fitters.

The Gorton boilers are made also for soft coal. A feature of the construction that has made the boiler popular wherever used is the use of the side feed for replenishing the fire. This combines with the advantages of a surface burning fire of strong radiating power the self feeding convenience of a base burner, so that the fire will run a long time without attention. A large surface of incandescent fuel is supplemented by the combustion of the gases through the grate construction, which admits an ample quantity of air to unite with the gases and consume them. A little pamphlet issued by the house gives complete information regarding these goods.

The Novelty Gas Meter Connections.

The New Haven Novelty Machine Company, New Haven, Conn., who make the Novelty fittings for connecting lead pipe with lead, iron, brass or copper pipe



The Novelty Gas Meter Connections.

without the use of solder and wiped joints, are just putting out a line of fittings specially adapted for the use of gas companies. With this fitting the gas company employec has no need to measure for the pipe and have the joints made in the shop. It is only necessary to take to the place where the gas meter is to be connected a sufficient length of pipe and the die and plug used for preparing the end of the lead pipe for the fitting, also a hammer, wrench and tools for cutting the lead. With this equipment any handy mechanic in a few minutes can prepare the pipe and make a tight joint against gas pressure. It is pointed out that this effects a great saving of time and expense in connecting gas meters and enables customers to be more promptly served. The fittings are adapted for several sizes of pipe and for makIng iron and lead connections.

Calcium Carbide in Germany.

The calclum carbide industry in Germany is suffering from overproduction. Prices have steadily decreased, so that all the factories in Austrla-Hungary, Italy, Switzerland, Scandlnavia and Germany are obliged to stop workIng. The production has amounted to 50,000 tons, of which only 12,000 to 13,000 tons are required for the production of acetylene. A few firms who have binding contracts to deliver calclum carbide are the only ones working. These are the works of the Alumlnum Industrie Gesellschaft in Newhausen, Swltzerland, who have a two years' contract wlth the Prussian Government, who require calcium carbide for producing acetylene gas for the illumination of rallway carriages. It is stated that a number of accidents have lately occurred which tend naturally to hinder the development of acetylene gas.

THE BRITISH INSTITUTION OF HEATING & VENTILATING ENGINEERS.

(From our London Correspondent.)

The summer meeting of the British Institution of Heating and Ventilating Engineers was held at Dublin, Ireland, on Tuesday and Wednesday, July 23 and 24. The proceedings of this institution should be watched by American heating and ventilating engineers, because whatever movement there may be in England toward the American system of domestic heating will, in all probability, be carried out by the members of this body. The special work of heating and ventilating is not as yet strictly delimited over here; for example, the president is at once an ironmonger, gas fitter, plumber and hot water engineer, and it may be said that the membership of the institution includes members who are severally or comprehensively members of all these trades.

There can be no doubt now that the old British bias in favor of the open fire is being dissipated. The business done by the American Radiator Company shows that clearly. If this be so, what is the likely course of domestic heating in England? Those who are best informed on this subject say that without doubt it will take the form of low pressure heating. Its simplicity, easy working and freedom from danger render it the most likely form of heating to appeal to the average Britisher. As it is now evident that there is a marked growth in the popularity of heat radiation by steam, the real difficulty lies in adapting the new system to existing buildings, while a good deal has yet to be said as to the cost. An expert on this point affirms that there are really few houses where a convenient position cannot be obtained for the boiler, either in the basement or in an adjoining building, and that by a little careful planning an installation can generally be fixed without much disturbance to old work.

The law of landlord and tenant has, however, to be observed, and it is important that arrangements shall be made whereby the heating apparatus shall be a tenant's fixture, to be taken away if required at the end of the lease. Thus an indcpendent boiler must be put in instead of one set in brick work. As for price, it seems likely that the low pressure apparatus is more economical than any other system. Quoting the same authority, it is said that most houses can be heated thoroughly in the hall and principal rooms at the cost of a year's rental. It is further stated that under this system the annual saving in the coal bill after dispensing with fires would well pay the interest on the capital outlay—that is, the cost of installation. Thus, in a residence having an annual rental of $350, in which a heating apparatus was fixed, the cost of the upkeep did not exceed an average of $1.25 a week, the price of fuel being then at about $2.50 per ton.

It is recognized, of course, that in this line of work the Americans are the pioneers. On this point my authority says: "Our American neighbors have been looked upon as pioneers in the heating world, and we must admit we have a debt of gratitude owing to them for the advances they have made in the science. It is, however, now well known that they are changing their views considerably, and utilizing water as a heating medium to a far greater extent than formerly, and some of their largest buildings, notably the War Office Buildings at Washington (which has mains of a diameter of 20 inches), are heated by low pressure hot water." On the whole then, it would seem to me that missionary effort on behalf of American methods is more likely to be remunerative to-day than ever before, so far as this country is concerned.

Harking back to the summer meeting of the institution, I quote the following remarks from the presidential address on the methods of heating adopted in France. W. R. Maguire on this point said:

The methods of heating adopted in France and Italy differ much, I find, from the English and American systems. When steam heating is adopted pressure seems to be eliminated by leaving the steam pipes open to the air in a fashion which we would consider wasteful. Examining a steam apparatus in a new hotel, I find it heated from a boiler formed of cast iron tubes or rings, a furnace fed from the top not capable of holding more than a charge of ¼ cwt. of coal, yet able to supply steam to about 2000 feet of radiators in various rooms and passages of the hotel, as closely as one could estimate. English engineers would specify a boiler of at least twice the surface, using twice the fuel, to attain the same result. This boiler, I noticed, was built into a cramped space in a low basement. The only fittings visible were a water gauge and a blow off cock; no safety valve was needed, as any condensed steam escaped freely if pressure exceeded a fixed amount as soon as it had accomplished its circuit through mains and radiators. The whole apparatus was of the plainest and cheapest construction; the radiators were of local castings.

Any of us would feel ashamed of such absolute simplicity, but it accomplished its work economically and satisfactorily, so far as I could ascertain. As I could not get accurate measurements, I merely mention such an apparatus in the preface to my address to suggest a general question as to whether we are not elaborating our systems of heating overmuch, adding valves and patented contrivances too fast and too many, with the best intentions, but perhaps attaining a point in complication which Continental engineers appear to me to be seeking altogether to avoid, with considerable success. If I found the radiator in my room too hot, by closing the single valve which admitted steam at the top it was cooled down in half an hour, and seemed completely under control and noiseless. The French and Italian heating engineer generally adopts, manufactures and fixes a definite type of boilers, radiators, valves, regulators and fittings, and calls the combination his system, which he patents and jealously guards as his own.

The pressure of steam is usually controlled by an expansion feed tank, whose water level is about 6 feet above the water in the boiler, making therefrom about 3 pounds pressure. The condensed water is led back into this tank or direct into boiler, according to the system adopted, which is also provided with an air and steam escape pipe to the open air or ash pit, and an overflow pipe, which serves to operate a damper to check combustion in event of water overheating or steam pressure exceeding its limits. Water is usually supplied by hand feed to boilers, and in the majority of boilers a magazine or store of coal is arranged to feed the furnace for hours without the attention of a special engineer. There is another system from which air vents are omitted and the air in apparatus remains unchanged, moving about with the action of the steam, so as to modify the temperature of radiators, according as they are filled with steam or with a mixture of air and steam. This passing account of the simple forms of low pressure steam heating adopted in France, with apparent success, may have some interest for our members.

If this be so, it would almost seem as if Americans might do something in France and Italy as well as in England. One other remark by the president must conclude this rough survey:

English heating engineers have a powerful object lesson in the growing volume of American trade in our own special business. American boilers, radiators and fittings are too often displacing our English trade union crippled productions. Our institution will, we hope, help to educate public opinion in favor of practical technical training for all youths who may wish to earn their own living. Also we hope to influence the popular mind in favor of securing abundance of fresh air in tenement houses, in schools and factories, and in all buildings where our poorer brethren live and labor without the power to help themselves. We should endeavor to promote judicious legislation to compel proper ventilation in such buildings, and also in hospitals, churches, public buildings and theatres of public resort.

A New Jewel Gas Circulating Water Heater.

George M. Clark & Co., 72 to 76 Lake street, Chicago, are distributing an illustrated circular which calls attention to the special merits of their new Jewel gas circulating water heater. This water heater is designed for use in connection with the ordinary kitchen boiler. It is intended to be connected with the boiler, so that the flow of hot water passes into the top of the boiler and the return is taken to the heater from the bottom. The water in being heated passes through a coil constructed of a number of short tubes, contained in a casing consisting of two thicknesses of sheet steel and two of asbestos with an air space between to prevent the loss of any heat by radiation. The heater is made in two sizes, each of which is 10 inches wide by 10 inches deep, one size being 20 inches high and the other 29 inches high. It will thus be seen that the heater occupies very

small space. The manufacturers state that the large size will give 2 gallons of scalding hot water in five minutes after the burner is lighted aud will then supply a gallon per minute at the same temperature. The smaller size will give 1½ gallons of hot water in five miuutes aud will then supply a gallon per minute. The water heater is furnished as desired for the use of ordiuary illuminating gas, natural gas or gasoline machine gas.

ADVANCED PLUMBING.

The followiug is an extract from a paper read by Wm. Paul Gerhard, C.E., at the annual meeting of the School for Health Officers at Burlington, Vt., on July 10, 1901. It will be interesting to plumbers on account of the views expressed on the use of vent pipes, which by many is considered the especial virtue of the modern system of plumbing:

The advanced system of plumbiug, which up to the present time has been iustalled in only comparatively few cases, is chiefly distinguished from the regular, common or double pipe system by reason of its greater simplicity and compactness. The principles of house drainage remain much the same, and the advance consists chiefly in the simplification, in greater thoroughness of workmanship and in greater safety. I have for years contended, and a long experience has only confirmed my views, that where plumbing fixtures are located withiu a short distance of a well ventilated soil or waste line the special back air pipes can with safety be dispensed with, provided nonsiphoning traps are used under basins, bathtubs and sinks, and provided those types of water closets are used which have a deep water seal.

Some able sanitarians have at various times explained the advantages of the system, and demonstrated that it is safer and more scientific than the complicated double pipe system. In my own practice I use the same by preference wherever I am left untrammeled by the dictates of building or health department regulations.

The advocates of back airing claim that separate vent pipes are necessary: 1, to prevent traps from being forced by siphonage or back pressure, also to prevent the absorption of gases by the water seal; 2, to aerate the traps and every inch of the branch waste pipes.

The first object can be accomplished safely by methods which are less costly and less complicated, and the second is attained at each discharge of a plumbing fixture whenever the same is iu constant use, and constructed so as to be quick emptying and working similar to a flush tauk.

Some of the reasons why the back airing of traps should be given up are as follows:

1. Trap vent pipes increase the liability of the seal of S traps being destroyed by evaporation. While an unvented nonsiphoning trap will hold its seal for two months, a back aired common S trap loses it, according to experiments, in from 4 to 12 days.

2. The system of back venting renders possible the making of dangerous by passes by the blundering of careless or incompetent mechanics.

3. The use of trap vent pipes increases the amount of piping and the number of pipe joints in a house, and in this way the danger of leaks is greatly increased. In any case they cause greater complication without corresponding greater security.

4. Incidentally trap vent pipes increase the cost of plumbing, and the money paid for them to plumbers is spent quite usclessly. A calculatiou undertaken by a careful investigator showed that the amount of piping is increased by 33 per cent. and the number of pipe joints by 66 per cent. The total cost of a plumbing job is increased by at least 10 per cent., and often even more.

5. Back air pipes are liable to stop up at the crown, or upper bend, of the trap from congealed grease or other semisolid matter. They then become iuoperative and hence give a false sense of security. In Cologne, Germany, all back air pipes which an investigating committee had cut open were found choked with either grease or coffee grounds or cobwebs. In St. Paul, Minn., an examination by a plumbing inspector showed that from a total of 23 houses 12 houses had the vent pipes from kitchen siuk traps completely stopped up by congealed grease and particles of vegetable matter or lint from kitchen towels. Of the 11 others only one house had a sink vent pipe which was perfectly clear and unobstructed, aud this was found to be due to the fact that hot water and lye was used once a month iu the pipes. In seven out of the 11 houses a soft, slimy substance was found adhering to the interior of the vent pipes for 2 or 3 inches above the crown of the trap, and in the other three the vents were partially stopped up. The vent from the S trap under the kitchen sink in my own house has been fouud partially stopped up five times in ten years, and would doubtless have become entirely stopped up before the end of this period if I did not have same cleaned once a year. In northern latitudes, where soil and vent pipes above the roof may become closed by frost, traps will readily be siphoned under such conditions.

6. The trap vent pipe, if placed much below the trap seal, does not protect the pipe against self siphonage or loss of seal by momentum. This is a point to which very little attention has been paid.

7. Nonsiphoning traps with more than the ordinary depth of seal are particularly desirable where the mouth of the soil pipe and, through it, the seal of traps is exposed to the action of boisterous winds, as, for instance, near the top of buildings, the winds causing such an agitation in the trap water as to make the ordinary S trap lose its seal by degrees.

Mr. Putnam, a well-kuown architect of Boston, who has given a great deal of attention to sanitary drainage, calls the trap vent law "oue of the most unfortunate and burdensome building laws ever inflicted upon the people, and an imposition upon the public."

The late Colonel Waring stated that in his judgment "the separate ventilation of traps, where the main soil pipe is at least 4 inches in diameter and open at top and bottom, is unnecessary. . . . Continued experience and observation tend more and more to confirm the opinion that the back venting of traps, aside from its great cost, does more harm than good—that is to say, that a trap is more likely to lose its seal if it is back vented than if it is not."

An English expert on drainage called "a diagram of house plumbiug, protected by ventilation pipes as prescribed by most American authorities, a bewildering nightmare of complicated ingenuity," to which statement many of you will doubtless heartily assent. [The lecturer here again referred to the diagram illustrating a house drainage system with back air pipes.]

The fact is, S traps with vents are perfectly safe only if the vent pipes are of sufficient area; if they are uot of too great length; if there are no sudden bends and not too many of them; if they are free and unobstructed, and if their fixture is used every day. The conclusion is therefore inevitable that, as ordinarily arranged, veut pipes are "useless complications."

I wish that time would permit me to make a more elaborate comparison between the two methods, in order to impress upon you the important fact that the improved and simplified system is far superior to the one commonly required by rules and regulations. [Here the lecturer explained a wall diagram showing the advanced system of plumbing.] That the present tendency in plumbing work is toward an undue complication of the work no one can deny, and it would seem to me that this is a particularly fit occasion, by recalliug the superiority of the simpler system, to make a plea for the revision of municipal plumbing regulations. To the health officers of those towns or cities which are about to make plumbiug regulations I suggest that the better way is to make it at least optional with the architect or owner of a building whether he will choose the common, or regular, system with double piping, and incur an unnecessary expense, or use the advanced, improved, simplified and safer method.

I am more than ever convinced that "the one-pipe system," as I have sometimes called it, is the coming system, and that within the next few years even the rules and regulations of our larger cities will be amended accordingly. In my judgment a plumbing regulation requiring the use of traps with antisiphoning properties and with a considerable depth of seal would tend to secure much safer and better work than the majority of the present rules. For the thriving rural communities of your own State I can, without the slightest hesitation, advise the adoption of the advanced plumbing system on account of its greater simplicity, safety and economy.

New York Master Plumbers' Outing.

We are indebted to T. J. Tuomey, chairman, for an invitation, with complimentary ticket, to the grand aunual outing of the Association of Master Plumbers of the city of New York (Manhattan Branch), which will be held Wednesday, August 28, at Crocheron's Hotel and grounds, Bayside, L. I. The train leaves Thirty-fourth street, East River, at 8 a.m. The other members of the committee besides Chairman Tuomey are T. F. Gaynor, I. O. Shumway, E. J. Brady, Joseph O'Brien and John Renehan, treasurer.

Manson W. Johnson, Indianapolis, Ind., has the contract for heating the building of the Grand Lodge of the Knights of Pythias in that city.

New York City Notes.

President A. H. Brown and Vice-President B. F. Donohoe of Manhattan Branch spent the best part of the week in Buffalo attending the session of the State Executive Committee. It is needless to say that while there they took in the sights of the Pan-American Exposition.

* * *

Among the busy plumbers are Griffin & Seddon of West Forty-fourth street, who have a number of good jobs on hand, both new and overhauling, notable among which is the residence of ex-President Grover Cleveland at Princeton, N. J.; a country residence for one of the Vanderbilts at Rhinebeck, N. Y., and the Wayside Home on East Twentieth street.

* * *

Mr. Seddon of the above named firm had a narrow escape from drowning at Rockaway Beach last Sunday. He was caught in an undertow and carried out to sea, but was assisted to shore by his bride of a few weeks, who saw that he was in difficulty and swam to his assistance.

* * *

Trade in the past few weeks has fallen off considerably from what it has been for some weeks past.

* * *

Wm. Lyman, who was one of the best known plumbers in the city a few years ago but left to go into the building business, has returned to his original trade and formed a partnership with Owen Costello at 2246 Fifth avenue. The firm are at present quite busy, one of their largest jobs being an apartment house on East Fifty-ninth street, with an ell running into Park avenue.

Heating and Plumbing Notes.

At the Florida State convention of Master Plumbers, held at Jacksonville, Tuesday, August 13, the election of officers for the ensuing year resulted as follows: President, H. W. Stafford of Jacksonville; first vice-president, George Fernald of Sanford; second vice-president, H. Bomford of Tampa; third vice-president, C. F. Hamblin of St. Augustine; fourth vice-president, H. H. Wickie of Pensacola; secretary, M. R. Hooker of Jacksonville, and treasurer, A. G. Johnson of Jacksonville.

The Glamorgan Pipe & Foundry Company of Lynchburg, Va., manufacturers of Cast Iron Gas and Water Pipe, &c., have leased the works of the Radford Pipe & Foundry Company at Radford, Va., which has a capacity of from 125 to 150 tons a day.

Proposals will be received at the office of W. C. Jones, chairman of the Special Building Committee of the McLean County Board of Supervisors, Bloomington, Ill., until September 7, for all the labor, materials and apparatus required in the steam heating, ventilating and heat regulation of the McLean County Court House, now being erected at Bloomington, in accordance with drawings and specifications prepared by Reeves & Baillie, architects, 600 Y. M. C. A. Building, Peoria, Ill.

George W. Page, who is said to have been the pioneer plumber of Lacrosse, Wis., died there recently at the age of 84 years.

The Stephenson Mfg. Company, 537 Wood street, Pittsburgh, Pa., are distributing a very attractive catalogue devoted to Stephenson's Automatic Instantaneous Water Heater for Gas. The Heater is designed to be connected with the water and gas service pipes in a building and to supply all the fixtures in the building with hot water. A special burner and valve are provided. A coil of 100 feet of copper pipe is exposed to the gas flame and heats the water as it flows through, so as to make it hot for use on its arrival at any faucet.

Green & Logan, Bridgeport, Conn., are roughing in the plumbing in the new preparatory school building which D. C. Mills is building at Salisbury. There will be 78 fixtures in all and the work is to be completed, according to the contract, by October 15. They also have the contract for the tin roofing and plumbing of W. M. Terry & Co.'s new block in Bridgeport.

The Atlas Wire Works, Springfield, Mass., have recently closed a contract through the Fuller & Warren Warming & Ventilating Company of Boston, Mass., to equip the High School Building in Hudson, Mass., with a large number of Vent Screens.

The journeymen plumbers of Columbia, S. C., recently struck against the employment of colored men to do plumbing, gas and steam fitting.

The Elm City Engineering Company of New Haven, Conn., were lately incorporated to carry on an electrical and mechanical engineering business, with a capital stock of $2500, which is fully paid in. N. B. Hoyt is president and treasurer of the company; J. H. Martin, manager, and J. E. Post, superintendent. Their office and factory is located at 65 Orange street, where they employ a force of experienced men. They have been busy filling contracts for placing electrical machinery for ceiling fans, ventilating apparatus, &c.

MacBrayen & Mahn, New Haven, Conn., have the contract to install a large steam heating system in the house of Frank H. Kimberly on Townsend avenue, known as "Fernhurst." They also have the contract to heat seven greenhouses for the same party.

Hoy & Co., Minneapolis, Minn., secured the contract for the plumbing and gas fitting work in the new Physics Building at the Minnesota State University.

Rothacher & Townsend, Minneapolis, Minn., have contracts for plumbing in two Curtis houses on Chicago avenue and in the new Turkish baths on Sixth avenue, that city; also in the school building at Sacred Heart, Minn.

The new house drainage system for Savannah, Ga., has been completed. It is 49 miles in length and cost the city $264,417.50. Up to date 1000 house connections have been made. The work was begun in 1897.

The Board of Education of Cleveland, Ohio, will receive, until September 9, bids for heating, ventilating, plumbing and gas fitting the Rose School building, also for the galvanized iron and tin work.

The F. G. Heald Hardware Company, Skowhegan, Maine, have the contract for plumbing the new school house at Madison. The heating contract was awarded to N. S. Steward, who will use the Magee Heaters, made by the Magee Furnace Company of Boston.

The city of Philadelphia, Pa., has taken title to the property of the Tenth Baptist Church, on Eighth street, above Green, and will tear down the present brick edifice and erect a public bath house upon the site.

F. W. Bryan & Co. of Canandaigua, N. Y., have been given the contract for erecting the new ventilating plant in the local Court House, to cost $2175.

A contract for a heating system for the Wisler Memorial Baptist Home, Chalfonte, Pa., has been awarded to the J. Frank Boyer Heating & Plumbing Company, Norristown, Pa.

A boom in plumbing in Denver, Col., has caused application for the unprecedented number of 84 plumbing permits to be made to the chief plumbing inspector in one week.

Henry Ashley Bryant died at his residence in Williamsburg, Brooklyn, N. Y., on August 17, of congestion of the brain, aged 63 years. He was in the plumbing business on Atlantic avenue. Mr. Bryant was a member of the Baptist Church. A wife and one son survive him.

The Hitchcock Supply Company, Springfield, Mass., inform us that they have purchased the good will and stock of the American Supply Company of their city, thereby increasing their business and facilities. The concern they have succeeded will no longer do business in Springfield.

The plumbing contract, including the drainage, for the factory of the Atlas Tack Company at Fairhaven, Mass., has been secured by the J. Wadsworth Company of Taunton. It will require nearly 4000 feet of Cast Iron Pipe. The company's bid was about $3200.

They have recently finished plumbing the new high school building at Taunton.

WORK has been begun on the construction of a new $30,000 hot water plant at Van Wert, Ohio, under the superintendence of E. F. McGlynn of Delaware, Ohio.

THE PENN YAN STEAM HEATING COMPANY, Penn Yan, N. Y., have notified their customers that on account of the high price of coal they will advance rates 20 per cent. September 1.

IN keeping with the name Royal, given to their Heaters, is the souvenir pencil that the Hart & Crouse Company, Utica, N. Y., are sending to their friends in the steam fitting trade, as a reminder that this is the season to use the Royal line of Heating Apparatus. The company's address and the words "Royal Heaters" are engraved on two sides of a handsome square nickel plated writing pencil and another side is graduated as a standard 6-inch rule. At one end is the screw for adjusting the leads, which are held by a clamp. The leads are intended to be worn out in writing orders for Heaters, but for Royal Heaters only.

HARRY FOX, Watertown, Conn., who carried on the manufacture of Faucets after his father's death, sold out the business to F. P. Welton of Waterbury some time ago. Since Mr. Welton has taken possession the business has shown a marked increase.

A MOVEMENT is being made in Gardner, Mass., to have the Plumbing Inspector of Fitchburg act for that town also, as there is not enough work to warrant the expense of a separate official.

THE PHILADELPHIA STEAM HEATING COMPANY, Philadelphia, Pa., have contracts to install heating plants in a number of buildings in that city, involving an outlay of $20,280. They include a plant to cost $3900 in the school of St. Agatha's Roman Catholic Church; one to cost $800 in the house of W. L. McLean, Queen lane, and one to cost $1700 in the store of Mitchell Fletcher & Co.

C. J. MCPHERSON of Portland, Ore., was a visitor at the office of *The Metal Worker* this week. He has been spending some time in the East among the makers of heating goods. His father, W. G. McPherson, handles the American Boilers made by the Pierce, Butler & Pierce Mfg. Company, Syracuse, N. Y., and the Perfect Furnaces and Ranges made by Richardson & Boynton Company, New York.

THE NATIONAL REGULATOR COMPANY, 204 Dearborn street, Chicago, are distributing a 24-page catalogue in a drab cover bearing a design in red and black. It is devoted to the National Automatic Temperature Regulator, which is designed to control the draft of all kinds of heating apparatus so as to maintain an even temperature throughout a building, or it may be attached to one Radiator or to the gas supply to a natural gas apparatus. Testimonials are presented that report excellent results.

THE uses to which Buffalo Volume Blowers and Exhausters are put are described in an interesting manner in a 20-page *brochure* which has been issued by the Buffalo Forge Company of Buffalo, N. Y. Illustrations as well as tables of dimensions and prices of the Buffalo "B" Volume Blowers and Exhausters are presented. The illustrations show the various adaptations of these Blowers, giving both the engine and motor electric connected types. A chapter also deals with Blast Gates, Bearings and Countershafts. The booklet has a neat and attractive appearance and contains much information for one who is looking into the matter dwelt on.

MALLEABLE IRON FITTINGS COMPANY, Branford, Conn., have just completed a new building, which they will use for japanning and coppering. This feature, in connection with their galvanizing and tinning business, enables them to supply Gray and Malleable Iron Castings, finished in either way. The upper floor of the new building, 283 x 58 feet, which was completed a few months ago, has been utilized as a machine shop and is running full time, with plenty of orders on Hardware Specialties and Malleable Iron Fittings, both Galvanized and Black. W. T. Flanders, author of "Galvanizing and Tinning," published by the David Williams Company, has been engaged to take charge of the galvanizing and tinning department, and to superintend the erection of new galvanizing and tinning plants, which business will be made a special feature.

THE following Board of Directors has been chosen for the National Tube Company: F. J. Hearne, W. H. Latshaw, J. D. Culbertson, E. C. Converse, C. M. Schwab, E. H. Gary, William Nelson Cromwell, W. J. Curtis, Charles Steele, A. S. Matheson and William B. Schiller. The board organized by electing the following officers: President, F. J. Hearne; first vice-president, W. B. Schiller; second vice-president, W. H. Latshaw; third vice-president, J. D. Culbertson; fourth vice-president, A. S. Matheson; secretary and treasurer, J. D. Culbertson. The regular quarterly dividend of 1¾ per cent. on the preferred stock has been declared, payable October 1. Books close September 23 and reopen October 1.

THE contract for heating with steam St. Austin's Military School, at Salisbury, Conn., has been awarded to M. Carney of Philmont, N. Y. Mr. Carney has also received the contracts for the heating and plumbing of St. John's Reform Church, at Chatham, N. Y., and the heating of the residence of E. Palmer of the same place.

THE heating contractor who visits the Pan-American Exposition at Buffalo will have a fine opportunity to get a comprehensive idea of Fans for heating and ventilating work at the exhibit of the Buffalo Forge Company of Buffalo, in the Machinery and Transportation Building. It is not only an imposing display with its pyramid of Fans, but Fans of large and small sizes can be compared and a better idea of them may be gained than from a catalogue. The Fans are shown connected with engines and motors just as they are used, some being in operation. Pressure Blowers for foundry cupolas and smaller ones for Blacksmiths' Forges are displayed, also complete Forges with Blowers. The exhibit covers a large space and to the practical man is an instructive one. The apparatus for washing and filtering air will be of special interest to many contractors.

CAPTAIN R. L. BROWN, Quartermaster at Sheridan, Wyoming, will receive bids until September 11 for plumbing, heating and electric wiring a barracks building at Fort Mackenzie, Wyoming.

THE F. W. BRYAN HARDWARE COMPANY, Shortsville, N. Y., bid $2175 and secured the contract for the ventilating plant for the Court House in that town.

CHARLES F. HAUSS, a member of the American Society of Heating and Ventilating Engineers, was in attendance at a four days' meeting of the German Society of Heating and Ventilating Engineers at Mannheim on August 13-16.

New Firms and Changes.

CHARLES A. JONES has bought the stand of Peacock Brothers, corner Eleventh street and First avenue, Detroit, Mich., and has opened a plumbing establishment there.

THE HOME STEAM HEATING COMPANY of Chicago have been incorporated, with a capital stock of $2500, by John B. Synnestvedt, Emil F. Lindrooth and Rose B. Barden.

L. A. MCGUIGAN has opened a plumbing and steam fitting shop at Davis, W. Va., and would like to get catalogues of goods in his line from the trade.

THE DRAPER MFG. COMPANY have been organized at Port Huron, Mich., to take over the business of T. Draper's Sons, manufacturers of Valve Facing Tools. The capital stock of the company is $25,000. H. Corey of Petrolea, Ont., is president; A. D. Bennett, manager of the Commercial Bank of Port Huron, is vice-president; Jas. F. Draper is secretary and treasurer, and Thomas Draper is manager. The company have secured from the city of Port Huron a lease of the old Fort Gratiot Water Works Building and are remodeling the building to suit their requirements. They will manufacture on a more extensive scale the specialties of the old firm, comprising Valve Facing Tools for all styles of Valves, Ball Check Valves, Solid and Hollow Brass Balls for all classes of work, Valves for oil, salt and artesian wells, Brass Valve Disks, &c. The company's products are fully set forth in a catalogue, which also

contains testimonials from users of the Draper Tools in all parts of the country.

ERICSON & JOHNSON are a new firm in the plumbing and tinning business at 48 Dwight street, New Britain, Conn. They desire to receive catalogues and quotations from dealers in their line.

THE FRIEND MFG. COMPANY of Gasport, Niagara County, N. Y., have been incorporated to manufacture Pumps, with a capital of $150,000. The directors are George H. Hull, W. N. Hull and A. B. Hull of Gasport.

AT a meeting held in Pittsburgh recently the company operating the Homer Brass Works of Philadelphia, Pa., were reorganized with the aid of Pittsburgh capital. The firm name has been changed to the Homer Brass Works, Incorporated, of Pittsburgh and Philadelphia, with C. S. Frishmuth of Philadelphia, president; James L. Hukill of the Pennsylvania Car Wheel Company, this city, vice-president; A. R. Bassett of the Pennsylvania Car Wheel Company, treasurer, and L. R. Wooldridge, secretary. The company are engaged in the manufacture of Plumbers' Supplies, though the manufacture of a general line of Brass Goods will be taken up later. The location of a branch plant in Pittsburgh is being considered, but has not been decided upon. The brass finishing department of the plant at Philadelphia will be enlarged and new machinery installed.

ARTICLES OF INCORPORATION of the Williams & Marvin Company of Saybrook, Conn., have been filed with the Secretary of State. The corporation are organized for the manufacture and sale of Turned Wooden Goods, Hardware and Plumbers' Supplies. The capital stock is $1800. The subscribers are Charles R. Marvin, Mary A. Williams, Ellen M. Post, Clara W. Williams, Mary A. Norton, Jane E. Marvin and Ernest L. Prann.

A Royal Kitchen.

We are accustomed to barbaric splendors at the Russian imperial court, but it is not generally known that the kitchens at the Palace of St. Petersburg form a magnificent part of it, says a writer in the *Westminster Gazette*. The walls and ceilings of these establishments are of black marble, covered with valuable ornaments. The kitchen utensils are of solid gold, and date back to the time of the Empress Catherine. Their value is £10,000, and there are among them several saucepans worth £50, while a fish kettle is worth £1000. The kitchen staff consists of 267 persons, and the head cook receives a salary of £10,000 a year. Six other cooks earn each from £1000 to £1500. From these figures it appears that, next to the Spanish court, that of the Great White Czar is the most luxurious in Europe.

But all these splendors pale before those of the kitchens of the Shah of Persia at Teheran. There the meanest vessels are of gold, and every article of the dinner service is incrusted with precious stones. No wonder the Shah's kitchen battery is valued at £1,000,000.

Bronson & Minor, counsel for the E. J. Manville Machine Company of Waterbury, have entered suit against John Carroll and John J. McCarthy for $100 damages, the case to come before the City Court the latter part of this month. The company sue because of an alleged violation of an agreement entered into some time ago between Mr. Carroll, his son, Francis T., and Mr. McCarthy. Francis Carroll was until recently an apprentice at the E. J. Manville Machine Works. When the strike came young Carroll went out with the other workmen, and by doing so, the company claim, he violated one of the clauses in the agreement. According to the complaint Carroll, through his father entered into an agreement with the company to work as an apprentice for at least three years. Mr. McCarthy, by attaching his signature to the document, guaranteed that Carroll should carry out the terms of the agreement. The plaintiff company claim damages for the breach to the amount of $100.

A New Welding Process.

The old difficulty of welding aluminum—a conundrum which has puzzled so many—has been tackled by Dr. Hans Goldschmidt with the usual German scientific thoroughness. He has succeeded in producing a temperature of 2000 degrees Cel., not by using the electric furnace, but by burning aluminum in hydrogen. Certain mixtures are necessary for the continuous combustion of aluminum. As a proof he mentions an experiment in the course of which he produced a temperature of 3000 degrees Cel. in a crucible, and with the heated fluid he perforated an iron plate ⅝ inch in thickness, with such rapidity that the plate itself could not absorb any heat, and the hole showed sharp contours. This experiment has given rise to the hope that such a cheap and quick way of producing high temperatures might be of practical use in welding. Dr. Goldschmidt immersed the pieces to be welded in the heated fluid, but this was found to be impracticable, as they became corroded, but in later experiments he poured the heated fluid upon the pieces. This new process is specially applicable in cases where other processes are not obtainable, especially with pipes and rails. Trials with pipes of different diameters have shown clearly the great cheapness of this process.

Aluminum Furniture.

What a fortune awaits the individual who discovers some simple and inexpensive way to extract aluminum from common clay, says the *Furniture Worker*. At the present time, by the advance in electricity, it can compete with copper in the manufacture of articles usually made of that metal; and who knows but that some shrewd scientist, by a still further cheapening of the cost of generating electricity, or an improved method of extracting aluminum from its ores, will render it the missing link of furniture evolution.

With aluminum furniture one man will be able to handle the heaviest dining table, and the small boy lift a chiffonier. Aluminum and glass will make up all case goods, and aluminum alone will be made into tables and chairs, parlor furniture and couch frames. The serenade of the saw mill will cease in rural groves, the planer's discordant chimes will be silenced forever, and the wood turner, wood carver and wood finisher will be a race extinct.

Warm Weather Houses.

The heat of the present summer ought to have some effect upon the construction of homes with reference to warm weather, says a recent issue of the Kansas City *Star*. In every large city, and even in the country, for that matter, all houses of considerable size should have some special provision for excessive heat as well as for extreme cold. The roof garden idea is capable of wide application. It may be utilized in an elaborate way in connection with fine homes, or it may be employed in a limited but saving extent in building smaller houses. For the past two weeks those who have had large verandas or flat roofs, especially such as could be resorted to as improvised sleeping quarters, have enjoyed an inestimable advantage over those who have been forced to occupy close rooms, shut off from the breezes that alone have made life tolerable. The time will come when there will be a general revolution in house construction with reference to hot seasons, particularly in the warmer climates.

United States Consul Swiney of Cork informs the State Department that an exposition of the products and industries of Ireland will be held at that city in 1902. The site selected is on the banks of the River Lee. The people of Dublin, Belfast and other cities of Ireland have promised their support, and have already liberally contributed toward the erection of the buildings and the preparation of the grounds. The railroads have also subscribed, and, in addition, will make low rates to visitors. The Consul adds that a number of the exhibitors at the Glasgow Exposition will send their exhibits to Cork.

The Steel Strike.

Developments of the strike in the past week indicate that the Amalgamated Association realizes that it is engaged in a struggle for existence, and that organization is putting forth every effort in its power to cripple the United States Steel Corporation in the operation of their plants. The situation has been complicated by the desertion of the Joliet and Milwaukee men, which cuts off a monthly production of about 40,000 tons of steel products. To these two steel plants must be added three of the steel works of the National Steel Company, the Bellaire, Mingo Junction and New Castle, and the Riverside and McKeesport steel plants of the National Tube Company. The tube industry has been that most seriously affected by the latest developments, since now the works in the Pittsburgh and Wheeling districts, the most important of all, are idle. The hoop and bar mills have been gaining steadily in tonnage, and the same is true, to some extent, of the sheet mills.

The situation in the sheet mills is slightly better than it was a week ago. All the mills of the American Sheet Steel Company in the Kiskiminetas Valley are running to utmost capacity, and are turning out a larger output than ever before. There have been outbreaks several times at the Wellsville Works, but no serious damage has been done. The Wood Mill at McKeesport is still closed, and there are no signs that these works are to be removed to Vandergrift, as reported. An attempt was made to start the Cambridge plant at Cambridge, Ohio, but it was not successful, and it is possible that this plant may be removed to the Vandergrift district. It is the intention of the American Sheet Steel Company to concentrate their works in the Kiskiminetas Valley, as the concern have no trouble with the men in that district.

There are in operation now 66 sheet mills belonging to the American Sheet Steel Company, which includes six at Wellsville, 46 at Saltsburg, Apollo, Vandergrift, Hyde Park and Leechburg, and 14 at the Old Meadow and Scottdale plants. These are producing now more than one-half of the normal output of the whole capacity of the company. Hyde Park was started full at once with five mills on three eight-hour shifts. Within the next few days an additional number of sheet mills will be started.

In regard to the tin plate mills, the Crescent Works at Cleveland have been started up and nonunion men have been introduced into the Star mills at Pittsburgh and the American Tin Plate Company's plant at Irondale, Ohio, both of which plants have partially resumed work. Also fires have been lighted and the machinery moved at the Demmler plant. Otherwise the situation in the tin mills is unchanged. The Monongahela Works, in the Pittsburgh district, and the Pennsylvania and Pittsburgh Works at New Kensington are idle and with no signs of being started. It is probable that an attempt will be made soon to start the Greer and Shenango Works at New Castle. These are the largest mills owned by the American Tin Plate Company, and the men who went out on strike are said to be very restless and anxious to get back to work. The large Monessen plant is in full operation.

All efforts to induce the employees of the South Chicago works of the Illinois Steel Company to strike have thus far been unsuccessful. Reports that a number of the men had quit work on the plea of sickness, but are really on strike are declared to be untrue. The only striker at this time is District Vice-President Davis, who seems to have lost his influence at South Chicago.

A statement addressed to labor organizations and to the public, signed by 14 men who claim to represent the members of the Amalgamated Association employed in the steel works at South Chicago, has been issued. The statement is an extended argument in justification of the refusal of the South Chicago men to violate their contract with the Illinois Steel Company, which specifically provides that the wage agreement can be broken under no circumstances except by either party to the agreement giving three months' notice of its intention, the notice to be given previous to October 1.

The statement quotes a decision rendered in 1897 by M. M. Garland, then president of the Amalgamated Association, disavowing the action of certain rail straighteners who sought to violate a similar contract with the Illinois Steel Company. It also quotes statements heretofore made by President T. J. Shaffer of the Amalgamated Association and John Mitchell, president of the United Mine Workers, upholding "the sacredness of labor contracts."

In conclusion the statement says:

"After taking legal advice we feel certain that President Shaffer's claim that our contracts are void because the Illinois Steel Company, with whom our agreement was made, have been absorbed by the United States Steel Company, is without foundation.

"The principles of union labor are as dear to us as to any men in the country who earn their living by honest toil, but we do not think we should be expected to violate every rule of business integrity and personal honor for a matter of sentiment, for this is a time when we must not let our sympathy get away with our better judgment."

While the strike looks more serious now than at any time since it started, there can be only one outcome to it, and that is the complete defeat of the Amalgamated Association. Of course, a compromise of the trouble is possible, but if this should come it will be on terms dictated by the United States Steel Corporation. An official of the Carnegie Steel Company is authority for the statement that no negotiations are on looking to a settlement of the strike.

EFFECT OF THE STEEL STRIKE IN CANADA.

A Canadian correspondent, writing from Toronto under date of August 16, has the following to say with regard to the effect of the steel workers' strike in this country on the Canadian markets for tin plate and sheets:

Canada draws nearly all its tin plate from the United Kingdom. That commodity is the main relic of the large trade in iron and steel done here by British manufacturers prior to the last half decade of the nineteenth century. In the fiscal year 1900 the Welsh mills sent to this country 480,794 cwt. of tin plate, and those of the United States sent 8364 cwt. This country, therefore, will not be likely to suffer in consequence of the tie up at the works of the American Tin Plate Company. So far from Canada looking to the United States just now for tin plate the reverse seems to be the case. According to advices from Montreal American agents are buying up all the British tin plate they can get at that point. The Montreal manufacturers of tinware are well supplied, having on hand stocks large enough to keep them going till spring. Some of them are said to have disposed of large lots at prices that yield them a handsome profit, getting in some instances $2 a box more than could have been realized a month or two ago. As a rule, however, they are understood to be holding on to the bulk of their stocks, the sales that have been made being from a surplus that is usually carried there with an eye to speculation at this season. Canada's own needs are just now too pressing, the orders for tins, &c., at the works are of too great volume for it to be possible to part with any considerable proportion of manufacturers' stocks.

The closing of the mills of the American Sheet Steel Company affects this country more seriously, as we buy from the United States a large part of our supply. Of Canada plates, flat galvanized iron and steel sheets, &c., we imported in the fiscal year 1900 133,697 cwt. from the United States, as against 287,403 cwt. from Great Britain. Of rolled iron or steel sheets of No. 17 gauge and thinner we took in the same year 79,668 cwt. from the United States and 92,737 from Great Britain. Of bar iron and steel the purchases from the United States in that year were 179,062 cwt., as against 82,480 cwt. from Great Britain. Thus it is to be seen that if the supply of these products should be cut off at United States mills by the strike, the matter would be corrected by an

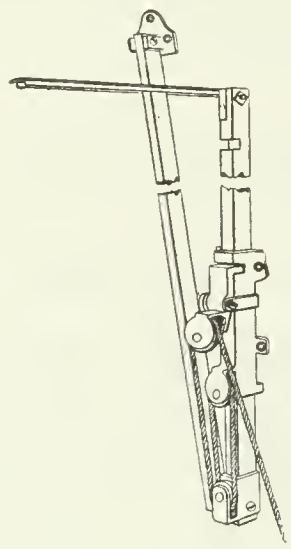
expansion of the present Canadian demand at British works. As the duty on British iron and steel is only two-thirds that on American iron and steel the transfer would not be materially obstructed by the tariff.

American Sheet Steel Company's Improvements.

The question of the removal of the Wood plant of the American Sheet Steel Company at McKeesport, Pa., has been dealt with. We understand that plans are now being made for an eight-mill plant, to be driven by a high duty engine, for the new works. In dismantling some of the housings of the mills it was found that bed plates were broken and that generally the old machinery was in poor condition. Very considerable improvements are under way at the Vandergrift plant of the American Sheet Steel Company. There is now in course of construction a new eight-mill plant, and this is to be followed later on by a second group of eight mills. The sheet bar mill, too, is to be increased in capacity.

Bickelhaupt's Patent Skylight Lift.

We show in the accompanying engravings a patent skylight lift which has just been brought out by the G. Bickelhaupt Skylight Works of 243 and 245 West Forty-



Bickelhaupt's Patent Skylight Lift.—Fig. 1.—View of Operating Mechanism.

seventh street, New York City. The construction is such that the lift can be applied to either hipped or flat skylights and when closed is securely locked. It is referred

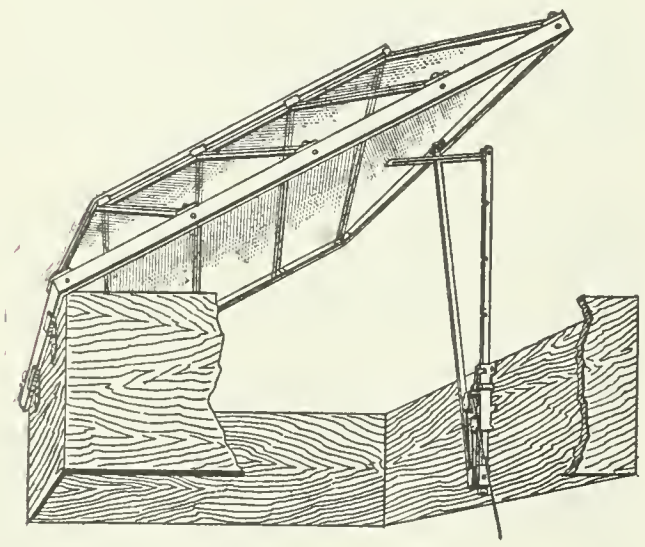


Fig. 2.—View of Device as Applied to Skylight.

to as being so simple that any one can operate it, and its use will greatly facilitate the ventilation of rooms by reason of the ease with which a skylight may be opened and retained in that position. Fig. 1 gives an idea of the mechanism of the lift, while Fig. 2 shows it applied to a skylight represented in an open position. In putting on the device the slide holder is fastened to the curb and the joint to the skylight and raising bar. A slight inward pull of the rope will cause the lever to catch in the notches of the lifting rod in the slide holder, thus maintaining the skylight in an open position. In order to close it a pull on the rope will release the lever from the notches and the skylight may be gradually lowered.

Sheet Metal Ceiling and Siding.

We have received from the La Crosse Steel Roofing & Corrugating Company of La Crosse, Wis., a copy of a 32-page catalogue showing a series of handsome designs of metal ceilings and siding. The pages are of such a size as to permit of the use of large cuts, thus indicating more clearly the beauties of the designs, which are classified and are suitable for all classes of buildings, such as school houses, theatres, churches, business establishments, amusement halls, residences, &c. The classic designs which are shown are briefly described and the origin of the word traced, so as to render the sheet metal worker intelligent concerning any particular design which he may use. Illustrations are given showing the application of continuous ceiling and side wall to wood furring, also the application of panel ceiling and continuous side wall to wood furring. The styles illustrated include the Greek, Romanesque, Rococo, Empire and Colonial. The last page in the catalogue is devoted to profiles of cornices, moldings, &c., in the various styles mentioned.

FLASHINGS.

The Jackson Iron & Tin Plate Company of Clarksburg, W. Va., recently incorporated, have organized by the election of the following officers: President, Col. T. M. Jackson; secretary and treasurer, W. I. Grove of Columbus, Ohio, and general manager, George Barkman of Columbus.

One satisfactory feature of the present scarcity in the Tin Plate and Sheet markets, so far as the jobbers and manufacturers are concerned, is the opportunity of cleaning out old stocks of these goods which have been lying in warehouses for long periods. Even Plates that were regarded as almost unsalable are eagerly snapped up by hungry buyers. "Everything goes" in the line of sheet metal these days.

It is announced that the American Can Company have decided to dismantle their factory at Youngstown, Ohio, formerly owned by the Youngstown Specialty & Mfg. Company, and remove the machinery and equipment to some of the other plants owned by the concern. The factory employed 75 hands and was equipped with the most improved machinery.

The American Tin Plate Company, it is announced, will immediately enlarge their National Works, at Monessen, Pa., to double their present capacity, making it a 24-mill plant. The decision of the company is a direct result of the strike. To secure the room necessary for the proposed enlargement the company have purchased 13 acres of land on the river front adjoining the present works. The addition will cost about $750,000 and the work is to be finished within nine months. When the addition is completed employment will be given to about 1500 men.

G. P. Williams, formerly with the St. Louis Stamping Company and more recently with the National Enameling & Stamping Company, has opened an office at 253 Broadway, New York, where he will act as agent for Hall & Carpenter of Philadelphia, the Sozo Supply Company, makers of Metal Polish, and several other firms.

The Buckingham-Routh Company, New Haven, Conn., are doing the Skylight and Metal work in connection with the addition to the National Pipe Bending Company's works in that city.

W. Vernon Phillips of F. R. Phillips & Sons Company, Philadelphia, who is now in Europe, has instructed shipment of a large quantity of the firm's Zero Metal to London and Germany, as well as to New Zea-

land. Mr. Phillips is negotiating the installation of an American type tin mill on the Continent.

THE JAMES H. WATSON ESTATE, Crawfordsville, Ind., send us a copy of their recent catalogue, which fully illustrates and describes their line of Crest-Tile Conductor and Steel Cresting, also their assortment of general Tinners' Supplies, which include Eave Trough, Conductor Pipe, Elbows and Shoes, Gutters, Valleys, Finials, Vanes, &c. Several pages are devoted to Crestings, of which the estate are large manufacturers, and a number of testimonials are included from those who have used the Watson Crest-Tile Conductor.

THE STANDARD METAL MFG. COMPANY, 53 New Jersey Railroad avenue, Newark, N. J., are a new concern who have a factory equipped for undertaking special Sheet Metal work of every description, including stamping, metal spinning, electro plating, buffing and polishing, japanning and decorating. They are prepared to do large or small work in Iron, Brass, Copper, Tin, Aluminum, Zinc, &c., and make a specialty of Standard Hoods, Shades and Fixtures for lighting purposes. The concern are composed of W. A. Lawrence, L. L. Terhune and F. I. Munn. Mr. Terhune, who was formerly connected with the Tea Tray Company of Newark, is in charge of the factory department of the concern. The New York City office of the company is at 10 Warren street.

IN a reference made in our issue of last week to the newly organized Heekin Can Company, the address of the concern was given as Columbus, Ohio. The company are located in Cincinnati, Ohio.

GEO. CALLAHAN & CO., 218 Front street, New York, are the manufacturers of an Elastic Paint Oil which they recommend to the notice of the roofing trade as a substitute for linseed oil. It is the color of boiled linseed oil and is used in the same way, only that it requires no dryer and no thinner. The manufacturers claim that the Elastic Paint Oil possesses advantages over linseed oil for roof painting purposes in that it is elastic, and will not dry up or lose its holding or binding quality, as linseed oil is apt to do when subjected to hot sunshine in the summer months.

THE POPE TIN PLATE COMPANY, recently organized at Pittsburgh, have decided to locate their works at Steubenville, Ohio. The supply of Black Plate will be obtained from the La Belle Steel Company, whose mills are at that place.

THE ALCANIA COMPANY, Murtland Building, Pittsburgh, who have made application for a charter, do not intend to take up the making of new lines of product. The concern will continue to make Tin Plate at their present works, but will operate under a Pennsylvania charter, instead of a West Virginia charter as at present.

THE KINNEAR MFG. COMPANY of Columbus, Ohio, are sending out a folder calling attention to their Kinnear Folding Door, and bearing upon the outer side the inscription, "The Open Door and How to Close It." Illustrations are presented showing the door open and closed, and there is also a sectional view indicating the joining of the slats. These doors and shutters are provided with special constructions suitable for warehouses, business blocks, public buildings, elevator shafts, freight houses, &c., and the company request those interested to write for catalogue "K," which they will send to any address on application.

IT is believed that the American Tin Plate Company will erect more tin mills on the land they have recently purchased near New Castle, Pa., where two of their largest plants are situated. Probably some of the smaller plants in other places will be dismantled and removed to New Castle, in pursuance of the policy of concentrating productive capacity which is being gradually introduced into all the interests controlled by the United States Steel Corporation.

The population of the Dominion of Canada, according to the census returns just given out, is 5,337,166, an increase of 503,827 over the census of 1891. Taken by provinces the increases are as follows: Quebec, 132,434; Ontario, 53,657; Manitoba, 92,212; Northwest, 79,300; Yukon and unorganized district, 43,113; British Columbia, 92,000, and Maritime Provinces, 11,000.

The Concentration of Manufacturing Plants.

The expressed determination of the officials of some of the constituent companies of the United States Steel Corporation to remove some plants from one locality to another has brought a perplexing question conspicuously before the country. It is not a new issue. It has been before the parties interested ever since the formation of the great consolidations. There has always been a certain mobility with American manufacturing plants. It has been nothing unusual for a manufacturer to transfer his works to some more favored locality, although a preliminary step in many instances has been to establish branch works which gradually overshadowed the parent concern. Nor has it always been on its merits pure and simple that a removal has been effected. Special inducements from boom towns or an effort to make a last stand against dry rot have been the motives in many cases.

It is no wonder that, after gathering in every available plant identified with a particular industry, the managers of a modern consolidation find themselves face to face with the problem of abandoning poorly located, poorly equipped, antiquated or inadequate establishments and utilizing such parts of them as are worth saving.

That this often works very serious hardships upon small communities and upon groups of workingmen is obvious. In fact the owners of such plants have been seriously, and in some cases justly, blamed for abandoning those to the guarding of whose welfare they had practically committed themselves. We know of instances in which the men were encouraged to put all their savings into the building of homes and were led to assume serious obligations. These interests were sacrificed, apparently without a thought, by owners of works who jumped at the chance to sell out, generally at an unexpectedly handsome profit. They may have pleaded against the closing down or the removal of the works and the accompanying ruin of many industrious and frugal men, but there the matter ended.

The managers of a consolidation cannot well be blamed for pursuing a course dictated by their duty to the stockholders of their company. Concentration of operations is imperative in the interests of economy, and it is absolutely necessary that that surplus capacity be put into reserve which is incapable of producing goods cheaply enough.

The strike in the Western rolling mills has now, however, introduced a new element, which prudent manufacturers cannot afford to leave out of consideration. That is the attitude of a community or of its officials toward those fundamental rights which are guaranteed to every citizen and corporate body. Where property is no longer sacred, where demagogues control a community, the owners of industrial plants are burdened with very serious risks. The danger involved may overbalance many otherwise important considerations, and may justify a course repellant to humanity and to the regard for the interests of others.

The present has been regarded as an opportune time to effect some of the schemes of concentration of plant which an active business has thus far rendered impossible. We believe that strictly economic considerations have influenced the officials of some of the constituent companies of the United States Steel Corporation in deciding upon the removal of smaller works to other localities. In fact that movement has been in process in some branches for a considerable time. But it is obvious that the developments during the present strike have introduced a new factor which was not taken into account before. Let it be hoped that it will prove a salutary lesson to the great majority of law abiding men in all our industrial communities who, through indifference or through timidity, allow the demagogues and the small radical element to jeopardize their interests.—*The Iron Age.*

"Mica in the Province of Quebec" is the title of a monograph in French by J. Obalski, Government mining engineer of Quebec. It describes the deposits of the province in detail.

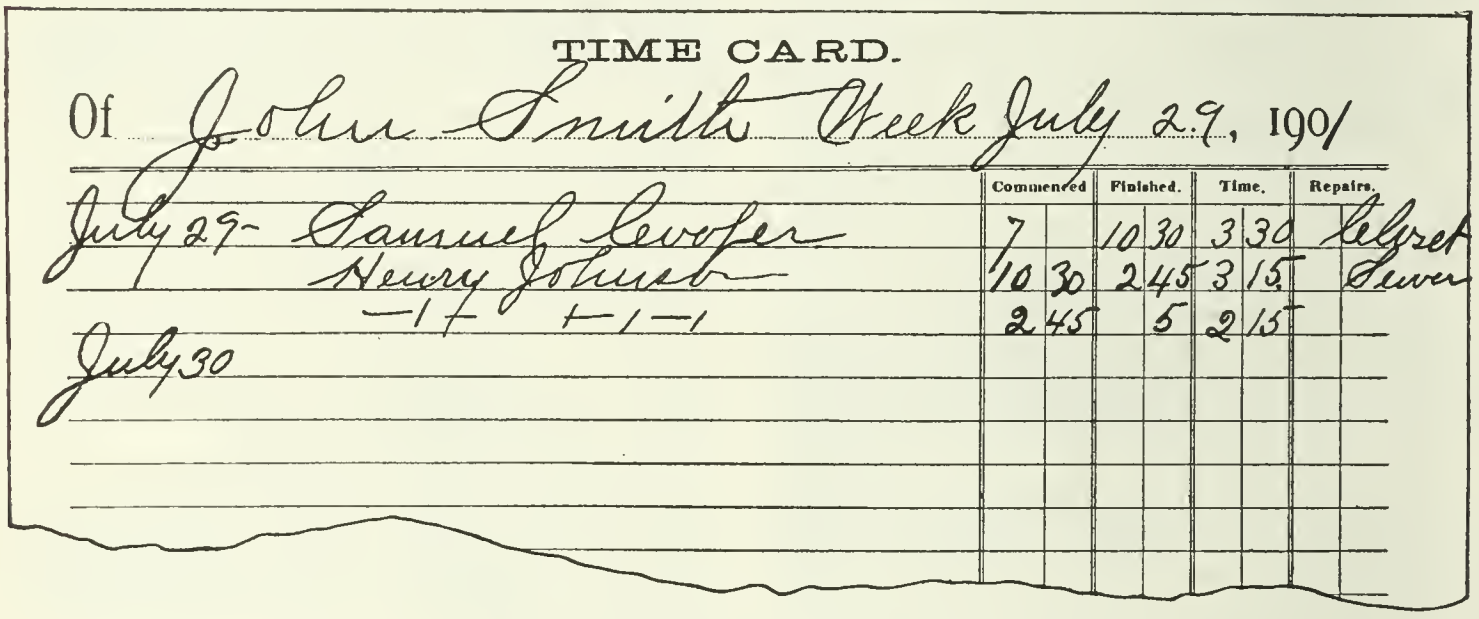
THE LETTER BOX.

Inquiries in regard to practical questions of general interest are invited, in reply to which we shall be glad to receive suggestions and information from our readers.

Correspondents are requested in all cases to give their names and addresses, which will not, however, be published or disclosed without their consent.

ACCOUNT OF PLUMBERS' TIME.

From J. M. White, Bristol, Conn.—In response to the request of "C. H." in *The Metal Worker* of July 27, I submit a time card that I have used for keeping track of the time spent by plumbers and other workmen working on contract work or different jobs. Each man is given a card on Monday morning on which to keep his time for the week. If he works for two or three different customers on the same day the time spent on each job must be accounted for. He must enter the date and name of the customer, then the time he went to work, the time he stopped and the time spent, as well as the kind of work done. For each customer he must turn in a charge slip from a blank pad furnished him, giving the date, name of customer, time spent and material used. This serves as a check on the time and a memorandum of the material used, so that nothing may be omitted from the charge through oversight. It is well to question a man, however, if he used any putty, washers, screws, tacks, solder, pipe fittings, &c., for it is very easy to forget a few cents' worth on every job that will melt the profits down to the danger line. Another thing, the time on the charge slips and on the time card turned in at the end of the week must tally. The average workman takes some pride in keeping his time correctly and is eager to avoid any loss of material.



TIME CARD.

Of John Smith Week July 29, 1901

	Commenced		Finished.		Time.		Repairs.	
July 29- Samuel Cooper	7		10	30	3	30	Celyrat	
Henry Johnson	10	30	2	45	3	15	Sewer	
—1+ +1—1	2	45		5	2	15		
July 30								

Account of Plumbers' Time.—From J. M. White.—Full Size of Card, 8½ x 7¼ Inches.

From Miller & Johnston, Fall River, Mass.—A correct account of material used and workmen's time spent on jobs goes a long way in preventing loss on work of all kinds, and we are glad to present our slips and an explanation of their use for "C. H.," who asks for a time record system in *The Metal Worker* of July 27. The slip reproduced in Fig. 1 is used by the workmen to report their time and has this advantage: It has the name of the customer and the date, and is filled out in the presence of some of the family or servants, who sign the slip. When the man reaches the shop the slip is checked to see if the time of leaving and returning to the shop is correctly stated, after which it is signed by us and filed for reference. By having the customer's name signed to the time slip lots of expense and time are saved, for if, when the bill is rendered at the end of the month, the time is disputed, it is a simple matter to find the time slips with the customer's name on them and show them to him, thus ending the dispute.

Another set of slips in our system that are equally valuable are the charge and credit slips. They are three in number, the "job work charge slip" being shown in Fig. 2, and are all of the same size, but of different colors. The "job work charge slip" is yellow, the "contract work charge slip" is pink and the "credit slip" light brown, so that they are readily distinguished and confusion is avoided. The slip has a place for the date, the name of the party against whom the charge is to be made and the name of the workman. The credit slip has at the bottom two lines, one beginning with the words "job work," the other "contract," so that a memorandum can be made of the job or work, the material returned and the credit to be made. When a workman fills out a time report he also fills out a yellow or pink

MILLER & JOHNSTON.

WORKMAN'S REPORT OF TIME

—ON—

Mr. John C Blake. Job Aug-5 1901

Left Shop 7-1-M. Reached Job 7-30 1-M.

Left Job 4-15 P.M. Reached Shop 4-45-P-M.

Andrew Smith Workman.

The time of beginning and leaving work is correctly stated.

John C Blake

The time of leaving and returning to shop is correctly stated.

Miller Johnston

By Locke

Account of Plumbers' Time.—From Miller & Johnston.—Fig. 1.—Workman's Time Report Slip; Regular Size, 6 x 4 Inches.

FALL RIVER, MASS. _____ 190

MILLER & JOHNSTON

JOB WORK CHARGE SLIP

CHARGED TO _____

DESCRIPTION OF ARTICLES

WORKMAN _____

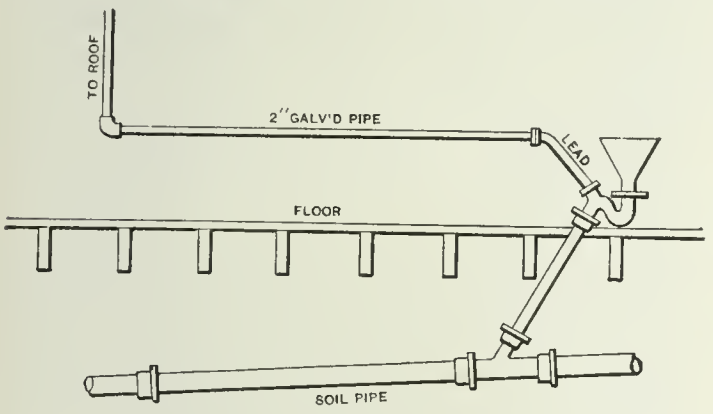
Fig. 2.—Charge Slip; Regular Size, 5½ x 8½ Inches.

slip with the material used, there being space for a number of items. If the charge slip has been filled out and handed in when the material was sent to the job and same is returned when the job is finished, the credit slip is filled out.

By this means, and the use of some care and supervision, the charges include not a part, but all of the things used, and a very considerable saving is effected. No part of the time spent in managing a business pays a better profit than that devoted to keeping the tools and material ready for the workmen and seeing that they get off promptly to jobs, and that they account for their time corectly and in filling out their time slips include every little item of material used.

A QUESTION FOR THE PLUMBING INSPECTOR.

From H. T., New York.—In reply to the letter of "N. J.," in *The Metal Worker*, August 3, I would recom-



A Question for the Plumbing Inspector.

mend that the back air pipe be carried horizontally in the partition to a corner where it can be turned up, as shown, and run through the roof. That is the proper way to do the job.

MAKING A CELLAR WATER TIGHT.

From F. R., Coalville, Utah.—I have a cellar which is 6 feet deep with an 18-inch stone wall all around. During the summer months water rises 12 to 14 inches, and I desire to learn what I can do to keep the water out and make a good, clean cellar. The ground in which the cellar is built is mostly gravel, especially the bottom. If any of the readers of the paper can assist me in this matter they will greatly oblige one who has only the best wishes for the success of the paper.

WILL A SIPHON WORK?

From A. M., Dryden, N. Y.—Will *The Metal Worker* help me with a little information about a siphon? We have a well 100 feet deep in which the water raises to within 40 feet of the surface. Can water be drawn from the well with a siphon having a fall of 100 feet?

Answer.—A siphon works through the water falling in the long leg and creating a tendency toward a vacuum in the short leg and the atmospheric pressure on the surface of the liquid in which the short leg is immersed forces the liquid up to fill the vacuum. As atmospheric pressure varies with the altitude above the sea level the hight to which water may be lifted by it varies; but it will never raise water 40 feet. With perfectly tight pipes, water may be lifted about 30 feet by a siphon, but to keep the pipes or siphon air tight is one of the troubles experienced with all siphons. This trouble is reduced as the lift is reduced. If the water in the well can be depended upon to always reach a level of 45 feet below the ground a siphon can be used, if the pipe forming it is buried so that the highest point is 20 feet below the ground. This would leave a lift of but 20 feet when the water reached the 40-foot level and 25 feet when at the 45-foot level.

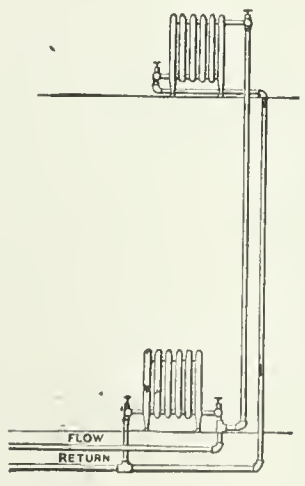
To operate effectively the pipe must be air tight and have a carefully preserved pitch both ways from the highest point. At this point a pipe should be carried up to the surface of the ground, having a stop cock on it and terminating in a funnel. As all water has more or less air in it the air will accumulate at the high point in the siphon and in time stop its operation. Then it is only necessary to keep pouring water into the funnel with the stop cock open to start the siphon, when the stop cock can again be closed until needed. Lead pipe with carefully made joints is best adapted for a siphon, as there is less liability of air entering through it. The flow of water is governed by the head or distance of the delivery point below the point of supply and also by the friction due to the length of the pipe and its size.

SETTING HORIZONTAL HOT WATER TANKS.

From J. A. S., New York.—A little account of my experience in setting horizontal hot water supply tanks may be of interest to "H. & C.," whose letter I read in *The Metal Worker* of August 17. In the first place, there is nothing wrong in setting the tank on brick piers. There are many set that way in this city, so it is sanctioned by custom. The brick piers may absorb some heat, but a greater objection is the space occupied by them. In most instances the overhead joists are strengthened so that the tank may be suspended from them. Then, when covered, there is little loss of heat. Another method of supporting them is to build a rack of wrought iron pipe, the lower ends resting in floor flanges and the floor flanges at the top being secured to the ceiling. Tees are put in the uprights at the proper hight for cross pieces of the proper diameter and length to support the tank when filled with water. Strength is necessary and the brick piers of "H. & C." provide it. The upright tank of large size is finding some favor, as it occupies less space, can be set on short legs or piers and can be connected to circulate well and to furnish hot water quickly. It also requires less special preparation and expense to set it. A cheaper way is to run one end of a piece of heavy pipe into a hole in the wall and the other end into an ell on the end of another piece of pipe resting on the cement floor.

HOW SHOULD RADIATOR BE CONNECTED?

From S. F., New York.—In answer to the letter of "I. R.," in *The Metal Worker* of August 10, I give the method of connecting two radiators on different floors



How Should Radiator Be Connected?

recommended in many hand books. The sketch shows that on the end of the main an ell is used for a riser direct to the first-floor radiator. Below this connection there is a tee to connect the riser for the radiator above. The returns are carried as shown. This method insures that both radiators will warm up in about the same time, making the distribution of the hot water about equal. If "I. R." connects his radiators in this way his customer will be satisfied with the heating.

TRADE REPORT.

MARKET SUMMARY.

Pig Tin is dull and ½c. lower in price.

Copper is without change and quiet.

Pig Lead is in steady demand and unchanged in price.

Spelter rules a shade firmer, but is very quiet.

Antimony is unchanged.

Nickel is firm and scarce.

Aluminum continues in active demand at former prices.

Tin Plates are still more scarce and prices high and stiffening.

Sheets are in active demand and scarce supply, with prices nominal.

Old Metals are dull and weak.

Sheet Copper is in good demand and firm in price.

Sheet Zinc shows no change.

Pig Iron prices are well maintained, although demand is not so active.

Hardware is moving in good volume and prices are generally firm.

Wrought Iron Pipe is still extremely scarce and prices rule high.

Plumbers' Marble Work is likely to be advanced 10 per cent.

Lead Traps and Bends have been marked up 5 per cent. in price.

Lead Pipe and Sheet Lead will probably be advanced in price shortly.

Stove Boards are becoming scarce and stiffening in price.

Wire Nails are in good demand at former prices.

Cut Nails are unchanged.

Wire is active and prices firm.

Chain is very firm.

Cordage prices are irregular.

White Lead is unchanged.

Mixed Paints are weaker, owing to drop in Linseed Oil.

Linseed Oil has declined 7 cents a gallon.

METAL MARKET.

NEW YORK, August 23, 1901.

Pig Tin.—The market during the week was quiet, with prices sagging. Prices rule about ½c. lower than at the date of our last report. Straits Pig, in small lots, is quoted by jobbers at 27¼c. to 27½c. per lb. Demand is slow and the volume of business transacted was quite small. The half-monthly shipments from the Straits were 2070 tons, as against 1680 tons for the same period of last year. The metal continues to arrive more freely, there having been landed so far this week 910 tons. This brings the total for the month to 1795 tons. A good portion of the new arrivals, it is said, go to a speculative concern, and it is supposed will be stored. The trade is at a loss to comprehend the object of such proceedings in the face of heavy discounts on future deliveries, and also in spite of the present condition of trade through the steel strike. It is also considered that through increased production everywhere the position of the article as to the future is by no means promising.

Copper.—The situation is unchanged. Business as a whole is dull, although domestic manufacturers are buying right along. Prices are unchanged. Small lots of Lake Ingot continue to be quoted at 17¼c. to 17½c. per lb. and Casting Copper at 16¾c. to 17c. The position of the metal is not considered a healthy one, when with a monthly production of 22,000 tons we have ceased to export our surplus. So far this month the exports were not more than the imports, about 3600 tons having arrived and a like quantity being shipped. During the previous seven months of this year our net exports—that is, deducting the figures of imports—amounted to only about 30,000 tons. That there is an accumulation of stocks on a very large scale is not questioned, and it is predicted in the trade that this will continue as long as prices here are maintained on a level so much higher than the European value. Production in this country so far this year has not increased, but everywhere else in the world is increasing. European producers, as far as their report for this month shows, have increased their output very materially. The report for the month of July shows a production of 9254 tons, as against 7433 tons of last year. Many unverified reports are current as to an understanding among the leading producers of the world.

Sheet Copper.—A satisfactory demand for Sheet Copper is reported and prices are firm on the basis of 21c. per lb. from store.

Pig Lead.—There is no change in this market. A quiet, steady business is being transacted and prices remain firm at former level. Small lots of American Pig are quoted at 4.60c. to 4.62½c. per lb. St. Louis reports a quiet market, with prices showing little or no change.

Spelter.—This metal is a shade firmer, but very quiet. Good Western brands, in small lots, are quoted at 4.45c. to 4.50c. per lb. St. Louis reports an unchanged market. Nothing more is heard of the Spelter combination, and it is presumed it is off again for a period at least.

Sheet Zinc.—The demand for Sheet Zinc is moderate. Jobbers quote 600-lb. cask lots at 6¾c. per lb. and smaller quantities at 7¼c.

Antimony.—A fair demand is noted. Prices are without change. Cookson's, in small parcels, is quoted at 10½c. to 11c. per lb., and Hallett's at 8½c. to 9¼c.

Nickel—Is firm and unchanged. Small lots are quoted nominally at 60c. to 65c. per lb.

Aluminum.—A good demand at former prices is reported. No. 1 Ingot, guaranteed 99 per cent. pure, in small lots, is quoted at 37c. per lb. and 100-lb. lots 35c.

Tin Plates.—The situation in this market presents no new features. Available stocks of Plates are rapidly dwindling and the scarcity is daily becoming more pronounced. Ordinary Coke Tins are in particularly short supply and many users of these Plates are feeling the squeeze to an uncomfortable extent. But little business is being done, as holders have hardly anything to offer, while buyers are taking nothing beyond what they are absolutely compelled to purchase. Plates for spot delivery command a very high premium. While quotations are merely nominal, it may be said that American Bessemer Steel Coke Plates, IC, 14 x 20, at New York or corresponding points, cannot be purchased at much less than $7.15 to $7.25 per box, which is about $2.50 a box higher than the price ruling before the strike. Importations are coming in now right along, but practically every box entered is sold before arrival, so that nothing is added to the general market. A steamer which arrived from Swansea at the beginning of the week had on board 20,000 boxes, more than half of which will go into consumptive channels. A further advance was made this week in the price of Welsh Coke Plates, bringing them up to about $5.50 per box, laid down in New York.

Sheets.—The market is very active and the scarcity of Sheets is greater than ever. Manufacturers are doing the best they can to accommodate their trade, but are practically snowed under with orders. Sheets for shipment in August and September are commanding very high prices. Galvanized Sheets are scacer than Black and can hardly be had at any price for prompt delivery. Retail pries are largely nominal. New York jobbers are

quoting No. 27 One Pass Cold Rolled Soft Steel Sheets, in small lots from store, at about 4.15c., and Galvanized Sheets at 60 per cent. off the list. Some sizes, which are the scarcest, command relatively higher prices than others.

Chicago advices are as follows: Merchants having stocks of Light Sheets are enjoying an exceedingly active trade. Orders are being received from all parts of the United States. Jobbers in leading cities remote from Chicago are purchasing from our local merchants, who are limiting the quantity on single orders, as stocks are being depleted too rapidly. Prices are still advancing, 4c. being now the minimum for No. 27 Black, while Galvanized Sheets are to be had in only limited quantities at 65 off, with some sales reported as high as 60 off. The Tin Plate situation is worse than in Sheets. The cheapest full weight Terne Plates are held at $11.50 per box, and 90-lb. I. C., 14 x 20 Coke Plates are selling at $5.60. Stocks are reduced to almost nothing.

Old Metals.—The market for both Scrap Iron and Old Metals is dull and rather weak. A limited demand prevails and stocks in sellers' hands are pretty full. Dealers are paying about the following for moderate sized lots, delivered at New York or corresponding points:

Heavy Copper	per lb. 14¾c.
Light and Tinned Copper	per lb. 13¼c.
Heavy Brass	per lb. 10 c.
Light Brass	per lb. 8 c.
Lead	per lb. 4 c.
Tea Lead	per lb. 3¼c.
Zinc	per lb. 2½c.
No. 1 Pewter	per lb. 18½c.
No. 2 Pewter	per lb. 9 c.
Tin Plate Scrap, per gross ton	$6.00
Wrought Iron Scrap, per gross ton	$10.50 to 11.00
Heavy Cast Scrap, per gross ton	10.00 to 10.25
Stove Plate Scrap, per gross ton	6.75 to 7.00
Burnt Iron, per gross ton	5.00 to 5.50

THE PIG IRON MARKET.

New York.—Aside from a good sized inquiry from the pump makers, little is doing in this district, and the market remains quiet. Southern furnaces are holding well at prices equivalent to $10.50 for No. 2 Birmingham. We quote: Lehigh, Schulylkill and Virginia Irous, No. 1, $16 to $17.50; No. 2 X, $14.75 to $15.75; No. 2 Plain, $14 to $14.50; Tennessee and Alabama brands, No. 1 Foundry, $14.50 to $15; No. 2 Foundry, $14.25 to $14.50; No. 1 Soft, $14.50 to $15; No. 2 Soft, $14.25 to $14.50; No. 3 Foundry, $13.25 to $13.50; No. 4 Foundry, $12.75 to $13.25.

Chicago.—The volume of business shows a marked increase. It is true that the city foundrymen are buying very little, but consumers in outside localities are not only taking Iron freely, but in notable instances are placing contracts for future delivery running into next year. It is estimated that the total business of the week was fully 20,000 tons. Inquiries are in hand for considerably more Iron, and a continuance of the improved demand is expected. Prices are held quite firmly, the local furnace companies having their product well sold for the remainder of the year and the Southern companies showing no disposition to make concessions. We quote as follows:

Lake Superior Charcoal	$17.00 to $18.00
Local Coke Foundry, No. 1	15.50 to 16.00
Local Coke Foundry, No. 2	15.00 to 15.50
Local Coke Foundry, No. 3	14.50 to 15.00
Local Scotch, No. 1	15.75 to 16.25
Ohio Strong Softeners, No. 1	16.00 to 16.50
Southern Silvery, according to Silicon.	14.90 to 15.15
Southern Coke, No. 1	14.90 to 15.15
Southern Coke, No. 2	14.15 to 14.40
Southern Coke, No. 3	13.65 to 13.90
Southern Coke, No. 1 Soft	14.65 to 14.90
Southern Coke, No. 2 Soft	14.15 to 14.40

Philadelphia.—Business cannot be defined as either very good or very bad. Buying is mostly in small lots and for early shipment, the exception being the demand from pipe founders, who have taken something like 10,000 to 20,000 tons during the past few days. Foundry grades are well taken, some of the furnaces being considerably behind in their deliveries, while there are none that have inconvenient surplus. The statistical situation is therefore very satisfactory, and the immediate outlook indicates a continuance of these conditions for some time to come. Sales have been at prices within the limits quoted herewith, according to quantity, quality, time and place for delivery, as follows for the city and nearby trade and 25c. to 50c. less at points within a radius of 100 miles South or West; No. 1 X Foundry, $15.50 to $16; No. 2 X Foundry, $15 to $15.25; No. 2 Plain, $14.25 to $14.75.

Pittsburgh.—There is not enough Iron being sold to fix prices and the tone of the market is very weak. The United States Steel Corporation will not likely need any Iron for September, and some of the Valley furnaces will either have to bank until the strike is over or else pile their Iron. It is probable that stocks this month will show an increase. Standard No. 2 Foundry Iron has been offered at $14, Pittsburgh, and declined. On firm offer it could likely be bought at $13.75. We quote: Bessemer, $15.75 to $16, and No. 2 Foundry, $13.75 to $14, Pittsburgh.

Cincinnati.—The conditions in the Pig Iron market have not changed materially during the past week. Labor troubles and the usual midsummer feeling are credited with keeping trade down to the actual necessities. In this immediate territory the tonnage booked is light, though there has been some fair business reported here from a distance. In regard to prices, there are the usual conflicting statements; some furnaces are evidently holding to the agreement figures and others are shading these 25c. or even more. The outlook is for a continuation of the present conditions. We quote, f.o.b. Ciucinnati:

Southern Coke, No. 1	$13.50 to $13.75
Southern Coke, No. 2	13.00 to 13.25
Southern Coke, No. 3	12.50 to 12.75
Southern Coke, No. 4	12.00 to 12.25
Southern Coke, No. 1 Soft	13.50 to 13.75
Southern Coke, No 2 Soft	13.00 to 13.25
Southern Coke, Gray Forge	12.00 to 12.25
Southern Coke, Mottled	12.00 to 12.25
Ohio Silvery, No. 1	15.50 to 16.00
Ohio Silvery, No. 2	14.50 to 15.00
Lake Superior Coke, No. 1	14.50 to 15.00
Lake Superior Coke, No. 2	14.00 to 14.50
Lake Superior Coke, No. 3	13.50 to 14.00

St. Louis.—The market has been very quiet for the past week and the few sales made were usually carload lots for immediate delivery. Inquiries are not plentiful, and selling agents are anticipating a rather dull period for the next few weeks, if not longer. Some scarcity of No. 1 Foundry in the Birmingham district is noticeable, but the scarcity is not of sufficient importance to have any effect on the price. The general tone of the market is a trifle uncertain, but should the present dullness become pronounced prices will ease off in consequence. We quote as follows, for cash, f.o.b. cars St. Louis:

Southern, No. 1 Foundry	$14.25 to $14.50
Southern, No. 2 Foundry	13.50 to 13.75
Southern, No. 3 Foundry	13.00 to 13.25
Southern, No. 4 Foundry	12.50 to 12.75
No. 1 Soft	14.00 to 14.25
No. 2 Soft	13.50 to 13.75

CHICAGO REPORT.

Scrap Iron and Steel.—Borings and Turnings are in some demand, but other classes of Old Material are dull and prices are weak. Dealers quote the following buying prices, in carload lots, Chicago delivery:

	Per net ton.
Country Wrought Scrap	$10.50 to $11.00
Machinery Cast	10.00 to ....
Malleable Cast	10.00 to 11.00
Stove Plate (free from burnt)	7.00 to ....
Burnt Iron and Grate Bars	5.50 to 6.00
Sheet Iron and Hoops	6.00 to 7.00
Plow Steel	9.00 to 10.00
Breaking Stock	9.00 to ....
No. 2, such as Shovels, Hoes, &c	.... to 7.00
Old Boilers—whole (Iron)	6.00 to 7.00
Old Boilers (Iron) cut in single Sheets and Rings	9.50 to 10.00
Old Gas Pipe and Boiler Tubes	10.00 to 10.50
Cast Borings	4.00 to 4.25
Turnings	8.50 to 9.00
Horseshoes	11.00 to ....

Old Metals.—The demand has shown some improvement. Dealers quote buying prices on small lots as follows:

	Per lb.
Copper Wire and Heavy	14¾c.
Copper Bottoms	13½c.
Copper Clips	14¼c.
Red Brass	13½c.
Yellow Brass	10 c.
Red Brass Borings	11½c.
Yellow Brass Borings	9 c.
Light Brass	7¾c.
Pipe Lead	4 c.

Tea Lead	3½c.
Zinc	2½c.
Pewter, No. 1	19 c.
Pewter, No. 2	10 c.

Old Rubber.—Consumers are buying very cautiously. Dealers' buying prices are as follows:

	Per net ton.	Per lb.
Garden Hose	$23.00	.....
Air Brake Hose	42.00	.....
Rubber Shoes	....	7¾c.
Rubber Car Springs	....	4¾c.
Inside Bicycle Tubing	....	21 c.
Outside Tubing	....	7¼c.

Rags.—Buying price of good country Mixed Rags, Chicago delivery, is 70c. to 80c. per 100 lbs., in any quantities.

Anthracite Coal.—The volume of business has been quite limited for some time. The schedule for carload lots is as follows:

	Grate.	Egg and Stove.
Chicago	$5.75	$6.00
Milwaukee, Wis.	5.75	6.00
St. Louis	6.20	6.45
Kansas City, Mo.	8.25	8.50

A discount of 10c. from these figures is allowed on all Coal ordered to be shipped in August.

THE HARDWARE TRADE.

The demand for all classes of goods continues large, intensified by the prospects of a good fall trade and the apprehension of being unable to obtain goods promptly. While the strictly Hardware business thus far has perhaps been inconvenieuced less than some of the heavier lines of business, many orders have found their way to jobbers' and mauufacturers' back order books through their inability to fill them promptly. Developments in the strike situation are followed closely by the trade, and while the ultimate outcome is not questioned, the temporary menace to trade interests is deplored.

NOTES ON PRICES.

Wrought Iron Pipe.—The condition of the Wrought Iron Pipe market, so far as the consumer is concerned, has gone from fair to bad during the past week. The advanced prices adopted by the jobbing trade on the 13th iust. have not acted as a preventive to buying, but have had a directly opposite effect. It seems as if every one needing Pipe is rushing to cover before prices take another and a higher turn. There surely will be another advance, as already three sizes have disappeared from the local market, and owing to the labor troubles existing at the mills it will be impossible to get any relief from that source.

Lead Traps and Bends.—The members of the Lead Trap Association advanced prices to the trade 5 per cent. on Tuesday, August 20. The advance was unexpected. It was ascertained from a large mauufacturer of these goods that in all probability this will be the only change in price to be made this year, unless the price of Pig Lead should undergo a material advance.

Lead Pipe and Sheet Lead.—The trade need not be surprised if an advance in the price of Lead Pipe and Sheet Lead is anuounced within the next few days. Several of the larger manufacturers are advocating an advance in prices. The scarcity of Galvanized Iron Pipe has caused an enormous demand for Lead Pipe, and as all the Lead presses are being run to their fullest capacity, it is very likely the manufacturers will take advantage of the occasion and advance prices from 25 to 50 cents per 100 pounds beyond the present rates.

Plumbers' Marble Work.—A radical advance in the prices of Marble and Slate Slabs and Stalls for plumbers' uses is likely to be announced within the next few days. The manufacturers, it is understood, already have agreed upon a new schedule of prices, and as soon as a few preliminary details are arranged the new prices will be made known. The advance will probably be in the neighborhood of 10 per cent. upon the present costs.

Solid Porcelain Ware.—It is understood in the trade that the new list of prices issued by the Trenton Potteries Company on August 15, and which we print herewith, has been adopted by all the three concerns who are making these goods. The demaud for this class of Sanitary Ware is very much in excess of the production, and it was partly owiug to the fact that the jobbing trade were reaping handsome profits upon the goods by charging premium prices that the potteries decided to recast the list and put them upon a basis which would insure to themselves better prices for the better quality goods.

Solid Porcelain Ideal Ware Bathtubs.

Boxing and packing, net extra.

Building Papers.—A leading manufacturing company, whose most important field is Chicago, although they have depots in all the principal cities, are quoting the following prices to the trade, f.o.b. Chicago: Red Rosin Sized Sheathing, rolls of 500 square feet, three ply, rolls weighing about 20 pounds each, 30 cents per roll; 25-pound rolls, 38 cents; 30-pound rolls, 45 cents, and 35-pound rolls, 53 cents. Red Rope Roofing, 60-pound rolls, of 500 square feet, $2.75. Asbestos Building Felt, 3½ cents per pound, ton lots. Tarred Felts in light, medium and heavier weights, $1.25 per 100 pounds, and Slaters' Felt, 500 square feet, per roll, 50 cents. Deadening Felts, in which some changes have been made, are now $1.80 and $2 per 100 pounds, ranging from 1 to 1½ pounds per square yard, according to quality. Prepared Roofing Felt, two ply, per roll, 65 cents; three ply, 85 cents. The prices given above are for lots of 25 rolls, smaller quantities ranging from 5 to 10 cents per roll advance.

Chain.—The Chain market is characterized by a decidedly firm tone. This is the result of the large volume of current business and the condition of the iron market. Apprehension of a scarcity of material also contributes to the strength of this line.

Cordage.—A wide range of prices remains a prominent feature in the Rope market. During the early part of July some of the manufacturers made a special effort to clear their warehouses preparatory to stock taking. Thus far this month the demand for all classes of Cordage has improved and those who are busy are not making concessions in prices to secure trade.

Stove Boards.—Owing to the shortage of Sheet Steel and Tin Plate, manufacturers of Stove Boards, other than those made of Zinc, are getting short of stock and are unable to fill orders with any promptness; consequently a scarcity of Stove Boards is a likelihood of the future, together with higher prices on these goods.

Wire Nails.—A satisfactory volume of business is being done. A large number of buildings and improvements are projected or under way and a good fall demand is anticipated. Prices are unchanged, small lots of Wire Nails from store, New York, being quoted at $2.60 per keg.

Cut Nails.—The demand for Cut Nails continues in about former proportions. New York price for small lots from store is $2.18 to $2.25 per keg.

Wire.—There is a good demand for Plain Wire, which absorbs the current output of the mills. Prices are firm. Plain Wire, in small lots, is quoted at 2.60 cents and Galvanized at 3 cents.

Window Glass.—Interest in Window Glass circles is centering about the possibility of the American Window Glass Company controlling the output of the Belgium Window Glass factories, which have been the largest importers of Glass to this country. If the control of the Belgium factories is secured by the American company, or if they succeed in having foreign Glass raised to higher prices than that of American Glass, the home market is likely to remain firm in the near future. The local Window Glass market remains quiet and prices unchanged.

White Lead.—For local consumption the demand for White Lead in Oil is fair. No change in price has taken place, contrary to the anticipations of some of the trade of lower values. It is understood that the recent advance in the price of Mixed Paints is not generally maintained, owing to the drop in the price in Oil, which occurred almost immediately after the advance in Paints was made. Quotations for moderate quantities of White Lead in Oil are 7 cents to 7¼ cents per pound.

Linseed Oil.—Immediate business in Linseed Oil is confined to small lots to cover requirements. Buyers of usually large quantities are purchasing what they require from day to day. The price was reduced 7 cents a gallon on Thursday. City Raw in small lots being quoted at 67 cents to 68 cents per gallon.

Spirits Turpentine.—The local Turpentine market is quiet and demand is confined to small lots. Quotations are unchanged at 37½ cents to 38 cents per gallon.

TRADE NOTES.

THE AMERICAN WIRE WASHER COMPANY, with a capital of $500,000, have been incorporated in Jersey City, N. J., to manufacture Washers from wire. The incorporators are Herbert C. Hart, J. Hardy Kugler and Paul W. Ryder, all of Jersey City.

THE ENERGY ELEVATOR COMPANY, Philadelphia, are manufacturing a new type of Elevator, one used to convey and place in ice baths patients suffering from high fever. One of these was manufactured for a prominent hospital in this city some time ago, and one is now in course of construction for the Pennsylvania Hospital of Philadelphia. The other branches of their Elevator business continue very active, and all departments of the plant are being operated to their best capacity.

THE OHIO MICA COMPANY have recently been organized at Canton, Ohio, and the following officers have been elected: F. Herbruck, president; Edwin Davis, vice-president; H. H. Maher, secretary, and H. R. Banhof, treasurer. The new concern are miners, millers, importers and manufacturers of Mica. A specialty is made of Pulverized, Sheet and Cut Electrical Mica. They also are manufacturers of Mica Chimneys, Canopies, &c.

Durability of Cut and Wire Nails.

In the past issues of the paper there has been more or less discussion as to the relative merits of cut and wire nails, more particularly perhaps in connection with roofs. Some rather interesting comments by a correspondent are to be found in a recent issue of the Mississippi Valley *Lumberman* regarding this question, and from it we quote as follows: While I have been in this place I have had good opportunity to note the lasting qualities of what has now become the old fashioned cut nail. A good many roofs of the old houses are giving out and being reshingled. Standing recently near a house that was being covered, I took up some of the old shingles and examined them and found that where the shingle was sound about the nail hole the nail itself was almost as good as ever, and it struck me then that the life of a cut nail and a white pine shingle was pretty nearly of the same duration. Where the shingle was decayed the nail also was rusted out, and so I concluded that where both the wood and iron were kept dry they were practically indestructible.

When the now common steel wire nail first came out it was generally conceded that they were a great improvement on the old cut nail, and there is no question that they are for general purposes in construction. Their toughness and breaking strain are so much greater than the old kind that the question of their strength and utility admits of no argument, but, as is the case with a good many things, there are some uses for which they are decidedly inferior to the cut nail, and these are where there exists a state of dampness. Common experience and observation go to show that the steel nail is susceptible of being oxidized much quicker than the cut nail. Go over one of your old sidewalks in the town where it has been put down with steel nails and you will find almost invariably that the nail has given out sooner than the wood. This is the cause of so many loose boards in the sidewalk.

It is for this reason that whenever you see a railroad company putting down a new platform at one of their stations you may notice that they use the cut nail instead of the steel article. You may also notice that the spike which is used to fasten the rail down to the tie is practically the same as it always has been and of the same material. If the steel kind were more serviceable you may be sure they would be used for that purpose, as railroad men are given to determining pretty closely what is the most durable in such matters.

Fastening shingles to the roof with wire nails has come to be pretty generally known among observant builders as defective to the making of a good serviceable roof. They have learned this through experience, although it must be said that the great majority of them still keep on using them, and will continue so to do until the public generally becomes advised against them for that purpose. The principal reason for this is no doubt because of their being easier to drive than the old cut nail. Anybody, even a woman, can start and drive a wire nail, but everybody doesn't know how to do the same with a cut nail, because if you do not start the latter just right you will split the wood if you are driving it near the end of the piece. This will be news to some of you youngsters who have come up since the wire nail was first introduced. You ask your father if you've a mind to and he will tell you the same thing.

Two years ago I reshingled my own house and profiting by what I had seen of the wire nail for that purpose, I had my carpenter use the cut nail. He "kicked" about it, but, as I was paying him by the day, it made no difference to him. He contended, like a good many others, that it was not the fault of the nail that it rusted out so quickly, but that the red cedar shingle was the cause. I am aware of the fact that from this idea has arisen a prejudice against this kind of shingles, it being claimed that there is some kind of an acid in the wood that has close affinity for metal and eats it away. Now, without beind rude to any one who holds such an opinion, I will say that I don't believe there is a grain of truth in such an assertion.

I have in my possession some wire nails that were used in putting on white pine siding. They had become so badly rusted that the heads had fallen off, compelling the owner of the building to have the siding entirely renailed. This is not the only instance of the kind I have seen where wire nails have rusted through in white pine siding. This goes to prove that it is not acid that rusts them.

Within the past year or two there has been manufactured a new kind of wire nail which I think will before long come into general use to nail on shingles. It is the galvanized wire nail and has the sharp point and flat head of the common nail that is now used. Their cost is about the same, and may be had at any hardware store in the larger towns. They will keep them in the smaller places also if the carpenters manifest a disposition to ask for them. If the dealers don't care to keep the two stocks of shingle nails, the *Lumberman* could probably prove more effective in getting them into general use by getting a few kegs and keeping them for sale. It won't take much arguing to induce some one who is building a house to buy the better article when there is no difference in the price.

CLASSIFIED LIST OF ADVERTISERS.

Acetylene Gas Generators.
International Heater Co., Utica, N. Y.

Agate Nickel-Steel Ware.
Lalance & Grosjean Mfg. Co., 19 Cliff St., N. Y.

Aluminum Ingots.
Janney, Steinmetz & Co., Phila., Pa.

Aluminum Scrap Buyers.
Janney, Steinmetz & Co., Phila., Pa.

Aluminum Sheets.
Janney, Steinmetz & Co., Phila., Pa.

Architectural Ornaments.
Edwards Mfg. Co., Covington, Ky.
Friedley & Voshardt, Chicago, Ill.
Gerock Bros. Mfg. Co., St. Louis, Mo.

Ball Cocks
Foster, F. W. Mfg. Co., Boston, Mass.

Black Plates.
American Tin Plate Co., New York.

Boilers, Range.
Koven, L. O. & Bro., 50 Cliff St., N. Y.

Brass Goods
Jenkins Bros., 71 John St., N. Y.
Zero Valve & Brass Mfg. Co., Buffalo, N. Y.

Brass Sheets, Rolls, &c.
Hungerford, U. T. Brass & Copper Co., 121 Worth St., N.Y.

CanMakers' Toolsand Machines.
Bliss, E. W. Co., Brooklyn, N. Y.
Gordon, W. J., Phila., Pa.
Niagara Machine & Tool Wks., Buffalo, N. Y.
Robinson, J. M. Mfg. Co., Cincinnati, Ohio.
Stiles & Parker Press Co., Brooklyn, N. Y.
Toledo Machine & Tool Co., Toledo, O.

Castings, Iron.
Cheney, S. & Son, Manilus, N. Y.

Ceilings, Metallic.
Berger Mfg. Co., Canton, O.
Brooklyn Metal Ceiling Co., Brooklyn, N. Y.
Canton Steel Roofing Co., Canton, O.
Dowman Mfg. Co., Atlanta, Ga.
Eller, J. H. & Co., Canton, O.
Friedley & Voshardt, Chicago, Ill.
Gerock Bros. Mfg. Co., St. Louis, Mo.
New York Iron Roofing & Cor. Co., Jersey City, N. J.

Cellar Drainers.
Kemp, C. M. Mfg. Co., Baltimore, Md.

Coal Vases.
Cincinnati Stamping Co., Cincinnati, Ohio.

Coils.
National Pipe Bending Co., New Haven, Conn.

Conductor Pipe and Elbows.
Berger Bros. Co., Philadelphia, Pa.
Clark, Quien & Morse, Peoria, Ill.
Lawrence-Letts Elbow Co., Ltd., Waverly, N. Y.
McClure & Co., Pittsburgh, Pa.
Marlin & Co., Pittsburgh, Pa.

Copper, Roofing and Cornice.
Gnmmey, McFarland & Co., Phila., Pa.
Hungerford, U. T. Brass & Copper Co., 121 Worth St., N.Y.

Cornice Machinery.
Donbie Truss Cornice Brake Co., Buffalo, N. Y.
Dreis, Andrews & Krump, Chicago, Ill.
Keene, Geo. C. & Co., Cincinnati, O.
Niagara Machine & Tool Works, Buffalo, N. Y.
Ohl, Geo. A. & Co., Newark, N. J.
Peck, Stow & Wilcox Co., 27 Murray St., New York.
Phila. Machine Tool Co., Phila., Pa.
Rowinson, J. M. Mfg. Co., Cincinnati, Ohio.

Cornice Work, Galvanized Iron.
Garry Steel & Iron Co., Cleveland, O.
Marlin & Co., Pittsburgh, Pa.

Couplings. *(See Pipe Couplers.)*

Cresting.
Watson, Jas. H. Est., Crawfordsville, Ind.

Cut Offs, Rain Water.
Cooney & Geiger, Indianapolis, Ind.

Damper Clips.
Brohard Co., Phila., Pa.

Dampers.
Greene, W. F., Est. of, Troy, N. Y.
Howes, S. M. Co., Boston, Mass.
Stover Mfg. Co., Freeport, Ill.
Troy Nickel Works, Troy, N. Y.

Dash Lamps.
Dietz, R. E. Co., New York.

Die Stocks.
Curtis & Curtis Co., Bridgeport, Ct.

Drop Hammers.
Bliss, E. W. Co., Brooklyn, N. Y.
Toledo Mach. & Tool Co., Toledo, O.

Dumb Waiters.
Energy Elevator Co., Phila., Pa.

Eave Troughs.
Berger Bros. Co., Philadelphia, Pa.
Berger Mfg. Co., Canton, O.
Clark, Quien & Morse, Peoria, Ill.
Eller, J. H. & Co., Canton, O.
Marlin & Co., Pittsburgh, Pa.
Watson, Jas. H. Est., Crawfordsville, Ind.

Eave Trough Hangers.
Berger Bros. Co., Phila., Pa.
Berger Mfg. Co., Canton, O.
Watson, Jas. H. Est., Crawfordsville, Ind

Eave Trough Machines.
Marlin & Co., Pittsburgh, Pa.

Elbows, Stove Pipe.
Lawrence-Letts Elbow Co., Ltd., Waverly, N. Y.
Reeves Mfg. Co., Canal Dover, O.

Electric Dynamo Machines.
Hanson & Van Winkle Co., Newark, N. J.
Zucker & Levett & Loeb Co., 526-530 W. Twenty-fifth St., New York.

Enameled Ware.
Lalance & Grosjean Mfg. Co., 19 Cliff St., New York,
National Enameling & Stamping Co., 78 Beekman St., N. Y.

Faucets.
Clark Novelty Co., Rochester, N. Y.
Litchfield, J. M., 105 Beekman St., N Y

Fire Brick.
Newton, W. M., Albany, N. Y.
Presbrey Stove Lining Co., Taunton, Mass.
Valentine, M. D. & Bro. Co., Woodbridge, N. J.

Fire Pots.
Burgess Soldering Furnace Co., Columbus, Ohio.
Clayton & Lambert Mfg. Co., Detroit, Mich.

Fire Sets.
Troy Nickel Works, Troy, N Y.

Flue Stoppers.
Stuber & Kuck, Peoria, Ill.

Furnace Cement.
Colebrook, W. H. Sons & Co., Syracuse, N. Y.
Perkins, J. L. & Co. Chicago.

Furnace Pipe and Fittings.
International Heater Co., Utica, N. Y.
Meyer, F. & Bro. Co., Peoria, Ill.
Osborn, J. M. & L. A., Cleveland, O.
Safety Furnace Pipe Co., Detroit, Mich.
Schaffer, Jno. P., Pittsburgh Pa.

Furnaces and Heaters.
Amer. Furnace Co., St. Louis Mo.
Barstow Stove Co., Providence, R.I.
Beckwith, P. D., Est. of, Dowagiac, Mich.
Bergstrom Bros. & Co., Neenah, Wis.
Boynton Furnace Co., 207 Water St., N. Y.
Brand Stove Co., Milwaukee, Wis.
Brien Heater Co., Hoosick Falls, N. Y.
Co-operative Foundry Co., Rochester, N. Y.
Danville Stove & Mfg. Co., Danville, Pa.
Dean Boiler Co., Boston, Mass.
Dighton Furnace Co., Taunton, Mass.
Floyd, Wells & Co., Royersford, Pa.
Forest City Fdry. & Mfg. Co., Cleveland, Ohio.
Graff Furnace Co., 208 Water Street, New York.
Hart & Crouse Co., Utica, N. Y.
Howes, S. M. Co., Boston, Mass.
International Heater Co., Utica, N. Y.
Keeley Stove Co., Columbia, Pa.
Kelsey Furnace Co., Syracuse, N. Y.
Lennox Machine Co., Marshalltown, Iowa.
Magee Furnace Co., Boston, Mass.
March-Brownback Stove Co., Pottstown, Pa.
Meyer, F. & Bro. Co., Peoria, Ill.
Mueller, L. J. Furnace Co., Milwaukee, Wis.
Noyes & Nutter Mfg. Co., Bangor, Maine.
Prizer-Painter Stove & Heater Co., Reading, Pa.
Richmond Stove Co., Norwich, Conn
Schaffer, John P., Pittsburgh, Pa
Schwab, R. J. & Sons Co., Milwaukee, Wis.
Sheppard, Isaac A. & Co., Phila., Pa.
Stamford Foundry Co., Stamford, Ct.
Stanton Heater Co., Martins Ferry, O.
Tubular Heating and Ventilating Co., Phila., Pa.
Wood & Bishop Co., Bangor, Me.
XXth Century Heating & Ventilating Co., Akron, O.

Gas Heaters. *(See Stoves and Ranges, Gas.)*

Gas Machines.
Kemp, C. M. Mfg. Co., Baltimore, Md.

Granite Steel Ware.
National Enameling & Stamping Co., 78 Beekman St., N. Y.

Groovers.
Wheeler, W. A., Indianapolis, Ind.

Heaters, Steam and Hot Water.
Barstow Stove Co., Providence, R.I.
Boynton Furnace Co., 207 Water St., N. Y.
Dean Boiler Co., Boston, Mass.
Dighton Furnace Co., Taunton, Mass.
Drake, W. H., Newark, N. J.
Gorton & Lidgerwood Co., 96 Liberty St., New York.
Gurney & Co., Boston, Mass.
Gurney Heater Mfg. Co., Boston, Mass.
Hart & Crouse Co., Utica, N. Y.
International Heater Co., Utica, N Y.
Kewanee Boiler Co., Kewanee, Ill.
Magee Furnace Co., Boston, Mass.
National Pipe Bending Co., New Haven, Conn.
Pierce, Butler & Pierce Mfg. Co., Syracuse, N. Y.
Prizer-Painter Stove & Heater Co., Reading, Pa.
Richmond Stove Co., Norwich, Conn.
Sheppard, Isaac A. & Co., Phila., Pa.
Smith, H. B. Co., Westfield, Mass.
Smith & Anthony Co., Boston, Mass.
Smith & Thayer Co., Boston, Mass.
Stolz, Frank D., Chicago, Ill.
Vance Boiler Works Geneva N. Y.

Hip Shingles.
Galesburg Cornice Works, Galesburg, Ill.

Hollow Ware.
Lalance & Grosjean Mfg. Co., 19 Cliff St., N. Y.
National Enameling & Stamping Co., 78 Beekman St., N. Y.
Sperry, D. R. & Co., Batavia, Ill.

Hose Couplings.
Meilink Mfg. Co., Toledo, O.

Hotel Cooking Apparatus.
Smith & Anthony Co., Boston, Mass.

Household Specialties.
Shepard, Sidney & Co., Buffalo, N. Y.
Silver & Co., New York.

Ice Cream Dishers.
Clad, V. & Sons, Phila., Pa.
Seavey Mfg. Co., Boston, Mass.

Iron, Galvanized Sheet. *(See Sheets, Galvanized.)*

Iron and Steel, Sheet. *(See Sheets, Iron and Steel.)*

Iron, Planished Sheet.
Amer. Sheet Steel Co., New York.

Iron Shutters and Doors.
Garry Steel & Iron Co., Cleveland, O.

Lamps.
Dietz, R. E. Co., New York.

Lanterns.
Dietz, R. E. Co., New York.

Lath, Metallic.
Schratwiesers Metal Lath Works.

Lead Pipe.
Colwell Lead Co., 63 Centre St., N. Y.

Lead Washers.
Littleford Bros., Cincinnati, O.

Lightning Rods.
Washburne, E. G. & Co., 46 Cortlandt St., N. Y

Lunch Boxes.
Seavey Mfg. Co., Boston, Mass.

Metal Ceilings. *(See Ceilings, Metallic.)*

Mica.
Munsell, Eugene & Co., 218 Water St., New York.
Palermo Mica Co., 115 Beekman St., N. Y.

Milk Cans.
National Enameling & Stamping Co., 78 Beekman St., N. Y.

Nickel Plating Outfits.
Hanson & Van Winkle Co., Newark N. J.
Zucker & Levett & Loeb Co., 526-530 W. Twenty-fifth St., New York.

Oil Heaters. *(See Stoves and Ranges, Oil, Vapor and Gasoline.)*

Ovens, Portable.
Blodgett, G. S. Co., Burlington, Vt.
Howes, S. M. Co., Boston, Mass.

Paint.
Connors, Wm. Paint Mfg. Co., Troy, N. Y.

Patent Solicitors.
Hamlin, G. R., Washington, D. C.
Howson & Howson, Philadelphia, Pa.
Stocking, E. B., Washington, D. C.

Patterns.
Cope, Geo. W., Detroit, Mich.
Gobeille Pattern Co., Cleveland, Ohio.
Vedder Pattern Wks., Troy, N. Y.

Perforated Sheet Metal.
Harrington & King Perforating Co., Chicago, Ill.

Pig Iron.
Wister, L. & R. & Co., Philadelphia, Pa.

Pipe Cutting and Threading Machines.
Livermore, H. F., Boston, Mass.

Pipe Couplers.
New Haven Novelty Machine Co., New Haven, Conn.

Pipe, Water and Gas.
Millar, C. & Son Co., Utica, N. Y.

Pipe Fittings
Vanderman Plumbing & Heating Co., Wilmantic, Conn.

Pipe Joints.
Estabrook's Sons, R., Boston, Mass.

Pipe Joint Cement.
Callahan, Geo. & Co., 218 Front Street, N. Y.

Pipe, Lined.
Lamb & Ritchie, Cambridge, Mass.

Pipe Wrenches.
Trimont Mfg. Co., Roxbury, Mass.

Plumbers Tools, Specialties and Supplies.
Barstow Stove Co., Providence, R. I.
Clayton & Lambert Mfg. Co., Detroit, Mich.
Colwell Lead Co., 63 Centre St., N. Y.
Estabrook's Sons, R., Boston, Mass.
Foster, F. W. Mfg. Co., Boston, Mass.

Galvanizing and Tinning.

A Practical Treatise on Coating with Tin and Zinc, with a Special Chapter on Tinning Gray Iron Castings. By W. T. Flanders. Size 5½ x 8 inches. 93 pages, 40 illustrations. Cloth bound. Price $2.00.

The author of this work has made a specialty of galvanizing and tinning, and has been employed to erect plants in various parts of the country, also to instruct the owners, so that, in all instances, they have been able to operate them successfully. The subject of galvanizing is, therefore, treated from the standpoint of an expert and in a practical manner. The selection of materials and apparatus for erecting plants of large and small capacity is treated, together with instructions for their equipment and accompanied by many illustrations of the plants and of the tools and appliances. Plain directions are given for the preparatory treatment of metals and articles to be coated, and every detail which is of importance in successfully applying to metals a secure and attractive coating is described. The tinning of articles is treated in the same practical manner. The difficulties found by many who have attempted to tin malleable and gray iron castings are explained and methods for doing the work made simple.

CONTENTS.

Galvanizing.

Locating a Plant and Selecting a Kettle.
The Galvanizing Room.
Tanks for Acids and Other Purposes.
Tools for Galvanizing.
Filling and Firing a New Kettle.
The Use of a Pyrometer.
Materials Used in Galvanizing.
Building and Setting Kettles.
Removing Scale with Sulphuric Acid.
Cleaning Sandy Castings with Sulphuric Acid.
Preparing the Work for Dipping in the Zincing Bath.
Drying the Work.
The Heat of Zinc.
Dipping the Work in the Molten Metal.
The Formation of Dross in the Kettle.
Running Over, or "Sweating," Zinc Dross.

Tinning Malleable Iron, Wrought Iron and Steel.

Preparing the Work.
Tools and Kettles.
A Tinning Plant.
Plan of Tinning Plant.
Removing Scale and Rust with Sulphuric Acid.
Cleaning Sandy Castings by Sulphuric Acid.
Cleaning Sandy Castings with Hydrofluoric Acid.
Removing Paint or Grease.
Tinning with a Single Kettle of Tin.
Tinning with Two or More Kettles of Tin.
Passing the Work Through the Tinning Kettles.
Tinning Wire in Coils.
Tinning Steel Spoons and Similar Articles.
Retinning.
Setting Retinning Kettles.

TINNING COMMON GRAY IRON.

Description of Tinning Plant.
General Considerations.
Tumbling Barrel.
Freeing Gray Iron Castings from Sand by Hydrofluoric Acid.
Cleaning Sandy Castings with Sulphuric Acid.
The Use of a Hot Alkali Bath in Certain Cases.
Preparing the Castings in the Gas Barrel.
Coating the Castings with Tin.

Sent postpaid on receipt of price, $2.

Our students succeed because they use I. C. S. Textbooks.

Sheet Metal Pattern Drafting

A course of instruction by mail for tinsmiths, coppersmiths, plumbers, sheet-iron workers, furnace workers, skylight makers and others that will enable a student to "strike out" working patterns for all kinds of sheet metal work. This is what a student says:

His Course More Than Paid for Itself

I am a tinsmith, and consider your course in Sheet Metal Pattern Drafting one of the best investments I ever made. Before I was half through I had realized from it more than the money paid for the whole course.
M. E. TOBIAS,
63 Fifteenth St.,
Wheeling, W. Va.

We teach by mail **Mechanical, Steam, Electrical, Civil and Mining Engineering; Shop and Foundry Practice; Mechanical Drawing; Architecture; Plumbing; Sheet Metal Work; Telephony; Telegraphy; Chemistry; Ornamental Design; Lettering; Book-keeping; Stenography; Teaching; English Branches; Locomotive Running; Electrotherapeutics.** When writing state subject in which interested.

taught by mail.

Dietz Blizzard Lantern.

"COLD BLAST."

This Lantern is the culmination of a vast deal of experiment, and it is offered as something *extra good* in the Lantern line. We call this Lantern a "Cold Blast," for the reason that it is fed exclusively with cold air, that which comes from above, being taken in through openings between the two rings at the top.

This system of air-supply greatly simulates combustion with the resultant extra volume and intense whiteness of its light. It is fitted with an entirely new and most effective device for raising and lowering the globe, which also locks the burner in position. It is, in point of fact, a close following of the well-known Dietz Globe Street Lamp, and, as already stated, it will meet the demand of any one seeking an "*extra good*" Lantern. It is fitted with 1-inch burner and "Blizzard" globe. Also made in No. 1 size with 5/8 inch wick.

FOR SALE BY

ALL LIVE JOBBERS.

If you handle Lanterns send to us for a catalogue and to your jobber for prices.

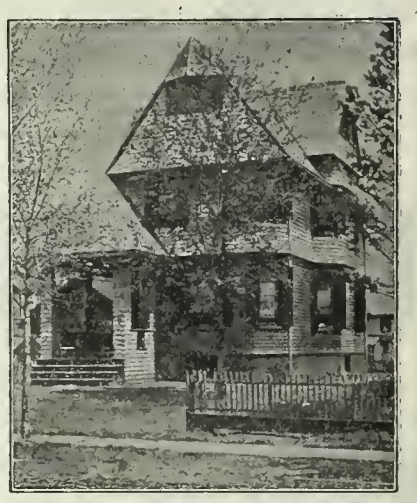
CARPENTRY AND BUILDING

Series No. 2.

Modern American Dwellings

With Constructive Details.



The Most Elaborate and Complete Volume of Plans Ever Brought Out for the Use of Architects, Builders and Home Seekers.

BY NUMEROUS ARCHITECTS.

A selection of thirty-seven designs of artistic suburban dwellings erected in various sections of the country, at a cost ranging from $2,000 to $5,000, and embracing floor plans, elevations and constructive details showing interior and exterior finish, all drawn to a convenient scale, together with brief extracts from the specifications.

Those who contemplate building a home will find this volume of great value. In connection with each design is given the necessary floor plans, elevations and constructive details as will enable any practical builder to execute the work. The plans are diversified in both the interior arrangement and external appearance, and will afford to persons of various requirements an opportunity to select a home suited to their taste and convenience.

33 Half-Tone Engravings. 127 Full Page Plates of Elevations, Floor Plans and Constructive Details. 40 Pages of Descriptive Text. Size 9 x 13 in. (oblong), Handsomely bound in cloth. PRICE $2.00.

The Time to Act

At a boys' banquet one youngster was overheard loudly whispering to another.—"JIMMY: The time to ask for tarts is when they're a PASSING of them."

This leads us to remark that the time to get the agency for

"BERGER'S Classik METAL CEILINGS"

is now, before your competitor gets it.

If you expect to get your share of the metal ceiling trade, it will pay you to get into the field early.

Again, there is no line you can get hold of that will give you as big an advantage as Berger's "Classik."

Berger's "Classik" is the right line for the up-to date dealer.
It is the most complete and most artistic line of metal ceilings upon the market.
It has the greatest variety of patterns to choose from.
It combines the mechanical excellence of sheet metal with the artistic effect of plastic relief.
Our new catalogue will interest you. Write to-day for a copy.

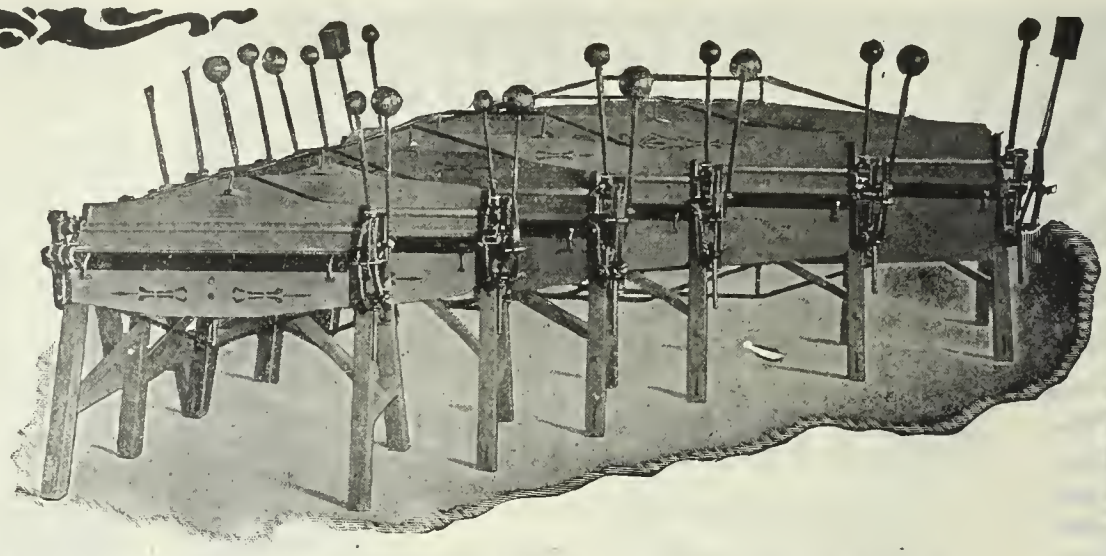
COVINGTON, KY.

— PAT AS AN ORGAN BLOWER.—An Irishman had been obtained at a pinch to blow an organ. The player was ready and the signal was given, but no wind came. The signal was repeated a second time, and again a third time, but still without result. The delay was becoming awkward, the congregation was getting uneasy. What was to be done? Choristers and organist now united in shouts of "Blow! blow! blow!" Not the slightest zephyr stirred within the windchest. At length the organist hastened to the blower's sanctum. And what a sight it was that met his eyes! Clinging with heels and hands to the long wooden handle of the bellows there hung the son of Erin, his eyes starting from their sockets and his cheeks distended and crimson, blowing as if for dear life into the end of that long wooden handle.—*Longman's Magazine.*

— BEFORE AND AFTER.—"What's this card in your pocket, John?" asked his wife.

"That? Oh, before I went to lunch that was a bill of fare. Now it's my table of contents."—*Exchange.*

The Double Truss Cornice Brake.



All the different sizes in which we make this practical machine are herewith illustrated.

This brake costs only half as much as an all-metal brake.

It is made mostly of hard maple.

It is just as good as an iron brake in every respect—much better in some ways. Beside the 50% saved in the first cost our brake will save money in its use.

It is light and can easily be carried from place to place.

By shaping or bending work in the building where it is to be used all the trouble and expense of handling formed-up work is saved.

Write for prices.

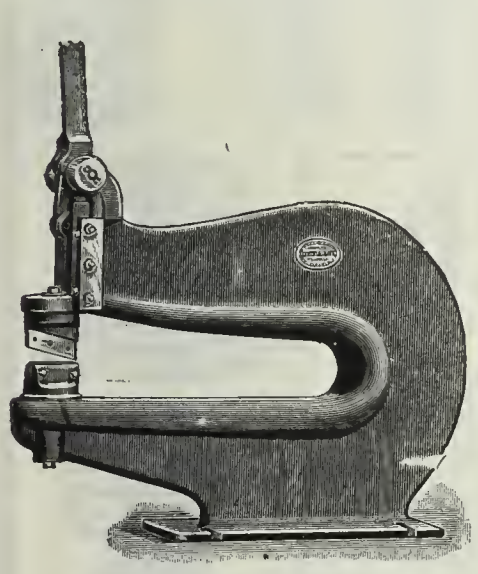
JAMES H. WATSON ESTATE, - - CRAWFORDSVILLE, IND.

Shears and Punches for Range Makers.



Drop Throat Shears.

On account of the deep throat these machines can be used for cutting and punching holes in large sheets. The knives *are arranged to swivel,* which permits of cutting from front to back, right to left, or at any desired angle, according to the nature of the work. The position of the knives can be changed quickly. The knives are 4 in. long, and each of them has two cutting edges, which can be used alternately.

For punching work, a die holder with die, punch and stripper takes the place of the knives.

Will cut iron up to 1/8 in. thick.

Will punch 1/4 inch hole in No. 14 iron.

Patent Applied for.

SOMETHING NEW!

THIS is not an every day "Air Tight Stove" that almost every stove foundry makes. While the general construction is the same, the principle is different.

This stove is furnished with a blow pipe fastened to inside of feed door and extends inside to the center of fire pot and is controlled by a screw register on outside of feed door.

DIRECTIONS FOR USING:

Close up all openings below feed door and regulate your fire entirely by screw register in the feed door.

By following these instructions you will produce more heat with this stove and consume less fuel than with any other stove made.

WRITE FOR PRICES AND SECURE THE AGENCY FOR THE BEST LINE ON EARTH.

THE ETNA FURNACE

Is a furnace worth talking about and selling.

It is the result of twenty years' experience in hot air practice, and knowing the wants and the requirements necessary to produce successful, satisfying results we made the Etna accordingly.

The Etna contains many strong, practical features not found in the majority of others. We feel satisfied they will meet the approval of every dealer who has been up against the heating problem and encountered its difficulties. We have smoothed out some of the rough places.

READ THE CATALOGUE. SENT FOR THE ASKING.

Pittsburgh Stove & Range Company

PITTSBURGH, U. S. A.

The Monitor Base Burner.

High Art Series.

It is without doubt the most powerful heater made and its rich and graceful appearance will attract attention at once. The novel construction and distinctive features offer every advantage to the dealer who secures the agency. The diving flue is in front, extending entire width of stove, being what is commonly known as a sheet flue, thus the greatest heat is in the front of the stove where it is most needed. The draft is taken in through the bottom, carrying the heavy foul air which settles near the floor. Grate is of the duplex pattern with outer shaking ring. Two large circulating flues are fitted in rear corners of the stove, affording ample circulation for heating evenly the largest room. Send for new Catalog and secure the agency without delay.

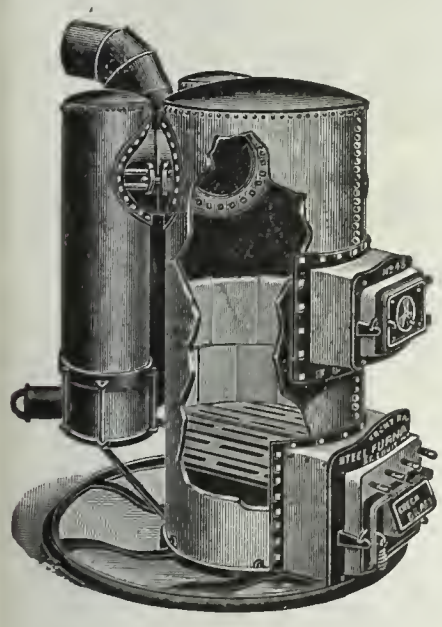
Detroit - Chicago.

AIR TIGHT HEATERS.

Our line in these comprises everything from the cheapest to the very finest finish possible to produce. Our manufacturing facilities and daily output justify us naming prices below any possible competition. This fact has enabled us to establish Wholesale Agencies in nearly every large city in the United States and makes it possible for us to supply the Dealer "Near His Door," saving time and freight. We also manufacture **Steel Ranges, Steel Cooks, Cast Ranges and Cooks, Hot Blast Coal Heaters, Oaks, Laundry Stoves, Radiators, etc.**, all up-to-date goods.

Write us for particulars and we will put you in the way of making some money.

EXCELSIOR STOVE & MFG. CO., - Quincy, Ills.



Front Rank Hot Air Furnaces

are built on vertical lines; air comes in direct contact with entire heating surface.

The Front Rank Fire Chamber is one solid sheet of closely riveted steel; being lined above the fire lines with genuine fire clay tiling it is the most durable made.

The radiators are very large and have an unusual area of heating surface in comparison with the size of fire pot.

These furnaces burn hard or soft coal or coke. We also make wood burning furnaces.

Send for our catalogue, it will give you a better idea of what we make.

Magee Furnaces Sell Themselves

—almost. Don't you know there are lots of people who don't care to know anything more about a furnace than that it's a Magee? Their parents—many of them—used Magee Heaters, and their grandparents, too. They have never heard anything but good about Magee Heaters. They feel that when they get an apparatus with the name

Magee HEATERS

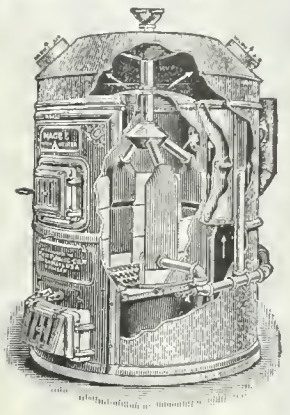
on it they're getting "a sure thing." Dealers who handle Magee Heaters know there's more than "talk" in this argument.

The Best 50 Years Ago.
The Best To-Day.

MAGEE FURNACE CO., Boston, Mass.

Makers Highest Grade Heating and Cooking Apparatus.

BOSTON HEATER "A."

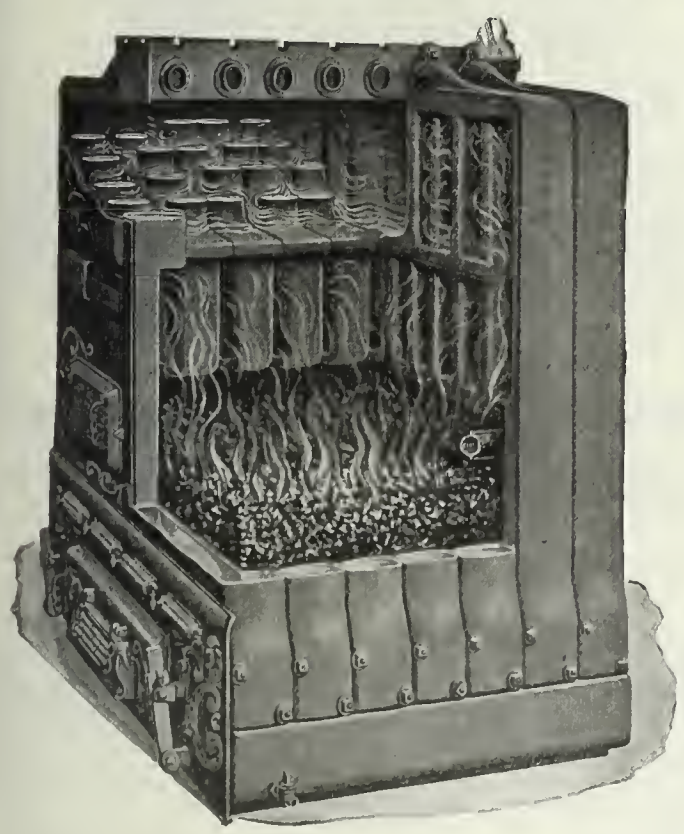


Warm air alone or in combination warm air and hot water.

MYSTIC HOT BLAST.

For warm air alone. Built in 6 sizes.

HENDERSON THERMO HEATER



Has many excellent talking points, not mere points to talk about, but decided advantages that the house owner appreciates and will pay for. It is easy to handle, easy to erect, easy to operate, durable, and, in case a section breaks, temporary repairs can be made in an hour or two, and the heater used while new parts are being procured.

The exclusive sale of our heaters in your city is sure to become profitable.

Now is the time to secure it.

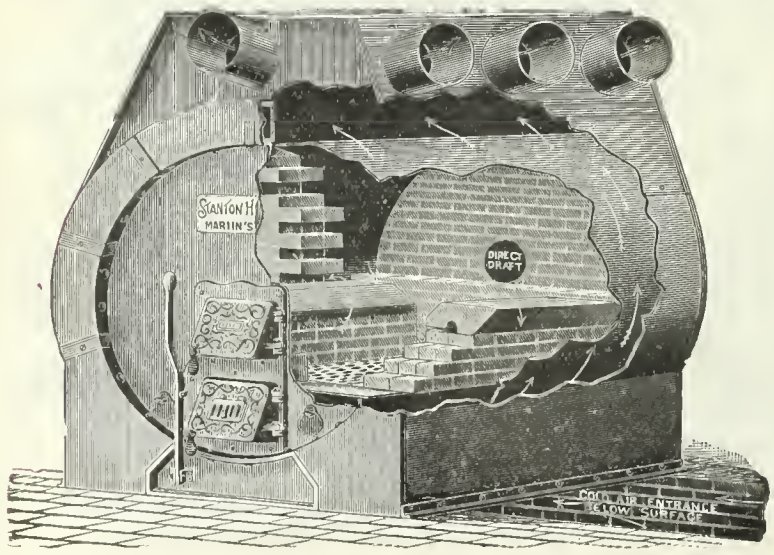
The Stanton Seamless Heater,

PORTABLE CASED.



LOUISVILLE, KY., Apl. 5th, 1901.

THE STANTON HEATER CO.,
Martin's Ferry, Ohio.

Gentlemen:—Your favor of the 3d inst is received asking our experience with the Stanton Heater which you put in for us during the fall of 1899. In reply we will say that it gives us pleasure to express our entire satisfaction with this Furnace. While we have had no severe weather this winter there have been several quite cold snaps, but our offices have been very comfortably heated, and our coal bill (Pittsburgh coal) has been quite moderate compared with other Heaters we have used.

The satisfaction the Heater has given us can be best expressed by saying that we have not heard the Furnace mentioned once this winter. You can see, therefore, that we have had absolutely no cause for complaint.

Yours very truly
ROBINSON-HUGHES & CO.

Martin's Ferry, Ohio.

See our advertisement next week.

There are no dark flues or mysterious air passages in the "DIGHTON" Furnace.

It sells for its real value as a heating apparatus, not on a theory as to what a fantastic construction ought to do. It's just as simple as a strong heating furnace can possibly be built and accomplish the best results with less fuel than another would require to do the same work.

There is no guessing as to the heating capacity of the "DIGHTON." Wherever a 20, 22 or 24 inch pot of any other make has ever done or would do the work, you can guarantee the "DIGHTON" to do it better and with less fuel.

Some dealers now sell from 15 to 25 furnaces a season that didn't think there was any money in the furnace business until they used the "DIGHTON."

DIGHTON FURNACE CO., Taunton, Mass.

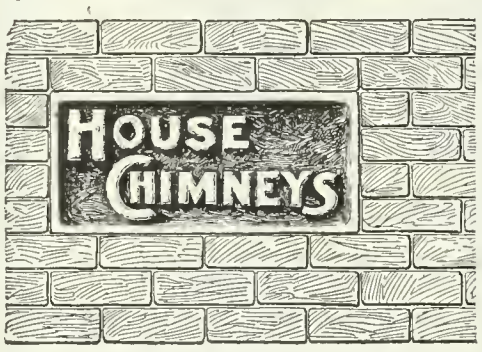
A 62-PAGE PAMPHLET

Comprising a Series of Articles and Letters on *Chimney Troubles and Their Remedies* published under the title



Contains a compilation from the columns of THE METAL WORKER, of articles and correspondence relating to house chimneys, defective flues, and kindred topics, comprising a source of information of the most practical and reliable nature, on overcoming difficulties which occur in the working of chimneys, flues, etc.

To all who are interested in flues and drafts, in their relation to stoves, furnaces and house heating apparatus, this book will prove instructive and helpful.

The Contents are as follows

Page.

POINTS ON CHIMNEYS - 7–32
An illustrated article by J. L. Bixby, Jr, describing many details in chimneys, which cause trouble, and giving remedies. An important table is presented, of the sizes of chimneys required in dwelling houses, based upon the amount of work to be done.

DEFECTIVE FLUES - - - 33–35
This article presents information resulting from a wide, practical experience of the writer, and gives sound advice on some of the details of chimney construction.

HOW TO IMPROVE A WEAK CHIMNEY - - - - - - 36–40

VARIOUS FORMS OF VENTILATORS or CHIMNEY TOPS 41–45

CONDENSATION IN STOVE PIPES - - - - - - - 46, 47

SMOKE PIPE FOR WOOD FURNACES - - - - - 48

REMEDYING DOWN DRAFT IN CHIMNEY - - - - - 49–51

CONNECTED FLUES DESTROY DRAFT - - - - - - 52–55

FAILS TO BAKE ON BOTTOM 56–62

40 good Illustrations help to make the Text clear.

Furnace Heating.

A Practical and Comprehensive Treatise on Warming Buildings with Hot Air, by William G. Snow, with an Appendix on Furnace Fittings. 170 pages; size, 6 x 9 inches. Cloth bound. Price, **$1.50.**

This is the only book that has been brought out which presents a systematic and reliable treatment of the warm air furnace system of heating.

It deals with the various types of furnaces, their construction, proper location and setting, together with furnace fittings, and all matters pertaining to the instal lation of furnaces and to effective and economical heating by warm air. The subject is discussed for the first time by a competent author possessed of a scientific education and a practical training, who presents positive rules, based on a long experience, for guidance in designing furnace systems for dwellings and other buildings where this popular method is employed. The various details of furnace work are described simply and at such length that the volume will be valuable to all who are in any way interested in the subject. It is recommended to practical furnacemen, to architects, builders and house owners, and to tinners and plumbers in suburban sections who do furnace work. To all these it will prove a reliable text-book and guide.

PARTIAL SUMMARY OF CONTENTS BY CHAPTERS.

Chapter I.—Furnaces—Is devoted to Furnace Construction—The Relative Proportion of Furnace Parts—Secondary Heating Surface—Economy and Efficiency—Heating Capacity and Exposed Wall Surface—Manufacturers' Ratings of Their Own Productions, etc.

Chapter II.—House Heating—Compares Furnaces and other apparatus, and describes Method of Setting Brick and Portable Furnaces—Location and Area of Cold Air Supply—Cold Air Rooms and Air Filters—Return Ducts and Air Circulation—Size of Hot Air Pipes—Location of Registers, etc.

Chapter III.—The Combination System—Discusses Heating Distant Rooms with Radiators—Balancing the System—Location of Water Heater in Furnace—Capacity of Water Heaters—Size of Radiators, etc.

Chapter IV.—Air—Deals with the Necessity of Ventilation—Water Needed to Moisten Air—Expansion of Air—Velocity of Air in Tubes, etc.

Chapter V.—Heating and Ventilation of Buildings—Considers the Size of Furnaces Required—Fresh Air Room and Supply—Air Circulation—Size of Flues—Use of Stack Heaters—Size of Heating Coils in Vent Flues, etc.

Chapter VI.—Heating of Public Buildings, Churches and Stores—Is given to the Size of Furnaces Required—Grate Surface in Ventilated Buildings—Air Supply—Size of Heating and Ventilating Flues—Size of Stack Heater, etc.

Chapter VII.—Fan-Furnace Combination System—Is devoted to Positive Warm Currents from Fan Systems—Location of Fan and Driving Apparatus—How Good Furnaces are Aided by Fans—Types and Efficiency of Fans—Area of Ducts and Flues, etc.

Chapter VIII.—Temperature Control.

Chapter IX.—Estimate and Contract Blanks.

Chapter X.—Value of Fuels. The Proper Size for Furnace Chimneys—with tables.

APPENDIX.

Furnace Fittings.—A section of 45 pages dealing with the Making of Furnace Casings—Metal Cold Air Boxes—Making Furnace Bonnets and Collars—Making Pipe and Elbows—Register Boxes and Stack Shoes, etc.

Sent postpaid on receipt of price, **$1.50.**

The Kelsey Warm Air Generator

Study the construction of the Kelsey and the principle employed in warming the air, and you will be convinced of its efficiency.

In the Kelsey the air is warmed thoroughly and evenly by passing in separate channels through the cast iron sections.

There are from nine to seventeen of these sections in a Generator, according to its size.

Each section weighs about 70 pounds, and has 8 square feet of heating surface.

These immense surfaces and this great weight of cast iron, being in direct contact with and over the fire, are kept heated to any required degree, with a most economical consumption of fuel.

The Kelsey Method of Warming the Air Is the Best Method. ***Send for Booklet.***

Freight Charges and Back Orders

Many merchants doing a business of moderate extent do not give to freight matters the attention they deserve. The cost of getting in stock is one of the very important items in doing business, and one where judgment and watchfulness are needed and are paid for in the dollars saved. Each individual item in the freight account is small, but the year's total is a goodly sum, even where every care has been exercised. One of the small leaks in business comes from "back orders," or the inability of the house to whom the order is sent to ship it complete. Such items as are short are put on what is called the "back order book," to be forwarded later, when new stock is received. Perhaps the freight cost of these back orders is the smallest part of the annoyance they cause. They probably are inevitable, but they are always irritatingly unwelcome. Very often, altogether too often, when an invoice is received, the dealer finds everything there that he was in no hurry for, while the one item most wanted has been put on the back order book. But in addition to the annoyance the back order causes it adds a great many small items to the freight account. It is not improbable that the day may come when a house that sends goods on a back order will be expected to pay the carrying charges on such shipment. In every way this would seem fair.

Some Kinds of Union Victories.

At a time when union labor is occupying a very considerable share of public attention and hot controversies on the merits of strikes are going on everywhere, it is not uninteresting to glance for a moment at what may be termed the humorous side of unionism—*i. e.*, the anomalies, approaching absurdities, that sometimes accompany a too literal carrying out of its rules and principles. The experiences in this line of a well-known manufacturing concern at Dayton, Ohio, following their recognition of union labor, are worth recording. The concern in question employed about 2500 laborers, skilled and unskilled, whose rights and comforts were their constant study. These workers were in the habit of boasting that they had a soft snap—good wages, short hours and every sort of advantage in the way of living and entertainment. The factory for many years was run on a nonunion basis, but a little over a year ago, at the request of some of their employees, the company consented to recognize union labor. Then their troubles began. In the first place, a walking delegate, in the course of his investigations, discovered that in the shower baths provided for the male employees of the company, the towels furnished by the concern were washed, at the company's expense, by nonunion washerwomen. As a consequence, the men were ordered by the union to supply their own towels and have them washed at their own expense, which was set down as a distinct victory for union labor. The same walking delegate shortly afterward learned that a spring on one of the mill doors was of nonunion manufacture. A secret conference ensued, and as the result of a protest the company had to remove the objectionable spring. This was set down as a further triumph of union principles. Yet later, some new machinery was introduced which did away with the services of half a dozen foundrymen. These men were laid off, and as a result, the entire force of foundrymen and metal polishers were ordered out on strike and the factory had to be closed down, throwing 2500 people out of employment.

Managers of Men.

There is one class of workers for whom a large and constant demand exists and who, therefore, need never starve for lack of employment. These are the men who have the managing faculty. Like the poet, the successful managers of men, as a general rule, are "born, not made." Their ability is rather intuitive than acquired. They have the faculty, knack, aptitude, call it what one will, of administration and leadership, which commands the respect of those they control. They are necessarily men of strong will, but are not arbitrary or oppressive in the exercise of it. Tact and good judgment are essential to the make up of such men. They must have a good understanding of men and be able to discriminate between those who must be driven and those who can be led, adapting their methods of dealing with each accordingly. To do this properly requires a close study of the dispositions of men, which the good manager will not fail to make. He must, moreover, so rule himself that he may pursue his course with even temper, never allowing his passions to get the better of his good judgment and strict sense of justice. Ruling by force of character and showing himself fair minded, sympathetic and devoted to his duty, he will command the respect and obedience of those under him. The domineering, passionate, arrogant slave driver may command men through fear, but he has no hold on them, and the moment they have the opportunity to do so they will rebel. He is not a good manager of men, although for a time they may obey him with alacrity. The really successful manager has his men so trained that they will do their duty as well in his absence as when he is present. A marked quality of such a manager is one that he shares with all the great men of history, the faculty of picking out good assistants and inspiring them to use their best efforts. This is not the least among the qualifications essential to good managership. A loyal, enthusiastic corps of lieutenants and a contented, cheerful rank and file of willing workers are secured by the methods above outlined, as used by the good manager, to the profit of all concerned.

Undeterred by the failure of the Pullman enterprise and the troubles at the cash register works at Dayton,

Ohio, J. E. Tilt, the president of a Chicago shoemaking concern, is reported to be planning the establishment of a model industrial town at Endicott, N. Y., on the Susquehanna River. Unlike most similar undertakings, the new town will have little or nothing in the shape of restrictions. Such ordinances as it will have will be made by the citizens. The company will not control the stores, franchises or privileges, and there will be no Sunday restrictions, nor will liquor be forbidden; neither will the formation of labor unions be discouraged. The company have contracted for the expenditure of nearly $3,000,000 in city improvements and will sell cottages to their employees on liberal terms. A factory to employ 2500 persons will be erected. Mr. Tilt disclaims any idea of philanthropy in connection with the scheme, but argues that, in providing the advantages referred to, the men will become better workers and so make the business more profitable and prosperous.. Having himself risen from the shoemaker's bench, Mr. Tilt thinks that he thoroughly understands the workingman and his needs.

A writer in the *Engineering Magazine* makes the point that Americans are extravagantly wasteful of the power which lies at their doors and which might be used with advantage. For example: While this country produces the greatest output of iron and steel, no engine driven by furnace gases is in practical use. In England, where the idea first originated, a few such engines are in operation, and also in France. The little principality of Luxemburg, with a population of only 236.000, has installed furnace gas engines to the extent of nearly 10,000 horse-power, while in Belgium there is 7000 horse-power and in Germany nearly 45,000 horse-power.

Many new and big things have had their origin in Chicago. The latest scheme that has been hatched in the Windy City is the establishment of a mammoth department store that will be open for business 24 hours a day. The project, it is said, is taking shape in a way that promises a successful start. It is in the nature of a co-operative movement among a number of the smaller merchants of the city, whose trade has been cut into by the large department stores to a ruinous extent. The company will be capitalized at $500,000 and the stock will be owned by the merchants in the combination. The intention is to have only one representative of a branch of business, who will be in charge of the department in which he is directly interested. From 30 to 50 separate departments are to be included, covering every line of commodities handled by the existing department stores. The idea of keeping the store open day and night is designed to accommodate every one, including thousands of people who work nights in the down town district of the city. Three shifts of clerks, each working eight hours, will be employed. By this means the promoters expect to be able to compete successfully with the regular large department stores.

The Anchor Line steamer "Ethopia," which arrived in New York on Monday, brought among her passengers 12 British workmen, who have been sent to tour this country and study at first hand the conditions of the American wage earners, how they are housed and live, their hours of labor, trades unions and other matters of interest. The expenses of the party are defrayed by one of the principal English newspapers. The men who have come over were selected from among different trades by popular vote. They include a carriage builder, a pottery and glass decorator, electrical and mechanical engineers, a locomotive engineer, a miner, a painter, a mason, an upholsterer, a weaver and a steel worker. They come from different parts of the United Kingdom. The party will visit Washington, Pittsburgh, Philadelphia, Cleveland, East Liverpool, Ohio; Buffalo and Ottawa and Montreal in Canada, remaining a few days in each city in order to study questions relating to labor conditions in which the British artisan is vitally interested.

Careful Buying for Plumbers and Metal Workers.

The letter signed by "Enterprise" that appeared in a recent issue of *The Metal Worker*, inquiring whether it would pay him to be a closer and more careful buyer, has brought many expressions of opinion from members of the trade in various parts of the country. The extracts given below discuss the subject in various phases:

BUYER'S DUTY TO BUY WELL.

An Illinois dealer thinks that it pays to look for low prices and that it is the buyer's duty to do so:

I have read the article, "Careful Buying for Plumbers and Metal Workers," in *The Metal Worker* of August 17, and will say I make it a custom to "figure around" some when in the market for a bill of sufficient size to warrant so doing, and find it pays to do so. I would recommend others to do the same. It can do no harm, and often results in getting better posted as to prices asked by various wholesalers. I think it is every buyer's duty to try and buy his goods where he can do the best.

* * *

DON'T SHOP AROUND.

A New Jersey dealer advises sticking to one reputable house:

We do not believe it pays to be continually shopping around. The average wide awake buyer has a pretty general idea of the market prices of the goods he handles, and can save time and receive better accommodation by sending his orders to some reputable house, who will soon learn just about what his needs are and can therefore fill his orders more satisfactorily than can be done by the shopping system.

* * *

EACH MERCHANT MUST DECIDE.

From Massachusetts comes the suggestion that any merchant can easily figure whether the extra time consumed in buying low is worth the saving in money. It is a proposition that each man must settle for himself.

In our opinion there is as much if not more in buying as in selling. Unless you are buying right it is hard to sell right, and make the profit that you ought to.

Will I stand as well with my jobbers and manufacturers? It will not make any difference in my standing, only they like to make as large a profit as they can. Buying as low as possible is business. And in order to do so you have to give some extra time and use a few postage stamps. As to the hiring of help to be able to give this extra time, each man must answer that question for himself. If he is doing a business that 5 or 10 per cent. more profit can be made out of by buying at the lowest possible price, the question is, will that pay him for the extra help and still leave him a little left over? We find that in our business it takes only a few minutes more time, and that it means dollars to us in a year. Some weeks careful buying earns a good week's pay for us.

* * *

FORCED TO BUY CHEAP GOODS.

An Indiana merchant prefers to buy everything of his jobber, but cheap competition compels him to purchase some inferior goods.

The question is one that is hard to decide. We like to treat our jobber right by buying of him when he calls. We can explain points personally which could not be understood otherwise. On the other hand, the "scalpers" who send out circulars and prices give much lower prices than our jobber. Your competitor will often buy his class of goods and will undersell you. As you don't want to go out of business, it frequently forces you to buy where you can buy the cheapest.

* * *

QUALITY AND PRICE THE ONLY CONDITION

An Iowa merchant always considers prices quoted in connection with freight rates, remembering that freight is part of the cost of goods:

I do not think the average retailer gives enough attention to buying. The small dealer's time is divided between so many details that buying is neglected. When a salesman comes in he buys quickly, as much to save time as money. It has been my experience in business that time spent in buying is the most profitable time spent.

Study your wants and study the markets.

Some articles you should buy at one place, some at another. Buy for quality and price, not out of friendship for a salesman. Study what you want and what you can use. Commence in time to buy season goods. Get prices, freight rates, &c. I have a price book in which I carry freight rates for all competing points. Quite often a price will seem low, but when freight differences are added the low prices will be high. A certain article may have one freight classification in State and another out of State. I also have a book of classifications in my desk for reference. These can be obtained from the general freight agent of the railroad on which you are located.

When a man's time is limited he must have everything in reach. It does not pay to be tied to any house or houses. What a retailer wants is to study his individual conditions and requirements, and buy regardless of where, letting quality and price be the only conditions.

* * *

NOT MUCH GAINED BY SHOPPING AROUND.

A New Jersey firm believe in sticking to one firm in whom they can place confidence, except when placing large orders.

In regard to careful buying, we would say that for the ordinary business man we do not think there is much gained by shopping around. By trading with a good reliable firm in whom we have confidence we can do as well, and perhaps keep in better standing with the trade. Of course, in buying a large quantity of a certain article it pays to look around.

* * *

STICK TO YOUR FRIENDS.

A North Carolina merchant advises sticking to jobbers who treat customers fairly.

I think that in buying goods, when you have good old friends and reliable houses to trade with that look after your interest as well as their own, it pays to stick to them as long as they sell as cheaply as elsewhere. Very often there comes along a salesman who offers to cut prices on some things, selling other lines higher. I have been trading with several firms 25 years, but I always write everywhere for prices and keep posted, and buy from the reliable firms selling the cheapest. The cheapest is not always the best.

* * *

PAY PROMPTLY.

From Illinois comes the following expression in favor of close buying and prompt pay:

Too much care cannot be taken in acquainting yourself with the changes in prices, so that you can know if you are buying intelligently. It is not careful and close buying that will injure the standing of the buyer with the jobber and manufacturer, but careless and unintelligent buying. Prompt paying of bills will protect the standing. So much of the profits now depend upon the buying and discounting that neither should be neglected.

I consider your paper very helpful and reliable in buying.

* * *

HOLD SELLER RESPONSIBLE.

From Michigan comes the advice not to try to buy too cheaply, but pay the fair price and hold the seller responsible:

The writer pretends to be what is termed a "close buyer," but the writer of the article referred to gets at the meat of the thing when he asks "Will it pay him to try to get lower prices?" There are a great many ways in which he can lose the little differences there may be in price. He can apply the principle to his customer. Can he satisfy himself that the customer who endeavors to get a cheaper price from him always saves money by this mode of dealing? Are there not times, to say nothing of the deception there may be in quality, when the matter of getting prompt shipment, or a great many other little favors, of which he may not be aware, will outweigh the difference in price? I take it that the jobber or manufacturer is but human, and a great deal like the retailer. Which customer will he endeavor to protect—the one that wants honest goods at honest values, or the one that would like to get something for nothing? It has been my experience that watching the markets carefully, buying at as good prices as are offered, not haggling over an extra 2½ or 5 per cent., but rather throwing the responsibility on the seller and not kicking when you have no reason will obtain the best all round results.

* * *

GET TWO OR THREE ESTIMATES.

A merchant in Southern New Jersey tells his method of buying so as to secure the right prices:

The best and cheapest way in my judgment is when your stock runs down or you are figuring on a job, make out a list of goods and send it to two or three jobbers for estimates. It only costs you a 2-cent stamp, and you will always get very good figures on goods. Pay particular attention to your collections and discount your bills, and the jobbers will hunt you up and give you all the advantages in the market. *Cash talks!*

* * *

LOOK AROUND TO KEEP LOW PRICES.

Fear of having a jobber raise his prices keeps a New Jersey dealer inquiring of others:

I find it always pays to look around, otherwise houses with whom I have been dealing for a long time, and who think they have my trade any way, will not always give the best prices.

* * *

COMPARE JOBBERS BY TRIALS.

The practice of a Georgia dealer of comparing different jobbing houses by three months' trials is interesting:

The best way I have found in buying supplies is to buy for cash and pay cash. Then pick out two of the best jobbing houses and buy about the same goods of each for three months. Ask them both to give you their lowest cash prices. At the end of three months, compare prices and freights and you will soon find out the cheapest place to buy. I find it is no use to buy of a house that offers leaders at cost and then gets even with you on the balance of your order.

* * *

GIVES CAREFUL ATTENTION TO BUYING.

A New Hampshire merchant reads *The Metal Worker* Trade Report every week and keeps posted on prices, buying carefully:

Referring to article by "Enterprise," referring to careful buying for plumbers and metal workers, I will say I have been engaged in the plumbing and heating business for the past 20 years, and I have always made it a rule to pay careful attention to buying my goods. I believe that "goods well bought are half sold." I read carefully every week the market reports in *The Metal Worker*, which I find a great help to me. The jobbers find that I am posted as regards prices and that I discount my bills and they are anxious to sell me, giving me the lowest market prices. I purchase from one jobbing house handling that particular line, which makes my trade valuable to them. When I have a large job I often send my specifications for the material to different jobbers and let them give me prices on it. I know I save a great many dollars by doing this, and I think it will pay "Enterprise" to give more of his time and attention to this department of his business.

The Armour Institute, Chicago, is arranging for the erection of Machinery Hall, the first of the new buildings to be erected with funds provided by the Armour family in the recent gift of $1,000,000 to this institution. Machinery Hall will be four stories in hight, and will be used for technical instruction in machine shop and foundry work. The first floor will be used as a forge shop, the second floor as a machine shop, the third floor as a pattern shop, and the fourth floor as a foundry. The foundry will be lighted with a saw toothed roof, rendering every part of the room available for the most detailed work. This building will be fully equipped with the most modern facilities for thoroughly instructing the students in all details of the branches taught here. The entire building will be fire proof, mill construction being used exclusively.

Datus F. Brown of Cleveland, Ohio, who is with the Standard Lighting Company, sends us "An Office Man's Vacation in the American Kootenai Gold Fields," which is an account of a trip he made last summer into this mining region of Montana. Mr. Brown gives a lot of information about the mines, and he tells his story in such an entertaining way that the reader cannot help becoming interested in the country and its mineral wealth. The text is relieved by many half-tone illustrations.

An exhibition of minerals and products of mineral industries, of mining, machinery and processes will be opened December 2 and continued for 15 days at the Grand Central Palace, New York City. A historical and entertaining feature of the exposition will be an extensive reproduction of a frontier mining camp.

THE CANADIAN STOVE AND HEATING TRADE.

There are in the Dominion probably between 40 and 50 firms eugaged in mauufacturing stoves and heaters, says *Canadian Hardware*. The stove industry, as most of our readers are doubtless aware, is oue of the oldest in the history of the country. We have this from a report made away back in 1752 by M. Franquet, who was sent from France to inspect the iron works at the St. Maurice Forges. "Each stove," he said, in describing the process of manufacture, "is manufactured in six pieces, which are separately molded and are afterward fitted into each other and form a stove about 3 feet high." The forges at that timc were owned by the King of France. Over 90 years ago quite an export trade was done in stoves of Canadian manufacture, for we are told by a gentleman who wrote iu 1809 that the mauufacture of iron in Canada at that time was the most important of the country's industries, and that there existed a "considerable export of east irou articles, particularly of stoves."

Canada's export trade in stoves is now iusignificant, the quantity sent out of the couutry in 1900 being valued at less than $3500. Our trade in stoves, therefore, is confined to the home market, which our mauufacturers monopolize. Our import trade iu stoves is practically confined to the gas description, which are brought largely from the United States, $129,114 worth out of a total of $129,864 coming from that country. Our exports of stoves during the last three years and the countries to which they were sent were as follows:

	1898.	1899.	1900.
Great Britain	$520	$608	$74
Australia	....	61	143
British Africa	29	....	....
Cuba	....	....	55
British West Indies	168	183	333
Newfoundland	2,628	1,799	1,019
China	....	135	....
France	....	....	218
Italy	....	8	....
Hawaii	4	....	....
St. Pierre	553	1,035	857
United States	367	346	693
Totals	$4,287	$4,175	$3,392

It will be noticed that our best eustomers are Newfoundland and St. Pierre. There are four factories in Canada that make radiators, and some of them are most extensive affairs. Quite an important export trade is done in radiators, but unfortuuately the official trade returns do not reveal its extent. But the countries to which we export theiu are Great Britain, Germany, France, Norway, Sweden, Austria, Belgium, South Africa, China, Japan, Australia aud New Zealand.

In quality and pattern Canadian stoves, furuaces and radiators staud high. Iu these respects they are surpassed by no other country. The Canadian customs duty is 25 per cent., and although the home market is controlled by the home manufacturers prices here are slightly lower than in the United States, possibly about 5 per cent.

An exceptionally good trade has been experienced by the stove and heating firms of Canada during the last two years. Frequently the demand exceeded the supply. For the ensuing season's trade a large uumber of orders have been booked. An unsatisfactory feature of the trade is the threatened scarcity of steel, and particularly of polished steel plates used in the manufacture of steel ranges, air tight heaters, &c. These plates are imported from the United States, and although the stove manufacturers placed their orders early iu the spring they have not, owing to the activity of the market and the present labor troubles, been able to get proper delivery. Most of the manufacturers are thought to have a sufficient supply of steel plates to keep them going during the early part of the campaign, but, judging from the present conditions, the outlook is anything but promising for the latter part of it. In the meantime they can only pray that the strike may soon terminate.

William Miller, inventor of the Miller system of ventilation in connection with Hot Air Furnaces used by the Thatcher Furnace Company, 240 Water street, New York, is enjoying a vacation in the Adirondacks in company with C. B. Raymond, another representative of the house.

The Charm Crawford Range.

A novelty in range construction is being offered by the Walker & Pratt Mfg. Company, Boston, Mass., in their new Charm Crawford range. In this range, which is shown in the accompauyiug illustration, the makers have departed from the usual custom of fastening by bolts the uickeled edge bands, and have substituted cast iron guard rails, which are detachable and may be removed from the stove by simply lifting them off when it is desired to black the range or clean the nickel work. The additional point is made by the manufacturers that these nickeled rails, or bauds, are set at a little distance away from the castings of the range, so that there is a circulation of air behind them, tending to keep the uickeled rails cool. In this connection the manufacturers use the term "guard rails" to properly describe their new style of uickeled bands.

The Charm Crawford Range.

The mauufacturers supply circulars of this range, which it is also stated is of medium grade as to size and weight. We also uote that the company are still calling attention to their exceptional manufacturing facilities. Their fouudry is probably unequaled of its kind.

Gilt Edge Furnaces Require a Larger Factory.

R. J. Schwab & Sons Company, Milwaukee, Wis., manufacturers of the well-known Gilt Edge line of warm air furnaces and combination warm air and hot water heaters, have reeently purchased a strip of land 88 x 150 feet. This plot lay between their present factory and a 44 x 150 foot vacant lot they have owned for some time, aud the new purchase gives them a continuous strip of laud of 364 feet frontage on Clintou street by 150 feet deep, and also the property on Reed street, 96 x 150 feet deep, which is directly back of the Clinton street property, making the entire plant one piece of property. They are at the present time engaged in putting up a temporary addition to their factory to keep pace with their increased volume of business. They are also improving their equipment by installing electric traveling cranes for the molding room, more modern wood working machinery for the pattern department, and dies, presses, &c., for the purpose of manufacturing safety pipes and tin and galvanized iron furnace fittings by machinery. The company expect in another year to put up a building that will cover the entire Clinton street property, constructed of brick, steel and glass, which will represent a total expenditure of $75,000 to $100,000.

The Monogram Gas Stove.

The H. Adler Company, Pittsburgh, Pa., show several new gas stoves in their latest catalogue, one of which is the Monogram, of which an illustration is presented herewith. This is a closed stove for natural gas fuel

The Monogram Gas Stove.

and has a 3-inch flue connection. The stove is made in two sizes of blue steel, ornamented by embossing and by the cast illuminating front. The feet and trimmings are nickel plated. The top ornament lifts off, allowing for the convenient heating of food or water. The stoves are provided with powerful and durable burners, and in operation they are guaranteed not to sweat. They are light, so as to be easily carried.

The Irving Ranges.

Floyd, Wells & Co., Royersford, Pa., are distributing a little pamphlet intended more particularly for the perusal of those who are thinking of buying a range. There are many things to be considered in selecting this part of the household equipment, and some of the more important are pointed out by the writer of this pamphlet, who gradually leads up to the merits of the Irving line of ranges, made by the company in question. Special attention is directed to the corrugated oven plates now used in the entire line of these goods, and to the reverberatory oven, first introduced in 1892. The claim is made that a gain of about 20 per cent. in radiating surface is secured by means of the construction employed, and that the baking qualities are greatly improved thereby. The Irving line embraces the Bright Irving, the Rock Irving, the True Irving, the Lady Irving, &c., all of which "are built like a machine, well mounted and fitted."

Ordering Stove and Range Repairs.

M. Brucker, manufacturer and jobber of stove and range repairs, 325 to 331 North Lincoln street, Chicago, is furnishing his customers with a very convenient order book for their use in ordering repairs. This book contains a large number of blanks, which are ruled in columns with the kind of information necessary printed at the head of each column to enable the order to be filled with accuracy. If a customer looks at the heading in each column and places under it the precise information desired, he will be sure to receive just what he needs. The leaves are perforated so that they can easily be torn out. Carbon paper is intended to be used in writing an order so that a copy of it can be retained.

Mr. Brucker is a specialist in his line of business. He has been connected with this line for years, manufactures his own castings, and claims to carry the largest stock of any house in the West, hence is in a position to guarantee good castings at reasonable prices and to make prompt shipments. The success which he has attained in this line illustrates the old doctrine that men who devote their entire time to one thing will be able to understand it thoroughly and give better results than when many things are attempted.

Ornamental Andirons.

Some very handsome designs of andirons which are made of cast iron in imitation of wrought are being introduced to the trade by the Pittsburgh Stove & Range Company of Pittsburgh, Pa., one style being illustrated herewith. This design is known as No. 106, the andirons standing 20½ inches in hight. They are made in five styles of finish, including antique bronze, antique brass, Berlin black, Japanese bronze and bright brass. These andirons are a copy of the wrought iron work of the olden times, when designs of this kind were fashioned "by the hands of brawny men to the music of the anvil." The marks of the hammer could always be seen, as it was not then the custom to smooth out rough places. The company state that the goods which they are turning out are so clever in imitation that even the marks of the hammer can be found upon them. A four-

Ornamental Andirons.

page folder which is being sent out among the trade shows four designs of these andirons, all executed in clever imitation of wrought iron.

ODD PLATES.

Alfred Hughes of the Southard-Robertson Company, New York, has returned to the Stove and Range trade after a sojourn in the Adirondacks, and now G. W. Butcher of the same house is enjoying an outing with his family on the New Jersey coast.

The Independent Register Company, 154 to 158 Champlain street, Cleveland, Ohio, are sending through the mails an illustrated card in the interests of their Independent Registers. The company state that they now make 75 sizes of Registers, adapted to every possible use and requirement, and that they are prepared to ship promptly in response to orders for these goods.

The Walker & Pratt Mfg. Company of 31-35 Union street, Boston, Mass., are distributing a leaflet calling attention to their new parlor stove known as the Clover. It has planished iron body, draw center grate, which is easily removed; capacious ash pan, revertible back pipe with damper, heavy rails placed well above the base and linings which are carried up one course above the level of the door. The Stove is made in four sizes, the

number indicating the diameter of the body. A second leaflet gives an interior view in the company's molding shop, showing about half their capacity. They state that after careful experiment they have made and placed in stock an assortment of aluminum water fronts for all their leading styles of Cranford Ranges, these being made in one piece, of the same thickness as the regular cast iron water fronts, and carefully tested at 150 pounds to the square inch.

T. Waddington, Philadelphia, Pa., who has been established in the Stove business at Passayunk avenue and Christian street for the past 29 years, has retired from active business. Mr. Waddington has been succeeded by his nephew, E. R. Glazier, Jr., who has been associated with him for a number of years, and who will continue the business at the same location.

The Excelsior Steel Furnace Company, Chicago, are among the fortunate manufacturers of Furnace Pipe and Fittings who laid in a sufficient stock of tin plate to enable them to satisfactorily meet the requirements of their trade this season.

The South Superior Stove Works, Superior, Wis., have been sold to the Duplex Mfg. Company, and will be used by the new owners as an addition to their Wind Mill plant. The Stove works had not been operated for several years and may now be considered as having passed out of consideration as a possibility in the Stove trade.

Ground has just been broken for the addition which is to be erected by the Prizer-Painter Stove & Range Company at Reading, Pa., the contract for the work having been awarded to Elmer D. Dampman. The addition will cover an area 35 x 150 feet, and when the improvements are completed employment will be given to some 50 additional men.

"A Book About the Eclipse" is the title of what is known as supplement A to catalogue No. 18, issued by the Eclipse Stove Company of Mansfield, Ohio. In it reference is made to new goods, which include the Triumph Eclipse Steel Range, D series; the Astral Eclipse cook, made for coal and also for burning wood; the Lustrous Eclipse, a new hard coal base burner; the Wonder Eclipse, a wood air tight heater; the Herald Eclipse and the Sun Eclipse.

William Resor & Co. of Cincinnati, Ohio, are the subject of a very complimentary article which appears in a recent issue of the Cincinnati *Merchant and Manufacturer*. Their plant is described at considerable length and extended reference is made to some of their leading lines of goods. Among these may be mentioned the Champion Monitor Steel Range for coal, the Monitor Gas Ranges, the Monitor Base Burner, the Monitor Oak and the Monitor Hot Blast. The article concludes with a list of the officials of the company.

The plant of the Moon Stove & Range Company at Columbus, Ohio, was destroyed by fire on Saturday, August 17, the loss being partially covered by insurance. We understand that the works will be rebuilt at once.

The Kelsey Furnace Company of Syracuse, N. Y., in a circular letter to the trade point out that one of the very desirable features of the Kelsey Warm Air Generator is that it sends the heat where it is wanted, and in this way every part of a building can be properly heated on the coldest day. It is claimed that the Kelsey will heat large residences, schools, churches and libraries, houses in exposed situations, rooms located at a long distance from the generator, even heat basement rooms on a level with the heating apparatus. Accompanying the circular letter is a booklet which throws considerable light on the quality of the air furnished in connection with the Kelsey Warm Air Generator.

An announcement has just been issued by the Walker & Pratt Mfg. Company of Boston, Mass., to the effect that beginning September 1 they will ship all their leading Ranges fitted with Dockash Grates, unless requested to send Triple or Plain Grates. This, it is stated, applies to the Home, Empire, Charm and new style Prince. The company state that their improved Dockash Grate is different from all others in that the two bars are of the same pattern, which is a great convenience both to the dealer and to the user. Either bar can be easily replaced without removing the grate support, linings, water front or coil. The anouncement is printed upon a leaflet carrying a half-tone illustration of the company's pattern buildings, which are referred to as being "busy places."

The Monarch Stove & Mfg. Company, Mansfield, Ohio, are sending through the mail a card carrying an illustration of the Monarch Ventilator and Gas Heater for the season of 1901. The company state that their new catalogue is ready for distribution and they will be glad to send a copy to any dealer on application.

The S. M. Howes Company, 40 to 46 Union street, Boston, Mass., have issued under date of August 15 a catalogue and price-list of Heating, Confectioners' and Laundry Stoves, designed for burning wood and coal, also of Portable Galvanized Ovens and Farmers' Boilers. The publication is neatly bound in red paper covers and is arranged with a cord for hanging it within convenient reach. The Heaters include a varied assortment of Oaks, Surface Burners, Sheet Iron Cylinder, Globe, Cannon, Cottage Parlor, Laundry and Air Tight Stoves. Miscellaneous goods are considered, including the New Process Oil Heater, the Electric Oil Heater, the Rochester Radiator, the Model Stove Truck, Stove Boards, &c.

The Best Vapor Lamps.

"The Best Light" is the title of a pamphlet distributed by the Best Street Light Company, Canton, Ohio. The motto of the concern is, "Maximum light at minimum cost." The Best incandescent vapor lamp is fully described in the introductory pages of the pamphlet, and the merits are pointed out, which include ease of management, cheapness and high illumination. Another important advantage that will be particularly appreciated during the warm weather is the claim for these lamps that they give off less heat than other illuminants. The first 20 pages show various forms of hanging and wall lamps of many different types, the reservoir being above the lamp and connected to it by a bent tube. Then come lawn and veranda lamps and the different styles of street lamps, beside torches of various kinds. The closing pages are given up to different patterns of shades.

Hardware Store Business Methods.*

A new and enlarged edition of "Hardware Store Business Methods" has just been received from the press. The book contains 227 pages, substantially bound in cloth. It retains all of the features which made the former edition so popular, and has in addition a very interesting and instructive chapter on "Keeping Track of Shop Work."

The scope of the work is broad, treating, among other subjects, those of buying and selling, stock taking, care of price-lists and catalogues, treatment of clerks, collections, methods of changing credit into cash business, record of stock, cost marks, &c.

The additional pages on keeping track of shop work are of importance, describing, as they do, jobs of repairing bicycles and plumbing and tin work jobs, from the taking of the orders to the completion of the work. Illustrations are given of the various slips and cards used in approved systems, the orders being followed from the time they are recorded until a permanent record is filed for future reference.

All of the methods described in the book are practical ones and in use by enterprising business men.

C. F. Myers, Westport, Ind., has disposed of his Hardware, Stove, Tinware, Agricultural Implement and Sporting Goods stock to Tripp Bros., who have moved the goods to their own building. They also conduct a store at North Vernon.

*David Williams Company, 232-238 William Street, New York. $1.00, prepaid.

THE RETAILER; HIS RIGHTS AND HIS POWER.

BY THE PRESIDENT OF THE NATIONAL RETAIL HARDWARE DEALERS ASSOCIATION.

Man was born with lungs. This fact establishes his natural right to breathe. He was also born with intellect and hands. This fact establishes his natural right to labor with mind and muscle. So nature, which is neither illogical nor incomplete, also supplies air for the lungs and material for mental and physical labor. Man's right, therefore, to live, to labor and to elect what disposition shall be made of the products of his labor are natural rights, they are indefeasible and inalienable, and any system of human relations which declines to acknowledge the verity of man's natural rights will surely fail.

Slavery was not wrong because the slave was cruelly treated, improperly housed, fed or cared for. This affirmation in many cases was untrue. But slavery was wrong because man's natural rights were violated.

TRADE RIGHTS IN THE COMMERCIAL WORLD.

There are in the commercial world certain "trade rights" which may very properly be likened to man's natural rights in that the demand from organized society which creates the retail Hardwareman also creates his field of operation. The modern method of Hardware distribution is rational and sound. First, the manufacturer; second, the jobber; third, the retailer. These three, in the order named, are the trinity of commerce and their respective spheres are well defined. The manufacturer supplies the jobber, the jobber supplies the retailer, the retailer the consumer. That this is the natural relation is thoroughly understood by manufacturer, jobber and retailer, and that this natural right of the retailer is violated both by the manufacturer and jobber is evidenced by facts indisputable. Out of this condition grows the contention of the retail dealers with the manufacturer and jobber who trample on their natural rights, and out of this condition will grow an "irrepressible conflict."

PERMANENCY OF JOBBER AND RETAILER.

It is idle to talk about the passing of the retailer. It is equally absurd to anticipate the decline of the jobber. Both are indispensable members of the commercial entity, and for mutually profitable existence there should be harmonious relations. But the manufacturer and jobber in their zeal for business overstep the boundary of their respective spheres and, without apology or ado, break the first commandment of the commercial decalogue, "Thou shalt not covet retail trade."

TRESPASSING ON RETAIL TERRITORY.

This tendency to trespass on retail territory is manifest in many lines, but the distribution of Builders' Hardware is a splendid example of the frequent violation of the retailer's natural rights. Jobbers and manufacturers sell direct and over the heads of their own customers to architects, contractors and owners. These are consumers and therefore belong in retail territory. It is insufficient to suggest that frequently their wants are large and therefore the manufacturer and jobber should sell to them. Such fact cannot change their classification as consumers. A jobber recently received a request from a number of his customers asking that he abandon his practice of selling Builders' Hardware to the consumer. His reply stated that some of the orders were large, and the inference was therefore that he should sell them. And he also inquired what they would promise him in return should he quit the retail field.

A SUPPOSITITIOUS CASE.

The attitude of this jobber toward his clients is very similar to that of a vender of fruit trees who sold his customer an assortment of trees. The customer held valid title to a piece of ground on which he planted the trees. He dug, pruned, mulched and sprayed. The vender came again that way, but the crop was scarce and small; so he paid little attention to the fruit and offered more trees. His customer bought them at the vender's price, paid the cash, set out the trees and cultivated assiduously. The trees grew large and hung heavy with fruit, ruddy and tempting. The vender passed again. He saw the fruit, stepped over the boundary lines and began to pluck and gather and put into sacks. The owner (his customer) came and said, "What right have you to come into my field and take the product of my labor?" The vender said, "What will you promise me in return if I quit your field?" Such expressions as these from representative and intelligent jobbers indicate outrageous rapacity and greed on one hand and jeering insolence on the other.

THE POWER OF THE RETAILERS.

The retailers of this country are ignorant of their power. A recent investigation showed that in a certain State the capitalization of the members of the retail Hardware association exceeded that of the jobbers in that State, and the membership did not equal 50 per cent. of the State's retailers. More than this, the retailer is the one who comes in personal contact with the consumer. His encouragement or disparagement has great weight in the placing of his merchandise with consumers.

DISPLACING AN ARTICLE OF STANDARD QUALITY.

In the personal experience of the writer an article long recognized as the standard of excellence was and is practically cleared from the shelves and in its place is sold the product of a competitive concern, and this is done easily. Our profits are materially increased, nor is the interest of the consumer in any sense violated. His purchase is of a quality which equals any similar article produced. The change was made because the original concern was contemptuous of a retailer's request. The second concern, whose goods we now handle, was not.

AN APPEAL TO RETAILERS TO JOIN THE NATIONAL ASSOCIATION.

The attitude of those concerns who hold the retailer in contempt will soon be known to the members of the National Association. Every Hardwareman anywhere in the United States should belong, first, to his State organization and then insist on its affiliation with the National Association. There is absolutely no other plan, argue as you may. This is the move. The community of interest idea, developed by the long heads of railway and other interests, is bringing success. It has a ready application to retail Hardware dealers. The national organization gives them the one opportunity to be felt in the war on those who violate the sanctity of retail territory.

THE REASONS FOR JOINING.

1. The membership fee of $1 is nominal. Any man who is sincere will not hesitate because of the fee.

2. Loyalty to the principles expressed in the constitution is of more value than a hundred fees.

3. Persistency counts. We should enlist for a period equal to that of our sojourn in the Hardware business.

4. We are, and in all conscience should be, self supporting. We ask no money contribution and will accept no financial aid from any manufacturer or jobber in the land. We are men with capital invested. Millions in the aggregate. We will give fair treatment and will demand fair treatment.

The Arkansas Association by unanimous vote joined the National Association June 20. Every Hardware Association in the country not already affiliated should do the same thing at its next executive meeting or next annual convention. This is vital to its interest as well as the interest of the national organization. The volume of Hardware to be distributed is increasing. Our profits in the business and our share in the distribution depend on its being placed through the proper channels. Every Hardwareman should act promptly and should act continuously until "piracy exists no more, and fairness reigns on fields of peace."

COMPANIA PAN-AMERICANA DE NOVEDADES (Pan-American Novelty Company), 606 Montgomery street, San Francisco, Cal., who make a specialty of export mail orders to Mexico, Central and South America and the Philippines, advise us that they would be glad to receive catalogues and other printed matter from manufacturers of Hardware Novelties suitable for export mail orders.

EVERY DAY DIMENSIONS FOR PLUMBERS.

BY O. N. E.

Experienced workmen often have recourse to methods, outside of generally accepted practice, which are found useful and effective, and, therefore, are worth while recording. In many little details of work variations are made that are not sufficient to upset the standard, yet which demonstrate the license that a competent hand may take without wasting time or material or interfering with the quality of his work. Among these details are the dimensions of wiping cloths and those of the joint to be wiped. There may be those who do not observe the dimensions given below, but who will be willing to concede that they can be used with advantage until a workman finds what changes may be necessary for comfort and convenience.

WIPING CLOTHS.

Many plumbers do not risk their wiping cloths in the tool bag, but are apt to carry the favorites particularly, if not the whole set, in the hip pocket. Although wiping cloths can now be bought at most of the supply houses, there are many workmen who still make their cloths of whatever material best suits their purpose, moleskin, bed ticking of good quality and other smooth finished cloths being used. The size varies according to the work to be done, but usually follows these dimensions:

Size of Wiping Cloths.

	Size of pipe. Inches.	Size of material. Inches.	Size of finished cloth. Inches.
Round joints	⅝ to 2	12 x 12	3 x 3
Round joints	4	16 x 16	4 x 4
Branch joints	⅝ to 2	10½ x 10½	2½ x 2½
Flange joints	....	13 x 7	3¼ x 1¾

The cloth is folded with the two outside edges to the center, and then folded again, giving a long, narrow strip. Then the ends are folded to the center, and again folded, leaving no raw edges. The ends are now secured by sewing with secret stitches in one place on each side. This leaves the cloth pliable and ready to have any loose nap burned off against a hot solder pot. Finally they are rubbed with chalk to fill the pores and greased for use. Other sizes of cloths are doubtless used to suit the work or the convenience of the workman.

SPACE TO BE CLEANED ON JOINT.

The space on the material to be shaved clean to wipe a joint is in many instances not measured, but is not far from what is given below:

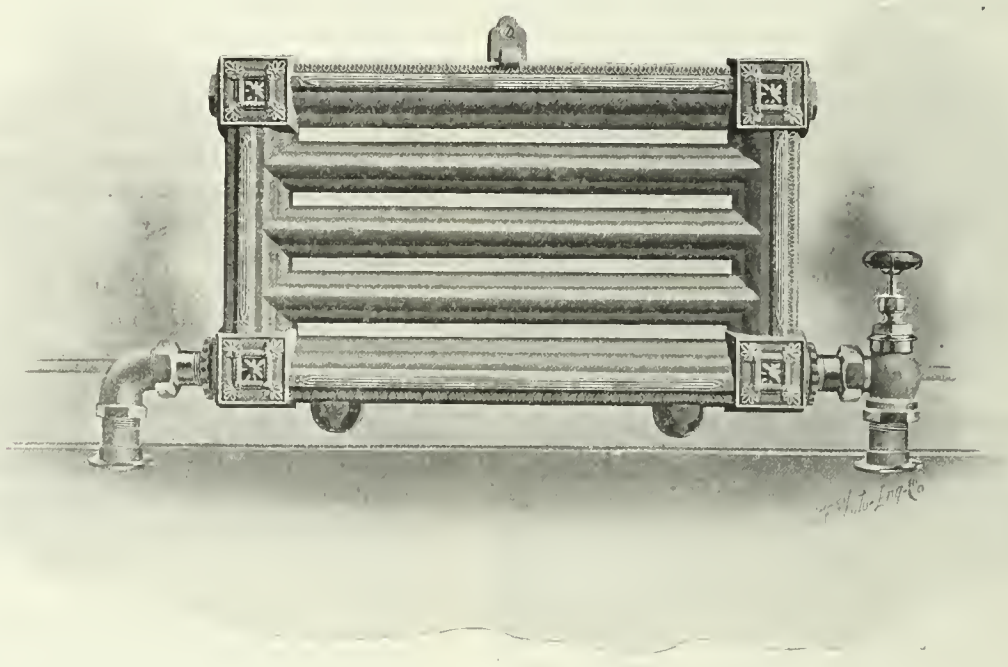
Length of Joints.

	Size of pipe. Inches.	Clean space. Inches.
Round joints	⅝ to 2	2
Round joints	4	1¾
Branch joints	....	1 x 1¼
Flange joints	....	¾ x ¾
Tank seams	....	⅞ x ⅞

In cleaning space for branch joints, the longer space is cleaned along the pipe each side of the branch opening and the shorter space on the branch. On each side of the cleaned space the material is soiled, covered with paper or pasted, to suit the workman. In order to have their work look uniform, some men have oval forms of stiff paper, leather or other flexible material, which they lay on the pipe to mark out the space to be cleaned for making branch joints, but more use the dividers to mark the space, having one leg of the dividers on the inner edge of the branch opening and using the other to do the marking.

The Imperial Wall Radiator.

The Imperial wall radiator, of which an illustration is presented herewith, is a recent addition to the line



The Imperial Wall Radiator.

of the Fowler Radiator & Mfg. Company, Johnstown, Pa. The manufacturers of the Imperial say they were induced to get up a new equipment for a wall radiator owing to the frequent complaints of the trade that the wall radiators in general use were inclined to leak at the joints when a considerable number of sections were assembled together; also that the internal right and left nipples were too small to insure perfect circulation, except on small radiators. The leaky joints were largely due to the bosses being too light to withstand the strain to which they were subjected on large radiators. This has been overcome by making the bosses on the Imperial extra heavy, and using much larger nipples for assembling the sections.

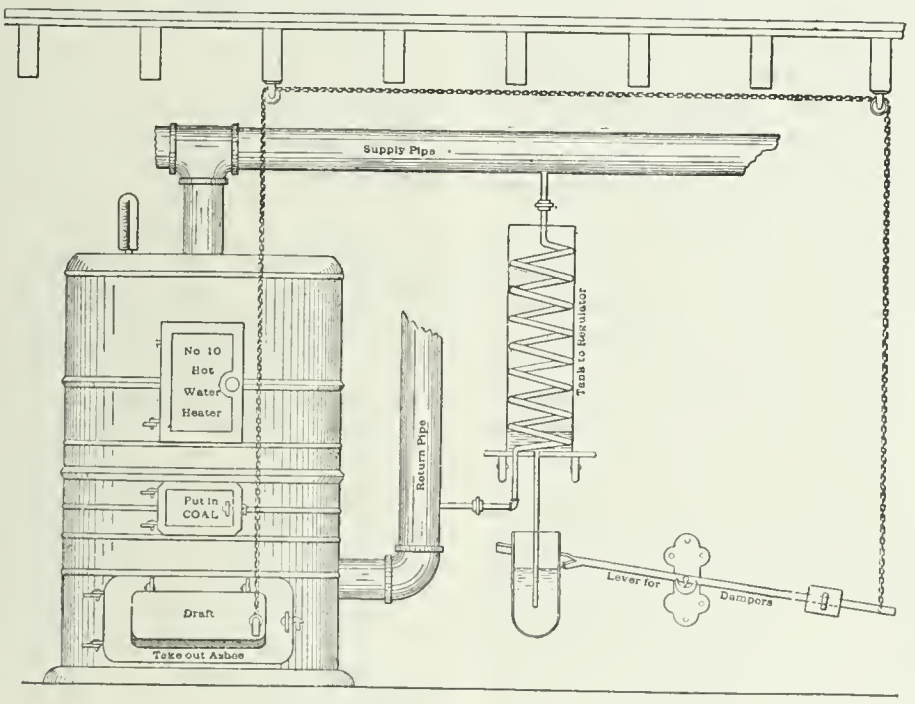
These improvements, in connection with the special machinery for boring and facing, secure a joint that the manufacturers guarantee to be absolutely tight under all conditions. The sections are all tested to over 100 pounds pressure before leaving the factory. This, along with the highly artistic design and liberal ratings, has made the Imperial a favorite with the heating trade wherever it has been used.

REED MFG. COMPANY, Erie, Pa., have issued an illustrated catalogue D, of Malleable Iron Pipe Stocks, Dies, Machinists' Sectional and Combination Vises, Taps and Reamers, Pipe Cutters, Emery Wheel Dressers, Tap and Pipe Wrenches, Beam Clamps, Pipe Hangers, Oil Cups, &c.

The Morgan Damper Regulator.

Morgan & Co., 40 Dearborn street, Chicago, have brought out a damper regulator to meet the demand for a device of this character which can be relied upon to regulate the dampers of hot water and vacuum steam heating apparatus and which can be sold at a moderate price. It is the invention of D. F. Morgan, senior member of the firm. The damper and its application to a heater are herewith illustrated. Its leading features are simplicity in construction and accuracy combined with a low selling price.

This damper consists of an air tight tank, having throughout its entire length a copper coil, the ends of which extend through and are fastened to the top and bottom of the tank. These ends are for the purpose of connecting to the main and return pipes of the steam or hot water plant, as the case may be. From the bottom of the tank a brass tube extends down for the purpose of delivering the contents of the tank into the receptacle provided to receive them. The receptacle is a metal vase. This vase is fastened to one end of an iron rod, which has a fulcrum at a proper distance which sets in a bracket, the other end of the rod having an adjustable



The Morgan Damper Regulator.

weight which may be moved and fastened at any desirable point on the rod. At the extreme end of the rod is fixed a chain which extends over pulleys and fastened to the dampers, which open or close as the end of the rod is raised or lowered. The motive power of the regulator is the expansion and contraction of the air in the tank as it is heated or cooled.

In the operation of this damper the weight is moved on the rod until the desired temperature is reached. The vase is then filled with water, which causes the end to which the chain is fastened to rise. This closes the damper. As the vapor or water in the heating plant cools down atmospheric pressure forces water from the receptacle into the tank until the weight on the rod overcomes the weight of the receptacle. It will then fall, which again opens the damper. This regulator will also be found of value in controlling the temperature of the hot water used for domestic purposes, as, after being set, it will constantly keep the water at a desired temperature. The regulator has no complicated parts to get out of order, and it requires no attention beyond moving the weight to suit the external temperature and occasionally putting a little water into the receptacle. It is easily attached to either an old or new apparatus.

J. Taylor Flynn of Middletown, Conn., has the contract for plumbing a new school house that is being erected at Cromwell, Conn.

Royal Steam and Hot Water Heaters.

We have received from the Hart & Crouse Company, Utica, N. Y., a copy of a neatly printed catalogue of 42 pages, relating to the Royal steam and hot water heaters, adapted for all classes of buildings. The statement is made that these goods were constructed to meet the demand for a sectional heater in portable form which would be safe, economical, powerful and durable and which could be taken into buildings already erected through the ordinary openings, such as doors and windows. The company also state that in their desire to maintain the high standing and reputation which their Royal heaters have attained during the past ten years they have continued to improve them from time to time, adding new sizes and such improvements as a practical demonstration of their merits seemed to warrant.

The Royal is shown in several varieties and accompanied by tables giving prices and capacities. An important feature of the catalogue is found in directions for using the Royal safety sectional steam heater and the Royal hot water heater, also instructions for setting them up. Several pages are devoted to the Royal circular sectional steam and hot water heaters, illustrations being accompanied by price-lists and capacities of the various sizes in which these goods are made.

The J. H. McLain Company's Heating Goods.

The Seneca radiator, for steam or hot water, is a new style that is being put on the market by the J. H. McLain Company, Canton, Ohio. Recent circulars issued by this firm show the Seneca two and three column radiators by means of half-tone illustrations which bring out the decorative features of these goods. They are made in a full line of sizes, and circulars give the dimensions and heating surfaces of the various sizes. The radiators are made for both one pipe and two pipe steam connections and are described as all nipple connections with no packing. A side view of the Seneca radiator is presented showing the air space between the sections.

We are also indebted to the J. H. McLain Company for a beautifully illustrated catalogue of 40 odd pages showing their line of hot water and steam heaters. In the introductory notice they refer to these pioneer heaters and remark upon their durability, efficiency and fuel economy. Each water part of their boilers is tested to 85 pounds water pressure. The ratings are based on a pressure of 2 pounds of steam at the boiler and 180 degrees for water. The catalogue is of large size, 12 x 9 inches, giving ample room for illustration of the boilers, internal construction of which is shown by broken

views, and being of such size that all the features are clearly brought forth. The half-tone engravings are both finely executed and printed, while the accompanying text, printed in green and red inks, tells all about the various constructions. The large boiler that begins the catalogue is the brickset Cornell, followed by the Princeton. Then come the Humber, the Oxford, the Cambridge, the Amherst and the Yale, in the order named, the water heaters being presented in the last pages.

A third publication that we have received from the company is an illustrated catalogue and price-list of steam and water goods, showing cast iron fittings, wrought iron pipe, iron and brass valves, cocks and supplies of all sorts.

"The Truth About Heating" is a dainty little pamphlet of 50 pages which the J. H. McLain Company send out in the interest of their boilers. Small illustrations are presented of the various types, and these are followed by views of the office and works of the company at Canton, and illustrations of many buildings heated by the McLain boilers. The accompanying text is a list of references covering cities from Maine to California.

THE SITUATION OF ENAMELED BATHTUBS.

This is a harvest season for the independent bathtub manufacturers. Never before in the history of the business has such a splendid opportunity been offered them to make and market their tubs. Those in the business of making enameled bathtubs know what difficulties confront them before the tub is turned out in a marketable state. It is conceded by all in the business that the tubs made by the leading interest are as near perfect as it is possible for these goods to be made. This is not true, however, of tubs made by all of the independent makers. But the enormous demand for tubs at the present time is helping the new comers by taking all their output, whether they be good, bad or indifferent. This, of course, is giving the new tub makers an opportunity to experiment with their plants at a small cost to themselves until they ultimately strike upon the right formula and process by which the first quality tubs are made.

It is generally remarked that some of the tubs now being sold to the trade are no better than iron castings painted. If it were not for the great scarcity now prevailing there would not be so many manufacturers in the business who have not yet got beyond the experimental stage of the business. It is doubtful whether very many of them will master the art before the demand abates.

The Perfect Boiler.

Within the covers of an eight-page pamphlet which is being sent out by the Pierce, Butler & Pierce Mfg. Company, with works and main office at Syracuse, N. Y., are to be found illustrations and description of the Perfect water boiler, which they manufacture. This boiler is intended for using hard coal only as a fuel, is square in shape, portable in form, and of "peculiar but efficient construction." The fire pot is tapering, being largest at the bottom, and is composed of two hollow sections deeply corrugated upon the sides that come into direct contact with the fire. These corrugations form channels up the inside of the fire pot for the passage of heated air and gases. This arrangement increases the direct fire surface, while at the same time it makes simple provision for expansion and contraction. Above the fire pot is placed the first water or distributing section, composed of a series of V-shaped channels for the passage of air, having V-shaped spaces between them for the passage of the products of combustion. These channels and spaces extend horizontally from the front to the rear of the sections and are arranged side by side over the entire surface of the fire. A second distributing section is placed over the first with a small space between them, the construction being somewhat similar to that of the first section. The complete boiler is built up in this manner, several sections one above another forming a number of circuitous flues for the passage of heat.

The manufacturers claim that owing to the peculiar construction of the sections and the small body of water contained in each one there is a positive and rapid circulation through every part of the boiler, which prevents the accumulation of sediment and makes a very powerful circulator. The sectional grates consist of triangular hollow bars which are operated through slides in the ash pit door. Each joint and section is secured in proper position by means of four steel bolts on the outside of the boiler drawn down to a uniform tension. In connection with the description of the boiler is a table giving the sizes in which it is made, the code words of the different sizes, together with dimensions and capacities.

Heating and Plumbing Notes.

A. S. Whitehead, Plumbing Inspector of Allegheny, Pa., has announced that the following master plumbers successfully passed the recent examination before the Examining Board: James P. Wall, W. J. Lenox, C. G. Barnett & Son, C. A. Wilhere, H. Schwarm, John P. O'Brien, Harvey Lewis and R. J. Steenson & Co. The Examining Board consists of Inspector Whitehead, Superintendent A. McLaughlin of the Allegheny Bureau of Health, and David Hastings. Under a new law this board is to be increased to four hereafter.

The contract for heating the Chestnut Street School, Waltham, Mass., has been awarded to Donnolly, Merritt & Co. of Boston, at their bid of $3137. The plumbing work was given to Fred. H. Kirwin of Waltham.

The Board of Health of Attleboro, Mass., are continuing their war against plumbers in that town who do work without a license, in contravention to the municipal ordinances. A warrant was issued last week against one such person. The members of the Board of Health declare that it is their purpose to see that the statutes are strictly complied with by every plumber in town, or else he will not be permitted to do business.

M. Carney of Philmont, N. Y., has just completed a hot water heating system in the residence of Hon. Abraham Vosburgh, at Ghent, N. Y. He has also secured the contract for installing a steam heating plant in the Berkshire Box & Paper Company's new mills, at Mellenville, N. Y., and is remodeling the heating system in the Union Free School, at Chatham, N. Y.

The Sanitary Coupling Company of Saugatuck, Conn., have received the contract to fit the large Windsor Hotel, at Trenton, N. J., with their patent Water Closets; also the new Y. M. C. A. Building, at New Haven, Conn.

Hopper & Sweeney of Hartford, Conn., have the contract for plumbing the Town Hall in Unionville, Conn.

The Foskett & Bishop Company, New Haven, Conn., are working on contracts for Steam Piping and Connections for the Palmer & Monson Street Railroad Company, the Norwich Gas & Electric Company and the Greenwich Gas & Electric Company.

Flynn & Miller, 217 Congress avenue, New Haven, Conn., who started in the plumbing business a few months ago, are reported to be busy with contract and jobbing work. The members of the firm, W. E. Flynn and O. W. Miller, are experienced and practical plumbers and well qualified for carrying on any work in these lines intrusted to them.

The showrooms of the Bradley & Hubbard Mfg. Company, Meriden, Conn., have recently been redecorated and rearranged so as to present the goods of the company in the most attractive manner. The company are large manufacturers of Gas and Electric Light Fixtures.

The National Pipe Bending Company, New Haven, Conn., manufacturers of National Feed Water Heaters and Coolers and Benders of Pipe, have awarded the contract for the construction of a two-story brick addition to their plant, 60 x 100 feet. The building is intended for an extension of the company's Brass and Copper Coiling department and will cost about $15,000.

H. Kelly & Co., Minneapolis, Minn., have been awarded the contract for the heating and plumbing work for the Chamber of Commerce in that city.

We are indebted to the Whitlock Coil Pipe Company of Hartford, Conn., for a little pamphlet illnstrating and describing the American Standard Feed Water Heaters. The pamphlet contains 16 pages and tells all abont the American Standard Heater, explaining its construction. Instrnctions and diagrams are also given showing how these Heaters are set in connection with componnd and componnd condensing engines. The American Standard Donble Coil Heater is likewise illnstrated and described. The same company are distribnting circulars referring to the American Steam and Oil Separator, for use in exhaust steam heating to remove the oil, thns keeping the heating snrfaces clean and in an efficient working condition.

One of the largest plumbing concerns in Eastern Connecticnt is the Mallory Company of 212 Bank street, New Haven. The company make a specialty of installing high class systems of steam and hot water heating, as well as Hot Air Fnrnaces. They also do everything in the line of plnmbing, sewering, draining and ventilating, and make a specialty of yacht plnmbing. The company have a large amonnt of work in hand and give employment to a big force of plumbers, steam fitters and sheet iron workers.

Bleyler & Marker of Chester, Pa., have been awarded the contract for installing the heating apparatus at the Langston School in that city at their bid of $1389.

Henry Weyand, Waterbnry, Conn., has a contract for plnmbing and tinning a new eight-tenement block on Hlll street, and one for roofing and plnmbing the addition to James V. Washburne's factory on Jefferson street, that city.

John L. Thomas, Ballston Spa., N. Y., secured the contract to place a Mahoney Boiler in the new Frank Bnilding in that town and do the necessary steam piping, plnmblng and roofing work on the same.

The American Mfg. Concern of Anckland, N. Z., are said to be purchasing some good sized lots of Plumbing Material in this country.

J. H. Alvord of Winsted, Conn., has the contract for plnmbing the Smith Block in that town.

Dispatches from Honolulu, H. I., report that the plumbers' strike, which has been ln progress for more than a year in that city, has been amicably adjusted. The plnmbers demanded $6 a day wages and a compromise was effected at $5.50 a day.

The Connty Commissioners at New Bedford, Mass., have awarded the contract for a new heating and ventilating system at the New Bedford Jail and House of Correction to the Cook & Grew Company of Fall River at their bid of $1920.

Robert Mowbray, manager for the Sedalia Steam Heating Company, Sedalia, Mo., has been instructed by the stockholders of the concern to pnrchase a suitable site and arrange for the immediate erection of a steam plant for the use of the company. The company have heretofore been dependent on the Sedalia Electric Railway Company, using the exhaust steam of that concern, bnt the increased demand for the steam heat supplied by the company has necessitated the establishment of their own plant. The company are preparing to extend their mains throughout the residence districts of the city, so that all may be provided with steam heat who desire it.

A deed was filed this week at Beaver, Pa., recording the transfer from the Colonial Land Company to J. W. Arrott of 8½ acres of property in Monaca, Pa., for the consideration of $12,750. The property will be used by the United States Sanitary Company, recently incorporated, as a site for the erection of a plant for the manufacture of Enameled Bathtubs and other sanitary goods.

It is reported from Pittsburgh that the Standard Sanitary Mfg. Company, at a recent meeting of the Board of Directors, adopted plans for the concentration of the manufacture of their various products at four points—viz., the works of the Standard Mfg. Company at Allegheny, Pa.; the Dawes & Myler Works at New Brighton, Pa.; the Ahrens & Ott Works at Louisville, Ky., and the plant at Rome, N. Y. It is stated that the Standard works in Allegheny will be enlarged so as to make it the most extensive plant of its kind in the world. When the improvements are completed employment will be given there to an additional force of 400 to 500 men. It is probable that an office building will be erected in Pittsburgh for the company, as additional office space is found to be greatly needed.

Peck Brothers Company of Chicago will discontinue carrying stock in Milwaukee, Wis., on September 1, and cover their Milwankee bnsiness from the Chicago office.

The Central Foundry Company, 116 Nassan street, New York City, have closed down their Lansdale, Pa., plant until the stock on hand shall have been disposed of. The company snpply Philadelphia and vicinity only from this plant, as they find it more convenient and cheaper to snpply other territories from their other plants. This plant is one of the best equipped owned by the company, and they have no intention of abandoning it, as reported, bnt on the contrary will pnt it again in operation as soon as business in that vicinity will admit.

Weatherly & Pulte, Grand Rapids, Mich., have the contract for installing the plnmbing and heating and doing the roofing work on the new Ferris Industrial School building at Big Rapids, Mich.

Work on the new plant of the American Sanitary Snpply Company at Elizabeth, N. J., is being rapidly pnshed forward. A nnmber of substantial brick buildings are in course of erection and it is expected to have them all inclosed before winter, after which the installation of machinery will be made. It is expected that the plant will be ready for operation next spring. The company's property covers about 6 acres of ground on the shore front and extending to the B. & O. Railroad tracks.

The American Radiator Company, Chicago, now have in press and in a few days will distribute to their customers two catalogues, which, it is said, will be among the finest trade catalognes ever issued. One of these catalognes will treat of the Radiators mannfactured by the company, while the other will show their Ideal line of House Heating Boilers.

Sealed proposals will be received by Quartermaster D. E. McCarthy, at Fort Leavenworth, Kansas, until September 9, for plnmbing and steam heating a cavalry barrack building at that post.

Fred. B. Carroll, Rumford Falls, Maine, has been awarded a contract to furnish a Steam Heating Apparatus for the Chisholm School House in that town. The buildings will be heated by direct and indirect radiation, a Richmond Boiler being used.

William Mercer of Grand Rapids, Mich., has the contract for installing a heating and plumbing system in the Conrt House at Ithaca, Mich. The contract amounts to abont $2800.

At the convention of the United Association of Journeymen Plumbers, Gas Fitters and Steam Fitters, which closed in Buffalo, N. Y., the following officers were elected: President, William Merrick, Salem, Mass.; secretary-treasurer, L. W. Belden, Cleveland; organizer, W. J. Spencer, Buffalo; auxiliary secretary, Thomas E. Burke, Chicago; first vice-president, J. McKee, Pittsburgh; second vice-president, W. E. Martin, Minneapolis; third vice-president, Joseph Buggy, Missonrl; fourth vice-president, M. J. McCarthy, Washington, D. C.; fifth vice-president, W. C. Brickey, Kansas City; sixth vice-president, C. F. Kiefer, Worcester, Mass.; seventh vice-president, R. Wilson, Toronto; eighth vice-president, R. M. Simpson, Seattle; ninth vice-president, A. M. Thatcher, Fort Worth, Texas; tenth vice-president, J. Little, Youngstown, Ohio; delegates to American Federation of Labor, Frank Benson, Cleveland, and John Clark, Buffalo.

The new club house of the New York Yacht Club in New York City will be heated exclusively with Radiators manufactured by the American Radiator Company of Chicago. The heating contractors are Baker, Smith & Co. of New York. This club is one of the finest clubs in the country, but perhaps its best claim to a world

wide reputation is its possession of the America cup, which has been the subject of so many contests between yachtsmen of this country and Great Britain for half a century. The continuous possession of this cup by American yachtsmen for so many years is a unique event in the world of sport. Our English friends will make another effort to win it this fall.

P. Gormley, Philadelphia, Pa., has taken out city permits to install a hot water heating plant at a cost of $1500 in the Sisters' House of St. Bonifacius Roman Catholic Church, and a steam heating Boiler to cost $700 in the parochial residence of the same church.

The Hull Bros. Company, Danbury, Conn., are experiencing a season of great activity in their plumbing and heating department, and have secured some of the largest contracts, both local and in adjoining towns, ever yet handled by this house. Among other large contracts recently taken is an extensive heating and plumbing equipment for Arnold Turner of Danbury, also one in Carmel and another in Wilton, Conn.

New Firms and Changes.

Voelkers & Wahlen is the title of a new plumbing and heating firm who have just opened up in business at South Bend, Ind.

The Charles F. Oxley Mfg. Company of Cranford, N. J., have recently been incorporated, with a capital stock of $25,000, to manufacture Gas and other Fixtures, the incorporators being Charles F. Oxley, Sarah E. Rea, Alfred N. Rea and Charles E. Oxley.

The North American Carbide Company, with principal office at 224 Market street, Newark, N. J., have been incorporated, with a capital of $100,000, to manufacture Carbide. William H. Wells, Joseph F. Wiswall and Charles E. Wiswall are the incorporators.

The Logan Burner Company of 221 Market street, Camden, N. J., with a capital of $100,000, have been incorporated by T. Logan, P. W. Janeway and John O. Wilson to manufacture Gas Burners.

Joseph Fletcher and J. H. Peck have opened a plumbing and tinning establishment at 22 Maple street, Summit, N. J.

The Leonard Stradinger Plumbing Company have been incorporated at Springfield, Ill., with a capital of $15,000, to do a general plumbing business. The incorporators are Leo. Stradinger, E. D. Normile and H. A. Nicols, Jr.

Biegel & Phalen is the title of a new firm who have started in the plumbing business at Manitowoc, Wis.

The Conway & McCarthy Company of New York City have been incorporated with a capital of $30,000 to manufacture Heating Apparatus. J. W. Conway, Jeremiah McCarthy and Geo. Botts of New York are named as directors.

A corporation are being organized by H. J. Mathews, Milwaukee, Wis., to manufacture Water Heaters and Radiators. The company will be known as the Water Heater & Steam Generating Company and will have a capitalization of $25,000. The devices which the company are to produce have been patented by E. Detweiler, patentee of the Perfection Gas Stove.

The Roberts Machine Company, Collegeville, Pa., has been sold to W. C. Jennings of the W. C. Jennings Company, formerly at 629 Filbert street, Philadelphia, Pa. The manufacture of Steam and Engineering specialties, &c., will be continued and an office and salesroom maintained at 46 North Seventh street, Philadelphia, Pa.

We are indebted to Joseph T. Ryerson & Son, Chicago, for volumes 5 and 6 of Ryerson's new technical library. The former book is entitled "Boiler Bracing and Braces." It contains an article by W. H. Wakeman on the McGregor crowfoot brace for tubular boilers that was written for the *Boiler Maker and Sheet Metal Worker*. In part second are designs compiled and amplificated by the Hartford Steam Boiler & Construction Company on head bracing and flue spacing. Volume 6 of the library is entitled "Little Giant Pneumatic Tools," these tools being illustrated and described in great variety.

Trade Conditions in Southern New England.

A flying trip through Southern New England finds the retail merchants well satisfied with the amount of summer business.

THE VACATION SEASON.

Some who are not quite contented with the situation make the complaint that they are handicapped in filling orders, as one of the clerks is on vacation. In this section it is the custom for most bosses to give their clerks a summer vacation with pay, the boss himself generally being contented with a few days' fishing or camping whenever he is best able to steal away from the store.

* * *

YANKEES MAKE GOOD DISPLAYS.

Yankee ingenuity is everywhere apparent in little ways of saving work, and in handy arrangements of stocks and tools. It is also shown in the methods of displaying goods, some of which are novel and very attractive. Merchants in New England seem to make a better use of their show windows than those in some sections. Those who carry a line of hardware have discovered that goods attractively shown in windows sell much better when prices are marked clearly than when the price card is left off.

* * *

THE STEEL STRIKE.

Much interest is manifested in the great steel strike. Every business man seems to be following it closely. The scarcity of tin plate and black and galvanized sheets is keenly felt, many dealers being caught with but a very small stock, hardly sufficient for present needs. They seem undecided whether to try to buy for future use or only for immediate wants. This hesitation has cost the dealers in the total many thousands of dollars, owing to the steady rise in prices. Merchants in absolute need of tin plates pay whatever price is asked, and are glad to pay it for prompt deliveries.

* * *

TIN PLATES VERY SCARCE.

A house in one of the larger cities doing a retail and a jobbing business of some size have been patiently waiting for a carload of tin plates ordered last May, and are expecting to wait much longer. Their stock is very low, and they are gingerly supplying good customers with what they have, substituting freely in some cases any goods on hand for those ordered. These are eagerly taken by the retailers.

* * *

BLACK AND GALVANIZED SHEETS.

While the scarcity of black and galvanized sheets is not as severely felt as tin plates, the stove and furnace men are wondering where they will get supplies from, most of them having only enough on hand for immediate uses. Those having sheets for sale are not anxious to dispose of their stock, though they are selling as an accommodation, but are naming materially advanced prices.

* * *

WROUGHT PIPE KEEPS THE TRADE GUESSING.

Wrought pipe is scarce and is held very firmly. Considerable interest is manifested in this line, it being wished that the price might be lowered, though the fear is expressed that it may continue to rise.

* * *

PREFERENCE GIVEN TO LOCAL JOBBERS.

Many dealers prefer to make purchases of the jobbers in the smaller cities rather than of those in New York and Boston. The reason is that they can place their orders more quickly in the nearby cities, the telephone frequently being used for this purpose, that deliveries are made much more promptly and that the neighboring jobbers are more accommodating than the New York and Boston jobbers, both in service and in credits. The prices are about the same, but there is an occasional saving of freights, so that the major part of the trade

goes to the local houses. Some places having direct boat connection with New York obtain low freight rates.

* * *

AN ARMY OF DRUMMERS IN NEW ENGLAND.

Good railway service, good hotels and the nearness of towns probably brings more drummers into this territory than in any other section of the country and the competition between jobbing houses is very sharp. Most travelers call on their customers about every two weeks, some weekly and others do not complete their circuits inside of a couple of months. That the trade appreciates frequent calls from the traveling fraternity is illustrated by the remark of a well to do merchant in a Connecticut city who said that he always tried to give his orders to the men who called frequently, and that he very seldom placed an order with the drummer who called only occasionally.

* * *

MARKET REPORTS AND QUOTATIONS.

The opinion was everywhere expressed that the prices as published in *The Metal Worker* were of considerable use in estimating and in buying. A dealer with a certificate of membership in the Master Plumbers' Association hanging over his desk said that *The Metal Worker* should not print prices, because they are seen by others than those in the trade. In answer to this he was told that the paper did not cater for a circulation outside of the trade and that there were very few names on the subscription list of persons not actively in the business, so that if any one in his town saw the paper, besides his single competitor, who is also a subscriber, it must be because either he or his competitor permitted him to see it.

"Would you rather have the prices printed or not for your own use," he was then asked, and answered that he wanted the prices but did not want any one outside of the trade to see them.

* * *

DEPARTMENT STORES ENTERING STOVE FIELD.

Department stores have invaded New England, and the stove man has been forced to appreciate his presence, for now it is the regular thing for these stores to carry cooking and a few heating stoves. These are generally of a cheap make, and are sold on the installment plan for $1 down and $1 a month until paid for. Much complaint comes of the poor quality of stove pipe used, which seldom lasts over one season, it is claimed.

* * *

HEATING STOVES AND REFRIGERATORS CUT.

Heating stoves are not sold to a very great extent, for the work of setting them is frequently too difficult for the department store man to do, as he is generally ignorant of the stove business. Refrigerators have been cut so by these stores that there is no profit in them for the stove dealer, and some merchants have decided not to handle the line at all next year. Some of them are endeavoring to dispose of their stock at cost.

* * *

WANTED—A GOOD SHOP SYSTEM.

There is an evident demand for a good, simple system for keeping track of time and materials used on plumbing, heating and tinning jobs. When asked as to the system employed to keep track of costs on this work, several live and progressive dealers explained that unless they forget to do so, they charge all materials taken out and credit them if they are brought back. The time is then figured on the proprietor's recollection of the time the journeyman has been away from the shop. This system is obviously too crude for twentieth century merchants. The honest dealer is apt to remember too little, while his more grasping competitor has the tendency to have too much of a memory when making out bills.

* * *

PROSPERITY MET EVERYWHERE.

Prosperity seems to be met with almost everywhere, and there are surprisingly few grumblers. It is seldom, however, that one goes into two stores on the same block and hears the same story.

Mr. A. was asked "How is business?"

"Business is fine," was the reply. "We have nothing to complain of. Last year we did 25 per cent. more business than the year before, and our business for the first six months of this year is exactly 25 per cent. ahead of last year. If it keeps on growing in this way I do not know how we will handle it."

Passing on to Mr. B.'s store, *The Metal Worker* representative, during a pleasant conversation with the proprietor, asked, "How do you find business?"

"Business was never better," Mr. B. said. "We have no complaint to make. Our business this year is 25 per cent. ahead of last year's, and we did a business last year 25 per cent. greater than the year before. If trade keeps on increasing this way, I do not know how we can take care of it."

It is rather odd that the two leading merchants in the same town should have their business increase so rapidly, and at just the same rate, neither being affected by the prosperity of the other.

NEW YORK MASTER PLUMBERS' OUTING.

The annual outing and Rhode Island clambake of Manhattan Branch of the Master Plumbers' Association of New York City took place at the Crocheron Hotel, Bayside, Long Island, last Wednesday, and was a day of enjoyment for every one who attended it. Among the guests present were General Geo. D. Scott of the Building Department, Superintendent J. C. Wund of Department of Highways, G. G. Stillwell and Ed. Kiersky of the same department, Commissioner Dalton of the Water Department, Messrs. Lewis and McAllister of the same department, Sanitary Superintendents Dewar, Rodman and Horsman of the Board of Education, Deputy Commissioner Donohue and Cashier Kramer of the Sewer Department, Assistant Corporation Counsel Steinert and Inspector Sullivan of the Health Department, Superintendent Bart. Donovan of the Department of Public Buildings, and last, but not least, a delegation from Brooklyn Branch, consisting of Messrs. Smyth, Gleason, Bosch, Donegan and W. M. Brown.

The games, which were run off in good order by the committee in charge, were as follows: Baseball game between the plumbers and supply trade for refreshments and a bound volume of the *Plumbers' Trade Journal*, won by the plumbers with a score of 16 to 12. The football team got a box of cigars as a prize. The shooting match, which had the most entries, 65 in all, distance 150 yards, was won by John Yule with a score of 22 out of a possible 25; G. G. Stillwell being second with a score of 21. The prizes given for the contest were jeweled stick pins.

Geo. Schweppenhauser won the fishing match, catching 13 fish in the time allowed. The catch included several eels, which at once found lodgings in various pockets. Major Magner of the Metropolitan Supply Company won the quoit contest, and W. M. Brown of Brooklyn won the fat men's race. The latter would never be suspected of weighing 195 pounds. The running broad jump was won by J. M. Heatherton.

The inevitable badger was pulled amid great excitement by Joseph Smith, representing W. H. Hussey & Son. Considerable money changed hands as the result of this fight, and although the dog was willing to do his best the badger won by his pull. The low water prevented the swimming and boat races, but other games were substituted.

The clambake was opened at 5 p.m., and was fully up to the standard of past years.

An interesting report on irrigation has been published by the State Engineer of Nebraska, which shows that there are now in that State 3924 miles of irrigating canals, which have cost $4,773,084 and which water 1,698,831 acres of land. One mile of canal irrigates 433 acres and the cost of a mile of canal is $1216, making a cost of less than $3 per acre. As the average increase in the value of the irrigated land is estimated at $10 per acre for the whole State, the profitableness of irrigation is very clearly demonstrated.

Stove and Hardware Dealers.

Best & Thompson, dealers in Hardware, Stoves, Crockery, Bicycles, Tinware, &c., Libby, Mont., have opened a branch store at Jennings, Mont.

Thompson & Dufur, Fairfax, S. D., have bought the Hardware part of the general stocks of C. A. Johnson & Co., Horst & Trautmann and Forbes & Co. of that place and will combine the goods thus purchased with their own stock of Hardware, Tinware, Stoves, &c.

Stokes-Evans Hardware Company, wholesale and retail dealers in Shelf and Heavy Hardware, Stoves and Tinware, Agricultural Implements, Sporting Goods, Furniture, &c., Macon, Miss., have moved to more commodious quarters, which have been modernly equipped throughout. Their main store is 80 x 190 feet in dimensions.

Broadway Bicycle & Sundry Mfg. Company, 7 and 9 Warren street, New York, intend to add a jobbing department, comprising Builders' Hardware, Shelf Goods, Kitchen Utensils, &c., which will be conducted in conjunction with their Bicycle Sundry business under the same firm name. They would be pleased to receive manufacturers' catalogues, discount sheets, &c.

Houston Hardware Company have succeeded H. H. Holtkamp, at Houston, Texas, and will do a wholesale and retail business in Hardware, Stoves, Tinware, Wooden Ware and Sporting and House Furnishing Goods. The company would be pleased to receive catalogues, &c., relating to the above lines.

Kirk-Latty Mfg. Company, Cleveland, Ohio, have materially increased their facilities for manufacturing Stove, Tire and Carriage Bolts, Stove Rods, Machine Screws, Rivets, Tacks, Cold Pressed Nuts and Special Bolts, Screws, Rivets, Nuts, Tacks, &c. They have also awarded a contract for the erection of another story to a portion of their factory, which will give them an addition of one floor 275 x 50 feet. They have also materially increased the size of their office and will soon be in condition to care for a largely increased volume of business. They have just issued a fine new catalogue, embracing the lines mentioned above, which will be cheerfully sent on request.

TRADE NOTES.

The Detroit White Lead Works, Detroit, Mich., have increased their capital stock from $400,000 to $500,000.

The Joseph Dixon Crucible Company of Jersey City, N. J., are sending out a little pamphlet referring to the use of Graphite for steam, gas and electric automobiles. Reference is also made to Dixon's Graphitoleo, a preparation of finely pulverized graphite and pure vaseline, which is highly recommended for chains and gears. The company are prepared to send free samples of these graphite products to any persons interested in the matter.

Hull Brothers, Gasport, N. Y., manufacturers of Friend Spray Pumps, Spraying Outfits, Gasoline Engines, Cream Separators and other light farming machinery, have been succeeded by the Friend Mfg. Company, recently incorporated, who will continue the business on an enlarged scale. A new work shop, 30 x 150 feet, two stories high, and a new foundry, will shortly be erected. Such other buildings as may be needed from time to time will be erected. The directors are George Hull, Warren N. Hull, Arthur B. Hull and John C. Hull of Gasport; R. E. Erdman, Thos. Sulley and M. W. Fuller of Buffalo.

The Bremer Machine & Tool Company have been incorporated for the purpose of operating a manufacturing plant at Kalamazoo, Mich. They will manufacture a standard line of Punches, Presses, Shears, Milling Machines, Horizontal Forging Presses, Hand and Power Presses, Foot and Power Hammers, Brass Goods and the Bremer Check Valve. The officers of the new company are as follows: President, C. J. O'Hara, Detroit; vice-president, Frederick K. Wormer, Detroit; treasurer, C. C. Wormer, Detroit; secretary, F. G. Bremer; superintendent, G. J. Bremer.

The Schrader Metal Company, Wallingford, Conn., manufacturers of Metal Novelties, have organized with a capital of $10,000. The company will absorb the business formerly carried on under the name of Schrader, Smith & Co. The officers are W. H. Ebert, president; Noah Linsley, secretary; L. R. Cook, treasurer, and Charles F. Schrader, manager.

The Lucas Pump Company, Toledo, Ohio, manufacturers of Galvanized Iron Pumps, will shortly occupy a large two-story brick and frame building on Fifth street, their present quarters being entirely too small for their rapidly growing business.

The H. F. Brammer Mfg. Company, Davenport, Iowa, have found the demand for their Washing Machines increasing so rapidly that they recently discontinued the manufacture of fixtures and furniture to enable them to use the building devoted to that department in extending their facilities for turning out Washing Machines. Even this enlargement of their factory operations is inadequate for the extent of their trade, and they have decided to erect an additional building. The company manufacture the Original Brammer Lever Machine, the O. K. Rotary Machine, and the O. I. C. Pendulum Machine. The leader of these machines is the O. K., which steadily grows more popular. The company have just issued a folder illustrating these machines, which shows them lithographed in their exact coloring. The folder is artistically executed, being a very fine sample of color printing.

The Syracuse Smelting Works, Syracuse, N. Y., manufacturers of Babbitt Metal and Solder, have enlarged their plant by two additions, 30 x 40 feet and 20 x 24 feet respectively. A new stock house has also been erected. Several furnaces and new machinery have been installed and the melting capacity increased about 2 tons of Babbitt and Solder per day. The company advise us that if their business increases at the rate it has during the past year they will be compelled to get a larger plant located elsewhere. The company have also increased the melting capacity of their Montreal works about 1½ tons per day by the installation of two more furnaces.

Buyers of Tin Plates and Sheet Iron, who have difficulty in obtaining supplies owing to the strike, will be interested in the advertisement of the N. & G. Taylor Company of Philadelphia, in this issue. This concern solicit orders for Coke Tins and Terne Plates for September, October and November delivery, also for Black and Galvanized Sheets.

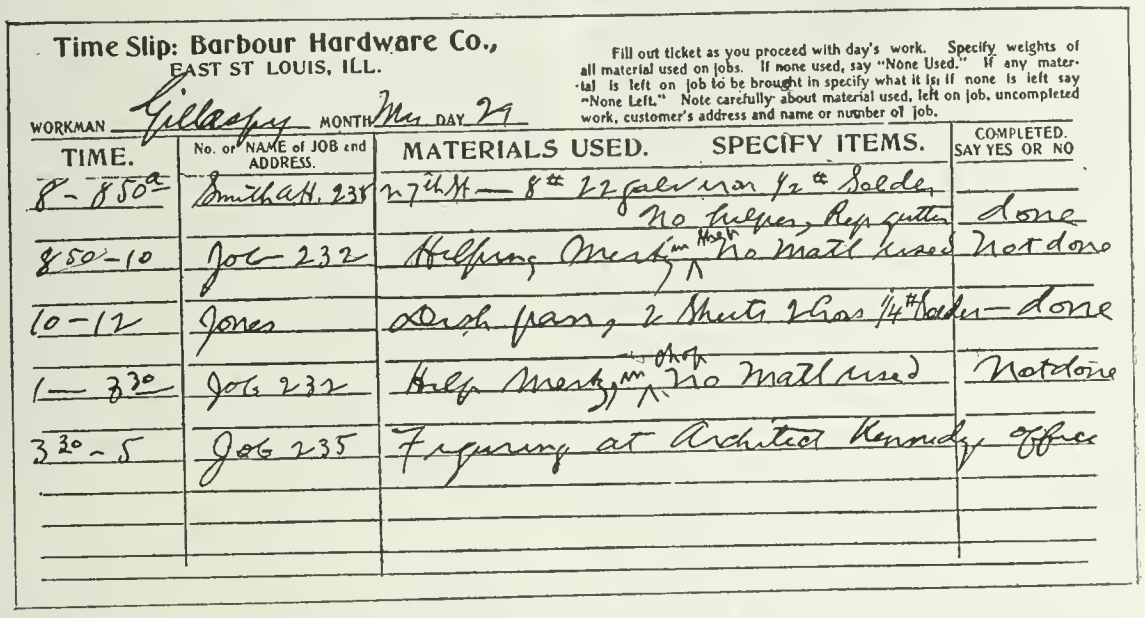
One of the interesting features of the Mines Building in the Pan-American Exposition is the exhibit of nickel ores. Oregon has a fine display of nickel ore taken from mines in the southern part of the State, which is said to be far superior to any of the French nickel ore. Washington State also has nickel deposits, which give a fair prospect of developing into importance, but the deposits of nickel ore in Oregon are the most important in this country and promise to develop into immensely rich properties in the near future. The nickel mines in Nevada have been recently developed to some extent and are said to have proved quite valuable. Specimens from all these different States are shown at the Pan-American, together with some good samples of ore from the Sudbury mines in Ontario, Canada. Thomas A. Edison is taking a great deal of interest in the nickel industry of this country and is reputed to have engaged the services of experts to investigate the same, with the view, supposedly, of becoming actively interested in nickel properties.

The following recipe for cleaning marble is given in the *National Architect and Builder:* Brush the dust off with a piece of chamois, then apply with a brush a good coat of gum arabic about the consistency of thick mucilage; expose it to the sun or wind to dry. In a short time it will peel off. If all the gum should not peel off, wash it with clear water and a clean cloth. If the first application does not have the desired effect, it should be tried again.

KEEPING TRACK OF SHOP JOBS.

The system for keeping track of jobs herein described is in use by the Barbour Hardware Company, East St. Louis, Ill. Much attention has been given by them to the subject of ascertaining which were the money making departments of their business.

The company handle Stoves, Hardware, Furnaces, Glass and Painters' Supplies. In addition sheet metal work is done and Guttering, Skylights and Cornices are furnished. To separate the store and shop business slips are used, as shown in the accompanying cuts. Every day each workman fills out a slip as illustrated in Fig. 1. All material is accounted for as it is used, and the time and material are charged up as the jobs proceed. All contract work is known by a number, while small jobs are not given a number.



Time Slip: Barbour Hardware Co.,
EAST ST LOUIS, ILL.

Fill out ticket as you proceed with day's work. Specify weights of all material used on jobs. If none used, say "None Used." If any material is left on job to be brought in specify what it is; if none is left say "None Left." Note carefully about material used, left on job, uncompleted work, customer's address and name or number of job.

WORKMAN Gillaspy MONTH Mar. DAY 27

Our job. March 1.
Louis, Contractor.

It will be seen that the last item on the slip in Fig. 1 is of a workman figuring on a job at an architect's office. The items are taken from the plans and copied on a job book, as shown above. The items are extended at retail prices, and the bid for the work is rendered in accordance with the total shown on the job book. As soon as notification is received that the company are the successful bidders the words "Our job" are written on the job book. The foreman then takes the items from the job book and distributes the work in the shop.

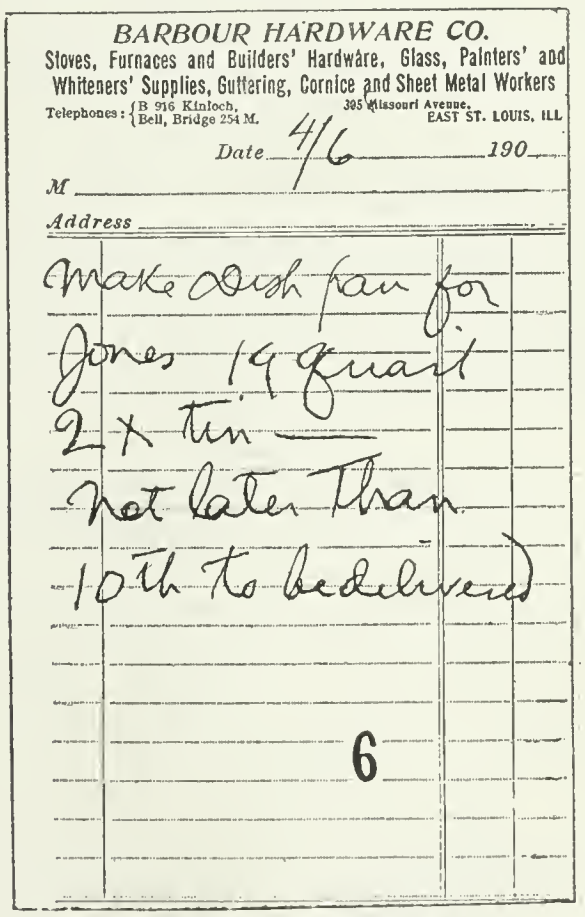
The foreman looks over the job book daily, and takes the work to the shop as it comes in.

While working on a job in the shop the workman enters his time on the time slip as "On job." The time slips are posted each day on cards kept in a card index system form representing the job, and when completed, the total time and material are on one card. The percentage of profit is then added and posted on the books. When material is taken out of the shop for a job, only that called for by the contract is taken. If additional material is required it is entered on time slip as "Extra material used."

A portion of the time spent on the job No. 232 shown on the card is recorded on the second line of the time slip, Fig. 1. The "drop in trade" orders are taken on a duplicate charge slip, as shown in Fig. 2. The slip is card from the index, and charged up on the books, the same as with contract work.

The job recorded in Fig. 2 is an order to make a Dish Pan for Jones, the time and material for which are entered on the third line in Fig. 1.

The half of the charge slip that is retained at the office enables the company to know how much work there is to be done, to see that no jobs are left undone,



BARBOUR HARDWARE CO.
Stoves, Furnaces and Builders' Hardware, Glass, Painters' and Whiteners' Supplies, Guttering, Cornice and Sheet Metal Workers

Make Dish pan for Jones 14 quart 2 x Tin — not later than 10th to be delivered

6

Fig. 2.—Duplicate Charge Slip.

to decide how much each job costs them, also how much each tinner makes for the company. If a workman fails to come up to the standard, he is cautioned, and if he continues to be under the average his wages are reduced, or he is discharged.

The plan has worked very satisfactorily and the 6 to 12 workmen take an interest in keeping up their average. It requires about 30 minutes of the bookkeeper's time each day to keep this record.

The Steel Strike.

While the situation in regard to the steel workers' strike shows little change from that of a week ago, the conviction is growing in the trade that its termination will not be much longer delayed. The officials have studiously avoided any steps which might lead to serious trouble, withdrawing in some cases at the danger of a clash. A large proportion of the capacity of the sheet mills is now turning out material, and additional workmen are being diverted to the tin plate rolling mills. The hoop mills are gaining steadily, so that, speaking broadly, it is chiefly in the tin plate and tube industry that the supply is most seriously affected. It is understood that when the strike was threatened the American Can Company purchased quite heavily in England. One large electric company are reported to have also placed an order in England for a good sized lot of sheets.

The official statement issued by the American Tin Plate Company to the effect that no negotiations were on with the Amalgamated Association for a settlement of the strike and that the men now working in the tin mills would be retained defines clearly the position of the United States Steel Corporation and shows that only a complete surrender of the Amalgamated Association will end the strike. Official denial has been made that through the efforts of third parties a conference would soon be held between officials of the United States Steel Corporation and the Amalgamated Association that would end the strike. The trouble has reached that stage that only a complete surrender of the strikers will end the trouble. The United States Steel Corporation are paying no attention whatever to overtures emanating from the Amalgamated Association, but are going ahead, getting their idle mills started as fast as possible.

THE SHEET MILLS.

The situation in the sheet mills has not shown much change since last week. The American Sheet Steel Company are getting out about 60 per cent. of their total capacity in the nonunion mills in the Vandergrift district. New mills are being added at Vandergrift, and in a very short time fully 75 per cent. or more of the entire output of sheets of the American Sheet Steel Company will be made in the mills of the Kinkiminetas Valley. Attempts were made early this week to start the Reeves works at Canal Dover, Ohio, but little progress has thus far been made, owing to the assaults made on the new men by outsiders. An injunction has been granted at that place by Judge Wing to prevent the strikers from interfering with the nonunion workers. A part of the Ætna-Standard Works at Martin's Ferry, Ohio, is being moved to Vandergrift, and the Dennison and Dresden mills are likely to be taken there.

TIN PLATES.

The American Tin Plate Company are making good progress in getting their idle mills started, in spite of the fact that the strikers have committed many acts of violence and intimidated the new men in every way possible. The Star Works, an eight-mill plant in Pittsburgh, has been started with nonunion men who are quartered in the mill. Four mills are now running, and it is intended to have the entire eight going inside of a week or ten days. The Crescent Works, at Cleveland, a six-mill plant, has also been started, many of the old men having returned to work, and the mill is running to about full capacity. Attempts have been made to start the Beaver Works, at Lisbon, and the Irondale Works, at Irondale, Ohio, but the strikers have committed so many acts of violence at both places, and have also made assaults on the men, that they have decided to ask the courts to grant injunctions restraining the men from interfering with the operation of the mills. It is stated that the Demmler Works, in the Pittsburgh district, will be started on Monday. An official of the American Tin Plate Company says that the Star, Crescent, Beaver and Irondale works have been put on the nonunion list, and that the Amalgamated scale will not be signed for these mills regardless of how the strike may be ended.

SHAFFER'S STATEMENT.

At a mass meeting of strikers held in Pittsburgh Tuesday night President Shaffer of the Amalgamated Association made this statement:

"If the United States Steel Corporation will sign the scale for the same mills for which the scale was signed last year; if they will pay the present Amalgamated scale for all mills now on strike, and if they will permit the men in nonunion mills to organize, if they see fit, the Amalgamated Association stands ready to make a settlement."

It can be safely stated that the strike will never be ended on terms given above. The Steel Company will not sign the scale for the mills that were signed for last year, but which have been started up nonunion since the strike started.

There is no doubt whatever but that the strike would have been ended before this had it not been that the rank and file of the Amalgamated Association is being deluded by promises of the leaders that a settlement will be reached within a week or two on terms favorable to the Amalgamated and that all the strikers would be given their old posltions. It can be stated positively that there are no peace negotiations on between officials of the United States Steel Corporation and the Amalgamated Association, and the strike can be ended only by the men returning to work.

Lloyd Booth.

Lloyd Booth, a pioneer iron manufacturer and president of the Lloyd Booth plant of the United Engineer & Foundry Company, died on August 27, at his home in Youngstown, Ohio, after an illness of only 24 hours. Mr. Booth was 67 years of age. Before the Civil War he was a locomotive engineer in the South, and on the building of the Erie shops at Susquehanna came North to become superintendent of them. Soon afterward he removed to Youngstown and established a foundry and machine plant, which was conducted under the name of the Lloyd Booth Company until its recent consolidation with Pittsburgh plants under the name of the United Engineer & Foundry Company. The concern made a specialty of the manufacture of rolls and rolling mill machinery, and equipped many of the large sheet and tin plate mills of the country. Mr. Booth is survived by his widow, a daughter and a son.

New Sheet Mills at Sharon, Pa.

It is officially announced that the Sharon Steel Company of Sharon, Pa., have let contracts for the erection of ten sheet mills and four additional open hearth furnaces. The new sheet mills will have a capacity of about 100 tons a day. Contracts for the erection of the buildings have been let to the American Bridge Company of Pittsburgh, and McIntosh, Hemphill & Co., of that city have been given large orders for machinery. The second set of ten mills at the company's tin plate plant will, it is expected, go into operation about October 1, and the new sheet mills will be ready six months later than that date. The latest additions to the Sharon Steel Company's plant will involve an expenditure of something like $1,000,000, which, with the plants already in operation or under construction, will represent an investment of more than $8,000,000.

FLASHINGS.

Joseph T. Ryerson & Son, Chicago, advise the trade by means of a small circular which they are distributing that they have in warehouse, in addition to their regular stock, a number of special sizes of Apollo Best Bloom Galvanized Sheet Steel, also Bessemer, one pass, cold rolled, box annealed Sheets. These stocks being naturally somewhat limited, the firm advise those who are needing such material to write or telegraph at once for prices, stating quantity desired.

Robert Reetz, Pawtucket, R. I., has the contract for Skylights for the Pawtucket Mfg. Company's new mill.

C. G. Brunnckow, Providence, R. I., manufacturer of Cornices, Skylights, Ventilators, &c., has recently executed a number of important contracts, including all the copper work on the State Normal School, the Rhode Island State House, the Public Library Building and the Union Trust Company's Building, as well as several theaters and other large structures in the city of Providence. Mr. Brunnckow started in business 13 years ago as a member of the firm of L. J. Scheltzer & Co., whom he succeeded in 1894. He is the possessor of a plant admirably qualified for turning out finished work of the best quality.

Rourke Brothers of New Haven, Conn., have just finished a Skylight for the new building of the New Haven Savings Bank. The Skylight is of copper with steel frame, 76 feet long and 26 feet wide, and is said to be the largest Skylight of its kind in New England.

The Berger Mfg. Company, Canton, Ohio, are distributing a little four-page folder illustrating by means of fine half-tone engravings some of the more attractive designs of their Metal Ceilings and Side Walls in Colonial, Rococo, Empire and Greek styles.

Contracts for $250,000 worth of machinery have been awarded by the Jackson Iron & Tin Plate Company, recently incorporated with a capital stock of $300,000, who are about to erect a large independent Sheet and Tin Plate plant at Clarksburg, W. Va. Work on the construction and equipment of the plant has already begun and will be actively prosecuted so as to get it into working order at the earliest possible date. The plant will consist of 14 mills and will have a potential daily capacity of 700 tons of Sheets and Tin Plates. Five hundred men will be employed.

A four-mill Tin Plate plant, it is reported, will be erected at Johnstown, Pa., by a company composed of local capitalists headed by W. K. Du Pont. The new concern will draw their supply of raw material from the Cambria Steel Company.

The Columbia Enameling & Stamping Company of Terre Haute, Ind., are preparing in that city a plant to consist of a stamping department, annealing shop, warehouse, power house and a number of smaller buildings at a cost of about $200,000.

A persistent rumor is current among the trade pointing to the probable absorption of the American Can Company by the United States Steel Corporation after the present labor troubles are settled. A relationship already exists between the Can company and the American Tin Plate Company, in that several of the directors are on the boards of both companies. It is also understood that a close understanding exists between the two corporations which works to the advantage of both in the matter of supplies of raw material. It is therefore natural to conclude that the ultimate destination of the Can company will be to become one of the constituent parts of the big Steel Corporation.

A. W. Brown and W. P. Deval, who were officials and large stockholders in the Cambridge Iron & Steel Company, at Cambridge, Ohio, before they were taken over by the American Sheet Steel Company, are reported to have bought a large site of land at Cambridge and may build a Sheet mill on it.

The Carnahan Tin Plate & Sheet Company, Canton, Ohio, who will make high grade Iron and Terne Plates and Sheet Steel, advise us that they will be ready to start six mills about November 1 next.

There is some talk of a new Tin Plate mill being built at Meyersdale, Pa. The citizens of that borough propose to issue bonds to the amount of $15,000, which will be given to the new company, and 6 acres of ground.

The Ferricup Metal Company of Providence, R. I., manufacturers of Copper and Brass Coated Steel Sheets, Copper Wire, Bars and Sheets, &c., are looking for a good mill with about 25,000 square feet of floor space, mainly on the ground floor, if possible, for heavy manufacturing, and with plenty of land on which to expand. They wish to be near a railroad with spur track privileges, and prefer water power. If a suitable mill cannot be secured the company propose to secure a good mill site and build a mill adapted to their requirements.

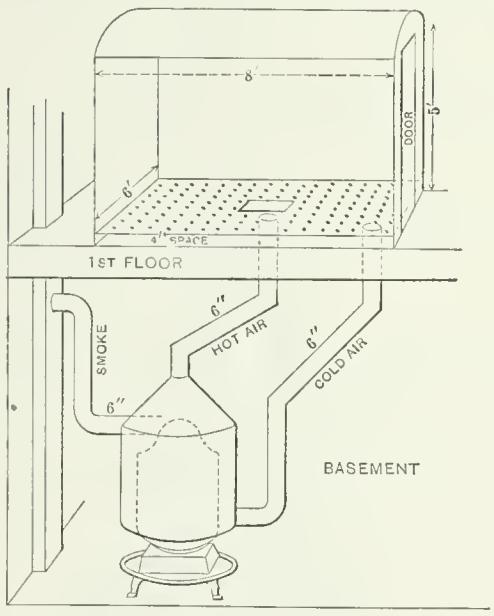
THE LETTER BOX.

Inquiries in regard to practical questions of general interest are invited, in reply to which we shall be glad to receive suggestions and information from our readers.

Correspondents are requested in all cases to give their names and addresses, which will not, however, be published or disclosed without their consent.

TROUBLE WITH DRYING OVEN.

From D. & K., Lathrop, Mo.—I have a problem that I would like to have solved in *The Metal Worker*. We want to construct an oven or drying room for the purpose of drying a stiffening material made of two or three thicknesses of muslin saturated with paste, each piece being stretched on a frame about 3 x 8 feet in size. We constructed an oven 8 feet long, 6 feet wide and 5 feet high, covered tight with galvanized iron, with a double bottom like diagram shown, but it fails to give satisfaction. It gives plenty of heat, but holds the moisture and does not dry the material. We wish to dry about 20 at one time. At present we have a 12-inch



Trouble with Drying Oven.

oak stove, inclosed like a furnace, connected by a 6-inch hot air pipe with the bottom chamber of the dryer. This air is distributed all through the drying chamber through ½-inch holes 4 inches apart in the false bottom, which is 4 inches above the bottom. The hot air is delivered at one end under a sheet iron plate about 16 inches square, and the air is returned to the heater by means of an 8-inch cold air pipe leading from the bottom of the dryer to the bottom of the stove casing. As our apparatus is not satisfactory, we will be glad to receive any information that will aid us in constructing a successful drying apparatus.

Answer.—In the sketch the return or cold air pipe appears to be drawing the air from the drying chamber and feeding it to the furnace, which, if so, is wrong. The air should be drawn from out of doors as cool as possible, and the drying room should be ventilated at the top by small ventilators at each corner, say of 3 inches diameter, which will give about an equal area with the inlet pipe.

LENGTH OF SKYLIGHT BARS.

From F. A. H., Jersey City, N. J.—In looking through some old *Metal Workers* I came across an item, November 4, 1899, in a letter from "A. T. E.," Pittston, Pa., in which you advise him of an improved method of obtaining the length of skylight bars. I would be very glad to have you explain this method in *The Metal Worker*.

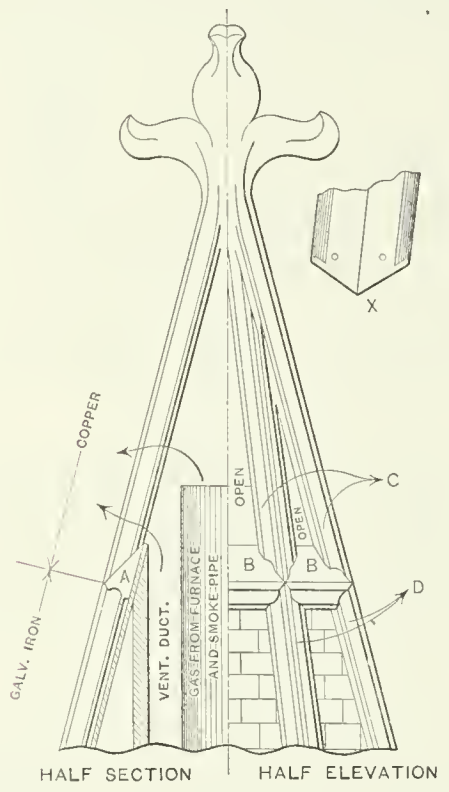
Answer.—If our correspondent will look through the columns of *The Metal Worker*, in the Letter Box department, in the issues of January 12 and March 16, 1901, he will find the short rules for obtaining the lengths of hip, jack and common bars.

CONSTRUCTING A COPPER SPIRE.

From W. L., Troy, N. Y.—Will you please give us your opinion as to the advisability of constructing the apex of a spire by continuing the ribs which form the hip moldings and ornamenting with a finial, the work to be executed iu heavy copper, but leaving out between the copper rlbs what is really the roofing, so as to permit a smoke pipe to be run up through the center of the tower, thus allowing the hot gases from the furnace to escape between the copper ribs? Is copper the proper material for use in such a case?

I would also like to know whether sheet lead is best for valleys on slate roofs.

Answer.—In the accompanying illustration we give a reproduction of our correspondent's sketch, showing a half section and half elevation of the spire in question. A smoke pipe runs through the center of the tower, the heat from which is supposed to create a draft for the escape of the foul air in the vent duct. The mold A in the half section and B B in the half elevatiou indlcates



Constructing a Copper Spire.

the deck mold above the roofing, and above the deck mold the ridging D is to continue to the apex of the spire, with a finial over the same, and leave the openings C above the deck mold for the escape of the gas, smoke and foul air.

The plan is a good one, and if the lower hip ridges are to be made of galvanized iron we would suggest that the deck mold A be made of tinned copper to avoid any electrical actiou between the galvanized iron and copper, making the upper ridging and finial of 20-ounce cold rolled copper, which is not likely to be destroyed by the smoke or gas. It would be well to line the inside of the duct with galvanized iron to avoid any danger of fire from sparks, unless the spire is of fire proof construction.

While sheet lead makes a good valley lining, we would suggest the use of soft copper—14 or 16 ounce weight—laid in 8 feet lengths without any nailing into the valley, the sheet to be fastened by means of copper cleats. This allows for the expansion and contraction of the metal. A sketch is shown at X of a valley with the water locks O and O on each side, which allows any leakage to follow and drain out at the bottom.

CLEANING ZINC.

From H. M. K., Cortland, N. Y.—I tried the recipe of "M. J.," Flatbush, N. Y., mentioned iu *The Metal Worker* of July 20, for cleaniug zinc, and had no luck at all; then tried one teaspoonful of oxalic acid in ½ pint of water—no good. Theu put iu another, still no good. Perhaps did not leave the acid on long enough. Gave it up as a failure. Would like to know from "M. J." how he does it. I could not do half as well with it as with common kerosene oil.

MAKING A CELLAR WATER TIGHT.

From L. T. M., Pottsville, Pa.—For the information of "F. R.," Coalville, Utah, who asks in *The Metal Worker*, August 24, about a water tight cellar, I would say that I have just completed a dwelling house and had to contend with a wet cellar. Water stood in the cellar and the mud and slush were several inches deep and would not drain off. I finally concluded to cement the cellar bottom and I filled in on top of the mud about 6 inches of concrete, composed of cinders and 2 inches of cement, with a top coat of the best cement. At first water came through the cement, but this ceased when the cement hardened, which took about a week. This composition made the best water tight floor I ever saw. There is not a bit of water to be seen and the cement is much harder than if the cellar had been dry.

From O. A. S., Elgin, Ill.—Regarding the inquiry of "F. R.," Coalville, Utah, as to the way to make a cellar water tight, I would suggest that the cellar bottom be leveled up with sand and a layer of cement about 2 inches thick lald on, running it well up against the walls. After the cemeut is dry coat the floor and the walls on the inside with hot asphalt, after which pave with brick dipped in asphalt, covering with another coat. I would then suggest that the outside of the walls be coated with 1 inch of cement, running it down below the cellar floor level and covering this after it is dry with a coat of hot asphalt. I believe that if these iustructions are faithfully followed a water proof cellar will result. The plan may prove somewhat expensive, but my opinion is that the job ought to be done well if at all.

TROUBLE WITH STEAM PUMP.

From D. E. S., Pennsylvania.—Your valuable paper has helped so many out of trouble that I write to get some assistance in the following case: I was called to the Pocono Mountains to examine a steam pump that supplied about 12 or 15 cottages. The trouble is that when the pump (a Worthington Duplex) makes 60 revolutions all is quiet, but if the speed is increased to 68 revolutions there is a hammer in the pipe at all the cottages and apparently it is in the suction pipe. The suction pipe is 2 inches in diameter and about 15 feet long, including three elbows and about 8 feet lift. The discharge pipe is 1½ iuches, pumping into a reservoir 200 feet high, the latter pipe beiug used for supplying cottages from the reservoir. I put in a rubber hose on the line to the reservoir at the branch of the first cottage from the pump, but it did not help it much. I will now put on a vacuum chamber near the pump on the suction pipe, but thought probably your army of readers could suggest a better remedy. The pressure is increased about 40 per cent. when pumping 60 revolutions of 25 gallons per minute. I removed foot valve, thinking that might cause it, but the trouble was the same. The pump has no air chamber. The additional increase in speed of eight revolutions increases the pressure about 50 per cent.

Answer.—The water hammer is no doubt on the force side of the pump. The long line past the cottages and to the reservoir is subject to vibration of the water in the line by the quick action of the pump. The remedy is to put a large air chamber on the force pipe near the pump, so arranged that it will be supplied by air from snifting cock on the suction pipe, which should be opened for a minute whenever the puump hammers. As it is well known that water under pressure absorbs the air in the air chamber in a short time, some means of supplying air must be used.

WHO MAKES THE NASH VENTILATOR?

From C. S. M., New Haven, Conn.—Can you inform us who is the manufacturer of the Nash ventilator?

TRADE REPORT.

MARKET SUMMARY.

Pig Tin is about ¼c. lower, but closed firmer.

Copper is quiet and unchanged.

Pig Lead is in fair demand and firm in price.

Spelter is in better demand and a shade higher.

Antimony shows no change.

Nickel is firm and unchanged.

Aluminum continues active at former prices.

Tin Plates are very scarce and high.

Black and Galvanized Sheets are in very active demand and scarce. Spot Sheets command high prices.

Patent Planished Sheets have been advanced about 1¼c. owing to increasing scarcity.

Old Metals are dull and weak.

Scrap Tin Plate is $2 a ton higher.

Sheet Copper rules firm and in good demand.

Pig Iron prices are unchanged, but demand is lighter.

Hardware is moving freely, with prices firm.

Wrought Iron Pipe was sharply advanced this week; great scarcity of Pipe is noted.

Plumbers' Brass Work prices are unchanged; a good demand continues.

Enameled Bathtubs are very scarce.

Furnace Pipe and Fittings were advanced in price this week.

Bolts and Nuts have been advanced in price.

Wire Nails are moving in good volume at unchanged prices.

Cut Nails are unchanged.

Wire is still in heavy demand and firm in price.

Coil Chain has been advanced in price.

Linseed Oil has undergone a further reduction of 7c. a gallon in price.

Spirits Turpentine is in light demand and without change in price.

METAL MARKET.

NEW YORK, August 30, 1901.

Pig Tin.—Owing to recent heavy arrivals spot Tin has become plentiful and prices slowly declined day by day until Thursday, when a reaction took place, owing to a rise in the London market, bringing prices again up about ¼c., and leaving them ¼c. lower than those ruling at the date of our last report. Straits Pig in small lots is quoted by jobbers to-day at 27c. to 27¼c. per lb.

Copper.—No new developments are to be reported in this market. Prices are without change and transactions on a limited scale. Small lots of Lake Ingot continue to be quoted at 17¼c. to 17½c. per lb., and Casting Copper at 16¾c. to 17c. The exports this month have been small, amounting to about 4800 tons, while imports during the same period footed up to 4500 tons. The London market this week experienced a slight rally on the strength of rumors of an international Copper combination, which have since been denied, and are now believed in the trade to have been circulated for stock jobbing purposes.

Sheet Copper.—Manufacturers and dealers report a very fair demand for this article, showing that a considerable amount of Sheet Copper is going into consumption, especially in connection with architectural work on new buildings. The scarcity of Galvanized Iron and other Sheet metal, owing to the Steel strike, has favorably affected the demand for Sheet Copper by cornice makers. Prices remain firm on a basis of 21c. per lb. from store.

Pig Lead.—Business, while not exactly brisk, may be described as moderately active. Prices remain steady and unchanged, small lots of American Pig being quoted at 4.60c. to 4.62½c. per lb. St. Louis reports indicate a rather dull market, with no change in prices.

Spelter.—The demand for Spelter has picked up considerably and the market has taken on a firmer tone. Spot is not so plentiful and is quoted a shade higher in large lots. Good Western brands in small lots rule at 4.45c. to 4.50c. per lb. The St. Louis market is reported as easy and quiet.

Sheet Zinc.—The demand for Sheet Zinc is about of average proportions and prices show no change. Jobbers quote 600-lb. cask lots at 6¾c. per lb. and smaller quantities at 7c.

Antimony.—This metal has experienced no change either as to price or condition of business. Cookson's in small parcels is quoted at 10½c. to 11c. per lb., and Hallett's at 8½c. to 9¼c.

Nickel.—Is unchanged and firm at prices which have ruled for some time. Small lots are quoted at 60c. to 65c. per pound.

Aluminum.—A good demand at former prices characterizes this metal. No. 1 Ingot, guaranteed 99 per cent. pure, is quoted in small lots at 37c. per pound, and in 100-lb, lots at 35c.

Tin Plates.—The strike at the Tin Plate mills shows no indications of early settlement, consequently the outlook for the future of Tin Plates remains very uncertain, and the market is in a decidedly unsatisfactory condition. The scarcity of certain sizes of Coke Plates is becoming more pronounced as the days go by, and is now verging on the famine point. The market is so irregular that it is almost impossible to give quotations. Dealers are asking fancy prices for lots which are for immediate consumption, and reports are current of almost ridiculously high prices having been obtained in cases where stock was absolutely needed. The figures usually asked by jobbers in New York and corresponding points for American Bessemer Coke Plates, IC, 14 x 20, are anywhere from $7 to $7.50 per box, and as high as $8 has been asked and paid in some cases. Very little is doing in the Tin Plate market under these conditions. Consumers are not taking anything beyond what they are absolutely forced to purchase, while those dealers who still have any stocks on hand do not need to push their sales by offering any concessions. Stocks of every variety of Plate are extremely light, and some sizes are not to be had for love or money. Two steamers have arrived this week from England, bringing about 23,000 boxes of Tin Plates, all of which are understood to have been appropriated before the vessel unloaded. No change has taken place in the Welsh market.

Sheets.—A few more mills of the American Sheet Steel Company have been started, and this concern are now said to be producing more than half their whole capacity. At the same time dealers and consumers complain of the impossibility of getting anything like the amount of stock that they could use. Orders which were placed as far back as April and May are still unfilled, and consumers are clamoring for stock which their jobbers are wholly unable to give them. The independent mills are profiting very much by the scarcity of Sheets, and are able to get almost any price they ask for Sheets for shipment within 60 days. More business is offered than could be handled in six months, but as the mills are nearly all sold up for the next three months ahead it is almost impossible to place new orders. Almost any price that is asked for either Black or Galvanized Sheets for prompt delivery can be obtained. Jobbers in this vicinity are quoting No. 27 Black One Pass Cold Rolled Soft Steel Sheets at about 4.20c., and Galvanized at 60 per cent. off the list. A

good many new Sheet mills will soon be started, but most of these have their products sold up anywhere from two to four months ahead. Galvanized Sheets continne very scarce and are uuobtainable for anything like early shipment. It is stated that the American Sheet Steel Company are willing to take orders at prices adopted July 1, but without specified delivery. The strike at the Wood mills at McKeesport and the partial closing down of the Wellsville mills have caused a cousiderable shortage of Planished Sheets, which are becoming quite scarce iu the market; consequently jobbers have advanced prices on these goods to about 11c. for the A quality, and 10c. for the B quality, net.

Chicago advices are as follows: Sales agents of the independent mills are unable to promise deliveries under six or eight weeks. Some of the uills are having much difficulty in getting a sufficient supply of Sheet Bars. Consumers are continuing to draw heavily from the stocks of the local merchants, but these stocks are now running quite low, aud it is almost impossible to get certain sizes. The demand is particularly heavy for Nos. 14 to 16 and Nos. 26 to 28 Black Sheets. Stove Pipe sizes are completely gone. No. 27 Black is quoted 4c. to 4.25c., the higher quotation being made by those actually having some stock from which to make shipments. No. 14 is selling at 3c. to 3.10c. Galvanized Sheets are now held at 65 to 60, with stocks runuing very low.

Old Metals.—The market is quiet, with prices rather weaker, except for Tin Plate Scrap, which is $2 a ton higher, being scarce and in active demand. Dealers are paying about the following for moderate sized lots, delivered at New York or corresponding points:

Heavy Copper	per lb. 14½c.
Light and Tinned Copper	per lb. 12½c.
Heavy Brass	per lb. 9 c.
Light Brass	per lb. 7½c.
Lead	per lb. 4 c.
Tea Lead	per lb. 3¼c.
Zinc	per lb. 2¾c.
No. 1 Pewter	per lb. 18½c.
No. 2 Pewter	per lb. 9 c.
Tin Plate Scrap, per gross ton	$8.00
Wrought Iron Scrap, per gross ton	$10.50 to 11.00
Heavy Cast Scrap, per gross ton	10.00 to 10.25
Stove Plate Scrap, per gross ton	6.75 to 7.00
Burnt Iron, per gross ton	5.00 to 5.50

THE PIG IRON MARKET.

New York.—As yet the orders from a leading consuming interest in this section have not been placed and the market has been very quiet. We quote: Lehigh, Schuylkill and Virginia Irons, No. 1, $16 to $17.50; No. 2 X, $14.75 to $15.75; No. 2 Plain, $14 to $14.50; Tennessee and Alabama brands, No. 1 Foundry, $14.50 to $15; No. 2 Foundry, $14.25 to $14.50; No. 1 Soft, $14.50 to $15; No. 2 Soft, $14.25 to $14.50; No. 3 Foundry, $13.25 to $13.50; No. 4 Foundry, $12.75 to $13.25.

Chicago.—While the total tonnage of transactions dnring the past week was below that of the preceding weeks, conditions prevailing in the trade were of a distinctly encouraging character, the nuumber of transactions being larger and representiug a better feeling amoug the rank and file of the foundry trade. Numerous orders for Fouudry Iron have been received, running from 300 to 500 tons. Foundrymen who, in ordinary course, would have contracted in June or July for the last half of the year, are now entering the market as rapidly as they can make up their miuds that their own bnsiness will be satisfactory. The local foundries are rapidly overcoming labor troubles and this is contributing to the improved tone in the market. We quote as follows:

Lake Superior Charcoal	$17.00 to $18.00
Local Coke Foundry, No. 1	15.50 to 16.00
Local Coke Foundry, No. 2	15.00 to 15.50
Local Coke Foundry, No. 3	14.50 to 15.00
Local Scotch, No. 1	15.75 to 16.25
Ohio Strong Softeners, No. 1	16.00 to 16.50
Southern Silvery, according to Silicon	14.90 to 15.15
Southern Coke, No. 1	14.90 to 15.15
Southern Coke, No. 2	14.15 to 14.40
Southeru Coke, No. 3	13.65 to 13.90
Southern Coke, No. 1 Soft	14.65 to 14.90
Southern Coke, No. 2 Soft	14.15 to 14.40

Philadelphia.—Business has uot been active during the past week, bnt prices have held quite firmly. Sales have been mostly in small lots. Opinions differ somewhat as to the probable course of the market after the strike is settled, but some good judges are figuring on higher prices during the last quarter of the year than any that have been realized up to this date. Makers of Pig Iron will certainly try to secure some orders for winter delivery and prices will depend a good deal on the way the buyers respond. The range of prices is about as follows for deliveries in Philadelphia or equivalent points, and about 25c. less for the Harrisburg district: No. 1 X Foundry, $15.50 to $16; No. 2 X Foundry, $14.85 to $15.25; No. 2 Plain, $14.25 to $14.75.

Pittsburgh.—There is nothing doing in Bessemer Iron except on occasional small lots. A little Bessemer has been sold luto September, but the amount is small. There is no disposition, however, on the part of the furnaces to reduce the price. Foundry Iron is dull and prices are weak. We quote Bessemer $15.75 to $16, and No. 2 Foundry $13.75 to $14, both f.o.b. Pittsburgh.

Cincinnati.—The general couditions in Pig Iron have not changed materially in the past week. With the close of August the situation shows up as a more than ordinarily active summer. July was one of the best months of the year. August was fair; some agencies report it as even good. The past week was about on an average with the rest of the month. There was more large inquiry than for a short time past, the result of which was rather small owing to the fact that the furnaces are in the main holding for better prices than buyers are willing to recognize. The outlook is a little bit uncertain and hard to judge, both as to actual selling prices and as to the amount of business likely to come within the next week. We quote, f.o.b. Cincinnati:

Southern Coke, No. 1	$13.50 to $13.75
Southern Coke, No. 2	13.00 to 13.25
Southeru Coke, No. 3	12.50 to 12.75
Southern Coke, No. 4	12.00 to 12.25
Southern Coke, No. 1 Soft	13.50 to 13.75
Southern Coke, No. 2 Soft	13.00 to 13.25
Southern Coke, Gray Forge	12.00 to 12.25
Southern Coke, Mottled	12.00 to 12.25
Ohio Silvery, No. 1	15.50 to 16.00
Ohio Silvery, No. 2	14.50 to 15.00
Lake Superior Coke, No. 1	14.50 to 15.00
Lake Superior Coke, No. 2	14.00 to 14.50
Lake Superior Coke, No. 3	13.50 to 14.00

CHICAGO REPORT.

Scrap Iron and Steel.—While business is rather quiet, a few items are in some demand, such as Gas Pipe and Horseshoes, Boriugs and Turnings. Dealers quote the following buying prices, in carload lots, Chicago delivery:

	Pet net ton.
Country Wrought Scrap	$10.50 to $11.00
Machiuery Cast	10.00 to ....
Malleable Cast	10.00 to 11.00
Stove Plate (free from burnt)	7.00 to 7.50
Burnt Iron and Grate Bars	5.50 to 6.00
Sheet Iron and Hoops	6.00 to 7.00
Plow Steel	9.00 to 10.00
Breaking Stock	9.00 to ....
No. 2, such as Shovels, Hoes, &c	.... to 7.00
Old Boilers—whole (Iron)	6.00 to 7.00
Old Boilers (Iron) cut in single Sheets and Rings	9.50 to 10.00
Old Gas Pipe and Boiler Tubes	10.50 to 11.00
Cast Borings	4.00 to 4.25
Turnings	9.00 to 9.50
Horseshoes	11.00 to 12.00

Old Metals.—Business is somewhat better, but prices are a shade easier on Copper and Brass. Dealers quote buying prices on small lots as follows:

	Per lb.
Copper Wire and Heavy	14¾c.
Copper Bottoms	13¼c.
Copper Clips	14¼c.
Red Brass	13⅜c.
Yellow Brass	9½c.
Red Brass Borings	11½c.
Yellow Brass Borings	8¾c.
Light Brass	7¾c.
Pipe Lead	4 c.
Tea Lead	3½c.
Zinc	2⅜c.
Pewter, No. 1	19 c.
Pewter, No. 2	10 c.

Old Rubber.—Trade is steady. Dealers' buying prices are as follows:

	Per net ton.	Per lb.
Garden Hose	$23.00	.....
Air Brake Hose	42.00	.....
Rubber Shoes	....	7¾c.
Rubber Car Springs	....	4¾c.
Inside Bicycle Tubing	....	21 c.
Outside Tubing	....	7¼c.

Rags.—Buying price of good country Mixed Rags, Chicago delivery, is 70c. to 80c. per 100 lbs., in any quantities.

Anthracite Coal.—The demand has been fair for the past week, running a little better than earlier in the month. The discount of 10c. per ton is not allowed after August 31. The schedule for carload lots is as follows:

	Grate.	Egg and Stove.
Chicago	$5.75	$6.00
Milwaukee, Wis.	5.75	6.00
St. Louis	6.20	6.45
Kansas City, Mo.	8.25	8.50

THE HARDWARE TRADE.

The directions in which the effects of the steel strike are being felt by the trade are becoming more numerous. The difficulty experienced in getting certain lines of goods, owing to the scarcity of material, is extending to other lines. Delays incident to these conditions are annoying to both jobbers and their customers, entailing a large amount of correspondence and many explanations. A long continuance of present conditions would, of course, intensify the situation. The active demand for all lines of goods continues under the somewhat adverse circumstances, and is stimulated by them. The outlook for a large fall trade is good, if sufficient goods can be obtained to supply the demaud.

NOTES ON PRICES.

Wrought Iron Pipe.—As predicted in last week's report, the price of Wrought Iron Pipe has undergone a most radical chauge. The new and advanced prices were announced and put into effect on Friday, August 23. The direct cause of the advance is said to be the scarcity of mauy sizes and the total disappearance of several sizes from the market, owing, of course, to the labor troubles at the mills. The scarcity of ¾-inch Pipe has caused that size to be reclassed and it is now sold under the low discount applying to the smaller sizes. The reclassification of sizes is as follows: ⅛ to ¾ inch, inclusive; 1 to 12 inches, inclusive. Most of the independent mills are now practically at a standstill owing to the fact that they caunot procure any more Skelp from which to make the Pipe. These mills are dependent on the United States Steel Corporation to supply them with Skelp. It will be seen that while the indepeudents aro having no trouble with their own labor, they are still affected by the labor troubles of the leading concern and aro consequently able to do little or nothing to relieve the stringency in the Pipe market. It is said, by a person who is in a positlon to know exactly what is going on, that the National Tube Company and each and every Independent mill in the Pipe business have enough orders now ou their books to keep their plants busy until March 1, 1902. This being the case, there seems to be little prospect of any decline in prices untll after that time. Prices are quite liable to undergo another advauce in the local market within a short time.

Plumbers' Brass Work.—The demand for this line of goods has continued brisk during the past week. The demand is almost entirely of a retail character. Prices have not undergone any change, and until after the next meeting of the Brass Manufacturers' Association at Detroit on September 4 there probably will be very little change in market conditions. It is understood that no further advances will be announced at the next meeting owlng to the fact that the last advance made on July 29 has had a directly opposite effect on the trade to what was expected. Instead of inciting buyers to place their orders, it has had the effect of keeping them out of the market with their heavy orders until there is some assurance that prices are likely to be kept where they are. The Detroit meeting, it is expected, will settle this point.

Furnace Pipe and Fittings.—The scarcity of Tin Plate and the great advance in its price have the past week compelled the manufacturers of Furnace Pipe and Fittings to make another advance in their prices, which are now 33 1-3 per cent. higher than one month ago. It is claimed that this advance does not entirely cover the higher cost of Tin Plate. In fact, it is absolutely impossible to get some sizes of Tin Plate at any price, as the stocks have been completely exhausted in the hands of both manufacturers and jobbers. It is impossible to say when the Tin Plate factories will again be in operation to a sufficient extent to adequately meet the necessities of the Tin Plate trade. The entire country is now manufacturing so little that it is merely an aggravation. If the strike continues much longer most manufacturers of such specialties as Furnace Pipe aud Fittings will run out of stock completely.

Sheet Metal Ware.—Stocks of Tinware, Enameled Ware and Galvanized goods are running low and assortments are becoming more broken every day. Great inconvenience will be caused from this time forward unless the strike is settled or the Sheet and Tin Plate manufacturers succeed in starting more of their mills. Prices are very firm all along the list of Sheet Metal Goods.

Coil Chain.—Coil Chain has been advanced in price by the Standard Chain Company. Present prices for cask lots, f.o.b. Pittsburgh, are as follows:

3-16	¼	5-16	⅜	7-16
$7.75	5.80	4.85	4.00	3.85
½	9-16	⅝	11-16 to 1	
$3.75	3.55	3.55	3.50	

An advance of 25 cents is added in less than cask lots.

Wire Nails.—Fair quantities of Wire Nails are being taken by the territory tributary to New York. There is a disposition on the part of some buyers to order in larger quantities thau for some time. Small lots of Wire Nails from store are quoted at $2.60 per keg.

Cut Nails.—The market continues without change, the trade taking about the usual proportion of Cut Nails. Small lots from store rule at $2.18 to $2.25 per keg.

Wire.—A continued heavy demand for Plain Wire is noted and the tone of the market is firm. Some of the mills are still behind in deliveries. Plain Wire, in a retail way, is quoted at 2.60 cents, and Galvanized at 3 cents per pound.

Window Glass.—The prospect of a large fall demand for Window Glass is not improved by the steel strike. Quotations remain unchanged.

White Lead.—The recent reductions in the price of Linseed Oil have unsettled the White Lead market to some extent, as grinders are not inclined to make contracts for supplies until the Oil market becomes settled. Some improvement in the demand for White Lead in Oil is noted, although confined for the most part to small lots. Quotations are unchanged at 7 to 7¼ cents per pouud for moderate sized lots from store.

Linseed Oil.—Values of Linseed Oil have again declined sharply during the week. On August 27 a further cut in price of 7 cents per gallon was announced, makiug the total decline since July 24 cents per gallon. City Raw, in small lots, is now quoted at 59 to 60 cents per gallon, Boiled Oil being 2 cents advance on Raw. Competition by interests outside the combine and the falling off in the cost of Flax Seed are causes to which the reduction in the price of Oil is attributed. The impression prevails in the trade that Oil is likely to go still lower. According to present reports the Northwestern crop of Flax Seed promises to be large.

Spirits Turpentine.—The Turpeutine market during the week has shown but little variation in prices. As a rule the demand has been light and for small lots. Retail quotations are unchanged at 37½ to 38 cents per gallon.

A British consular report from Sweden is authority for the statement that the German, Swiss, Austrian, Swedish and Norwegian manufacturers of calcium carbide have made an agreement, with the object of checking the overproduction of carbide, which is uow threatening the industry on the European Continent. It is said that nearly every maker of importance has signed the agreement, and has bound himself to stop all production for the present until stocks are reduced. The united production has been about 50,000 tons yearly,

while the consumption up to the present has only reached 12,500 tons. In France, Italy and other countries, where the above mentioned agreement has not been signed, the consumption of calcium carbide is less than the production, so that under the circumstances it has been impossible to maintain prices.

A Beautiful Electrical Effect.

The Baltimore *American* in a recent issue describes a most beautiful electrical effect which has been produced in the Roman Catholic cathedral in that city by means of a lighting system designed and executed by I. P. Frink of New York City. It is the illumination of a statue of Our Lady of Lourdes, which has recently been placed in the church. As is well known, especially among Roman Catholics, Our Lady of Lourdes was an apparition that appeared before the child, Bernadette Soubirons, some 40 years ago on a rock at Lourdes in France. Since that time Lourdes has become famous for a fountain, the water of which is said to possess most wonderful healing qualities, which spring was revealed after the child had dug in the sand at her feet at the command of the apparition. Two magnificent churches have been built near the fountain, which is visited by many thousands annually, and many miraculous cures are attributed to the same. The statue of Our Lady of Lourdes stands at the left of the altar in the Baltimore Cathedral and is of Italian marble. Adorning the head is a magnificently designed brass crown studded with tiny incandescent bulbs, and around the feet of the statue are roses made of Austrian porcelain, the leaves being of brass and remarkably natural in appearance. Inside each rose is a small electric bulb, the soft rays of which contrast beautifully with the brilliant illumination of the circle about the head of the statue. Each group of lights about the statue can be used separately. It is said to be one of the most striking electrical displays of the kind ever made.

Dr. George F. Becker of the United States Geological Survey, in a report on the minerals of the Philippines, says that the copper deposits in the Province of Lepanto, near Mount Data, have been worked by the Igorrotes since before the discovery of the Philippine Archipelago by the Spaniards. These barbarians, who live in squalor, seem to have developed industrially to a surprisingly high point. The skill they exhibit in the extraction and working of the metal is described as remarkable. They turn out copper kettles no less than 3½ feet in diameter, and they also make numerous kinds of implements and ornaments out of the same metal. From 1840 to 1855 they exported some 20 tons of copper utensils and other manufactures.

The variety of serviceable articles made from mica by the Ohio Mica Company, Canton, Ohio, is illustrated and described in a tasteful pamphlet issued by that concern. The publication, covering some 12 pages, shows various metal strip chimneys and other forms of mica chimneys, likewise canopies for lamps and gas jets in various styles. A smaller pamphlet is the Standard Price-List of Stove and Electrical Micas. The Ohio Mica Company are miners, millers, manufacturers and importers of mica, and beside their warehouse and general office at Canton, Ohio, have warehouses at Spruce Pine, N. C., and Ottawa, Canada. Among other goods they make a specialty of cut and uncut sheet mica, mica washers, powdered mica, mica chimneys, canopies, &c.

The United States Consul at Rouen, France, reports that a novel idea in the fire extinguishing service has been introduced by the head of the fire department in that city. Inasmuch as the city is traversed everywhere by electric trolley wires, it is proposed to provide pumps driven by dynamos, to take currents by means of a trolley hooked to the street car wires at the nearest point to the fire.

The annual report of the Interstate Commerce Commission for the fiscal year ended June 30, 1900, just completed, shows the total mileage of railways in the United States at that date to have been 193,345, an increase of 4051 miles for the year. In 1890 the total railway mileage of the country was 163,507, and the gain in the following ten years was, therefore, 29,748 miles.

The President's proclamation in regard to the St. Louis International Exposition, just issued, declares that the exposition shall be opened not later than May 1, 1903, and that it shall be closed not later than December 1 of that year.

PERFORATED METALS

STEEL, IRON, COPPER, ZINC, BRASS, TIN, and all other metals PERFORATED AS REQUIRED for

Grain Cleaning and Mining Machinery, Woolen, Cotton, Paper and Pulp Mills, Rice, Flour and Cotton Seed Oil Mills, Sugar and Malt Houses, Distilleries, Filter Presses, Stone, Coal and Ore Screens, Brick and Tile Works, Filters, Spark Arresters, Gas and Water Works, Oil, Gas and Vapor Stoves, Coffee Machinery, &c., &c.

Standard Sizes Perforated Tin and Brass Always in Stock.

The Harrington & King Perforating Co.,

Eastern Office, 284 Pearl St., NEW YORK. 217 North Union St., CHICAGO, ILLS., U.S.A.

CLASSIFIED LIST OF ADVERTISERS.

Acetylene Gas Burners.
Carroll, J. B., Chicago, Ill.

Acetylene Gas Generators.
International Heater Co., Utica, N. Y.

Aluminum Ingots.
Janney, Steinmetz & Co., Phila., Pa.

Aluminum Scrap Buyers.
Janney, Steinmetz & Co., Phila., Pa.

Aluminum Sheets.
Janney, Steinmetz & Co., Phila., Pa.

Architectural Ornaments.
Friedley & Voshardt, Chicago, Ill.

Ball Cocks
Foster, F. W. Mfg. Co., Boston, Mass.

Black Plates.
American Tin Plate Co., New York.

Boilers, Range.
Koven, L. O. & Bro., 50 Cliff St., N. Y.
Wolff, L. Mfg. Co., Chicago, Ill.

Brass Goods
Farnan Brass Works, Cleveland, O.
Jenkins Bros., 71 John St., N. Y.
Zero Valve & Brass Mfg. Co., Buffalo, N. Y.

Brass Sheets, Rolls, &c.
Hungerford, U. T. Brass & Copper Co., 121 Worth St., N.Y.

Burners, Acetylene.

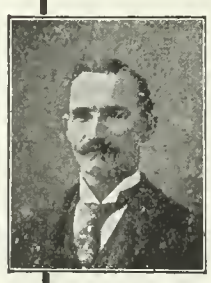
Our students succeed because they use I. C. S. Textbooks.

Sheet Metal Pattern Drafting

A course of instruction by mail for tinsmiths, coppersmiths, plumbers, sheet-iron workers, furnace workers, skylight makers and others that will enable a student to "strike out" working patterns for all kinds of sheet metal work. This is what a student says:



His Course More Than Paid for Itself

I am a tinsmith, and consider your course in Sheet Metal Pattern Drafting one of the best investments I ever made. Before I was half through I had realized from it more than the money paid for the whole course.

M. E. TOBIAS,
63 Fifteenth St.,
Wheeling, W. Va.

We teach by mail **Mechanical, Steam, Electrical, Civil and Mining Engineering; Shop and Foundry Practice; Mechanical Drawing; Architecture; Plumbing; Sheet Metal Work; Telephony; Telegraphy; Chemistry; Ornamental Design; Lettering; Book-keeping; Stenography; Teaching; English Branches; Locomotive Running; Electrotherapeutics.** When writing state subject in which interested.

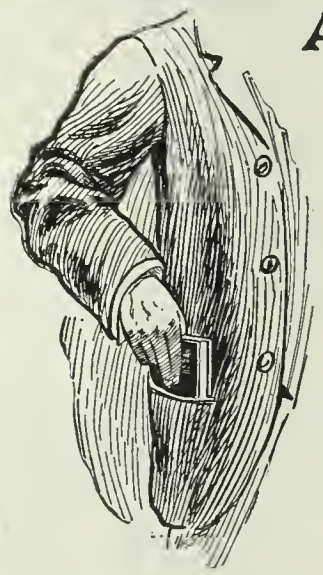
TINSMITHS' HELPER and PATTERN BOOK

WITH USEFUL RULES, DIAGRAMS and TABLES
= By H. K. VosBurgh =
NEW AND IMPROVED EDITION



A USEFUL handbook for tinners and other mechanics, treating simple problems in pattern cutting, such as are of daily occurrence in the shop.

An elementary manual for the young tinsmiths: A handy reference for all sheet metal workers.

120 Pages
53 Figures

An Invaluable Pocket Companion $1.00

Section 1 Pages 1-66
Diagrams and Patterns

Demonstrates in a simple way, and by means of illustrations and descriptive text, about 50 examples of sheet metal pattern work, such as the method of cutting can breasts, flared tinware, scale scoops, oval boiler covers, lips for measures, elbow patterns, &c.

Section 2 Pages 69-88
Epitome of Mensuration

Compiled with regard to the requirements of the tinner, describing how to find the area of a circle, the circumference of a circle, the contents of a sphere, a cylinder, a cone, and other information relating to the work of a tinsmith.

Section 3 Pages 89-120
Tables, Rules, Recipes

Gives tables of the weights of sheet metals, including the weight of black sheet iron, sheet lead, and galvanized iron sheets with their dimensions; the weight of lead pipe per foot; the weights of tin plates, sheet copper and sheet zinc. Several pages are devoted to tables giving the areas and circumferences of circles, the capacity of cans, the number of barrels in cisterns and tanks, sizes of tinware in form of frustum of a cone, &c., and practical receipts, including mixtures for solders of different kinds, soldering fluxes, and various cements.

A Few Points About
The Dover Elbow:

No unsightly seams or corrugations standing out to give it a bunched appearance.
The outside can be polished, as it presents a smooth, even appearance.
The seams are folded on the inside.
No corrugations to reduce diameter and collect soot.
No seams to corrode and rust.
It is made on a scientific principle. It is the same diameter as the pipe.
It is handsome. It is strong. It is the best elbow on the market.

THE REEVES MANUFACTURING CO.,
CANAL DOVER, OHIO.

A UNIVERSAL REMEDY FOR LEAKY ROOFS.

The valuable qualities of a good roofing cement are firm adhesiveness and elasticity. These qualities the ***American Seal Builders' and Roofers' Elastic Oil Cement*** possesses. It will adhere firmly to Slate or Metal and will not crack or crumble. It is especially recommended for repairing leaks around chimneys, dormer windows, skylights, scuttles, firewalls and any place that requires fixing on a roof, either Slate, Tin or Shingle.

This Cement will answer to repair ***a roof*** when ***Solder*** cannot be used.

PUT UP In Barrels, about 800 lbs. In Tubs, about 112 lbs. In 25 and 50 lb. Pails. In 5, 10 and 15 lb. Pails.

Special Discount to Jobbers and Large Buyers.

METAL SPANISH TILE.

Metal Tile is being used extensively to-day where in past years nothing but Terra Cotta Tile would have been thought of. This is for several reasons, but chiefly because they do not become loose or crack, and they make a much lighter roof. The chief feature that distinguishes OUR METAL TILE from OTHERS is THE LOCK. This is patented by us and ours is

The only Metal Tile on the Market that Cannot Spring Apart.

We can tell you a lot about it if you will drop us a postal card, or let us send you a CATALOGUE, where it is fully illustrated.

AN OBJECT LESSON IN ARTISTIC METAL CEILINGS.

HERE is an object lesson in artistic metal ceilings

It shows one of the combinations of our Gothic design.

Gothic Style, of course, isn't as elaborate as some other styles we manufacture, but it has a dignity and forceful simplicity which makes it a favorite for church decoration and similar work.

First of all you will notice it combines the effect of plastic relief with the mechanical excellence and staying qualities of sheet metal.

Secondly, it is in harmony of style throughout,—every part of the ceiling is Gothic in design, and it is perfectly appropriate for the interior decoration of churches and other buildings or rooms finished or furnished in Gothic Style.

The cut shows only one of the ***many*** effective combinations that can be made from our Gothic ceiling material. If you are not familiar with our line, you have probably no idea of the almost countless number of different combinations we can furnish in this style,—not to speak of an equally large number of combinations from each of the other ten distinct decorative styles for which we have patterns.

It will pay you to know what we can do for you. Our list of ceiling patterns is the most complete and most artistic upon the market. Write for Catalogue and full particulars.

Every description of Sheet Metal Architectural Work and all kinds of Metal Skylights.

THE G. DROUVE CO., Bridgeport, Conn.

The New Metal Worker Pattern Book.

425 Pages. 744 Illustrations.
Size 10 x 13 Inches.

A new treatise on pattern cutting as applied to all branches of sheet metal work.

Cloth Bound, Price $5.

This work contains a collection of **218** problems and an elaborate explanation of the principles of pattern cutting, including Triangulation.

It embodies the problems of the former Metal Worker Pattern Book, all of which have been revised, and many of which have been entirely rewritten and solved by more approved methods. To these have been added **75** new problems and much other new material and explanatory matter, making this work a model of completeness in every respect.

ARRANGEMENT.

In point of arrangement the new work far surpasses the former one in that the problems are classified under three different heads, and simply indexed, and also that by means of a table of contents any required department of the work can be easily found.

CONTENTS.

While Chapter VI, comprising the greater part of the work, is devoted to the solution of problems, the five preceding chapters thoroughly explain the principles of pattern cutting, and place the student in possession of the preliminary information necessary to a thorough understanding of the subject.

SUMMARY OF CONTENTS.

I. Terms and Definitions—15 pages.
II. Drawing Instruments and Materials—13 pages.
III. Linear Drawing—6 pages.
IV. Geometrical Problems—35 pages.
V. PRINCIPLES OF PATTERN CUTTING—25 pages.
VI. PATTERN PROBLEMS (3 Sections)—325 pages.
1. MITER CUTTING,
2. FLARING WORK,
3. TRIANGULATION.

All Tinners, Cornice Makers and Sheet Metal Workers should be provided with a copy of

The New Metal Worker Pattern Book.

Price $5, post or expressage paid.

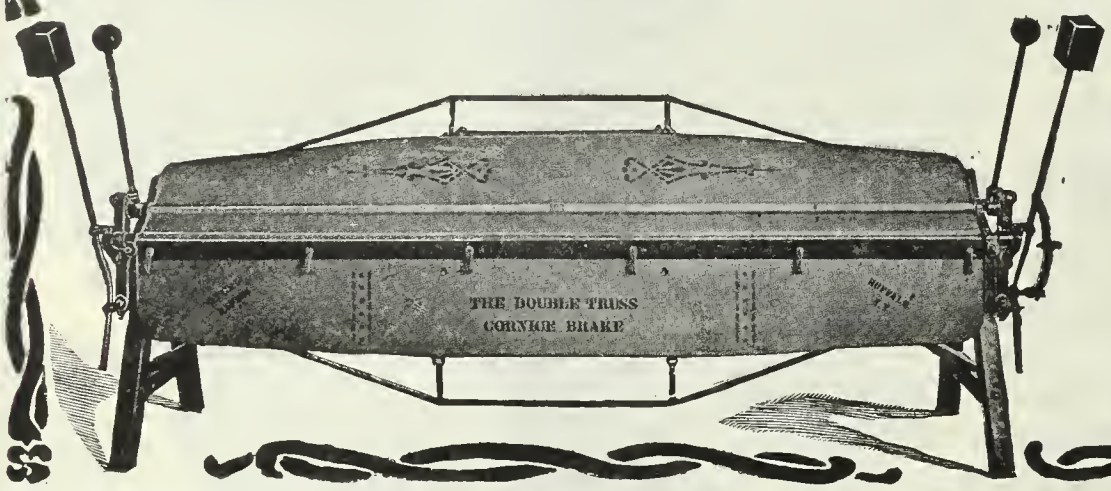
THE DOUBLE TRUSS CORNICE BRAKE.

This is the most practical brake on the market.
It is the most practical because, in the first place, it is lower in price than any other Cornice brake that will do perfect work.
Secondly, because its practical construction enables you to use it to the most profitable advantage.
When you hear about a good thing in your line of business, investigate it. Turn on it the light of reason and consider its money-making possibilities.



Let us send you information regarding our double edge on front leaf, for making fine members and corrugations.

The Double Truss Cornice Brake Co.,
1453 Niagara St.,

96 inches long.

CORNICE MAKERS' SQUARING SHEARS.

With Lever Arc, Automatic Gauge. Will cut No. 22 iron

97 inches long.

HERCULES SHEARS

make the cutting of sheet metal of heavy gauges an easy task for the mechanic and a profitable operation for the employer. With them a man can cut No. 12 steel with one hand on the lever, leaving the other hand free to guide the stock while cutting elbows, ties and circles, as small as 8 in h radius; this is done without burring or buckling either piece, thus avoiding hammering and straightening, which add to the cost of the product. Thev split sheets of any width or length up to No 12 gauge, cut wire or bar-steel ⅛ inch thick, cut off and mitre angle iron ⅛ inch thick, and do it perfectly.

PRICE, - - $35.00.

Write for Discount.

Paragon Point No. 1.—FEWEST JOINTS.

As many pieces of the Paragon Furnaces are made without joints as is consistent with good judgment. The "crab" or lower radiator is made solid with the feed door neck. The upper radiator is a solid piece. The firepot is, of course, solid. When it is necessary to make a joint, a deep cup joint is used which is thoroughly cemented.

This point means that the Paragon gives absolute freedom from gas and dust.

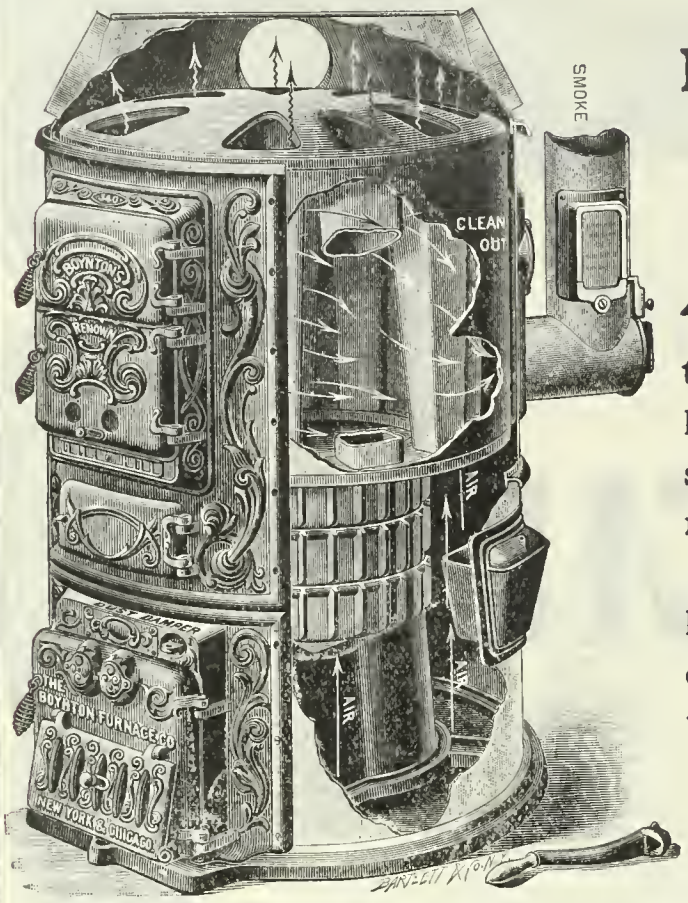
BOYNTON'S "RENOWN"

PORTABLE FURNACE



A new and distinct type of construction thoroughly tried and tested. Possessing more area of heating surface to area of grate surface than any other furnace manufactured.

Notice construction of cast iron heating flues, each one directly over and in contact with fire. Can we mail you catalogue and prices?

The **BOYNTON FURNACE CO.,**

NEW YORK, CHICAGO.

The American

M & D

Steel Range.

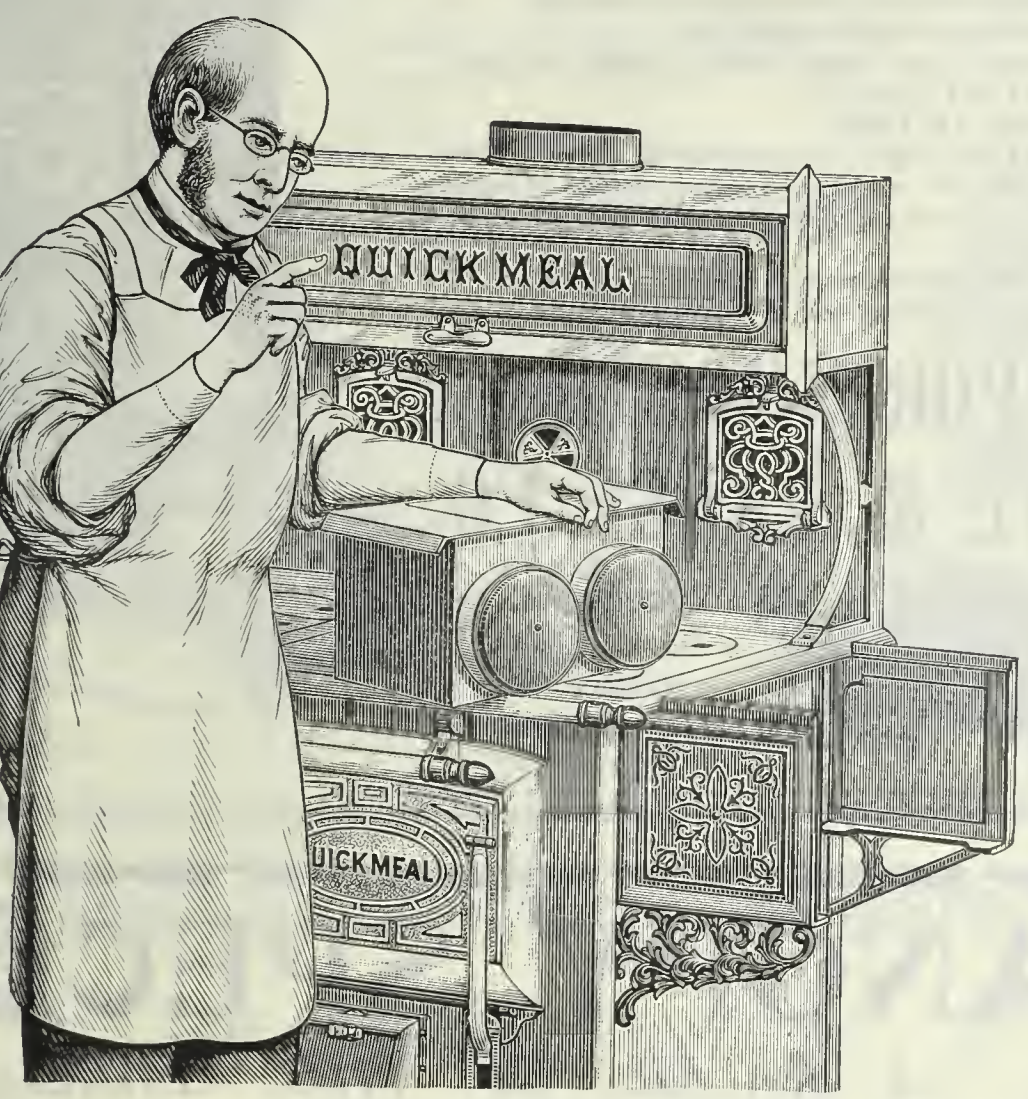
BEST ON EARTH.
HIGHLY ORNAMENTED.

The heaviest, strongest and best working range on the market. Reservoirs portable, ***white enameled inside and out,*** or ***encased*** as desired. Large poke door on end, with or without ***feed pouch.*** ***Duplex-dock ash*** or wood grate, all slide out. Heavy cast iron back flue. Poised oven doors.

4 sizes, 16, 18, 20 and 22 inch ovens. We make all sizes Family, Hotel and Combination Steel Ranges.

M & D RANGE COMPANY, 96, 98, 100 Lake Street, Chicago.

QUICK MEAL



The practical old-time Tinner says:

A SIMPLER, MORE PERFECT or BETTER FITTING RESERVOIR could not be made than the

New "Quick-Meal" Right-Hand Reservoir.

It is SIMPLE, DURABLE and PRACTICAL. **Nothing else like it on the market.** No dampers to interfere with the draft or confuse the operator. The outside casing is ornamental and so arranged as to allow the air to circulate between the casing and the Reservoir, preventing sweat and steam from draining down the Reservoir sides.

"Quick Meal" Reservoirs are made of Copper, its pockets being drawn out of one piece of extra heavy copper, double seamed to the body and covered on the fire ends with a piece of heavy sheet steel to protect the copper from the extreme heat. When he Reser oir is in place the pockets project through the right wall of the Range and fit flush on the inside, making no obstruction in the flue and allowing the heat to come in direct contact. They are as good as the "Quick Meal" Left-Hand Reservoir—they could not be BETTER—but they are better than any right-hand reservoir ever made.

RINGEN STOVE Co. SAINT LOUIS

Model Radiator

For Hard or Soft Coal.

Made in four sizes, Nos. 12, 14, 16 and 18.
Every stove a single or double heater complete, without the use of extra parts.
Large heating surface—Equal to that of an Oak.
Best and simplest reversible pipe collar.
Very substantial outer casing, which is easily removed.
Joints ground and cemented.
All doors fitted Air-Tight.
Our patented Air-Tight draft register in Ash Pit Door.
In this stove we use our new patented method of holding the sheets of mica. They will not get out of place or smoke up.
Handsome Nickel Ornamentation.
A postal card will bring you more information.

M TRADE MARK

Moore's Quick Oven Stoves

M TRADE MARK

A Straight Proposition

The Bottom of the Bottom is more important for you to know about than the top of the bottom. The top of the bottom may be apparently all right, and yet the bottom of the bottom be all wrong and so lacking for proper braces that it will **HUMP ITSELF** on the least provocation.

OUR BOTTOMS are all straight. We are at the bottom of the Steel Cook Stove business—made the first one, and have made more of them than all our imitators put together. We make them right, that's why—make the comparison yourself, and you will find that the bottoms in Moore's Steel Stoves are straight.

JOLIET STOVE WORKS, JOLIET. ILLINOIS.

HOLBROOK, MERRILL & STETSON, San Francisco, Sacramento, Los Angeles.

THE ETNA FURNACE

Is a furnace worth talking about and selling.

It is the result of twenty years' experience in hot air practice, and knowing the wants and the requirements necessary to produce su cessful, satisfying results we made the Etna accordingly.

The Etna contains many strong, practical features not found in the majority of others. We feel satisfied they will meet the approval of every dealer who has been up against the heating problem and encountered its difficulties. We have smoothed out some of the rough places.

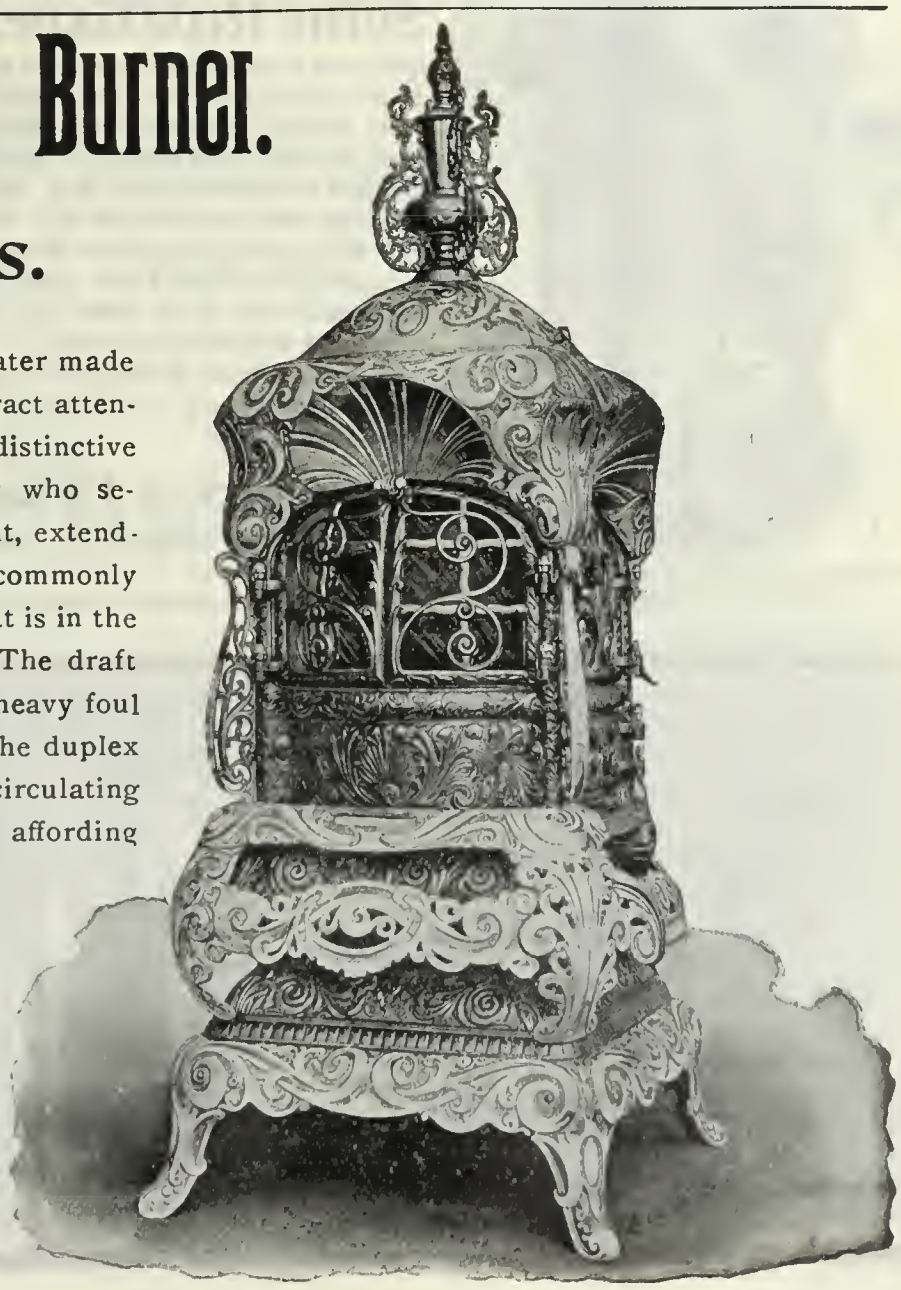
READ THE CATALOGUE. SENT FOR THE ASKING.

Pittsburgh Stove & Range Company

PITTSBURGH, U. S. A.

The Monitor Base Burner.

High Art Series.



It is without doubt the most powerful heater made and its rich and graceful appearance will attract attention at once. The novel construction and distinctive features offer every advantage to the dealer who secures the agency. The diving flue is in front, extending entire width of stove, being what is commonly known as a sheet flue, thus the greatest heat is in the front of the stove where it is most needed. The draft is taken in through the bottom, carrying the heavy foul air which settles near the floor. Grate is of the duplex pattern with outer shaking ring. Two large circulating flues are fitted in rear corners of the stove, affording ample circulation for heating evenly the largest room. Send for new Catalog and secure the agency without delay.

TUBULAR HEATING AND VENTILATING CO.

232 Quarry St., PHILADELPHIA, PA.

New Leader Furnace

POINTS OF CONSTRUCTION

ASH-PIT has great depth, with flush front. Full sized door.

Grate in full view, making the removal of ashes very easy—*not so with low ash-pit doors.*

Not a square inch of solid substance to obstruct the draft, avoiding clinker formation.

Grate is easily taken apart as there are no bolts used. The cutting off of corroded bolts takes time and costs money.

By simply removing the plate in front of the cogs the bars can be replaced by unhooking them from the yokes. This is a new and desirable feature.

Feed Dome is made in one solid casting from fire pit to radiator and offers a large surface for the direct rays of the fire.

Fire Pot is made in two sections, heavy and particularly durable.

Dust Flue is placed in front of the furnace and extends from ash-pit to feed dome. It is large and has a damper.

Radiator is mounted with best quality refined steel.

5 SIZES:

20, 22, 24, 26, 28 in. fire pot.

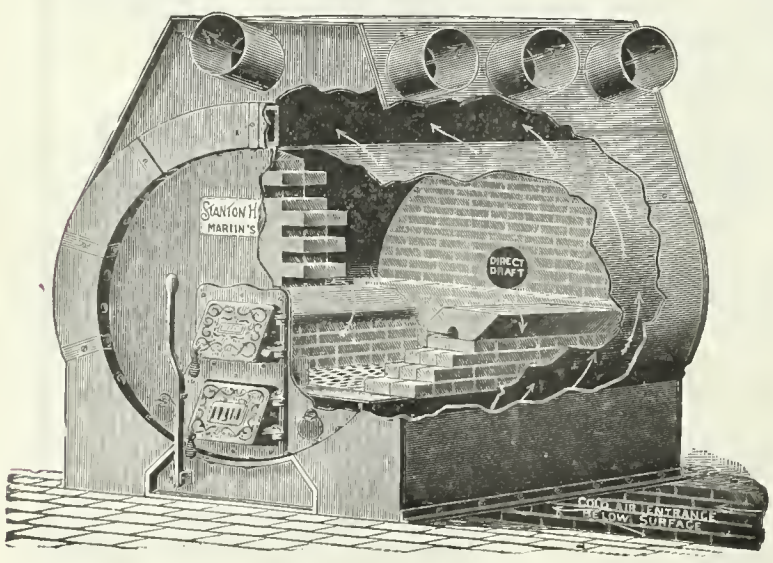
The Stanton Seamless Heater,

PORTABLE CASED.



LOUISVILLE, KY., Apl. 5th, 1901.

THE STANTON HEATER CO.,
Martin's Ferry, Ohio.

Gentlemen:—Your favor of the 3d inst is received asking our experience with the Stanton Heater which you put in for us during the fall of 1899. In reply we will say that it gives us pleasure to express our entire satisfaction with this Furnace. While we have had no severe weather this winter there have been several quite cold snaps, but our offices have been very comfortably heated, and our coal bill (Pittsburgh coal) has been quite moderate compared with other Heaters we have used.

The satisfaction the Heater has given us can be best expressed by saying that we have not heard the Furnace mentioned once this winter. You can see, therefore, that we have had absolutely no cause for complaint.

Yours very truly

Bright Idea Steam Boiler.

Nothing Equal to It.

It was Goethe, you recollect, who declared that "to find some one who thinks as I do strengthens my belief." Well, here's what one individual who has thoroughly tested the

GURNEY

"Bright Idea" Heater

thinks of it: "My house is large and exposed, but I can heat the whole of it with the mercury at zero outside. I believe there is nothing equal to the 'Gurney' for heating a house."

If such testimony were rare, of course it would carry less weight, but when we assure you that we have on file hundreds of letters of the same tenor, it seems almost impossible for you not to comprehend the excellence of the "Gurney" Heaters.

But, having comprehended it, why not make use of it? Become our agent and then you'll share its benefits. For just so long as merit finds appreciation, just so long are "Gurney" Heaters bound to sell in increasing numbers.

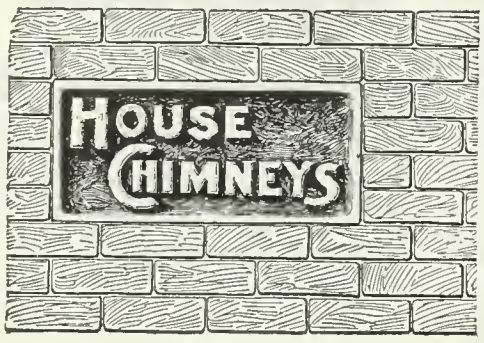
Comprising a Series of Articles and Letters on *Chimney Troubles and Their Remedies* published under the title



Contains a compilation from the columns of THE METAL WORKER, of articles and correspondence relating to house chimneys, defective flues, and kindred topics, comprising a source of information of the most practical and reliable nature, on overcoming difficulties which occur in the working of chimneys, flues, etc.

To all who are interested in flues and drafts, in their relation to stoves, furnaces and house heating apparatus, this book will prove instructive and helpful.

The Contents are as follows

Page.

POINTS ON CHIMNEYS . 7–32
An illustrated article by J. L. Bixby, Jr., describing many details in chimneys, which cause trouble, and giving remedies. An important table is presented, of the sizes of chimneys required in dwelling houses, based upon the amount of work to be done.

DEFECTIVE FLUES . . . 33–35
This article presents information resulting from a wide, practical experience of the writer, and gives sound advice on some of the details of chimney construction.

HOW TO IMPROVE A WEAK CHIMNEY 36–40

VARIOUS FORMS OF VENTILATORS or CHIMNEY TOPS 41–45

CONDENSATION IN STOVE PIPES 46, 47

SMOKE PIPE FOR WOOD FURNACES 48

REMEDYING DOWN DRAFT IN CHIMNEY 49–51

CONNECTED FLUES DESTROY DRAFT 52–55

FAILS TO BAKE ON BOTTOM 56–62

40 good Illustrations help to make the Text clear.

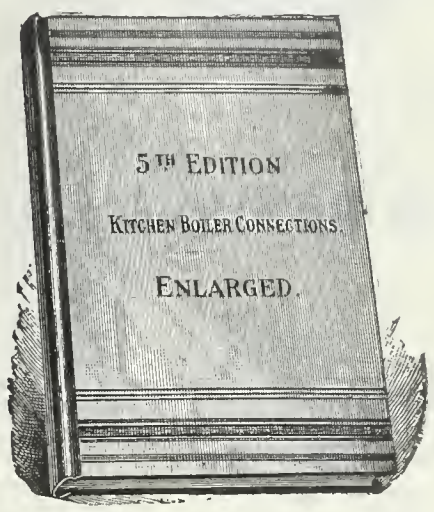
KITCHEN BOILER CONNECTIONS.



A SELECTION OF

Practical Letters and Articles Relating to Water Backs and Range Boilers.

FIFTH ENLARGED EDITION.

104 Pages, 113 Illustrations, 6 x 9 in. Cloth Bound.

Price, $1.00, Postpaid.

Press Notices of First Edition:

The book is a practical helper to every member of the plumbing trade, who, being alive to his own interests, should embrace this opportunity to obtain the valuable instruction in which the work abounds.—*New England Stove, Hardware and House Furnisher.*

The Metal Worker produces in this volume a number of queries, with answers thereto, which have appeared in that paper. It will be seen that *any plumber who is troubled to make boilers work satisfactorily will here find his troubles alleviated. It contains numerous illustrations and throughout is highly practical from the standpoint of the plumber.* It contains a table of contents and an index.—*Scientific American.*

Both interesting and instructive to our trade. It shows how mistakes are apt to arise and how they may be overcome.—*Plumbers' Trade Journal.*

The publisher of this work is well known for his former successful efforts in the publication of useful and thoroughly practical books for metal workers and steam fitters. The book before us is a model of its kind in judicious compilation, practical instruction, neat illustrations and general typographical appearance.—*The Master Steam Fitter.*

The book is well got up and the information well given. Those interested in works of this character will do well in buying it.—*The Plumber and Decorator.*

Can be considered an authority on the subject to which it relates.—*American Engineering.*

Nearly every problem is illustrated fully and this interesting question of water back connections will be found to be quite fully treated in the volume.—*Domestic Engineering.*

ABOUT ESTIMATE BOOKS

For Plumbers and Heating Men

Your Contract and Estimate Record Book for Plumbers is one of the best books that ever came into our house and we would not be without it for three times the amount it cost. We can figure without omitting anything with accuracy at a very short time. We think that every plumber should not be without this valuable book.

W. C. BENNETT & CO., Haverhill, Mass.

We have used an estimate book for three years and could not do without one. Would say that yours is far superior to any yet used and can cheerfully recommend it.

W. R. PARK & SON, Taunton, Mass.

A great advantage. Prevents the leaving out of small items, which amount to more than the cost of the book in a very short time.

CHAS. W. COOMBS, Lawrence, Mass.

Your Contract and Estimate Record Book has been of great use to me in both the saving of money and labor, and I would highly recommend it to any or all master plumbers.

THOMAS P. DOHERTY, Taunton, Mass.

These testimonials are a few of many, and indicate both that a well arranged estimate book, which provides complete lists of items to be figured upon, is a time, labor and money saver, and that the *"CONTRACT AND ESTIMATE RECORD BOOKS"* come up to this requirement.

THE EDITIONS ARE AS FOLLOWS:

CONTRACT AND ESTIMATE RECORD BOOK FOR PLUMBERS

OFFICE EDITION.

200 Pages. Arranged for 100 Estimates. Size 8 x 11 inches. Cloth bound, **$1.50**

500 Pages. Arranged for 250 Estimates. Size 8 x 11 inches. Cloth bound, **$2.50**

POCKET EDITION.

200 Pages. Arranged for 50 Estimates. Size 3½ x 8 in. (oblong). Flexible cloth binding, **$0.50**

CONTRACT AND ESTIMATE RECORD BOOK FOR STEAM AND HOT WATER HEATING

200 Pages. Arranged for 100 Estimates. 7 x 12 inches. Cloth bound, **$1.50**

NOTE. The omission of one item in an estimate on a plumbing or heating job might result in the loss of all profit. These books provide a reliable, accurate, business-like record, and a sure means of avoiding loss due to mistakes and omissions.

Sent prepaid on receipt of price.

THE NEW HAVEN NOVELTY MACHINE CO., New Haven, Conn., U. S. A.

WHY YOU SHOULD USE A No. 5 FIRE POT.

$4.50 Net.

It is light, strong, and can be easily carried.
It produces a strong, blue flame which is intensely hot and free from smoke. The flame can be regulated as the user desires.
A kettle of metal and a pair of coppers may be heated at the same time.
The burner hangs on a swivel joint and can be pointed up or down.
The top section may be removed, exposing **the open fire, which can be used as a torch.** The flame then may be applied direct to the point where heat is desired. It is unequalled in thawing frozen pipes, taking soil pipes apart, making overhead or upright joints, flowing bath plugs, or any similar work.
There are many other advantages which will suggest themselves to you.
It requires but little gasoline to do a large amount of work and will save you its cost in the saving of gasoline alone in a short time. When you buy, get the best there is. If it bears our name it means your money back if you are not pleased.
Jobbers sell at factory price, or we ship direct on receipt of $4.50.

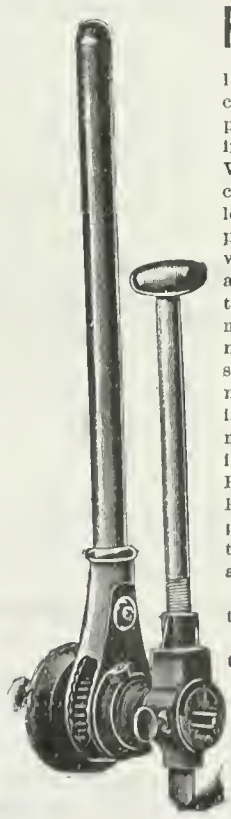
This lining cannot be torn from the pipe.

LAMB & RITCHIE,
Cambridge, Mass., U. S. A.

LEAD LINED IRON PIPE.

The Climax

RATCHET STOCK



Is an indispensable tool for conveniently threading iron pipe in ditches, under floors, in corners, over head, etc With this tool threads can be cut without removing whole lengths of pipe. This tool is provided with a strong vise which securely grips the pipe and by means of the leading thread the die is forced on pipe and the thread is cut. It is made of malleable iron and steel, and while light in weight, making it convenient to carry, is very strong and rigid. The advantages of this tool make it absolutely indispensable to Plumbers, Steam and Gas Pipe Fitters, Gas and Water Companies, Machinists, etc. It takes standard size dies, which are extra if furnished.

No. 1 threads ¼ to 1 in. pipe, takes 2 or 2½ in. die, $10.00.

No. 2 threads 1 to 2 in. pipe takes 2½, 3 and 4 in. die, $17.00

The Kelsey Warm Air Generator

Study the construction of the Kelsey and the principle employed in warming the air, and you will be convinced of its efficiency.

In the Kelsey the air is warmed thoroughly and evenly by passing in separate channels through the cast iron sections.

There are from nine to seventeen of these sections in a Generator, according to its size.

Each section weighs about 70 pounds, and has 8 square feet of heating surface.

These immense surfaces and this great weight of cast iron, being in direct contact with and over the fire, are kept heated to any required degree, with a most economical consumption of fuel.

The Kelsey Method of Warming the Air Is the Best Method. ***Send for Booklet.***

Brilliant Enameled Steel Ware

This ware is now manufactured by our factory at Bellaire in the Brown Color only, same having been discontinued in all colors by our Portland, Conn. factory. Particular effort is being made to turn out a highly satisfactory and pleasing article, and all dealers are requested to order a sample lot to be convinced of the merit of this ware.

White and White Enameled Steel Ware

This ware will also be made by our Bellaire Factory only hereafter having been discontinued by the Portland Factory. A large line of hospital goods made in this ware Recommended where sanitary qualities are essential.

The Opening of Fall Trade.

The summer months, now past, were marked by some influences which had a tendency to disturb trade and restrict its volume. The exceptional severity of the heat was widely felt, and the injury to agricultural products through the long continued drought awakened apprehension as to the effect upon business of a partial failure of crops. There was the beginning of a labor contest, upon the result of which much depended in connection with the permanent prosperity of manufacturing interests. These influences temporarily interfered with business to some extent. The market now, however, is not seriously troubled by any of them, and the fall opens with very satisfactory conditions and prospects of large business. Notwithstanding the damage done in some sections to agricultural products, the farmers of the country have to rejoice in an exceptionally good season, the excellent prices which are ruling more than making up for any shortage in the crops. The steel strike seems to be nearing its end, with the prospect of early resumption of production in the mills which have been closed, thus relieving the market of any scarcity, which is beginning to be troublesome. Meanwhile, the general conditions are exceedingly favorable. The railroads are doing a large and profitable business. Trade in general, not only in the lines with which we have especially to do, is active, and conditions are full of promise. In hardware and metals there is a good volume of busines, the trade buying liberally. The tone of prices is decidedly firm, and nearly all the changes which are occurring are in the direction of higher values. This is illustrated in the advanced prices ruling for bars, wrought pipe, heavy hinges, poultry netting, cut nails, chain, sheets, tin plate, &c. Manufacturers are conservative about accepting orders for future delivery. The scarcity of material has caused much inconvenience, and is the reason for many of the advances which have taken place. When this difficulty is removed, which it is anticipated will be soon, prices will naturally feel the effect and may recede a little. The large volume of business and the possibility that it may be difficult to obtain goods in several lines are looked upon by the trade as influences which will tend to keep the market steady and firm.

Improving the Opportunity.

Under the very favorable conditions under which the fall business opens it is no time for the trade to be indifferent or listless. Merchants and manufacturers alike are confronted by opportunities of which they should make the most. Earnest and enterprising effort should be put forth to secure for themselves a proper share of profit from the prevailing prosperity. It is possible for many in the trade, whether in high places or low, to do a larger and more profitable business. There is a large amount of money which will be spent somewhere. It is the privilege of our readers to see that a fair share of it is spent in their stores, or shops, or factories. The opening of the fall season is an admirable time for business men to review the situation, especially their own methods and enterprises. They should recognize the danger there is confronting every business house, that things will run along in a rut, when much would be gained by even minor changes in the way the business is conducted. There are very few manufacturing or mercantile concerns in which alertness and enterprise will not be able to suggest improvements which would result in increasing the volume and the profit of the business. The chances are that the readers of these lines, if in business for themselves, could, by the exercise of thought and energy, materially extend their trade and make more satisfactory balance sheets at the end of the year. But while there are changes which should be made in store or factory, the adoption of correct and careful business methods, a more persevering and perhaps aggressive going after trade, and in many ways an increasing energy in conquering success, the danger is that things will run along on the old lines, with the familiar story of wasted opportunities, with only a limited where there might have been a large success. Some will, however, recognize the wisdom of putting more thought and more energy into the business, and make in these opening days of the fall a new effort to correct the faults of the past and make the most of the opportunities presented by the very favorable conditions which are prevailing. As a result their business will be prosecuted with vigor and enterprise, which will tend to give it an ample measure of success.

Incorporation of Labor Unions.

One effect of the steel strike has been to revive the subject of the incorporation of trades unions. It is reported, on what seems to be good authority, that the great industrial interests with which J. Pierpont Morgan is identified will in future enter into no negotiations with labor leaders unless the latter can show that they represent an incorporated union that can give satisfactory guarantees for the faithful performance of its contract obligations. The contention that, under present circumstances, labor unions, as unincorporated bodies, are lacking in responsibility, is borne out in the case of the Amalgamated Association. On the one side of the present struggle is a great industrial corporation, whose responsibility is unquestionable and who can be kept closely to their contracts, and on the other a body of men voluntarily acting together, without legal or financial basis of responsibility, and from whom no damages can be secured for breaches of contract. In other words, responsibility is opposed by irresponsibility. When the tremendous interests involved in the present contest are considered, it is but natural that those who, by reason of their corporate character, could not evade their contract obligations if they would, should demand

that the parties opposed to them be placed under similar responsibility. The incorporation of labor unions would, after all, give them a standing and dignity which would impart a new importance to the whole labor movement. And this view is held by many of the more thoughtful and broad minded among the wage earners, who see that the best interests of labor would be more satisfactorily served if their unions assumed the dignity of incorporation. The only apparent argument against such a course is one that would be unworthy of honest men—viz., that incorporation would deprive them of the liberty to violate their contract obligations.

Profit Sharing in England.

The plan of profit sharing is regarded by many as offering the best solution of the problem of the proper relation of capital to labor. It is argued that by giving to employees a direct pecuniary interest in the prosperity of the business with which they are connected, more and better work is secured, a community of interests is established, and a condition of contentment and good feeling is promoted which tends to obviate strikes and other labor troubles. While the system has been practiced with more or less success in this country and abroad by a few scattered concerns for some time past, it is only within the past few years that the movement has assumed any degree of importance. From a statement recently issued by the labor department of the British Board of Trade it appears that there are now seventy-three firms in the United Kingdom who have profit sharing schemes in operation. Of these full returns were received from sixty-six concerns. These returns show that an average bonus of 6.4 per cent. on wages paid was distributed in 1900. The results in the several cases, however, differed widely. Out of the sixty-six cases cited there were thirteen in which no bonus was given, while, on the other hand, there were two instances in which as much as 41 and 39 per cent. respectively was paid. In the large majority of instances the bonus varied between 5 and 7 per cent. The report mentions seven cases in which the profit sharing system was abandoned, the reasons for failure being mostly of one character—viz., dissatisfaction of the employees when there were no profits to be shared. This seems to point to the conclusion that profit sharing is regarded by many of the employees as a good thing when the business prospers and the bonus comes in regularly. But as soon as adversity overtakes the concern and the would-be profit sharers are asked to assist in making good the debit balance they have no further use for the plan. Nevertheless, it is undeniable that the system has worked well in a number of instances, and it may be that, after all, the profit sharing principle will form an important feature of industrial conditions in the future.

In common with the experience of other tradesmen, the plumbers throughout the country are being seriously affected by the steel strike, owing to the scarcity of some kinds of supplies. It is becoming increasingly difficult to get certain lines of goods, especially pipe and bathtubs. In consequence of this stringency a number of plumbing jobs contracted for some time since have had to be reconsidered and finished in a different manner, owing to the impossibility of obtaining the material laid down in the specifications. With the continuance of the strike these conditions will become still more pronounced, and both plumbers and their customers are liable to suffer great inconvenience from lack of material wherewith to complete jobs contemplated or already in hand. Moreover, the price of plumbing goods in the lines indicated is rapidly advancing, and jobs are likely to cost anywhere from 25 to 50 per cent. more than would have been the case six months ago. It is probable that a great deal of contemplated work will be laid over or abandoned altogether in consequence of the present scarcity and high prices of materials.

Oil from the Texas wells is being put to a new use in certain parts of that State, where the people are using it instead of water for laying dust on the highways. It is said that it packs the dust closely without making mud, and that on well graded roads it sheds the rain like the roof of a house. Half a barrel per mile is sprinkled each day, and it is used when hot. A similar system is being used in the park roadways in San Francisco with complete success.

Tests of Fire Proof Building Material.

An interesting series of tests of fire proof building material were held last week, under the auspices of the Building Department of New York City, in the yard of the Sanitary Fireproofing Company, East 106th street, near the East River, New York. Nine concerns participated. Each manufacturing concern was required to erect a one-story building, 10 feet 6 inches in width and 15 feet 6 inches in length, on a 3-foot brick foundation, the sides and roof to be of the fire proof material manufactured by the concern, with an iron grate resting upon the foundation and an iron or fire proof door in the front and center of the building. Flues and chimneys were also required. In each of the buildings a fire was to be started and kept going for one hour, showing during that time, or a part of it, a heat of not less than 1700 degrees F. At the lapse of the hour a stream of water at a pressure of 45 pounds was thrown into the building, against the sides, for a period of five minutes, in order to show what effect water would have upon the fire proof partitions after having stood the extreme heat.

The test was under the direction of the engineers of the building departments of the boroughs of Manhattan and Brooklyn. The first building to be tested was one erected by the White Fireproof Construction Company. The fire was started at 10 a.m., and, after going through all the requirements of the test, the building was found to have withstood them, with the exception of a little bulging on one side. The next test was that of the Norman Company building, with almost similar results to the first one. The third was the building of the Metropolitan Company, which was not quite as satisfactory as the others, part of the partition having come down. The fourth test was made on a building erected by H. W. Bell on the Bell system. The showing in this case was good, except a slight bulging of the front partition. The Union Fireproof Construction Company's building was next tested, and was found at the close to be in perfect condition, although the degree of heat at one time exceeded 1900 degrees. The Moslein system, consisting of metal laths plastered on both sides, was next tested on a building erected by Mr. Moslein. The metal laths withstood the heat, but the plaster was forced from the laths by the extreme heat. The Brinkman system, which uses material made of solid terra cotta blocks, was the subject of the succeeding test, and, excepting a slight bulging on one side, the building stood it satisfactorily. The Sanitary Fireproof Company building was also tested with equally satisfactory results. The interior of this building was partly plastered with the plaster of the Platt Company, and, while in other buildings the plaster was almost entirely destroyed, it seemed to be hardly affected by the fire. The ninth and last building to be tested was one erected by Jacob Schratweiser of Brooklyn. The building was constructed of the Schratweiser metal laths, with plaster in and outside the same, and a door of similar construction. The test of this building was satisfactory beyond expectation. It came out of the test absolutely unharmed.

Careful Buying for Plumbers and Metal Workers.

The inquiry of our correspondent whose letter was published in The Metal Worker of August 17 has awakened an unusual amount of interest in the trade. Some of the communications we have received in regard to the care with which plumbers and metal workers should buy their goods are given below. They admirably supplement the interesting collection of letters published in our last issue. It is generally recognized that this is an important subject, especially for the smaller houses, some of whose business methods are not as careful and up to date as they should be:

From a Well-known Ohio Merchant:

In a recent issue *The Metal Worker* printed a letter under the caption of "Careful Buying for Plumbers and Metal Workers" in which a statement was made and questions were asked, which the writer begs to enlarge on and reply to in a general way.

Your subscriber avers he is already doing a nice little business in this line, enough to lay by something each year, also stating that he has never given much attention to the buying of his goods, paying what the houses ask with whom he deals. He is indeed a fortunate man in many respects:

1. That he can buy in this way.
2. That he can sell on a basis of this class of buying.
3. That in buying and selling so his customers allow him to pay expenses, get his living, and still have something left to lay by or invest in an increased stock.

SOME PERTINENT QUESTIONS.

A few questions are perhaps pertinent as to how and why he is enabled to do this:

Is he constantly meeting competition?

Is he on a railroad, cross road or isolated?

Is he within the pale of the catalogue house?

These are asked only because of the fact that an affirmative answer would make it hard to understand how such clever work was possible, in the face of the fact that the most vigorous competition of the present day requires every business, be it large or small, to secure, by any and all legitimate means, the lowest possible prices in its buying. Then the question arises at the end of the year, "Will the business show any profits?"

SOME ANSWERS

I believe the indorsement of nearly every reader will follow these answers. To your correspondent's first question, "Will it pay me to try to get lower prices?" I answer emphatically *yes*.

It pays any merchant to better his position, to add to his income and increase his profit, to know that he is buying lower this time than at his last purchase, to keep up his interest in his business, to take advantage of markets, to secure additional discounts if possible, to face the man of whom he buys with a knowledge of the goods equal to his own, and to know beyond the question of a doubt that he is buying goods lower than, or at least as low as, his enterprising competitor. These are the pleasures of living and working and doing business for many merchants, and without the fight for them the snap and vim of the institution would be gone.

STANDING ADVANCED

By careful buying his standing with jobbers and manufacturers would be advanced very materially rather than the opposite. This is his second question, and will be answered as above by 99 out of every 100 men in business, be it plumbing and metal working, hardware or what not. A good buyer who is honest in his efforts is the admiration of every house and of every man who sells him goods, and his standing is not only bettered with them, but so, too, is his rating and his general basis of credit with the selling community.

It is all right to go on the principle that you can trust the man of whom you buy goods, to a certain length. The salesman will be patient with you and do for you all that he does for others under like circumstances, but will always have in him the hesitating price as to just what to charge you, and the continual wonder that you as a business man are not posted for yourself.

A SUGGESTION TO THE BUYER.

A suggestion that may be somewhat of a lesson is here offered in all good feeling: Take your slip or memorandum of purchase handed you by the salesman, of whom you have just purchased a certain invoice under the old way of buying, and go over it with him again, item by item, with your *Metal Worker* or *Iron Age* at hand, making comparisons and asking for extras where they show or where you think yourself entitled to them. When through sum up the result; see what you have made by the slight effort to find a close market; see if it does not amount to 5 or 7½ or 10 per cent. better all the way through. Then carry it into your year's purchases and find out what per cent. it might be for the entire twelvemonth of your business. You may have surprised the salesman, but if he is a business man you will have increased your standing with him rather than lowered it.

WILL IT PAY?

The question, Will it pay? has been answered pretty fully in what has gone before. In conclusion, it certainly will pay, from every standpoint, to give attention to that on which depends every dollar of your profit. It will pay to add the necessary man spoken of to your force. The time you give to getting right prices, to studying the markets, to knowing the ins and outs of your business, will be more than made up and his time paid for in the results you will secure. The first cost of help is a legitimate expense, which you are more than cutting off at the other end.

This is the day of competition, and competition must be met with competition. Every question as to your business and as to values must be replied to almost on the instant, and replied to intelligently. It is the posted man who secures the contracts; good buying is the lever of the business, good profits the result.

An Indiana Merchant Writes:

Noticing the article which appeared in the last issue of *The Metal Worker* under "Careful Buying for Plumbers and Metal Workers," we would think that if the party who "has a nice little business, and who was able to lay by a little every year," were to employ a young, energetic plumber, who would be intelligent enough and experienced enough to do his buying and send out letters of inquiry to different manufacturers and jobbers, in getting catalogues and price-lists from each of these and keeping them on file and of easy access, entertaining traveling men as they come in, whether desiring to buy goods or not, this party would save enough money on the purchases of his goods to pay the increased expense. Then this same party might be used in soliciting business and keeping the shop and store in good condition, thus increasing the volume of business. We feel certain that this would place the party in better standing with the jobbers and manufacturers, for jobbers and manufacturers

ADMIRE A CLOSE BUYER,

one who is well posted as to the markets and as to values, styles and kinds of articles. Every travelling salesman representing a jobber or manufacturer would rather come in contact with a purchaser who thoroughly understands his business than with one who does not.

The old adage, "Goods well bought are half sold," we find to be very true in many respects; for it is hard to sell an article even at cost if it has not been bought right, and, on the other hand, it is easy to sell an article at a profit if it has been bought right. We find that in watching closely the values of different articles and making purchases right we keep the jobber and the manufacturer posted, and in turn are helping them by being more careful in buying. We cannot see that it would bring one into disfavor with the manufacturer or jobber, for it benefits them as well as the purchaser. Moreover, these are times when it is policy to purchase as closely as possible, for there is no question but that

values have reached their limit and sooner or later must commence to decline. If goods are well bought now they will not show so great a loss if there be a decline in the market. This might not be of much benefit to a very small buyer, but we think that it can be applied to buyers of all sizes and classes.

A New Hampshire Dealer Says:

The subject of close buying is a very important one to me, for I must buy to meet close competition. As a rule I have chosen to deal with good firms who stand behind their goods, and at times I find my neighbors have bought to make a profit and so force me to sell at cost or keep my goods. To illustrate: I sent to a good house with whom I have done quite some business for some pruners. They came all right, but were billed $31.20 per dozen. I was astonished, and as I could not sell even one at the cost price I started to investigate the different pruners and their prices, and found a better and a stronger one for $9 per dozen, which I could sell easily at a fair profit.

If I buy well the battle is half fought, for I can show the people I am up to date in prices as well as in goods. I buy where I can buy the cheapest in price and not the cheapest grade of goods, for I cannot afford to buy inferior articles.

SUGGESTIVE WINDOW DRESSING.

BY INSPECTOR.

I was a good deal interested in the article by your clever contributor, "Inspiration," in *The Metal Worker* of August 10, which was distinctly inspirational. The scheme of a window dressing for midsummer, intended, like the Probasco fountain in Cincinnati, to exemplify one idea in what the electricians would call its polyphase development, is good. In the instance described it is worked out very cleverly, but the result as shown in the illustration and gathered from the description, is like coal tar. There is nothing disrespectful in this comparison. Coal tar is perhaps the most interesting material known to the adept in analysis and synthesis. It is a hydrocarbon, so rich in hydrogen and carbon atoms to the molecule, that if we can only remove those which are superfluous we have left every hydrocarbon in nature. It contains them all, I believe, just as the block of marble contains any and every form of which the sculptor can conceive. He has only to remove the superfluous stone encasing it to have left anything in the statuary line which it suits him to produce. This explains my meaning in saying that the window dressing of "Inspiration" reminds me of coal tar.

I am very glad to have as good a text for a sermon on window display as the illustration accompanying the article referred to gives me. To my mind it bears about the same relation to really suggestive window dressing that chaos bears to cosmos. By count I find somewhere between 150 and 200 articles shown. My uncertainty on this point is not due to the fact that I cannot count, but because in the case of piles of things a picture on the scale of that referred to leaves something to the imagination, and makes an estimate necessary. I have no doubt that as many as 300 articles were really employed for the purpose—which I venture to say was somewhere about 250 too many. The thought of the decorator was to suggest rest and refreshment under conditions especially attractive to one suffering from the discomforts of a blistering hot day. He failed to do it by the very common and not unnatural mistake of overdoing it. A thirsty man is not appealed to by a stack of water coolers 6 feet high, obviously out of commission and on show. It does not tend to make him think that a lemonade would taste good "just about now" to see a peck of lemons, an assortment of lemon squeezers, a 7-pound box of sugar and all other ingredients and kitchen implements in wholesale quantities, or at least in job lots. If ice cream is the subject of the intended hypnotic suggestion it is somewhat too formidably presented when the means employed include an assortment of freezers ranging from 16 to 1 (quarts). If the idea of fanning as an expedient for the conversion of B. T. units into dynamic force, so to speak, is to be imparted, one fan will do it better than a row of fans hung up like a decoration in a college girl's bedroom. But why particularize? The window dressing under discussion would be useful as establishing the fact that the dealer making it had a large and well assorted stock of merchandise in a certain line which he was desirous of selling. To announce this fact in the proper way makes for good; but I do not conceive that this was the object sought in this instance. If designed to inspire a desire in the mind of the casual passer-by to provide himself with the means of contributing to his hot weather comfort, it was in some degree a failure, since a clearer impression and a more pronounced desire would have resulted from a much simpler arrangement.

For example, if "Inspiration," having conceived the really bright and catchy idea of a "keep cool" window display, had restrained the misguided zeal of his clerks and resolved that he would express the idea in the simplest way possible, he would have suspended the hammock, with a pretty sofa pillow in one end and perhaps a lace scarf carelessly draped in and over it, as if left there for a moment by an absent girl. A table suitable for a porch or arbor would stand in front of it, with just enough furniture in the way of lemonade and fake ice cream to meet the maximum needs of two or perhaps four people. In one corner a water cooler, a bowl of cracked ice, two or three lemons, a claret bottle and whatever else lent itself to the color effect or to the idea sought to be conveyed, would be effective. A fan or two carelessly disposed, as if just laid down, would be useful. The merchandise display should be subordinated to the picture effect, and not one thing should be visible which did not contribute to the *coup d'œil*, or which would be out of place in the position in which one found it. Stiffness and formal order, with everything on one side exactly balanced by something like it on the other side, is fatal to a pleasing and natural effect. Care should be taken to avoid the pre-Raphaelite detail, which leaves nothing to the imagination. Especially should care be taken to avoid a confusion, which is barren of any other suggestion than that a fool buyer has been to the store and bought such a lot of stuff that Mary, the house maid, has not had time since the call of the delivery wagon to put things away, or indeed to find places for them.

"Inspiration's" window arrangement reminds me of a pleasing incident which happened some years ago under my own notice. A friend of mine with ideas of his own which were sometimes right, received a present of an oil painting of considerable merit from one whom he had placed under obligations. It was a landscape representing "the mill by a dam site," with a background of Swiss mountains and a pleasing foreground of the usual conventional character. My friend was greatly pleased, but the more he studied the picture the more it impressed him that it would be greatly improved by the introduction of something to give it human interest. It lacked life. So he took it to an alleged artist of his acquaintance, and asked him to put in a figure or two, human or animal, as he might find most convenient, just to liven it up a bit. This artist was probably one of the window dressing variety in whose school "Inspiration" has studied. He went to work on the picture and soon had it as lively as the most sociable critic could desire. In the immediate foreground he put little groups of people going to or coming from the mill. On the foaming tail race, presumably driving down hill at the rate of 40 miles an hour, was a fleet of stately swans and geese, with a few ducks added for variety. On a bridge crossing the race he put a couple of goats contesting the right of way. A dog on the bank was barking at the goats. On the roof of the mill he painted as many pigeons as it would hold, and filled the circumambient atmosphere with birds of various sizes and colors. In this condition he sent it home, and it has ever since been a source of great joy to the owner's friends. It serves at least to show that a good idea may be carried too far. My esteemed friend, "Inspiration," will no doubt catch my meaning without further elaboration.

Window decorators seem to be afraid of empty spaces. Their fundamental idea is to get into a window all it will hold. This is usually a mistake. Sometimes it works

very well, but only in connection with a fake of some sort. I remember ouce seeing what purported to be gold watches exhibited in a show window by the barrelful. I have also seen jewelry loaded on an ordinary railroad contractor's wheelbarrow for show window purposes. In these instances the quantity, suggestive of cheapness and a distribution on a large scale, was effective. In both instances, however, there was an indefinite multiplication of the unit, and the purpose was to convey the idea that the dealer had millions of them and was making a drive to unload. Even this, however, ceases to be a novelty and attracts only brief attention. The artistic window dresser avoids overcrowding. The eye is not caught and held by an exhibition of reserve stock. I remember seeing in Berlin a store which so fascinated me that I often went some distance out of my way to pass it. The show window was lined with clean white marble and in the middle of the single slab which made its floor was a beautiful dish on which rested in a bed of appropriate garniture a single article, usually a fish. It was so cool and clean and attractive that I was daily tempted to buy what I saw displayed. This is true in every line of business. The windows which attract attention and accomplish their purpose are not the ones which suggest a confused idea of a general assortment of commonplace merchandise, but those which present to the eye a picture easily comprehended at a glance and suggesting a want which cannot be supplied at any time and anywhere. My purpose in writing this is not controversial. "Inspiration" had a first-class idea, and one which can be worked out with advantage. The suggestion is the best hot weather scheme of window dressing for a hardware and house furnishing store I have seen; but he made a mistake of overdoing it, and if he will think the matter over I am sure he will agree with me.

THE PHILADELPHIA STOVE TRADE.

The fall season's trade among the manufacturers of stoves, heaters and ranges in Philadelphia and the Schuylkill Valley district has fairly begun. Although indications point to a late season, it is generally considered that, if the weather conditions are in any way favorable, a large volume of business will be done. Some manufacturers have been more or less handicapped in the production of some lines of their goods for the fall trade by inability to obtain promptly their supplies of raw materials. This has been particularly so in the case of sheet iron and steel, which, owing to the labor difficulties in the Middle West, have been very scarce.

Orders are reported to be as numerous as at this time last season and they are taken about as freely. It is noticeable, however, that deliveries in some cases have been extended to even 30 days later than last year's deliveries, and by parties who are usually said to want early deliveries. As a reason for this one manufacturer says that many of the retailers carried over from last season a larger stock than usual and they desire to move that stock before taking on the new goods.

The various foundries are now quite busy, and numerous general shipments are being made. The local retail trade, however, remains quiet, particularly as far as new goods are concerned, although a large amount of repair work is being done and a good fall season anticipated.

The Monarch Cinderella Heater.

The Pittsburgh Stove & Range Company of Pittsburgh, Pa., for whom W. D. Sager, Chicago, Ill., is Western sales agent, have issued a daintily printed, handsomely illustrated four-page folder, showing the Monarch Cinderella self feeding, base burning, double heater for hard coal. The design is such as to at once attract the eye, while the elaborate nickel enrichments tend, in connection with the black surfaces of the stove and the ample mica illumination, to give most brilliant effects when the stove is in operation. The company state that they constructed the Monarch Cinderella "with a view to please the ultra critical from an artistic as well as from a mechanical point of view." They express the belief that the verdict of the discriminating buyer will be that, mechanically, it is as carefully designed and constructed as any hard coal base burning double heater offered. Among the special points which deserve the consideration of the trade is the flue construction, this being such that the products of combustion are divided and pass down two flues, one in each corner, which distributes the heat to the extreme corners of the stove, and then over all parts of the bottom, making all the lower portion of the stove a direct heating surface. The heat then passes back through the center flue in the bottom and out through the large ascending flue to the smoke pipe. The hot air flues are large and effective, being located between the descending and ascending flues, and are heated by direct radiation from the sides of both flues. The cold air is taken from the floor, carried along under the base to the circulating flues, and delivered through the pipe collar at the top, from which point it may be conducted to rooms above. The grate is of the Ranson duplex type. The ash pit is large and deep. The fire pot is of good weight and easily removable through the front doors, and the magazine is provided with double covers, preventing the escape of gas and protecting the nickel on the swing cover. The gas cover is automatically raised by the swing cover. The Monarch Cinderella is made in three sizes, and has fire pots ranging in diameter from 12 inches in the smallest to 15 inches in the largest size.

Stove Repairs.

The catalogue of stove repairs just issued from the press by Mahood & Co. of 14 North Second street, Philadelphia, Pa., is a publication of 106 pages neatly printed on good paper, profusely illustrated and bound in colored paper covers. Among the opening pages is a list of the manufacturers named in the catalogue, for whose stoves Mahood & Co. can furnish repairs. It is pointed out that there are stoves made by these manufacturers under special names, different from those advertised in their respective catalogues, repairs of which can also be furnished by Mahood & Co. No attempt has been made to include all foundries in the United States, but mention is made of stoves manufactured largely in Eastern Pennsylvania. It should also be borne in mind that only manufacturers producing stoves at the present time are mentioned, as, in most cases, they own or control the patterns of foundries that have long since gone out of business.

Mahood & Co. state that they carry constantly on hand a large stock, and that their many years of careful study of the business enable them to satisfactorily handle all orders with which they may be entrusted. They can supply parts for all stoves named in the catalogue, and will also endeavor to accommodate their customers in obtaining repairs not named therein. The illustrations are of a character to facilitate the intelligent ordering of repairs for ranges, cook stoves, heaters and furnaces and by using the names there given the dealer will avoid the annoying mistakes which are constantly arising in this branch of the stove business. The names of stoves for which parts can be supplied are arranged in alphabetical order, so that reference to any particular stove is a comparatively easy matter. In addition to their line of stoves and stove repairs Mahood & Co. state that they sell stove dealers' supplies and give in the closing pages of the catalogue a list of these articles, prices of which will be quoted upon application.

THE WASHINGTON FOUNDRY COMPANY is the name of a concern which has just been incorporated at Spokane, Wash., for the purpose of manufacturing Cook Stoves, Ranges and small articles for household use, which heretofore have been purchased from Eastern manufacturers. The four trustees and incorporators of the company are: Samuel Katzenstein, Arthur Katzenstein, Thomas Caufield and Ellsworth Caufield. The erection of the necessary buildings will be begun at once and the machinery for manufacturing purposes will soon be on the way. The incorporators and trustees are well known in Spokane, where for some time past they have been engaged in business.

CHIMNEY AND FIRE PLACE CONSTRUCTION.

A subject which is always of interest to architects and builders, as well as house owners, is that indicated by the above title. A great deal has been said with regard to the construction of chimneys and fire places, but the subject seems to be by no means exhausted. In a recent issue of the *American Architect and Building News* the matter is discussed by W. W. Jackson, who, in part, says:

It is usual to think that a chimney has in itself ability to create a draft, but this is not true. Force is always needed. Usually it is heat; in some cases a fan or other machine gives the motion, or external air movements induce the currents. The chimney is merely a tube—the place in which the results of the energy are manifested, and without some external power there can be no draft.

When there is a current up or down an unused flue, it will be found that the air of the house is warmer or cooler than that outdoors, or the sun's rays may be warming the chimney especially.

The amount of current in the flue depends on the difference of density between the air within the flue and that outdoors. Just as the balance falls when one side is heavier than the other, so the lighter column of air rises from the pressure of denser and colder air. It is pushed up by the heavier volume.

The architect's work is to make easy the operation of the currents. There must be a convenient entrance for the rarefied air from the fire place to the flue, and this throat, as it is called, would best slope at an angle of 45 degrees.

The flue must be built in proportion to the size of the fire place, and must have as much volume as possible in proportion to its wall area.

The surface of the wall exerts an enormous amount of resistance, and especially when there are turns, bends or changes in size. Flue linings are desirable, not alone for their protection against fire, but because of their smooth surface and their uniform size. In fact, a rough brick flue 8 x 8 inches when lined becomes 6 x 6 inches, and although the cross section is not much more than half, the draft is almost equally as good.

A small, smooth flue is better than a flue that is larger, but irregular. In cutting a channel for water in new irrigation plants, the water course is left rough from economic motives. As the demand for an additional supply is realized, the rough rock work is filled in and a more rapid flow results. Air and smoke are similarly affected.

When flue linings are not used, see that the inner walls of the flue are smooth. Cut off the corners when corbeling or turns are necessary.

The shape of the flue must be such as to give a large area, with little friction. Thus a circular flue is better than a square one, and a square better than an oblong rectangle. A triangle is bad, for, with but half the area of a square, it has 85 per cent. of the wall surface. And, too, the corner spaces soon fill with soot, so as to reduce the original area rapidly. The flues of old-fashioned city houses, wide and shallow, are especially bad. Thus, 4 x 16 inches is no larger than 8 x 8 inches, yet it has 25 per cent. more wall surface, and 50 per cent. more exposure to the outside cold.

It is always best to have the chimneys in interior walls, as then more heat is radiated to rooms adjoining the flues and less is taken from the smoke. With an outside exposure, the cooling of the smoke seriously reduces the draft of the flue.

With an interior flue, of course, the more exposed the brick work the more heat will be received in the house from the chimney, which is not a good feature for a kitchen flue in summer.

The size of the flue in cross section should be one-twelfth, or possibly as small as one-fifteenth, the area of the fire place opening. Soft coal requires a proportion of one to ten.

Do not alter the size of the flue, unless it be to increase the area near the upper part, and have no cap or stone over the top.

The chimney must be as high as the highest point of the house, and if there are any high objects near, there will still be trouble when winds are blowing across the chimney toward those objects. In mountainous sections a fire place will inevitably smoke in certain winds, though, of course, an increase in the hight of the chimney will help.

Except that they increase the hight of the opening, chimney tops or cowls do little good. It is not so much the direction of the wind that is disastrous to the draft, but an increase in density of the atmosphere at the place of obstruction. This heavy atmosphere, seeking an outlet to relieve the pressure, goes down the flue and causes a "downward draft."

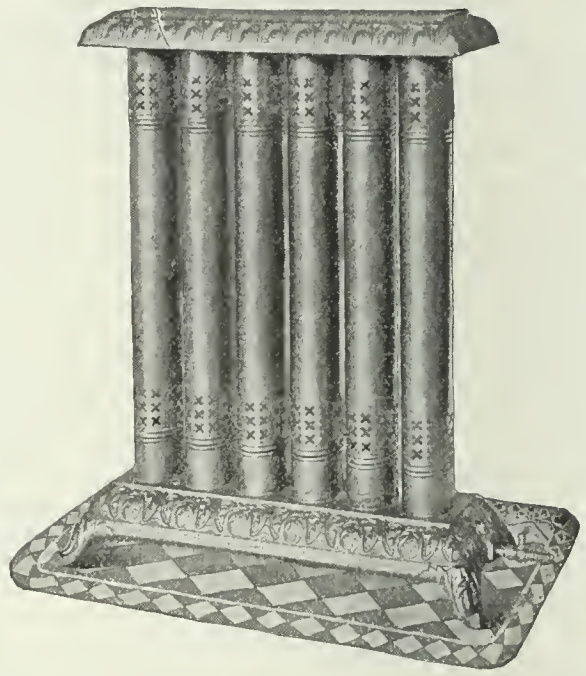
There is one other feature required for the free burning of a grate fire, and that is a source of air to supply or replace the draft. It is evident that the air passing up the chimney must be replaced. One cannot suck air out of a bottle. If the furnace is running it supplies a volume of air and materially helps the draft.

In the usual case, the air comes through cracks around doors and windows, and if there be no cracks the draft is checked. The well built house is more apt to have smoky fire places than the cheap contract house. To supply the draft, either use some of the grates that are constructed on this principle, or yourself arrange a similar system.

Here, too, the wind has an effect on the fire. The side of the house on which the wind blows is under more than normal pressure, and there is a natural exit up the flues of the rooms on the side. On the other hand, the lee side is subject to suction, and the fire places here have this to overcome, or smoke pulls down the flue and into the room.

The Acme Gas Radiator.

One of the new productions of the H. Adler Company, Pittsburgh, Pa., is the Acme gas radiator, shown herewith. It is made with four tubes 19 inches high,



The Acme Gas Radiator.

and also with four, six and eight tubes 30 inches high, adapting it to a wide range of heating requirements. The radiator is finished in bronze and black, with blue steel tubes. The top and base are heavy and are constructed of cast iron of suitable design. A brass pipe burner is provided, so arranged as not to blow out and with an instantaneous lighting device. It is said to be entirely free from odor while burning, and is adapted for burning all kinds of gas.

On a brown paper postal card, which the Independent Register Company, 154-158 Champlain street, Cleveland, Ohio, are sending through the mails, they call attention to the fact that the present is a good time for placing orders for Registers and Ventilators. Note is made that the concern are now manufacturing 75 sizes in square, round, convex and circular top Registers.

New Chimney Base.

We illustrate herewith a new chimney base, or furnace pipe connecting plate, which is being manufactured and placed on the market by Floyd, Wells & Co., Royersford, Pa. This plate consists of a cast iron frame with pipe hole, and is fitted with clean out door below, as shown in Fig. 1. This arrangement makes it very convenient to remove soot or any other matter which has accumulated at the base of the chimney without taking down the smoke pipe or interfering with the draft. The frame is walled into the chimney and is securely held by four projecting flanges, as shown in the cut, and a suitable cover plate is furnished for the base when the smoke pipe is not in use, Fig. 3. A reducing ring, Fig. 2, is used to change the size of the smoke pipe hole, from 8 inches to 7 inches in the No. 20 base, and from 10 inches to 9 inches in the No. 30 base. Copper rivets are used in the hinges of the door to avoid any rusting. We are advised that this new base has met with great favor among architects and builders, as well as with the general trade.

New Chimney Base.

Beaver Stoves and Furnaces.

The Beaver stoves and ranges are the subjects of folders which are being distributed among the trade by the Danville Stove & Mfg. Company of Danville, Pa. One of these is a 12-page folder, carrying illustrations of four varieties of ranges, two patterns of oak stoves and three styles of heaters, prominent among which is the Beaver Oak for coal and wood. Another four-page folder deals with the new Beaver hot air furnace, made in three sizes. Its special features include large, heavy sectional fire pot, with protruding flanges, making it a very durable construction. The grate is of the duplex pattern, geared with cogs and operated by a crank, a large crab radiator connecting the heavy steel radiators with the fire chamber. The company point out that the steel radiators are made of the best quality of heavy steel plate, rendering them very durable. They claim that the Beaver has few joints and is absolutely gas tight. A large dust flue connecting the ash pit with the exhaust flue tends to prevent all dust or ashes being carried through the registers.. This dust flue can be used when required to regulate the heat of the furnace, the same as the dust damper in a revertible flue stove.

The Walker & Pratt Mfg. Company, 31-35 Union street, Boston, Mass., have gotten out a very neat eight-page circular relating to the Charm Crawford Range, which they have recently placed upon the market, and which was recently illustrated in these columns. A little pamphlet of 16 pages sent out by the same company gives nine reasons why Crawford Ranges should be used in preference to other Stoves. A few testimonial letters are also presented showing the satisfaction which the Crawford has given to some of those who have demonstrated its merits in a practical way.

ODD PLATES.

J. B. McLean, Lacona, N. Y., was awarded first prize at the Agricultural Society's Fair, held last week at Sandy Creek, N. Y., for his exhibit of Andes Stoves and Ranges, made by the Phillips & Clark Stove Company of Geneva, N. Y.

The Pennsylvania Stove Company have purchased the plant of the Ellwood Bath Tub Works, at Ellwood City, Pa. The buildings will be remodeled and will be fitted up for the manufacture of Stoves and Ranges.

The Tuttle & Bailey Mfg. Company of New York, Chicago and Boston have just issued from the press a 42-page catalogue and price-list of Warm Air Registers, Ventilators, Screens, Borders and other goods which they manufacture in great variety. Attention is given to fine Brass and Bronze Metal Tablets, Grilles, Doors, &c., as well as heating and ventilating specialties, all from architects' designs. Owing to the entire change in list prices in this catalogue, the company request dealers to destroy all former lists. A discount sheet applying to the new standard price-list can be obtained from the company on application. An interesting feature of the closing pages of the catalogue is a series of directions, accompanied by sectional diagrams, showing how to set Floor Registers.

The S. Obermayer Company of Cincinnati, Ohio, are sending through the mail a postal card of commercial size calling attention to the fact that they were established in 1874, and offer the trade first-class material, prompt service, liberal terms and the lowest possible prices. They claim to be the largest Foundry Supply house in the world and can furnish Stove manufacturers with everything required in the foundry.

The Omaha Stove Repair Works, Omaha, Neb., have recently issued a circular announcing the arrival of their full stock of "burning out parts," for nearly all Stoves and Ranges and Furnaces made. They state that it is their purpose to keep in Omaha a full supply of such parts as wear out by constant use, and for Stoves for which dealers are sole agents. The Repairs are said to be made by the manufacturer and are guaranteed to fit. The company have issued a 500-page catalogue, with over 300 illustrations, and announce to dealers that if they have not received a copy one will be mailed on notice to that effect. Since their catalogue went to press the company state that Repairs for over 1000 new Stoves and Steel Ranges, as well as over 500 Furnaces, have been added.

The Buckwalter Stove Company of Royersford, Pa., are sending out a four-page folder calling attention to the Canopy Special Range, made in four sizes of ovens and in seven sizes of tops. It is referred to as combining all the best features of Range construction, great care having been exercised to render it perfect in every detail. The design of the Range is neat and attractive, and the ornamentation tasteful and in keeping

with the general shape and construction of the stove. The top is large, the ash pit is capacious, the fire box fixtures are heavy to insure durability, the water front is of large capacity, and the other features of a character to render the Range satisfactory in operation and pleasing to the eye.

We have received from the Michigan Stove Company a quantity of priuted matter, illustrating their method of assisting their agents in local advertising. Illustrations are given of striking forms of presenting the special merits of goods, having particular reference, of course, to the manner in which the good features of Garlaud Stoves and Rauges can be emphasized. The manner in which cuts can be used is shown very suggestively. Local reading notices are also framed in a manner enabling them to be used *verbatim*. These suggestions are undoubtedly of value to a busy merchant. The company have also sent us a copy of a letter received from an Illinois Stove dealer, who expresses his great satisfaction with the Garland line, which he says he was induced to handle four years ago. While occasionally he has been persuaded by representatives of other houses to purchase goods of them, on the ground that they were as good as the Garland and cheaper in price, he had been disappointed in every shipment. We have further received from the company a beautifully decorated tin whisk holder, which is being furnished to agents as an advertising device. This holder has the Garland trade-mark as the central feature of its decoration.

The Prizer-Painter Stove & Heater Company, Reading, Pa., with branch offices in Boston, New York, Detroit, Chicago and St. Paul, have found it necessary to provide increased facilities to meet the demand for their Henderson Water and Steam Heaters. An addition to the foundry, 50 x 150 feet, has just beeu finished, and more traveling cranes, another air compressor and other machinery installed.

A. J. Magoon & Son, 313 Weybosset street, Providence, R. I., announce that they are prepared to furnish promptly Repairs for Spicer and Barstow Stoves. They advise us that they use original patterns and can offer decided advantages in the way of prompt attention and low prices.

The annual meeting of the stockholders of the Pittsburgh Stove & Range Company was held in Pittsburgh on Monday, September 2. Charles H. Bradley resigned as president, and was succeeded by John D. Nicholson of George B. Hill & Co., stock brokers, of Pittsburgh. Lyman De Haven also resigned as director. No other changes were made among the officers. The report of operations of the company for the year was presented to the stockholders, and was regarded as quite satisfactory.

EFFECT OF STEEL STRIKE ON HARDWARE TRADE.

The close relationship between the hardware trade and the large producers of iron and steel is being strongly demonstrated by the strike now existing in mills controlled by the United States Steel Corporation. The products which are particularly affected by this strike are tin plate, light sheets and hoops. These products are, of course, sold in their ordinary form, as they come from the mills, by many hardware establishments. The effect on the hardware trade, however, is felt to a much greater extent through the difficulty experienced by manufacturers of hardware in obtaining a sufficient supply of material to meet their requirements in making up goods. In going over his stock a wholesale merchaut is confronted with the fact that only a small proportion of the goods which he handles does not contain in some form oue of these products affected by the strike. It may be said, in fact, that nine-tenths of the goods commonly denominated hardware cannot be completed without the use of some one of these materials. The restriction of the supply caused by the stoppage of these works is therefore a serious matter to the entire hardware trade. If relief does not soon come by the starting of the closed mills it threatens to greatly cut down the volume of business. Stocks of hardware were light when the strike began in these mills, as the market supply had been seriously cut down by the stoppage of the mills for so long a period last year. The manufacturers and jobbers have been unable to accumulate any stocks of any consequence since then, while the demand from consumers has been simply phenomenal. As soon as the strike occurred its effect was, therefore, felt through the entire trade. It is to be hoped that the indications which now point to the early termination of the strike are not misleading. A condition will then be ended which is rapidly becoming one of great embarrassment. The exhaustion of stocks, however, all aloug the line, from the manufacturer through the jobber to the dealer and consumer, will undoubtedly be of benefit to the trade for months to come in keeping up an active demand.

Changes in the Lalance & Grosjean Mfg. Company's Staff.

The remarkable growth in the busiuess of the Lalance & Grosjean Mfg. Company of New York City duriug the past year or two has necessitated the enlargement of their managing staff at the main offices, 19-21 Cliff street, New York City. With this end in view the company have removed James D. Fleming, manager of their Chicago branch, to the headquarters office in New York. Mr. Fleming, who has already entered upon the discharge of his new duties, has beeu the company's Chicago manager for six years, but has been connected with the company for a much longer period. The vacancy caused in the management of the Chicago office by Mr. Fleming's promotion has been filled by the appointment to that post of Palmer W. Holmes, who has been one of the most efficient salesmen of the house for a number of years past, covering the territory west of Chicago. The rules of civil service are applied here, as Mr. Holmes receives recognition for the fine record he has made as a salesman.

The Lalance & Grosjean Mfg. Company's immense factory at Woodhaven, L. I., N. Y., and their rolliug mills at Harrisburg, Pa., have both been kept running with full force through the summer, and the large volume of orders now on the books of the concern insures a steady continuance of operation at both plants throughout the coming winter. The business of the concern has made such remarkable strides of late that already the large additions to the enameled ware department at the Woodhaven factory, made early last year, seem to be becoming inadequate. The concern are now employing about 2100 hands at Woodhaven. They are erecting a large warehouse building on a piece of property adjoining their plant on the west side.

The National Metal Weather Strip Company of Allegheny, Pa., have been incorporated, with a capital stock of $10,000, by Samuel P. Bricker, James W. Gray, Francis J. Torrance and Nathaniel R. Wishton, all of Pittsburgh. The company have a well equipped plant on Isabella street, Allegheny.

The Saginaw Mfg. Company, Saginaw, Mich., are producing an improved Glass Washboard which they have just placed on the market. The manufacturers claim that the rubbing surface, being of glass, offers no chance for clothes to catch on the Board and be torn. The point is also made that the Board is practically indestructible and with reasonable care will last many years.

An interesting item of news transpired this week to the effect that all differences existing between the National Enameling & Stampiug Company and the Lalance & Grosjean Mfg. Company of New York City have been mutually adjusted to the satisfaction of all parties concerned. We are officially advised that all litigation between these important interests has been settled.

Timothy J. McHugh.

Timothy J. McHugh, superintendent of the Boston Brass Company of Boston, Mass., died of Bright's disease on August 21, at his residence in Cambridgeport, Mass., aged 52 years. Mr. McHugh learned his trade with the Walworth Mfg. Company and later was for a number of years superintendent of the old firm of Ward & Curley. He was also connected with Smith & Anthony for a period of ten years, until 1897, when he became superintendent of the Boston Brass Company. Mr. McHugh was the originator of the Ward ball cock, also the "B. B." ball cock, as well as a large number of other patented devices in the line of plumbing goods. He was well known to the plumbing trade of New England, and was regarded as one of the foremost brass workers of the country. He is survived by a widow and four children.

A Municipal Hot Water Heating Plant.

The city of Goshen, Ind., has for some years past been cited by the advocates of municipal ownership as a shining example of a community wherein the theory has been most successfully carried out. The town is in possession of flourishing municipal water works and an electric lighting plant. And it has now decided to go into the hot water heating business on a large scale. The central heating plant will be located, according to plans lately approved, at the water works, and it is figured out that the exhaust steam will supply the plant easily for several years. The cost of operating will be chiefly composed of a small addition to the pay roll of the water works plant, and the expense of the fuel which will be used in generating power to pump the hot water through the pipes and radiators. It is figured out that the enlarged revenues from the city plant, established in connection with the water works and electric light station, will be sufficient to pay off the bonded indebtedness within 15 years at the most. While there are many privately owned hot water and steam heating plants in the country supplying hot water to customers from a central heating station, this is the first case in which a municipality has taken up the matter. It is expected that the system will be in partial operation not later than the middle of November.

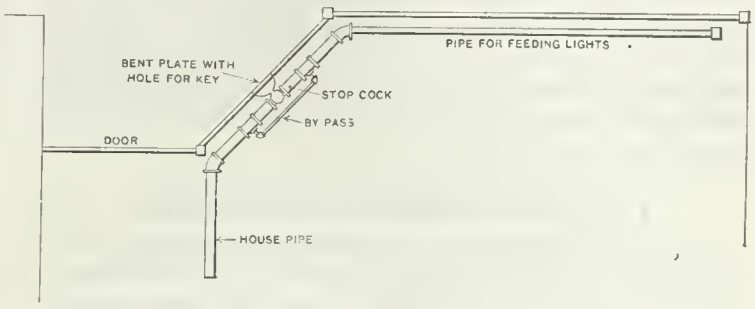
Pump and Well Supplies.

The Mark Mfg. Company, Evanston, Ill., whose mail address is Drawer C. C., Chicago, have just brought out their No. 7 catalogue of supplies for well drillers, which is much more extensive than any previous publication issued by this company. The contents of the catalogue comprise the full line of supplies needed by drillers, including wrought pipe, driving well points, tubular well cylinders, working barrels, pump cylinders, check valves, tubular well valves, rod couplings, drive shoes, earth augurs, pipe tools, &c. The company are now occupying a much larger plant at Evanston than formerly used by them in Chicago, and consequently have greatly improved facilities for meeting the requirements of their trade. The company have also issued their special catalogue A, which treats of the tools of which they make a specialty, comprising the Mark roller pipe cutter, the Mark improved three-wheel pipe cutter, the Mark improved one-wheel pipe cutter, open hinge malleable iron pipe vises, pipe benders, melting ladles, malleable iron oilers, the Baxter adjustable S wrench, Mark pattern heavy and light steel dogs, Mark and Snow pattern adjustable clamps, tinners' snips, &c.

THE BARNES MFG. COMPANY, Mansfield, Ohio, have just issued catalogue C, cloth bound, 192 pages, containing full lines of iron and brass Hand, Wind Mill and Power Pumps of their manufacture, together with kindred goods, such as Steam Fitters', Water Works and Well Drillers' Supplies, in which they deal. A little later on exact duplications of this book will be issued in the form of a pocket edition for handy reference.

GAS BY PASS FOR WINDOW LIGHTING.

At a recent meeting of the Ohio Gas Light Association, W. H. Anson, Columbus, Ohio, contributed to the "Wrinkle Department" the following suggestions and sketches for saving gas when lighting show windows and to permit the window lights to be controlled by a watchman or attendant without entering the store:



Gas By Pass for Window Lighting.—Fig. 1.—Plan, Showing Arrangement of Keyhole.

The supply pipe to the window lights is run so as to be accessible from the outside of the window and a stop cock is placed in the pipe with an extension stem running through to the outside with a square head to fit the night watchman's key. The opening is finished with an ornamental floor plate. This window lighting

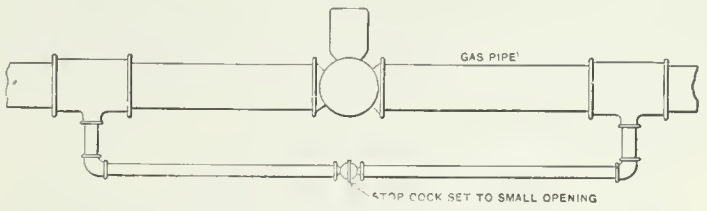


Fig. 2.—Compensating By Pass.

scheme enabled the house using it to obtain a great deal of patronage that would not otherwise have been secured. The by pass shown in Fig. 1 is a simple form and very old.

The by pass Fig. 2 is a modification of Fig. 1 to compensate for fluctuations in pressure. A Wilder or other suitable form of a volumetric governor burner is

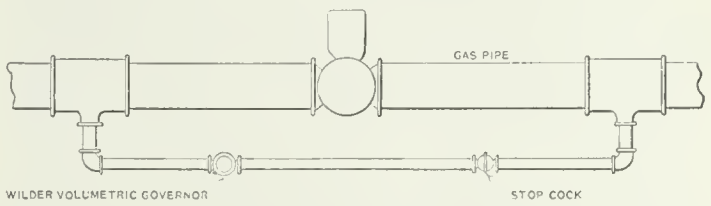

Fig. 3.—By Pass with Governor.

sometimes inserted on the small by pass pipe, as shown in Fig. 3, and at a time of lowest pressure is adjusted to pass just enough gas to maintain the pilot lights. This results in a less consumption, and prevents the objectionable glow of the lights at time of high pressure when they are not in use, and if adjustment is made at

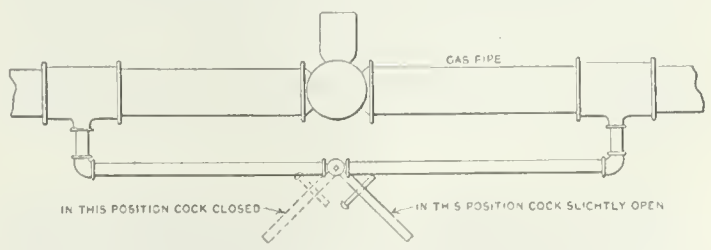

Fig. 4.—Method of Adjusting Stop Cock.

time of lowest pressure, they will always light up when the main cock is opened.

The by pass shown in Fig. 4 is made by using a stop cock which has a bent handle, which brings the arc of its movement on a vertical plane with the center of the pipe. A hole is tapped in the handle of the cock,

and a machine screw is inserted which strikes the pipe and fixes the extent to which the cock may be closed. A by pass of this sort may be so arranged that the gas may be entirely shut off by throwing the lever handle of the cock toward the head of the screw, and when thrown toward the point of the screw the cock will have sufficient opening to maintain a light in the lamps. The screw permits a very delicate adjustment.

Maintaining Welsbach lights with just sufficient gas to keep them lighted can be done satisfactorily under very unfavorable conditions if the matter is given proper attention. I know of no simple way, however, to get satisfactory results where lights are on different levels, except by piping all lights on different levels with separate pipes.

Fire at the Ahrens & Ott Works.

The sales department of the Standard Sanitary Mfg. Company has issued the following notice to the trade:

Owing to a fire in the small ware enameling department of our Ahrens & Ott Works, Louisville, Ky., on Friday, August 30, we wish to announce to our patrons that arrangements have been made to take care of this business promptly from our other factories, hence there will be no delay in the fulfillment of any orders which were in hand at Louisville. The bathtub department of the Louisville Works is unharmed, so that our customers need feel no fear that shipments will be detained in consequence of the fire. A large force of men is already at work repairing the damage, and the interruption will only be temporary, as new buildings will be erected immediately to replace those affected. To insure against delays prompt action has been taken to stimulate and increase the production and shipment of orders from our Standard and Dawes & Myler Works.

New York City Notes.

Considerable complaint is being made by plumbers about the methods of inspection lately adopted by the Department of Buildings, whereby there are only a few men detailed to make the final inspection, and it often happens that the other mechanics are pushing the plumbers and great delay and trouble are caused by having to wait until an inspector can get around for the final test.

* * *

Among the busy plumbers are: T. J. Cummins, who is doing a factory building for the Astor Estate on Eleventh avenue, between Fifty and Fifty-first streets; Huston & Corbett, at 51 West Twenty-first street, who are plumbing stores for Higgins & Seiter; Byrne & Murphy, who are at work on a mansion at 71-75 East Seventy-third street, for Jos. Pulitzer, editor of the New York *World*, and T. J. Byrne, with a stable for C. A. Peabody, at St. Nicholas avenue and 155th street; John Boyd is putting in sewers for the new Public Library, Fifth avenue, from Fortieth to Forty-second streets; M. J. O'Brien is hard at work on the Administration Building on Blackwell's Island; Chas. A. McMurray has a large apartment house on 128th street near Seventh avenue.

* * *

At the outing of Manhattan Branch last week the number of old members present was noticeable. Among them were John Renehan, James Nugent, John Yule, J. A. Rossman, James Howard, Wm. Kirchhof, P. J. Carpenter of Dobbs Ferry, Philip Brady, M. J. O'Brien, Cauldwell Fraser and many others. The supply trade was also well represented, about every house in the trade having one or two representatives present.

* * *

The Law Committee of Manhattan Branch are still active in the prosecution of unlicensed plumbers. They have several cases awaiting disposition in Special Sessions and many more to bring up when these are disposed of.

WORK is progressing rapidly on the new Tube mill being built by the Sharon Steel Company, at Sharon, Pa. The company will make Black and Galvanized Tubes up to 12 inches.

Heating and Plumbing Notes.

THE ALLEN FIRE DEPARTMENT SUPPLY COMPANY, Providence. R. I., have the contract for steam heating the new Woodbury Memorial Chapel in that city.

THE IRON CITY MFG. COMPANY of Pittsburgh, Pa., are making extensive improvements in their plant at Zelionople, Pa., which will provide an increase in capacity of about 50 per cent. The company have also under consideration an extensive addition to their present foundry which will enable them to double their output. They manufacture a general line of sanitary goods, but make a specialty of Enameled Bathtubs. On the completion of the additions they will be enabled to produce 75 Tubs a day.

THE plumbing shop of Rothmel & Merten of 705 Ninth avenue, New York City, was wrecked a few days ago through the explosion of a dynamite cartridge which had been placed in a vise by Charles Merten, the 19 year old brother of one of the partners. Young Merten was so seriously injured that his recovery is considered very doubtful. The shop was completely wrecked by the explosion.

THE new law creating a plumbers' examining board and requiring all plumbers to receive certificates of competency from the same, after examination, went into effect in Grand Rapids, Mich., on September 5. Every plumber in the city who has not been actively employed for a space of two years will be obliged, in order to continue at the business, to pass an examination before the board to secure a certificate of competency, and all new plumbers will have to do likewise before they can obtain a license to practice their trade. The examining board is composed of the city engineer, the city health officer, Plumbing Inspector Thompson, William Robertson and William H. Vander Veer.

A REPORT from Springfield, Ohio, says that plans are under consideration for the enlargement of the American Radiator Company's plant in that city, so as to double the present output of the works.

THE STANDARD SANITARY MFG. COMPANY'S Ahrens & Ott plant at Louisville, Ky., was visited by fire on September 1, causing a loss of about $56,000. The enameling shop, mixing mill and part of the warehouse were destroyed, together with some outbuildings and stock in freight cars. The loss is fully covered by insurance.

RIDGWAY & TYLER of Albany, N. Y., have installed a heating and ventilating system in the new Masonic Temple in that city at a cost of $3749.29.

N. S. STEWARD & Co. of Bangor, Maine, are erecting a new building for their plumbing business in that city.

THE contract for plumbing and heating the new church of the Belmont Avenue Baptist Society, Springfield, Mass., has been awarded to R. Wilson & Son of that city. The same firm are doing the plumbing in the new houses which Gragnier & Angers are building, at the corner of Fort Pleasant and Park avenues, Springfield.

FRANK B. LYON of Red Jacket, Mich., has submitted a proposition to the Town Council of that place offering to put in a general heating plant to supply the heat to any houses that desire it. He has asked that a stock company, formed with local capital, be granted a concession to lay pipes under the streets. The Town Council have the matter under advisement.

MACBRAYEN & MAHN of New Haven, Conn., are installing new sanitary plumbing in the Grand Opera House in that city.

P. GORMLEY, Philadelphia, Pa., will install heating plants at the priests' and sisters' houses of the Roman Catholic Church of St. Boniface, in that city, at a cost of $2200.

HENRY BEUTELSPACHER, Bridgeport, Conn., has the contract for plumbing the Waltersville School House.

J. H. WILLIAMS & Co. of Brooklyn, N. Y., have prepared a catalogue illustrating and describing their extremely wide line of Drop Forgings made of iron, steel, copper, bronze or aluminum. Their factory is equipped with the latest appliances for the accurate and econom-

ical production of Drop Forgings. This concern were the first to establish a uniform line of Drop Forge Wrenches, and to make them with the 15 degree angle which has since been generally adopted. They have a larger number of Wrenches than are made by any other manufacturer, and they range all sizes. Wrenches for every size bolt from ⅛ inch to 5 inches inclusive are kept in stock.

THE works of the Atlantic Tube Company, at Beaver Falls, Pa., which have been idle since June 15, and which were recently sold at receiver's sale, will probably start up this week. The Pittsburgh Seamless Tube Company, recently organized at Pittsburgh, will operate the plant, making Seamless Tubing. E. M. Wolf will be superintendent.

WELLINGTON & MILLER, Bridgeport, Conn., have a number of important steam fitting jobs in hand, including one on the new building which is being erected for the Fairfield Rubber Company, one for the Canfield Rubber Company and another for the Connecticut Railway & Lighting Company.

A LARGE illustrated card is being sent through the mails by the Smoke Prevention Company of America, 66 Broadway, New York City, in the interests of their Automatic Smoke Preventer and Fuel Economizer. The company state that the amount of coal that will be saved by their apparatus depends on the condition of the plant, and that they are prepared to make a careful study of any plant with the object of reporting what the saving will be, a saving, moreover, which they will guarantee.

JOHN B. MURPHY of the Crane Company, Chicago, has just returned from a two months' vacation tour abroad.

THE LUNKENHEIMER COMPANY, Cincinnati, Ohio, have installed in section 46 of the Machinery and Transportation Building at the Pan-American Exposition in Buffalo, N. Y., a very handsome exhibit of their productions in the line of Brass and Iron Steam Specialties and Engineering Appliances. F. L. Swanberg is in charge of the exhibit.

CHARLES D. MOORE of the plumbing firm of Sprague & Moore, Westfield, Mass., died of Bright's disease on August 26 at his home in that city, aged 43 years. Mr. Moore was born in Rainbow, Conn., and as a young man was employed in the Capitol Building at Hartford. Ten years ago he removed to Westfield, and shortly afterward formed with H. M. Sprague the plumbing firm of Sprague & Moore. He leaves a widow, but no children.

J. G. STACY, Seneca Falls, N. Y., has secured the contract for heating and ventilating the new High School Building at Waterloo, N. Y.

THE AMERICAN VALVE COMPANY, Coxsackie, N. Y., are about to erect a machine shop of brick and steel construction, 40 x 120 feet in area, on a lot which they have purchased adjoining their present plant.

THE MUELLER COMPANY, Milwaukee, Wis., have been awarded the contract for heating Gimbel Brothers' new nine-story store building and the large new machine shops now being erected for the Nordzberg Mfg. Company in that city.

LANGARD BROTHERS of Halifax, Nova Scotia, have just completed one of the largest hot water heating contracts ever done in that part of the country. It is a system for the Alexandria School, in which 65 radiators were installed and over 6000 running feet of pipe used. The whole work was done in twelve weeks.

JOHN P. RICHARDS & SONS, Philadelphia, are engaged in installing a low pressure steam heating system in St. Martin's Protestant Episcopal Church in that city.

RIDGWAY & TYLER, Albany, N. Y., have booked a contract for installing a new steam heating system for the church and parish hall of Grace Episcopal Church in that city.

JOHN A. FISH of Boston, Mass., who is well known to the heating trade, has associated himself with the Walker & Pratt Mfg. Company of that city, and will manage their wholesale Boiler department. Mr. Fish will be glad to meet his old friends at 31-35 Union street, Boston.

E. L. SMALL, New Britain, Conn., has taken the contract to furnish the steam heating apparatus for the passenger station in Harlem, New York City, which is being erected by the New York, New Haven & Hartford Railroad.

THE Common Council of Lansing, Mich., has granted to Platt Brothers of that city the right to lay mains in several streets for the purpose of conveying steam for heating from their power house to the State Capitol. The firm have secured the contract for heating the Michigan State House for the term of two years. They will also sell steam for heating other buildings along the streets on which the mains are laid, and propose extending the system throughout the city eventually.

THE J. J. HOWDEN COMPANY of Muskegon, Mich., have been awarded the contract for installing a heating system in the Hackley Manual Training School, at a cost of $15,000.

H. O. HOLT has sold his interest in the business of Holt & Clark, plumbers and tinsmiths, at Richford, Vt., to Henry Clark of Burlington, a brother of his partner. Mr. Holt's withdrawal from business is caused by sickness, which makes complete rest absolutely necessary.

THE *Herald* of Northampton, Mass., states that an effort is being made to organize a stock company in that city for the manufacture of Lead Pipe and other Plumbing Material.

THE journeymen plumbers of Washington, Pa., are on a strike for an advance in wages from $3.25 to $3.50, with a nine-hour day and eight hours on Saturday.

THE ILLINOIS MALLEABLE IRON COMPANY, 30 West Monroe street, Chicago, advise the trade that they have on hand a good stock of Black and Galvanized Pipe in sizes from ¼ to 2½ inches inclusive, and will accept orders for immediate shipment of the same. They add that new shipments are now on the way which will enable them to execute orders for larger sizes about September 10.

New Firms and Changes

THE G. F. BARD CORPORATION of Norwich, Conn., have been incorporated with a capital stock of $10,000 to deal in Iron, Steel, Copper and other Metals and Plumbing Supplies. The incorporators are: George F. Bard, G. Percival Bard and Charles T. Bard, all of Norwich.

THE CHICAGO STEAM GENERATOR COMPANY of Chicago, with a capital of $2500, have been incorporated by George H. McGlenn, Guy H. Powell and John S. Lemon for the manufacture of Steam Generators and other appliances.

THE JAMES BARRETT MFG. COMPANY is the title of a new concern who have started in the plumbing supply business at 48-50 Pearl street, Boston, Mass. The firm are composed, in addition to Mr. Barrett, of P. J. O'Brien, formerly Boston representative of Dalton & Ingersoll, who acts as president, and J. J. Deveraux, lately with the Webb Mfg. Company, who is secretary and treasurer. Mr. Barrett is known to the trade as the inventor of the Barrett sewer trap, the Barrett grease trap and other sanitary devices.

C. C. SOFLEISS has opened a plumbing establishment on South Broad street, Woodbury, N. J.

THE ALLEN STEAM TRAP & SEPARATOR COMPANY, St. Louis, Mo., have been incorporated with a capital of $100,000 by H. T. Smith, Dod G. Gibson, P. W. Dent, William H. Garland and others.

WILLIAMS & MARVIN MFG. COMPANY, Deep River, Conn., have incorporated to manufacture Turned Wooden Goods, Hardware and Plumbers' Supplies. At present their special line of work is Lignumvitæ and Maple Caster Wheels, Water Closet Pulls in the various woods, and variety Wood Turning in general.

THE CAROLINA PLUMBING & HEATING COMPANY of Charlotte, N. C., have been incorporated by W. H. Bigelow, S. A. Abbey and T. A. Conklin, Jr., with a capital stock of $25,000.

JAMES M. LEAHY has opened a plumbing shop on Main street, St. Albans, Vt.

TROUBLES WITH STEAM APPARATUS.

BY Z. W.

Although not a steam fitter nor engineer, I have had two troublesome experiences with steam apparatus which convince me that most of the troubles reported are not due so much to the appliances as to the misuse of them. My first experience came when I was a boy about 14 years old. I was employed in a factory where silk handkerchiefs were made. They were made in strips, and a part of the finishing process was to dry these strips, the method being to pass them over and under tin cylinders about 18 inches in diameter. These cylinders were supplied with steam, and revolved on an axle which was hollow so as to allow the steam to enter and keep the cylinders hot. While attending these cylinders and keeping the silk guided in the proper direction, under the superintendence of the engineer, one of the cylinders began to make an unusual noise that scared the engineer, who was afraid that the cylinders, being made of light tin, would burst. He shouted to me to bring a pail of water and pour it on one of the cylinders. This I did quickly, and was much surprised to see the thing cave in.

This accident occurred in the presence of a man of some general learning, and after the engineer had expressed surprise and wonder at the occurrence, this gentleman explained that the cold water put on the surface of the cylinder had caused the steam inside to condense and create a vacuum. Then the atmospheric pressure on the outside was sufficient to cause the cylinder to collapse. This instance was brought to my mind by meeting the same gentleman some time ago, although the accident occurred more than half a century ago.

This experience did not stop me from following a mechanical trade. In future years, when I had become a master hand at mechanics, I was employed at a plant where a large boiler was used to make steam for heating coils, as well as furnishing steam for the engine. One morning, when the ground was covered with snow about a foot deep, and the thermometer was dallying with the zero point, the caretaker of the factory came to my house and asked me to come to the factory at once, as he thought the boiler had burst, for the plant was being flooded. He had come for me because I lived nearer to the factory than any other person that he thought could help him out. It had been his custom to gratify his own ideas of safety by turning on a little more water in the boiler when he came to take charge of the plant at night. This he had forgotten to do until about twelve o'clock. He then turned the water on, and as there was a higher pressure in the street main than in the boiler, the boiler eventually flooded, and what could not find outlet through the safety valve was running out through the leaky valves and other openings, wherever steam was connected, as well as through the engine. Of course, it did not take me long to find that the boiler was flooded, and that the large quantity of water found could not come from the boiler, but must come from some other source. Seeking the supply cock I found it wide open. It was only necessary to shut this off to stop the further flooding. I then had the pleasant job of assisting the man to get the plant ready for use in the morning, as I knew that in several departments there were important orders to be completed as soon as possible.

These two experiences with steam plants occurred early in my life, and since that time numerous others of like character have come under my notice, although I have not been so closely identified with them.

THE STANDARD LIGHTING COMPANY, Cleveland, Ohio, are distributing two illustrated folders advertising their Improved Standard Smokeless Oil Heaters and their New Process Oil Heaters. The cuts show the construction of their smokeless device, whereby the wick cannot be raised enough to smoke. The Heater is also provided with an automatic extinguisher. This smokeless device is claimed to obviate much that has been found objectionable in other oil heaters.

Gurney Heater Mfg. Company's Traveling Men Meet.

The regular semiannual meeting of the traveling staff of the Gurney Heater Mfg. Company of Boston, Mass., recently held in that city, was a most enjoyable occasion for the traveling members of the company's force. After the meeting, at which the business of the concern for the past six months was reviewed with the officers of the company, an elegant dinner was served at the Parker House, followed by the adjournment of the entire party to the Boston Museum, where the antics of "The Governor's Son" were enjoyed. On the following morning the party took a trip to the foundry, where the boys were shown how their orders were taken care of. Subsequently the party were taken aboard Frank P. Gurney's beautiful 84-foot yacht "Lotis," where they were met by President Edward Gurney and his son, Holt Gurney. The party were taken to the beach at Hull, Mass., where a bounteous dinner awaited them at the Hotel Pemberton.

An enjoyable incident occurred after the table was cleared, when an elegant gold headed walking stick was presented to President Edward Gurney as a token of esteem from the members of his traveling staff. The presentation speech was made by C. W. Rugg. Mr. Gurney, in returning thanks for the present, remarked that he hoped "the present force would be with him for many years to come." The party were then taken back to Boston, where the men disembarked for the different trains which would carry them to their various scenes of action.

Those present were: President Edward Gurney, Vice-president and General Manager William T. Isaac, Secretary and Treasurer A. G. Merser, Frank P. Gurney and Holt Gurney, and the following members of the traveling staff: E. H. Dow, J. S. Matson, F. W. Ashcooft, E. L. Sollis, C. W. Rugg, F. D. Miller, F. Jones, George C. Boose and George E. Rinkenberger. The office was represented by P. W. Sharp, R. B. Williams and Ralph Marden.

Solders for Aluminum.

Notwithstanding that the subject of soldering aluminum has been treated in these columns many times during the past few years, requests for information on this head still continue to reach us with great frequency, showing that the matter is one which interests a large number of our readers. For their benefit is reprinted from the current issue of the *Journal* of the Franklin Institute of Philadelphia the following article, which covers the general subject of solders for aluminum:

The one great drawback to the application of aluminum for a large number of uses in the arts for which its lightness, color, resistance to oxidation and the ease with which it can be rolled, drawn into wire, pressed and spun up into various shapes, &c., is the difficulty of soldering joints. While some approximations have been made to a durable solder, among which that of Richards' should be named, it is nevertheless true that an entirely satisfactory solution of the problem has yet to be found.

The difficulties encountered are threefold: 1, the high heat conductivity of aluminum, which abstracts heat rapidly from the joint, and, 2, galvanic action between the aluminum and the metals of the solder by which the aluminum, the more electro-positive metal, is corroded and the joint destroyed.

It is comparatively easy to make an apparently perfect soldered joint of aluminum with various mixtures of zinc and tin, for the reason that when freshly made the adherence is all that could be desired. The effects of the galvanic corrosion may make themselves apparent after the work has been exposed to atmospheric influences for some months. The rapid heat conductivity of the metal can be practically obviated by applying artificial heat to the joint while the solder is being applied. It has been proposed to use aluminum in considerable proportions in the solder to avoid the effects of galvanic action, but while this artifice might accomplish the desired result, the joints cannot be made with the soldering iron, because of the high heat required to melt the alloy. A perfect solder for aluminum is still to be found.

The Sharon Sheet Steel Company.

The Sharon Sheet Steel Company of Sharon, Pa., will make application for a charter on September 23. The incorporators are: John Stevenson, Jr., Nevin McConnell, J. P. Whitla, all of Sharon; George W. Darr of New York and William Flinn of Pittsburgh. The Sharon Sheet Steel Company are an identified interest of the Sharou Steel Company, and propose to build a ten-mill plant at Sharon, for the manufacture of black and galvanized sheets. Nearly all the contracts have been placed, the buildings being given to the American Bridge Company and the mills to Mackintosh, Hemphill & Co. of Pittsburgh. A large galvanizing plant will also be erected, and it is the intention of the Sharon Sheet Steel Company to have one of the most complete sheet mills in the country. It is possible that after the first ten mills have been built the plant may be increased to 20 mills. Work of construction will be pushed as fast as possible, and the concern expect to be in the market as makers of sheets about the first of the year.

New Enameling Process.

William A. Dunlap of Pittsburgh, Pa., says the *American Manufacturer*, has an improved method for enameling metal surfaces free from ridges or irregularities and imparting a smooth, glossy, beautiful appearance of such thinness and elasticity that the contraction and expansion of the metal under changes of temperature, as in cooking utensils, will not crack or injure the enamel surfaces. It is characteristic of the methods heretofore employed for producing marbleized or variegated effects that at least one of the coats should be comparatively thick, so as to sink into the other coat. Owing to the difference in plasticity both coats of enamel would not spread uniformly, so that ridges and irregularities would be produced in the finished surface, and further, the difference in plasticity promotes coagulation of the coats during drying and burning. In the improved method the two coats, or, more properly speaking, the two mixtures which form the finish coat, have equal plasticity and specific gravity, so that they will mingle easily and uniformly over the metal surfaces.

In the practice of the invention the metal surfaces are prepared for enameling by the usual method of pickling, neutrallzing, and cleansing. Special care is taken in the preparation of the sheets to eliminate all traces of acid and to produce a smooth, bright surface, so that the ground or foundation coating may enter closely into the pores of the metal and adhere. A ground or foundation coating is applied in the usual manner—*i. e.*, by slushing or dipping—the surplus enamel or material being shaken off, so as to leave only a very light, thin, and almost transparent coat on the metal surface. This ground or foundation is formed by mixing the following ingredients in about the proportions stated: Quartz, 350 pounds; borax, 500 pounds; feldspar, 300 pounds; soda ash, 75 pounds; cryolite, 50 pounds; fluorspar, 40 pounds. To these is added a coloring material to produce the desired shade or color for the foundation or ground coat.

After the foundation or ground coat has been dried and burned in the usual manner a second or finish coat is applied in the same manner as the ground coat. This second or finish coat consists of the ingredients before stated and in about the same proportions, except that the fusing point of the mixture is lowered by the addition of suitable flux—such as borax, feldspar, soda ash, &c.—and a coloring matter or material is added, so that the mixture will have the same color or contrast in color from the foundation coat or ground. In preparing and applying this second coat care should be taken that it is sufficiently thin to run quickly over the surface and form only a thin coat thereon. While this finish coat is still fluid a second coat is applied by means of a brush or other appliances, so that it will be thrown or projected in drops or like spray with sufficient force to cause it to sink into and through the first coating until it comes in contact with the underlying foundation or ground coat. Then by shaking these two coats blend or run together, forming what is practically a single coat on the ground or foundation coat. The second coating is of the same character as the finish coat, except that it is a contrasting color. In preparing these second coats care should be taken that the two mixtures shall have practically the same fluidity and specific gravity, so that when the second coat is applied and sinks into and through the first coat it will not tend to push up or raise the first coat by displacing the latter, but will simply intermingle or flow into the latter, and the two coats will spread as a single coat evenly and smoothly over the metal surface. After the two coats have been blended or intermingled, as stated, they are dried and burned in the usual manner, producing a smooth, glossy surface entirely free from ridges or irregularities.

As both coats are very fluid, and therefore spread thinly over the metal surfaces, there is no liability of a coagulation of the coatings during the drying and burning, and further, as the enamel surface is very thin, it will accommodate itself to the expansion and contraction of the metal under changes of temperature without cracking or injury to the enamel.

The Pope Tin Plate Company.

The Pope Tin Plate Company, recently organized in Pittsburgh, with a capital of $500,000, will build a 12-mill tin plate plant at Steubenville, Ohio. Contracts for the buildings have been placed with a leading bridge interest, and the mills, shears and other equipment have also been placed. The main building containing the hot mills will be 380 feet long and 80 feet wide. Another building will be 360 x 40 feet, a third, 300 x 75 feet and a fourth, 180 x 25 feet. There will be smaller buildings, consisting of tin house, boiler house and warehouse. The plant will be so constructed that 12 more mills can be added, and these, if built, will be either tin or sheet mills. Work on the building of the plant will be pushed as fast as possible, and the concern hope to be making tin plate inside of six months. The offices of the company are at 421 Wood street, Pittsburgh, Charles E. Pope being president, and E. W. Mudge, secretary and treasurer.

Youngstown Iron & Steel Roofing Company.

The new four-mill sheet plant of the Youngstown Iron & Steel Roofing Company, which has been under erection for six months, is practically completed and the first sheets were rolled Wednesday morning, September 4. The plant is modern throughout, the equipment being the best that money could buy. John W. O. Pew, general manager, had invited a few guests to be present at the starting of the mill, and among these were L. E. Cochran, for many years identified with the iron industries of Youngstown, and who is president of the Youngstown Iron & Steel Roofing Company; T. B. Davey and W. W. Bonnell of the Finished Steel Company, J. T. Haslett and Andrew Milliken of the Youngstown Car & Mfg. Company, James P. Kennedy of the American Bridge Company, Robert A. Walker of *The Metal Worker*, and others. The mill started off very nicely, and when in complete running order will turn out from 1200 to 1500 tons of sheets per month.

We are advised by the J. M. & L. A. Osborn Company, Cleveland, Ohio, that C. C. Moore, who has ably managed the company's Columbus branch for the past two years, relinquished his position on September 1. E. C. Howard, who has covered the entire territory contiguous to Columbus for the past ten years in the interests of a local firm in the same line, has assumed charge of the Osborn Company's Columbus office. The company advise the trade that the establishment of a supply house at Columbus has proved a most satisfactory undertaking, and it will be their aim to carry more ample and complete stocks there than ever before, for the benefit of their customers in that district. Messrs. Osborn also advise us that W. M. Esterly has left their employ after 14 years' service, to engage in business for himself. The duties of the position formerly held by Mr. Esterly will be carried out by W. P. Abel.

SHEET METAL BOOKCASE.

BY H. M. S.

We have here represented a bookcase wholly made of sheet metal. It is so simple in its construction as to be easily made by any tinner of ordinary intelligence, as it requires in its manufacture only such tools and machines as are used in every well equipped tin shop. Such a bookcase possesses several advantages over the wooden case in common use. 1. It is fire proof. 2. It is vermin proof. 3. It is dust and dirt proof. 4. It is more convenient than the ordinary cumbersome wooden bookcase, and is easily moved from one place to another, without removing the books from the case, as it is made in sections of convenient size for handling, and very easily and readily adjusted to any position required. The sections are all made of a uniform size in length, hight and depth, so that in getting out a pattern for one we have a pattern for all.

There is another very important feature in this case. The glass doors with metal frames that protect the books in front are so constructed, with adjustable hinges at the sections above, as B C C B, &c., are back out of the way in the recess over the books.

In Fig. 2 is given a sectional view showing the general construction of the case. In section A B B A the door is shown closed. In all the sections above, *x y z*, is shown the position of the doors when open. F F F F F shows the sockets that hold the sections together on the back, which are still further shown in their relative positions in Fig. 3 by F′, &c.

Fig. 4 illustrates a section, half full size, of the end of one of the sections of the case. On the front, as shown by Q, there is formed a ½-inch round, which can be easily formed in a beading machine. U shows how the ends are connected with the back. G shows the position of the door, N the adjustable hinge, and M the ¼-inch steel rod upon which the door swings, extending across the front of the case and fastened at each end.

Fig. 5 shows a half full size section of case construction. G is a sectional view of the glass door with the metal frame construction and attachments, indicating how, when the door is swung up into a horizontal position and pushed back, the hinge slides back off the rod

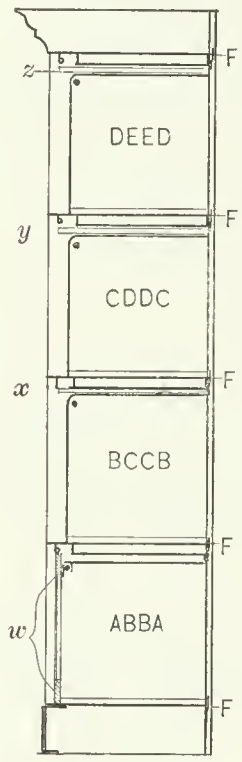

Fig. 2.

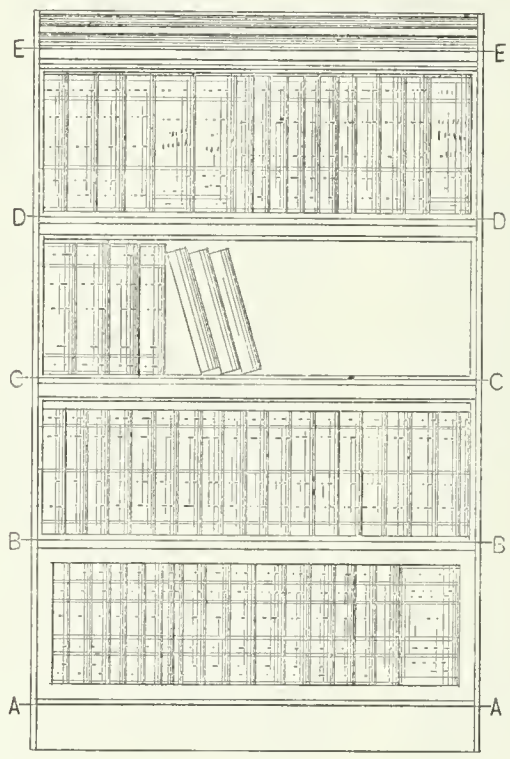

Fig. 1.

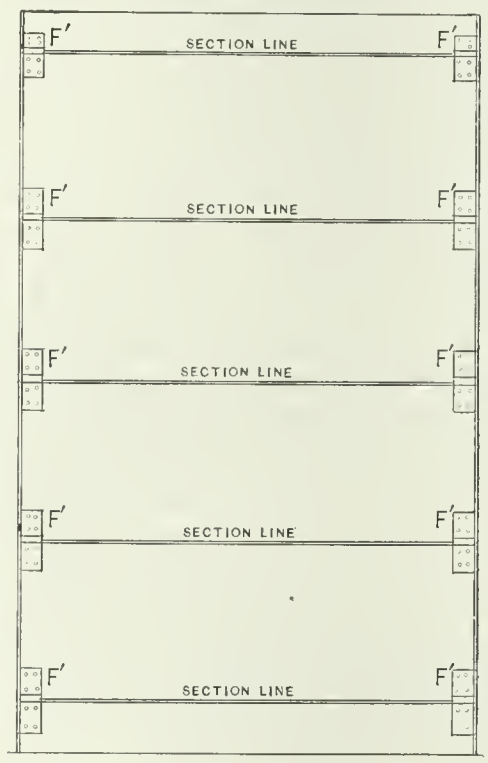

Fig. 3.

Sheet Metal Bookcase.—Elevations and Section.

top, that when opened from the bottom they will slide back into the recess over the top of the books. This arrangement removes the door out of the way while arranging or selecting books, a much more desirable way than the old method of having to use one hand in holding up the door while selecting books or arranging them.

Fig. 1 shows the bookcase with its various sections set up in place for use. A B B A, B C C B, &c., each represent a section of the case. Every section is interchangeable. In transferring the case from one place to another, if it is found to be too high, any one or more of the sections could be left out, the top cornice fitting equally well upon the top of any of the other sections, as they are all alike.

In taking apart the various members of the case it is not necessary to begin at the top. But, owing to the construction of the case, as hereinafter explained, it is necessary to know how to proceed. Lift the front of the cornice—above section line E E—about ½ inch. This draws the pins up out of the sockets at E E. Then draw it forward ½ inch. This relieves it from the sockets that hold it down on the back. It is now freed from its connection with the case and can be lifted off. In like manner proceed with the section above D D, and each of the other sections in their turn. It will be noted that the door on the first section A B B A is closed down over the front of the books, while the doors for all the and permits the door to move backward into the recess out of the way. As the door slides back in the channel at each end of the case, and these channels are made just wide enough to receive the thickness of the door to give it free action without binding, the hinge can never get out of place. Thus when the door is drawn out again the hinge always takes its position on the rod, and the door swings down into place. The dotted line shows the position of the door when the case is open. N′ indicates the position of the hinge on the door—one at each end—and M′ the ¼-inch rod on which it turns. N″ shows the position of the hinge when the door is open.

The bottom is made with a ¼-inch edge turned down on the two ends and back, with a ¼ x 1 inch iron bar in front. The top in front is constructed, as shown at G, with a 3-16 iron rod. O is a pinion, one at each end of each section, that fits down into the socket, as shown by Q in Fig. 4. This holds the front of the case at each sectional point firmly in position. F″ is a section one quarter full size of the lug attachment on the back and bottom of each section, as shown in Fig. 3, and Fig. 8 shows its face view. F‴ in Fig. 5 shows that portion of the lug attachment placed at the top of each section of the case, with a slot, as shown at C in Fig. 9. Into this slot the lug F″, fastened to the bottom of the next section above, slides and holds the two sections together, preventing the top section from tipping forward or side-

ways when the pinion O, as shown in Fig. 5, settles down into the socket Q, shown in Fig. 4.

A front view of the side, or one end, of a section of the case is given in Fig. 6; O′, the pinion at the bottom; L, a sectional view of the center of the end, and M″ the steel rod upon which the door swings. Fig. 10 is a section through *a b* in Fig. 6.

Fig. 7 is a sectional view of pinion construction that holds the sections together in front.

FLASHINGS.

It is reported that Messrs. Jackson and Seberlin of Cleveland, Ohio, are organizing a company for the purpose of manufacturing Bars and Sheets at Springfield, Ohio.

The American Bridge Company have been given contracts for the construction of buildings for the Jackson Iron & Tin Plate Company at Clarksburg, W. Va. Withrow & Co. of Charleston, W. Va., will put up the stacks, build the tinning houses and lay the foundations for the steel works.

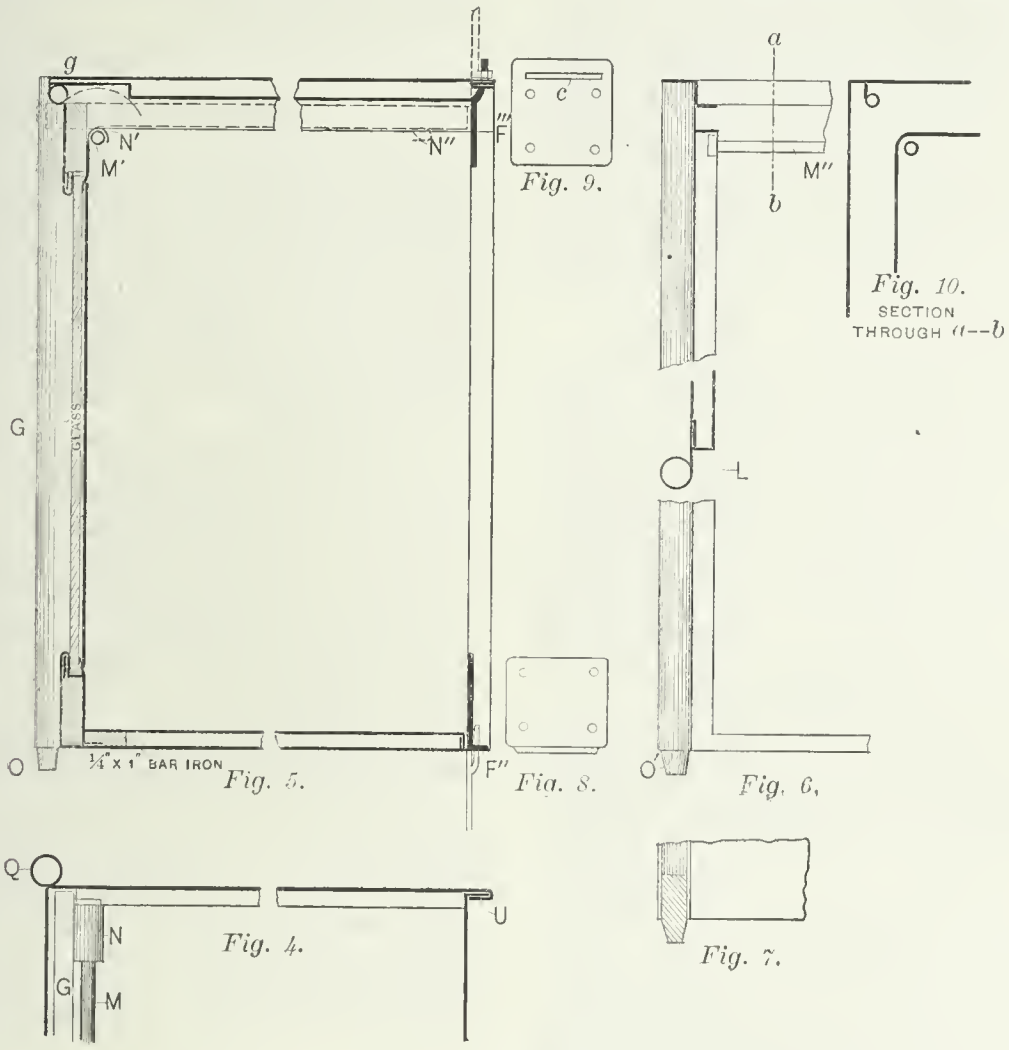
John F. Usher, formerly manager of the jobbing mills of the Ætna-Standard Iron & Steel Company, has been appointed manager of the new Laughlin Tin Plate mills, Wheeling, W. Va.

Berger Brothers, 231-237 Arch street, Philadelphia, Pa., are building a large warehouse adjoining their establishment and fronting on 100 to 106 Broad street. The addition was rendered necessary to meet the demands of their growing business. The building is of five stories and covers a space 55 x 75 feet. It is of substantial construction, calculated to support very heavy weights on each floor.

E. H. Friedrich of Holyoke, Mass., has in hand a large contract for the copper work and slate roofing on the tower of the Church of the Immaculate Conception at Easthampton, Mass. Mr. Friedrich also has a number of other important jobs on hand, including the metal work and slate roofing on the new Town Hall at Warren, Mass., and the Hospital for Consumptives at Rutland, Vt., and the skylights in connection with the new mills of the Farr Alpaca Company in Holyoke.

W. P. Devore of Cambridge, Ohio, advises us that the report that he, with A. W. Brown, would build a new Sheet mill at Cambridge, Ohio, is untrue. Messrs. Devore and Brown were connected with the Cambridge Iron & Steel Company, who were taken over by the American Sheet Steel Company.

We can state officially that the report that the Sharon Tin Plate Company would build ten more Tin mills, making a total of 30, or the same size of plant as the Shenango works of the American Tin Plate Company, at New Castle, is untrue. The Sharon Tin Plate Company have ten mills running, the output of which goes to the American Tin Plate Company under contract, and are also building ten more mills, which will be ready in October or November, at least. There is no intention, however, at the present time of adding any more mills other than those now under construction.



Sheet Metal Bookcase.—Details, Showing Construction.

A suit has been begun against the Pan-American Exposition Company for $9000 damages for alleged breach of contract by the firm of Merchant & Co. of Philadelphia, dealers in metal goods. The Exposition Company have joined issue, and the case will be tried at the September term of the Supreme Court. The complaint alleges that on October 18, 1899, the Exposition Company entered into a contract with Merchant & Co. to furnish all the metal tile used by the Exposition Company for roofing. The prices to be paid were at the rate of $6.95 a square, which means 100 square feet, for ordinary roofing and $12 a square for graduated tile for conical surfaces. It appears that the company were in doubt as to whether they would use that kind of roofing on all their buildings. They decided, however, to use it on the Service Building. It was agreed, says the complaint, that if, after the Service Building was finished, the company decided not to use the metal tiling on the other buildings, the company would pay Merchant & Co. at

the additional rate of $1 a square for that used on the Service Building. The metal tile was laid on the Service Building and paid for at the rates first mentioned. Then the company decided not to use it on the other buildings. Instead, the Philadelphia firm allege, the company entered into a contract with other builders for the same kind of tiling, ordering in all about 5000 squares, or 500,000 square feet. Merchant & Co. say they stood ready to fulfill their part of the contract, but the company refused to let them deliver the goods. By reason of the alleged breach of contract the Philadelphia firm state they have suffered $9000 damages, which they now seek to recover from the Exposition Company.

The Steel Strike.

One of the important developments in the strike in the past few weeks was the effort made by the Amalgamated Association to get the men at the Duquesne Steel Works to come out on strike and cripple the plant. A few men from the open hearth department joined the strikers, and they were immediately discharged, their places being filled by new men. The Duquesne Works started up again in full in all the departments, and has been running so right along and with no signs of trouble. The strikers, chagrined at the failure to bring the men out, have given up all attempts to make trouble at the Duquesne Steel Works, and will let that plant alone in the future.

Another important event was the failure of negotiations between the Conciliation Committee of the National Civic Federation and President Schwab of the United States Steel Corporation, which were held in New York City on Wednesday and Thursday. The final terms offered by Mr. Schwab were definitely refused by President Shaffer, although it is understood that he was counseled by President Gompers of the American Federation of Labor and President Mitchell of the United Mine Workers to accept them. As a consequence, orders were sent out by the Steel Corporation to start up all their mills at the earliest possible moment.

As far as the strike in the Pittsburgh district proper is concerned, it is about over. The only plant idle in that city on account of the strike is the Monongahela works of the American Tin Plate Company. The Pennsylvania Tube Works of the National Tube Company are idle, but steam is being raised and the plant will probably be started on Monday. Many of the men have intimated to the company that they made a mistake in going on a sympathy strike, having no real grievance, and they would like to return to work. For this reason the management anticipates no trouble in getting enough men to run the plant full when it is started. The Demmler Works of the American Tin Plate Company are ready to resume, and will be started up at once, the protection of the Sheriff of Allegheny County having been asked and secured. The Star Works in Pittsburgh, and the Crescent Works in Cleveland, of the American Tin Plate Company, are both said to be running nearly full now, and the company expect to have both plants in full running order in a few days.

The situation in the sheet mills shows steady gains for the American Sheet Steel Company. Injunctions have been issued against the strikers at the Reeves Works, at Canal Dover, and the men have been prohibited from doing picket duty. This will allow the company to operate the mill and at the same time assure protection to the men. Most of the equipment of the Chartiers Works has been removed to Leechburg, and it is probable several other plants will be taken to the Vandergrift district, but definite action has not yet been taken on this by the company.

The nonunion hoop mills of the American Steel Hoop Company are all running full now with the single exception of the Lindsay & McCutcheon Works in Allegheny. No effort has been made to start up the idle mills of this concern, and probably none will be until the men have shown a desire to return to work.

Every day that goes by shows more decisively that the strike, so far as the Amalgamated is concerned, is lost, and it would not be surprising if the men were ordered almost any day to return to work. J. D. Hickey, a former official of the Amalgamated, and an employee of the Federal Steel Company, gave out a statement in which he says that President Shaffer made a serious mistake in ordering the strike, and that the proposition of the United States Steel Corporation made at the Hotel Lincoln conference on July 13 should have been accepted. President Shaffer also admits now that this proposition should not have been rejected by the Amalgamated, and that he made a mistake in not accepting it. President Shaffer knows that his association is defeated, and that the only way he can, perhaps, save a part of his organization is to order the men back to work, and then accept from the United States Steel Corporation officials whatever terms they may see fit to offer, as regards recognizing the Amalgamated Association in the union mills that were signed for last year and that are still idle.

The Value of Acetylene.

During the months of April and May, 1899, says *Engineering* of London, some experiments were tried on the value of acetylene in a small light of the sixth order at one of the batteries guarding the entrance of the harbor at Genoa. These having proved very satisfactory, the Italian Minister of Marine suggested that the inventor of the apparatus should repeat them on a larger scale at the first-rate light of La Lanterna, the principal light of Genoa Harbor.

The test was to be carried out at the inventor's own expense, who had to guarantee better illumination than that given by the petroleum burners of the lighthouse, and a constant light without smoke or interruption for 15 hours at a time. The offer was accepted. An apparatus with four separate generators was installed, and for a period of 1000 hours, or 100 days of ten hours each, during October to January of last winter, the lighthouse was worked with the new gas without the slightest difficulty.

At a distance of 40 nautical miles from Genoa is the electrical light of Tino, and it was observed that while the Tino light could never be seen at Genoa, the Genoa acetylene light was visible at Tino. It is also stated that the annual cost of maintaining the electrical installation at Tino is 26,000 francs, whereas, from the experience gained at Genoa, it could evidently be supplied with acetylene for 1200 francs per year. Acetylene lights were simultaneously tried at Leghorn and Civita Vecchia, but no report as to their behavior has been published.

New Lighting Methods in England.

A London correspondent writes as follows: It is interesting to observe that the municipal and other authorities in England are still experimenting upon various forms of lighting for streets and vehicles. The "Phos" Acetylene Company have received a contract for lighting the London 'buses with acetylene lamps. These lamps are patented by this syndicate, and are proving very serviceable, not only for 'buses, but also for street lighting. Contracts have also been secured in various mining centers, while the same company are sending out workmen to Venezuela and Brazil to start the system over there, contracts having already been secured. Another scheme of lighting is that known as the "Kitson System," which was brought out in 1896 in the United States, and has now spread to the Continent, to Japan and China. The beauty of this or any similar system is that it is not necessary to obtain Parliamentary powers, such as are necessary for gas and electric lighting, as no mains or cables need be laid, nor need the roads be torn up. Judging by the amount of business that has been secured by both of these firms in this country during the past two years, it would seem that there is money in it.

THE LETTER BOX.

Inquiries in regard to practical questions of general interest are invited, in reply to which we shall be glad to receive suggestions and information from our readers.

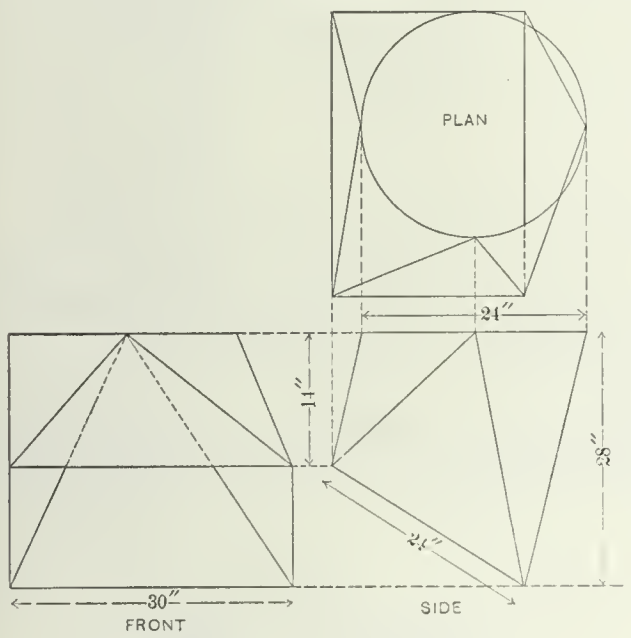
Correspondents are requested in all cases to give their names and addresses, which will not, however, be published or disclosed without their consent.

TRANSITION PIECE FROM RECTANGULAR TO ROUND.

From G. G. B., Anniston, Ala.—I inclose herewith a sketch showing the plan and elevations of a transition piece from square to round, with both ends mitered. Please show in the columns of *The Metal Worker* how to develop the patterns for the same.

Answer.—The accompanying illustration is a reproduction of our correspondent's diagram. By the expression "both ends mitered" we presume that he refers to the inclination of the two ends or bases to the sides, as shown in the side elevation. This feature, however, has no influence in the method of solving the problem, as the pattern must be obtained by triangulation. The first fact noted from an inspection of the front elevation and plan is that the center of the upper or round base is not on either center line of the lower or rectangular base, and since the design does not therefore consist of symmetrical halves, the pattern for the entire transition piece must be developed.

It is evident from the several oblique lines, which appear in the elevations and plan, that our correspondent



Transition Piece from Rectangular to Round.

has at least a general idea of triangulation, as these lines show that the surface consists of four plain triangular sides and the envelopes of a quarter each of four different scalene cones; the plain and the conical surfaces being alternated with each other in the order of the plan. The bases of the triangles forming the flat sides of the transition piece are the sides and ends of its rectangular base. The apexes of the triangles are at the four points marking the quarters of the upper base, at which points the four conical surfaces forming the corners of the transition piece meet. Subjects similar to this have been treated in our columns on former occasions, and since the principles governing the development are entirely covered in "The New Metal Worker Pattern Book," we will refer our correspondent and readers to certain problems in that work, merely adding a short description of the course to be pursued in developing the pattern.

Problem 182 shows a design embodying all the conditions of that above given except that it consists of symmetrical halves. Although the plane of its round end, as shown in Fig. 583, is at right angles to its sides, the rectangular base is oblique to them, thus producing cones of unequal altitudes at the corners. Problem 179 shows a similar design in which the two bases, although parallel with each other, are not on a common center line, but the method therein described is the more applicable to our correspondent's case.

The operation of developing the pattern consists, first, in dividing each of the four quarters of the upper base into any convenient number of equal spaces and drawing lines from the points of division in each to the adjacent angle of the lower base, as shown in Fig. 575; second, in the construction of four diagrams of triangles (one for each cone, as shown in Fig. 576), whose bases are equal to the several lines just drawn, the hypotenuses of the triangles when obtained being the correct distances across the pattern, between corresponding points of the plan, and finally the construction in consecutive order of the triangles composing the pattern in accordance with Geometrical Problem 36 on page 45, the sides of the same being the hypotenuses of the triangles in the four diagrams, while their bases are the spaces of the plan. The altitude of the triangles in the two diagrams corresponding with the cones of the upper or short side is 14 inches, while that of the two for the cones of the lower or longer side is 28 inches, as shown upon the side elevation. The outer sides of each of the two outer triangles of each quarter cone are, of course, one and the same with the adjacent sides of the large intermediate triangles, two of whose bases are 24 inches, the other two being 36 inches. The method of developing the pattern is shown in Fig. 577, the description of the same beginning near the bottom of page 332.

TROUBLE WITH DRYING OVENS.

From Wildel.—For the information of "D. & K.," who ask in *The Metal Worker* of August 31 for an improvement in the heating power of a drying oven, I would say, cover it with boiler covering, then erect a division in the middle of the oven, from the bottom below the false bottom to 6 inches from the top of the oven. Take your heating pipe straight up from the stove and set the middle of one division directly over the hot air pipe. Now, from the middle of the other division, conduct the air out of doors as quickly as possible. The air for supplying your oven with heat should be drawn out of doors and passed over a shallow box of quicklime, which should be renewed as fast as it becomes damp. This box should be 2 feet wide, and a space of 1 inch should be left between the top of the lime and the inside top of the box. Thus the air will be made dry before being heated and will be very effective in drying quality.

From A. J. W., Philadelphia.—I have noticed the reply in *The Metal Worker* of August 31 to your correspondents, "D. & K.," Lathrop, Mo., in regard to trouble with drying oven, and would say that the answer you give there is entirely correct and I can indorse it in every particular.

TRAPPED WITHOUT CONSIDERATION OF REGULATIONS.

From D. C. E., Hooksett, N. H.—I was called upon lately to fix a trap where a set of wash trays and sink are connected to a 5-inch round trap. The inlets from the trays and sink are of 1¼-inch pipe and connect with the trap within 2 inches of each other. The outlet is made of 1¼-inch pipe. The waste stack, which is 2 inches, does not run through the roof. When the tubs are emptied air is sucked in with the water through the sink pipe. The stack cannot be run through the roof or a back air pipe connected with the trap. If the outlet is enlarged to 2 inches or a partition is put in the trap to stop the rotary motion in it, will it stop the air entering and the noise that it makes?

Answer.—Such an arrangement as described would be a violation of the regulations of some cities which require a separate trap for each fixture. So long, however, as the trap seal is not broken the trap performs its duty, and that is the main thing. A back air pipe from the trap, through which air could enter, would stop the air passing down the sink pipe simply because it would be easier to enter the other way.

If the pipes from the trays and the sink are of any great length the decomposition of grease in them will cause unpleasant odors unless flushed frequently. If the inlet pipes are connected at the bottom of the trap and the outlet at the top, the water seal may be deep enough to reduce the trouble from the head thus gained. If this is not effective a back air pipe of the full size of the inlet pipe should be devised in some way. Enlarging the outlet pipe would increase the noise.

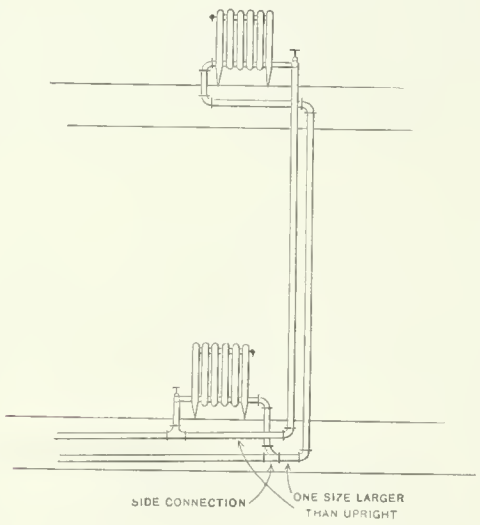
QUALITY OF WINDOW GLASS.

From C. F. F., Waukesha, Wis.—Please give some simple positive manner of testing window glass after it is set in the sash. The glass in question will average 26 x 26 inches in size. What I want to find out is whether it is A quality and double strength.

Answer.—The thickness can be determined by the use of a suitable pair of calipers. Single thick glass is 1-16 inch, while double thick is ⅛ inch thick. The quality is not so readily determined, but double thick glass is made in A A, A and B qualities, determined by the clearness and absence of curves, waves or marks. The quality known as A should be very clear, so as to give the impression when clean that the window is open. Of course, glass of the same grade from different factories varies in clearness and color, and it would be largely a matter of expert opinion as to the quality of the glass when once removed from the makers' package.

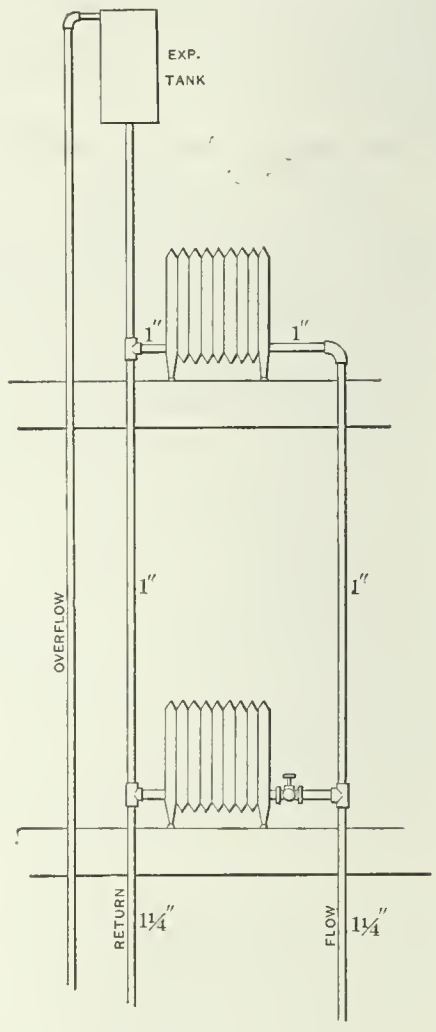
HOW SHOULD RADIATOR BE CONNECTED?

From W. M. Mackay, New York.—I notice in your issue of the 24th ult. a suggestion of method and sketch for connecting two hot water radiators on different floors. In my experience the sketch is faulty in three points. There is one more elbow than is necessary on the flow connection, increasing the friction and requiring a higher temperature to circulate. The second-floor radiator should be fed at the bottom instead of at the top. I find that it is no further from the bottom of a radiator to the top of it inside than it is on the outside. The connection at the bottom generally looks better, will always work as well and is not liable to become air locked by an accumulation of air in the top of the radiator, but will circulate as long as there is any water in the radiator. Then I find that when there is any trouble with radiators connected in this way the trouble usually occurs at the point where the two returns connect together, and I find that this trouble can be remedied by connecting the return of the first-floor radiator into the side instead of into the top of the horizontal return main. I inclose a sketch showing my method of connecting two radiators in the positions mentioned.



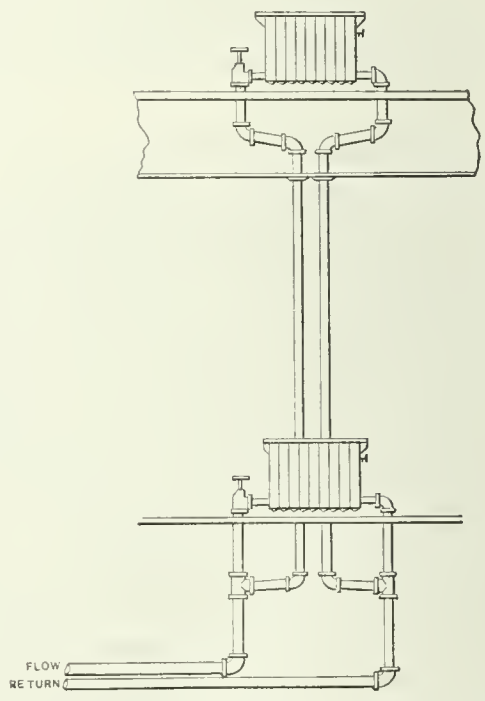
How Should Radiator Be Connected?—Plan of W. M. Mackay.

From J. H., Richmond, Maine.—Referring to the inquiry of "I. R.," in *The Metal Worker* of August 10, as to connection of radiators on lower and upper floors, I submit herewith a sketch showing a job which I have just done and which works all right. As will be seen, I put a valve in the flow end of the radiator in the lower room. In the upper room I put the expansion and did not place any valve, for the reason that if it should chance to be closed in cold weather it might get frozen. Perhaps this is not the right way to make the connections, but in this case it circulates readily.



How Should Radiator Be Connected?—Plan of "J. H."

From A. H. P., Columbia, Pa.—In answer to the inquiry of "I. R." of Norwich in *The Metal Worker*, August 10, I would advise him to try the plan shown in the accompanying sketch, which, I think, will work satisfactorily. There may be a still better way, and I would be pleased to have other readers of *The Metal Worker* express themselves on their methods.



How Should Radiator Be Connected?—Plan of "A. H. P."

TRADE REPORT.

MARKET SUMMARY.

Pig Tin is dull and about ¼c. lower.

Copper is quiet and unchanged.

Pig Lead shows no change in price or demand.

Spelter is quiet and unchanged.

Antimony shows no change.

Nickel is firm and unchanged.

Aluminum is in good demand at former prices.

Tin Plates are still scarce and high in price.

Black and Galvanized Sheets continue in heavy demand, and are scarce and high for spot delivery.

Russia Iron is about ½c. higher.

Old Metals are dull and without change.

Sheet Copper is in good demand and firm in price.

Sheet Zinc is unchanged and in moderate demand.

Pig Iron is moving in good volume, with prices showing more firmness.

Hardware continues in active demand, with prices well maintained.

Wrought Iron Pipe is still very scarce, with prices stiff all along the line.

Hot Air Registers, in new list, show an advance of 10 per cent. on larger sizes.

Solder has been marked down ½c. a lb.

Dripping Pans have been advanced on scarcity of material.

Poultry Netting is very firm; manufacturers have withdrawn quotations.

Heavy Hardware is advancing in some lines, owing to scarcity of material.

Tinned Iron Spoons are higher in price.

Sheet Asbestos has been reduced in price, on the strength of fuller supplies.

Tinware and Japanned Ware have been marked up 10 per cent.

Galvanized Ware has also undergone a slight advance.

Wire Nails are in good demand at unchanged prices.

Cut Nails have been advanced 5 per cent.

Linseed Oil has declined another 8c. a gallon.

Spirits Turpentine is firm, owing to higher stocks.

METAL MARKET.

NEW YORK, September 6, 1901.

Pig Tin.—Since our last report the premium on spot Tin has disappeared entirely, owing to heavy arrivals. Prices have declined about ¼c. per lb. Jobbers are now quoting small lots of Straits Pig at 26¾c. to 27c. per lb. The demand is of a very moderate character. The prolonged strike in the Tin Plate mills has cut off the heaviest channel of consumption, and stocks of Tin are constantly piling up. The monthly statistics published on September 1 are not very favorable. The shipments from the Straits are given as about 600 tons larger than for the same period last year. The total visible supply on August 31 is placed at 16,327 tons, which is just about the same amount recorded a year ago. Statistics for the United States, as compiled by the New York Metal Exchange, show the total visible stocks here and afloat as 5772 tons.

Copper.—This metal is in the same position in which it has been for many weeks. Prices are unchanged except that the shading which is being indulged in by some of the smaller interests is becoming more marked. Small lots of Lake Ingot continue to be quoted at 17¼c. to 17½c. per lb. and Casting Copper at 16¾c. to 17c. It is generally known in the trade that the stocks of consumers are very low; thus far no attempt has been made to lay in a sufficient amount of the metal to cover fall requirements. If consumers continue to buy from hand to mouth, as they have been doing for some months, a continuance of the present stagnation of trade may be looked for. If, however, the consumers come forward with good inquiries to cover their fall requirements it is expected that prices will immediately advance. The monthly statistics show very unfavorably. Exports for the month were only 6408 tons, and the total decrease this year is now 46,736 tons, as compared with last year. Arrivals were very heavy.

Sheet Copper.—A good amount of business is being done in Sheet Copper and prices remain firm on the basis of 21c. per lb., from store.

Pig Lead.—There is absolutely no change in the position of this metal. Business is rather quiet. The prices quoted by the American Smelting & Refining Company continue to rule, and small lots of American Pig are quoted at 4.60c. to 4.62½c. per lb. St. Louis reports indicate the movement in Pig Lead as being limited and prices as showing no change.

Spelter.—But little demand is reported for this metal, which is very quiet at unchanged prices. Good Western brands in small lots rule at 4.45c. to 4.50c. per lb. No change is noted in the St. Louis market.

Sheet Zinc.—The demand for Sheet Zinc is of moderate proportions and prices show no change. Jobbers quote 600-lb. cask lots at 6¾c. per lb and smaller quantities at 7c.

Antimony.—There has been no change in this market. Cookson's in small parcels is quoted at 10½c. to 11c. per lb., and Hallett's at 8½c. to 9¼c.

Nickel—Is unchanged, the price for small lots being quoted at 60c. to 65c. per lb.

Aluminum.—A good demand at prices which have ruled for a long time past is reported. No. 1 Ingot, guaranteed over 99 per cent. pure, is quoted in small lots at 37c. per lb., and in 100-lb. lots at 35c.

Tin Plates.—The situation in the Tin Plate market is without change. It is a waiting market on both sides. Only a very small business is being transacted, as supplies available for prompt delivery are exceedingly light and consumers are buying only as dictated by their absolute requirements. Throughout the entire strike the prices of the American Tin Plate Company have not changed; but this is not of much importance, as they have been entirely unable to make deliveries of the sizes for which there was the greatest demand. Nor even if the mills are again put in operation within a reasonable time will they be able to relieve the scarcity this side of 1902. In certain sizes of Coke Plates the scarcity amounts to an absolute famine, and users are forced to buy anything in the line of Bright Tin that they can lay their hands upon, and at such prices as would have seemed to be utterly exorbitant a few weeks ago. Supplies of Welsh Tin Plate are coming in with more or less regularity, but they do not relieve the situation to any appreciable extent. Nearly all the stock that is imported has been appropriated by the larger consumers and the exporting packing interests. Quotations are merely nominal, but jobbers in New York and corresponding points are asking at least $7 to $7.50 per box for American Bessemer Plates, IC, 14 x 20, and even higher figures are being paid in some instances. The Welsh market has not changed during the week.

Sheets.—The demand for both Black and Galvanized Sheets continues heavy and the supplies do not, so far, show any marked enlargement. However, the output of Sheets is said to be steadily increasing, both by the American Sheet Steel Company and the independent mills, several of the latter being just about ready to

start. Therefore the situation shows some indications of improvement within the next few weeks. Sheets for prompt delivery are practically impossible to secure and prices rule very high. Some of the mills are not quoting on early deliveries at all. Galvanized Sheets are scarcer than Black and prices for both varieties are firmly held. Jobbers in this vicinity quote No. 27 Black One Pass Cold Rolled Soft Steel Sheets at about 4.20c., and Galvanized Sheets at 60 per cent. off the list. Owing to the restriction in the production of American Patent Planished Sheets the demand for genuine Russia Iron has shown a decided increase. Jobbers who handle this material have advanced the price about ½c., quoting small lots at 10½c. to 11c. per lb.

Chicago advices are as follows: The situation in Sheets has not yet been relieved, the supply being far below the requirements of the trade. The independent mills are unable to make prompt deliveries, the mills of the American Sheet Steel Company are only supplying about 60 per cent. of their regular volume of business and jobbers' stocks in this city are very badly broken. Buyers who are compelled to make purchases find the market irregular, prices varying according to the size of a merchant's stock, the quantity wanted and other conditions. No. 27 Black Sheets are quoted at 4c. to 4.25c. and Galvanized Sheets at 65 to 60 off.

Old Metals.—The market is dull and without change in prices. Dealers are paying about the following for moderate sized lots, delivered at New York or corresponding points:

Heavy Copper	per lb. 14½c.
Light and Tinned Copper	per lb. 12½c.
Heavy Brass	per lb. 9 c.
Light Brass	per lb. 7½c.
Lead	per lb. 4 c.
Tea Lead	per lb. 3¼c.
Zinc	per lb. 2¾c.
No. 1 Pewter	per lb. 18½c.
No. 2 Pewter	per lb. 9 c.
Tin Plate Scrap, per gross ton	$8.00
Wrought Iron Scrap, per gross ton	$10.50 to 11.00
Heavy Cast Scrap, per gross ton	10.00 to 10.25
Stove Plate Scrap, per gross ton	6.75 to 7.00
Burnt Iron, per gross ton	5.00 to 5.50

THE PIG IRON MARKET.

New York.—Generally the market is quiet and steady. We quote: Lehigh, Schuylkill and Virginia Irons, No. 1, $16 to $17.50; No. 2 X, $14.75 to $15.75; No. 2 Plain, $14 to $14.50; Tennessee and Alabama brands, No. 1 Foundry, $14.50 to $15; No. 2 Foundry, $14.25 to $14.50; No. 1 Soft, $14.50 to $15; No. 2 Soft, $14.25 to $14.50; No. 3 Foundry, $13.25 to $13.50; No. 4 Foundry, $12.75 to $13.25.

Chicago.—Business is picking up materially although transactions the past week have not covered any large quantities; the demand for fair sized lots is steadily increasing. It is remarked as a good indication of improving business that mail orders which are sent in without solicitation are becoming much more frequent. Quite a number of contracts for Foundry Iron have been closed which run up to 1000 tons, and inquiries are being received for deliveries running well into next year. Local foundrymen are buying considerably more Iron as their working forces are increased. Prices are firm, but unchanged. We quote as follows:

Lake Superior Charcoal	$17.00 to $18.00
Local Coke Foundry, No. 1	15.50 to 16.00
Local Coke Foundry, No. 2	15.00 to 15.50
Local Coke Foundry, No. 3	14.50 to 15.00
Local Scotch, No. 1	15.75 to 16.25
Ohio Strong Softeners, No. 1	16.00 to 16.50
Southern Silvery, according to Silicon	14.90 to 15.15
Southern Coke, No. 1	14.90 to 15.15
Southern Coke, No. 2	14.15 to 14.40
Southern Coke, No. 3	13.65 to 13.90
Southern Coke, No. 1 Soft	14.65 to 14.90
Southern Coke, No. 2 Soft	14.15 to 14.40

Philadelphia.—The market is not as active as makers of Pig Iron would like to see it, but prices are fairly steady. Metal for prompt shipment in small quantities is rather badly wanted, tonnage of this class being in the aggregate quite considerable; but for long deliveries buyers are inclined to postpone action. There is an impression that they will be able to buy to better advantage a little later on, and they therefore make only a tardy response to requests for bids for winter shipment. At the moment Iron is by no means abundant, but the unsettled outlook has a tendency to check immediate operations. Prices are more variable than usual, but the range would be about as follows, for Philadelphia and nearby points: No. 1 X Foundry, $15.50 to $16; No. 2 X Foundry, $14.75 to $15.25; No. 2 Plain, $14.25 to $14.75.

CHICAGO REPORT.

Scrap Iron and Steel.—Mills are buying cheap stock, such as Borings and Turnings, but other materials are quiet. Dealers quote the following buying prices, in carload lots, Chicago delivery:

	Per net ton.
Country Wrought Scrap	$10.50 to $11.00
Machinery Cast	10.00 to ....
Malleable Cast	10.00 to 11.00
Stove Plate (free from burnt)	7.00 to 7.50
Burnt Iron and Grate Bars	5.50 to 6.00
Sheet Iron and Hoops	6.00 to 7.00
Plow Steel	9.00 to 10.00
Breaking Stock	9.00 to ....
No. 2, such as Shovels, Hoes, &c	.... to 7.00
Old Boilers—whole (Iron)	6.00 to 7.00
Old Boilers (Iron) cut in single Sheets and Rings	9.50 to 10.00
Old Gas Pipe and Boiler Tubes	10.50 to 11.00
Cast Borings	4.00 to 4.25
Turnings	9.00 to 9.50
Horseshoes	11.00 to 12.00

Old Metals.—The demand is fair but not strong enough to affect prices. Dealers quote buying prices on small lots as follows:

	Per lb.
Copper Wire and Heavy	14¾c.
Copper Bottoms	13¼c.
Copper Clips	14¼c.
Red Brass	13⅜c.
Yellow Brass	9½c.
Red Brass Borings	11½c.
Yellow Brass Borings	8¾c.
Light Brass	7¾c.
Pipe Lead	4 c.
Tea Lead	3½c.
Zinc	2⅜c.
Pewter, No. 1	19 c.
Pewter, No. 2	10 c.

Old Rubber.—No special movement is reported. Dealers' buying prices are as follows:

	Per net ton.	Per lb.
Garden Hose	$23.00	.....
Air Brake Hose	42.00	.....
Rubber Shoes	....	7¾c.
Rubber Car Springs	....	4¾c.
Inside Bicycle Tubing	....	21 c.
Outside Tubing	....	7¼c.

Rags.—Buying price of good country Mixed Rags, Chicago delivery, is 70c. to 80c. per 100 lbs., in any quantities.

Anthracite Coal.—Trade is light. Prices are now 10c. higher than last month, and up to the full rate of the spring months. The schedule for carload lots is as follows:

	Grate.	Egg and Stove.
Chicago	$5.75	$6.00
Milwaukee, Wis.	5.75	6.00
St. Louis	6.20	6.45
Kansas City, Mo.	8.25	8.50

Avery Stamping Company, Cleveland, Ohio, who manufacture a line of Seamless Steel Wares trademarked Never-Break, have one article patented in both the United States and foreign countries; this is the children's Safety Sled Skates, the words Sled Skates being also registered as well as the trade-mark. In the way of cooking utensils they make Kettles, Griddles and Spiders from sheet steel, the density of which is such that they are said not to absorb grease, these goods being used in the United States Army and Navy at home and abroad. Other goods similarly branded are Garden Trowels and Post Hole Diggers. The trade are advised by the company to place their orders for Sled Skates at once if they wish to avoid delays in delivering.

The Stover Mfg. Company, Freeport, Ill., manufacturers of Wind Mills, Feed Mills and Hardware Specialties, have been so driven with business this summer that they are now 60 days behind with their orders, although running their factory to its utmost limits. They are erecting a new plant on a property comprising 21½ acres in a desirable locality adjoining the city of Freeport, and propose to have the largest plant for the manufacture of Wind Mills and Feed Mills in any country in the world. This immense plant is now nearing completion and will soon begin to receive its equipment of electric, special and automatic machinery.

NOTES ON PRICES.

Wrought Iron Pipe.—There has been no change in the Wrought Iron Pipe market within the past week. Prices have remained as before and stocks have continued to dwindle. The local jobbing trade are adhering strictly to the prices named on August 23, and on the sizes which are reported to be out of the market it is said that a premium of 10 per cent. is being asked by those jobbers who are lucky enough to have any in stock. We were told this week of a Pittsburgh jobber who telephoned to a New York supply concern offering any quantity of any or all sizes of Pipe at a price which equaled an advance of 20 per cent. over the prices quoted by the mills before the strike was declared. If the Pittsburgh party has an unlimited supply of Pipe on hand to be put on the market from time to time at prices showing such handsome profits, it looks as though there was some sort of understanding between the powers that make and the powers that sell; that this is a splendid opportunity to make money at the expense of the unwary consumer who neglected to cover himself for his necessary supplies in the Pipe line. Aside from this incident the market shows a narrowing of jobbers' stocks and also a greater demand for all sizes of Pipe used in the heating business. It looks as though the trade will undergo some hardships before the Pipe situation improves.

Plumbers' Brass Goods.—No change has taken place in the market for Plumbers' Brass Goods. Prices remain very stiff and there is considerable scarcity. The meeting of the Plumbers' Brass Goods Manufacturers' Association, which was to have been held in Detroit, Mich., on Wednesday, September 4, was postponed to Friday, September 6. It is said by some in the trade that a further advance will be announced as a result of this meeting, but others of equal judgment greatly doubt if prices can reasonably be put any higher under present conditions.

Hot Air Registers.—The manufacturers of Hot Air Registers have adopted a new list on these goods, which went into effect September 2. It is understood that manufacturers representing about 80 per cent. of the production of Registers, Ventilators, &c., have agreed to uphold the new list. The new prices show an advance amounting to about 10 per cent. in some of the larger sizes of Registers, while others are unchanged. It is really a readjustment rather than a general advance in prices. The demand for Registers this season has been unusually large and many of the manufacturers are hard pushed to fill the orders on their books, especially as the supply of raw material has been restricted by the Steel strike. It is thought likely that the present prices will be firmly maintained. The Tuttle & Bailey Mfg. Company of New York City have issued the following discount sheet applying to the new and revised price-list of 1901:

Black Japanned Registers, Ventilators, Faces and Borders	70 %
White Japanned Registers, Ventilators and Faces (separate list)	70 %
Bronzed Finishes in imitation of Gold, Silver, Copper and Bronze	70 %
Nickel Plated	70 %
Electroplated in Brass, Bronze, Copper, Oxidized Silver	70 %
Wall Frames	70 %
Heavy Round Gratings	70 %
Ventilating Plates	70 %
Cold Air Inlets	70 %
White Porcelain Enamel Registers, Ventilators, Faces and Borders	60 %
Solid Brass and Bronze Metal Registers, Ventilators, Faces and Borders	50 %
Dampers	50 %
Soapstone Borders	30 %
Slate Borders	50 %
Specialties.

The terms are 2 per cent. cash 10 days, and 60 days net. No freight is allowed. On all orders of less than $10 the cost of boxing will be added.

Asbestos Sheets.—The scarcity of Canadian Asbestos, which forced up prices to a remarkably high point toward the close of last year, has been relieved to a considerable extent by the opening of some of the older mines, and supplies have now become more liberal. In consequence, the prices of goods manufactured from the lower grades of Asbestos have receded. Asbestos Sheets, such as are used by the Furnace trade and the manufacturers of Steel Ranges, have declined in price from 33 1-3 to 40 per cent. since the beginning of the year. The goods made from higher grades of Asbestos, however, are unchanged in price, not having been advanced in the same ratio as those manufactured from the poorer grades. Sheet Asbestos is classed among the goods manufactured from the lower grades.

Tinware, &c.—Japanned and Pressed Tinware and Tinware Trimmings have been advanced in price 10 per cent. by the Metal Ware Association. Galvanized Ware has also undergone a further slight advance. The scarcity of Sheets and Tin Plates, which is becoming more pronounced as the strike at the mills is prolonged, is causing serious inconvenience to the makers of Tin and Sheet Metal Goods, who are unable to secure further supplies of material and, in consequence, are forced to decline new orders while unable to fill those already on their books. Those concerns that are in the happy position of making their own Sheets and Tin Plates are rushed with orders, which keeps their factories running at full pressure. The outlook favors still higher prices for all Sheet Metal Ware.

Peerless Enameled Ware.—The Lalance & Grosjean Mfg. Company, 19-21 Cliff street, New York, have issued, under date of September 2, 1901, a revised price-list of their Peerless Enameled Ware. The present list covers the entire line of goods manufactured by the concern in this class of Ware. It is not illustrated, but is intended as an addition to their regular Enameled Ware catalogue, where all the goods in this line are fully illustrated. The prices given on this Peerless Enameled Ware are subject to a discount of 70 per cent.

Dripping Pans.—The scarcity of material is affecting this line and manufacturers have generally made a moderate advance in prices.

Poultry Netting.—Manufacturers are showing a good deal of conservatism about accepting orders for next season, and some quotations which have recently been current have been withdrawn. The tone of the market is firm.

Heavy Hardware.—In several lines the difficulty of obtaining material is causing the withdrawal of prices or the announcement of higher ones. In this way Screw and Strap Hinges have recently been advanced about ¼ cent per pound. Manufacturers of Vises and many other goods are also troubled in the same way. Goods into the manufacture of which Sheet Steel enters are generally scarce and show a marked tendency toward higher prices.

Tinned Iron Spoons.—This is a line which feels the effect of the existing market conditions. The manufacturers find it difficult to secure sufficient raw material to meet their requirements. The tone of the market is decidedly firm and prices are quotably higher. Some manufacturers who have not made actual advances have withdrawn prices.

Solder.—The decline in Pig Tin values has caused a softening in the price of Solder. Jobbers are now quoting Half and Half, guaranteed, in small lots, at 18½ to 19 cents per pound, and No. 1 at 15 to 17 cents, according to quality.

Wire Nails.—The Wire Nail demand keeps up in good volume, with no signs of decreasing. Concessions in prices are reported at some competitive points, especially in the South, although the general tone of the market is

firm. Quotations are as follows, f.o.b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in 10 days:

To jobbers in carload lots.....$2.30
To jobbers in less than carload lots..... 2.35
To retailers in carload lots..... 2.40
To retailers in less than carload lots..... 2.50

Small lots from store, New York, are quoted at $2.60 per keg.

Cut Nails.—At the monthly meeting of the Cut Nail Association an advance of 5 cents per keg was made in the price of Cut Nails, to take effect at once. It is hard to determine just what the prevailing opinion at the meeting was regarding this action. Some members of the association, it is reported, favored an advance of 25 cents per keg, while others are of the opinion that the measure was a half hearted one, as some mills have not notified their customers of any change in price. The trade express different opinions regarding the advance. Some consider it ill advised, because the association had not been successful in maintaining former prices. The advance should have been at least 10 cents per keg, according to the views of others. Some of the mills have little Plate from which to cut Nails, and they believe that if the strike was to end at once it would take 60 days to get even a fairly good start. Difficulty is experienced in getting prompt shipments of Cut Nails, while 8 and 10 penny Nails are particularly scarce. Quotations are as follows, f.o.b. Pittsburgh, plus the actual freight to point of destination, terms 60 days, or 2 per cent. off in 10 days:

Carload lots.....$2.05
Less than carload lots.....$2.10 to 2.15

The advance of 5 cents per keg came as a surprise to the New York trade. It is too early to state just what effect the advance will have upon this market. Up to the present time some jobbers have made no change in prices from store, while others have announced an advance of 5 cents per keg in their prices. New York quotations for carload and less than carload lots are based on the above prices, to which Pittsburgh freight is added:

Carload lots on dock.....$2.18
Less than carload lots on dock.....2.23
From store.....$2.18 to 2.30

Plain Wire.—There is no falling off in the former heavy demand for Plain Wire, so that mills are unable to accumulate stock. Quotations are as follows, f.o.b. Pittsburgh, terms 60 days, or 2 per cent. off for cash in 10 days:

Base sizes.	Plain.	Galv.
To jobbers in carload lots	$2.25	$2.65
To jobbers in less than carload lots	2.30	2.70
To retailers in carload lots	2.35	2.75
To retailers in less than carload lots	2.45	2.85

The above prices are for the base numbers, 6 to 9. The other numbers of Plain and Galvanized Wire take the usual advances.

6 to 9	Base					$0.40	extra.
10	$0.05	advance	over	base		.40	"
11	.10	"	"	"		.40	"
12 and 12½	.15	"	"	"		.40	"
13	.25	"	"	"		.40	"
14	.35	"	"	"		.40	"
15	.45	"	"	"		.75	"
16	.55	"	"	"		.75	"
17	.70	"	"	"		1.00	"
18	.85	"	"	"		1.00	"

For even weight bundles, 50 pounds and over, 5 cents per bundle advance on above.

In New York small lots of Plain Wire from store are quoted at 2.60 cents and Galvanized at 3 cents.

White Lead.—The further decline in the price of Linseed Oil last week keeps the Lead market in an unsettled condition. Business in White Lead in Oil is confined largely to prompt shipments to supply nearby requirements. It is anticipated that a large amount of painting will be done, especially next month. Quotations are unchanged, as follows: In lots of 500 pounds or over, 6½ cents; in lots of less than 500 pounds, 7 cents per pound.

Linseed Oil.—Another reduction in the price of Linseed Oil of 3 cents was made August 29, followed by a further cut of 5 cents on September 5, making a total decline of 32 cents in four weeks. Well informed Oil men believe that Oil will go still lower than the present quotations, owing to the prospects of a large Flax Seed crop, and to the competition outside the combination. Quotations are as follows: City Raw, in lots of five barrels or more, 50 cents per gallon; in lots of less than five barrels, 51 cents. Boiled Oil is 2 cents per gallon advance on Raw.

Spirits Turpentine.—The Turpentine market is characterized by a firmer tone, owing to lighter stocks and export buying at the South. Local demand is confined, for the most part, to small lots. Quotations are as follows, according to quantity: Southerns, 36½ to 37 cents; machine made barrels, 37 to 37½ cents per gallon.

Old Rubber.—A fair amount of business is being done. Prices are well maintained. Dealers in New York and vicinity are paying about the following figures:

Car Springs, ton lots, per lb..... 4¾c.
Rubber Shoes, less than carloads, per lb..... 7¾c.
White Wringer Rolls, per lb..... 7¾c.
Inside Bicycle Tubing, per lb.....21 c.
Outside Tubing, per lb..... 7¼c.

Sheet Metal Pattern Drafting

A course of instruction by mail for tinsmiths, coppersmiths, plumbers, sheet-iron workers, furnace workers, skylight makers and others that will enable a student to "strike out" working patterns for all kinds of sheet metal work. This is what a student says:

His Course More Than Paid for Itself

I am a tinsmith, and consider your course in Sheet Metal Pattern Drafting one of the best investments I ever made. Before I was half through I had realized from it more than the money paid for the whole course.

M. E. TOBIAS,
63 Fifteenth St.,
Wheeling, W. Va.

We teach by mail **Mechanical, Steam, Electrical, Civil and Mining Engineering; Shop and Foundry Practice; Mechanical Drawing; Architecture; Plumbing; Sheet Metal Work; Telephony; Telegraphy; Chemistry; Ornamental Design; Lettering; Book-keeping; Stenography; Teaching; English Branches; Locomotive Running; Electrotherapeutics.** When writing state subject in which interested.

taught by mail.

INTERNATIONAL CORRESPONDENCE SCHOOLS,
Box 968, Scranton, Pa.
Established 1891. Capital $1,500,000.

GALVANIZING AND TINNING. A practical treatise on coating with tin and zinc, with a special chapter on tinning gray iron castings. By W. T. Flanders. 93 pages, 4 illustrations, 5½ x 8 inches, cloth $2.00

BLUE PRINT MAKING. Embracing directions for constructing the printing frame, preparing the paper and making prints of various kinds. A pamphlet, 28 pages..... 25c.

ELBOW CHART FOR TIN AND SHEET IRON WORKERS, giving the rise of the miter line of Elbows of any diameter and number of pieces and for any angle..... 50c.

PRESS WORKING OF METALS. A treatise upon the principles and practice of shaping Metals in dies by the action of presses, together with a description of the construction of such implements in their various forms, and of the materials worked in them. By Oberlin Smith. Illustrated with 433 engravings, 276 pages, 8vo, cloth $3.00

COTTAGE DESIGNS, with constructive details. $600 to $1500. A series of 25 designs of cottages, most of which have already been erected, ranging in cost from $600 to $1500, together with the details of interior and exterior finish, all drawn to convenient scale, and accompanied by brief specifications. Size 9 x 13 inches (oblong)..... $1.00

MODERN AMERICAN DWELLINGS, with constructive details. $2000 to $5000. This is the largest and most complete volume of perspective views, floor plans, elevations and constructive details of modern homes now published. Size 9 x 13 inches (oblong), handsomely bound in cloth $2.00

HARDWARE STORE BUSINESS METHODS. Compiled and edited by R. R. Williams. 200 pages, 5½ x 8 inches, cloth bound..... $1.00

A SYSTEM OF EASY LETTERING. A rapid method to become a good letterer with a little practice. By J. H. Cromwell. Oblong, cloth. 50c.

ARCHITECTURAL DRAWING FOR MECHANICS. By I. P. Hicks. A thorough treatise on Architectural Drawing for Building Mechanics, showing the learner how to proceed, step by step, in every detail of the work. 94 pages, illustrated throughout, oblong, cloth. $1.00

Dietz No. 3 Street Lamp.

Has a shining record of 20 years.

Fitted with our new style fount which holds oil sufficient to burn 24 hours.

It is offered as an effectual antidote for "outer darkness," and is thoroughly well made on scientific principles.

It will give more light than most gas-burning lamps, do it cheaper, and do it with kerosene (coal oil).

It can be lit and regulated from the outside; can continue in business despite the wind; can and will give you entire satisfaction by reason of its absolute reliability.

A few of these lamps around the grounds of a summer resort add materially to its attractiveness.

One lamp kept burning all night in the yard, is a better protection against thieves than a watch dog.

It takes a No. 3 Globe and 1½-in. wick.

We also make this lamp with a bail to hang, and without the socket, and call it: "Dietz No. 3 Globe Tubular Hanging Lamp"

We have a special catalogue for this lamp; also one showing our very full and complete line of out-door lamps and lanterns, and are glad to send them (free) to those interested.

AMERICAN SEAL PAINT
MANUFACTURED BY
E PLURIBUS UNUM
TROY PAINT AND COLOR WORKS, TROY, N.Y.
ANY DESIRED SHADE OR COLOR
TRADE MARK

A UNIVERSAL REMEDY FOR LEAKY ROOFS.

The valuable qualities of a good roofing cement are firm adhesiveness and elasticity. These qualities the ***American Seal Builders' and Roofers' Elastic Oil Cement*** possesses. It will adhere firmly to Slate or Metal and will not crack or crumble. It is especially recommended for repairing leaks around chimneys, dormer windows, skylights, scuttles, firewalls and any place that requires fixing on a roof, either Slate, Tin or Shingle.

This Cement will answer to repair ***a roof*** when ***Solder*** cannot be used.

PUT UP In Barrels, about 800 lbs. In Tubs, about 112 lbs. In 25 and 50 lb. Pails. In 5, 10 and 15 lb. Pails.

TINSMITHS' HELPER *and* PATTERN BOOK

WITH USEFUL RULES, DIAGRAMS and TABLES
= By H. K. VosBurgh =
NEW AND IMPROVED EDITION

A USEFUL handbook for tinners and other mechanics, treating simple problems in pattern cutting, such as are of daily occurrence in the shop.

An elementary manual for the young tinsmiths; A handy reference for all sheet metal workers.

120 Pages
53 Figures

An Invaluable Pocket Companion **$1.00**

Section 1 ~ Pages 1-66
Diagrams and Patterns

Demonstrates in a simple way, and by means of illustrations and descriptive text, about 50 examples of sheet metal pattern work, such as the method of cutting can breasts, flared tinware, scale scoops, oval boiler covers, lips for measures, elbow patterns, &c.

Section 2 ~ Pages 69-88
Epitome of Mensuration

Compiled with regard to the requirements of the tinner, describing how to find the area of a circle, the circumference of a circle, the contents of a sphere, a cylinder, a cone, and other information relating to the work of a tinsmith.

Section 3 ~ Pages 89-120
Tables, Rules, Recipes

Gives tables of the weights of sheet metals, including the weight of black sheet iron, sheet lead, and galvanized iron sheets with their dimensions; the weight of lead pipe per foot; the weights of tin plates, sheet copper and sheet zinc. Several pages are devoted to tables giving the areas and circumferences of circles, the capacity of cans, the number of barrels in cisterns and tanks, sizes of tinware in form of frustum of a cone, &c., and practical receipts, including mixtures for solders of different kinds, soldering fluxes, and various cements.

AN OBJECT LESSON IN ARTISTIC METAL CEILINGS.

HERE is an object lesson in artistic metal ceilings.

It shows one of the combinations of our Gothic design.

Gothic Style, of course, isn't as elaborate as some other styles we manufacture, but it has a dignity and forceful simplicity which makes it a favorite for church decoration and similar work.

First of all you will notice it combines the effect of plastic relief with the mechanical excellence and staying qualities of sheet metal.

Secondly, it is in harmony of style throughout,—every part of the ceiling is Gothic in design, and it is perfectly appropriate for the interior decoration of churches and other buildings or rooms finished or furnished in Gothic Style.

The cut shows only one of the ***many*** effective combinations that can be made from our Gothic ceiling material. If you are not familiar with our line, you have probably no idea of the almost countless number of different combinations we can furnish in this style,—not to speak of an equally large number of combinations from each of the other ten distinct decorative styles for which we have patterns.

It will pay you to know what we can do for you. Our list of ceiling patterns is the most complete and most artistic upon the market. Write for Catalogue and full particulars.

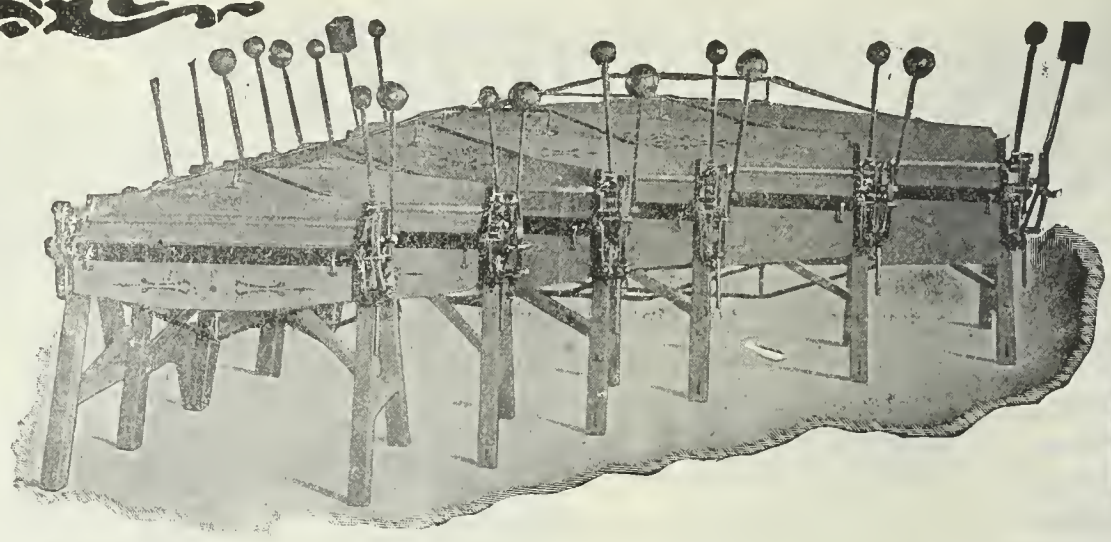
The Double Truss Cornice Brake.



All the different sizes in which we make this practical machine are herewith illustrated.

This brake costs only half as much as an all-metal brake.

It is made mostly of hard maple.

It is just as good as an iron brake in every respect—much better in some ways. Beside the 50% saved in the first cost our brake will save money in its use.

It is light and can easily be carried from place to place.

By shaping or bending work in the building where it is to be used all the trouble and expense of handling formed-up work is saved.

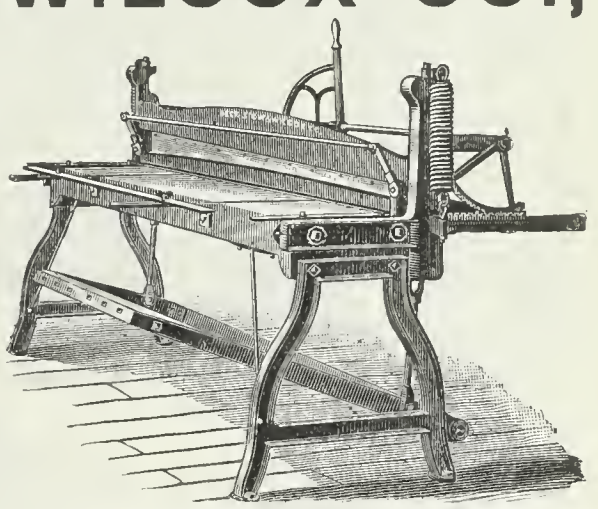
Hundreds sold and never a complaint. Works easily and rapidly. The universal verdict is, IT IS THE BEST IN THE WORLD.

96 inches long.

Our *Improved Eureka Cornice Brake.* Will bend No 20 iron.

96 inches long.



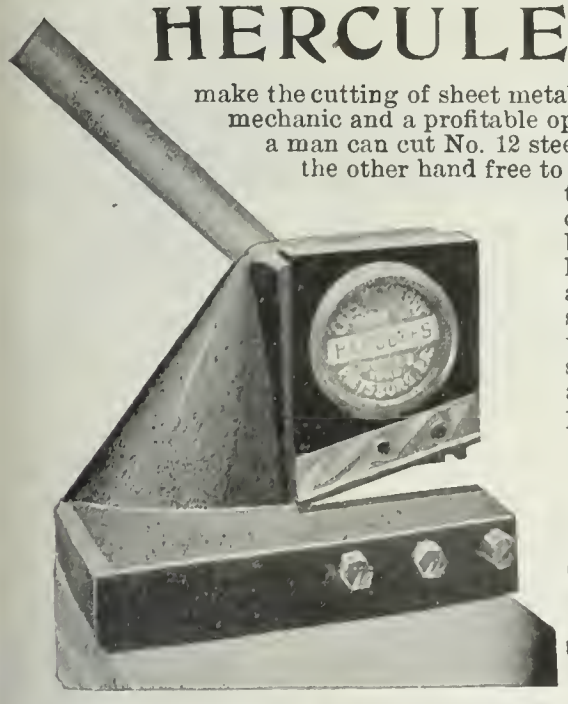
CORNICE MAKERS' SQUARING SHEARS.

With Lever Arc, Automatic Gauge. Will cut No. 22 iron

97 inches long.

HERCULES SHEARS

make the cutting of sheet metal of heavy gauges an easy task for the mechanic and a profitable operation for the employer. With them a man can cut No. 12 steel with one hand on the lever, leaving the other hand free to guide the stock while cutting elbows, ties and circles, as small as 8 inch radius: this is done without burring or buckling either piece, thus avoiding hammering and straightening, which add to the cost of the product. They split sheets of any width or length up to No 12 gauge, cut wire or bar-steel ⅛ inch thick, cut off and mitre angle iron ⅛ inch thick, and do it perfectly.



PRICE, - - $35.00.

★ SAWS ★

Our Star Hack Saws are now used in nearly all Iron-working Shops the world over. They are equally useful for farmers and men in all departments of life. They will cut iron and wood equally well. A nail does not dull them at all. One blade, which costs five cents, will cut off an inch square bar of iron 200 times without sharpening. We have cut off such a bar 887 times with one blade. All hardware dealers will furnish these saws. If not, we will send one steel frame and six blades by mail, prepaid, on receipt of $1 00.

All good blades are stamped with a ★

Paragon Point No. 2.—EQUALIZED DRAFT.

That's the point that makes the Paragon differ so widely from the common hot air furnace. By means of an upper radiator, the inner drum connects with the outer drum. The draft through the mass of fuel is separated, half passing straight up into the center drum and through the upper radiator to the outer drum, and half passing through the arms of the crab directly into the outer drum, where it meets the other current at the smoke collar.

This point means that all portions of the radiating surfaces are heated with absolute uniformity and that the coal is thoroughly and evenly consumed without clinker. It means more heat for your money in the Paragon Furnace than in any other.

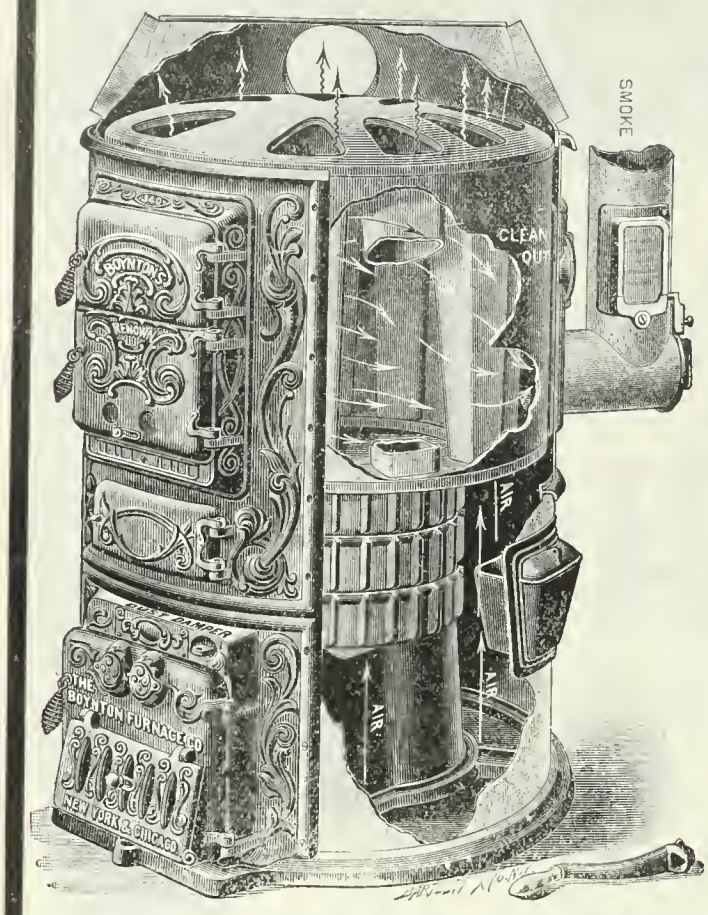
BOYNTON'S "RENOWN"

PORTABLE FURNACE

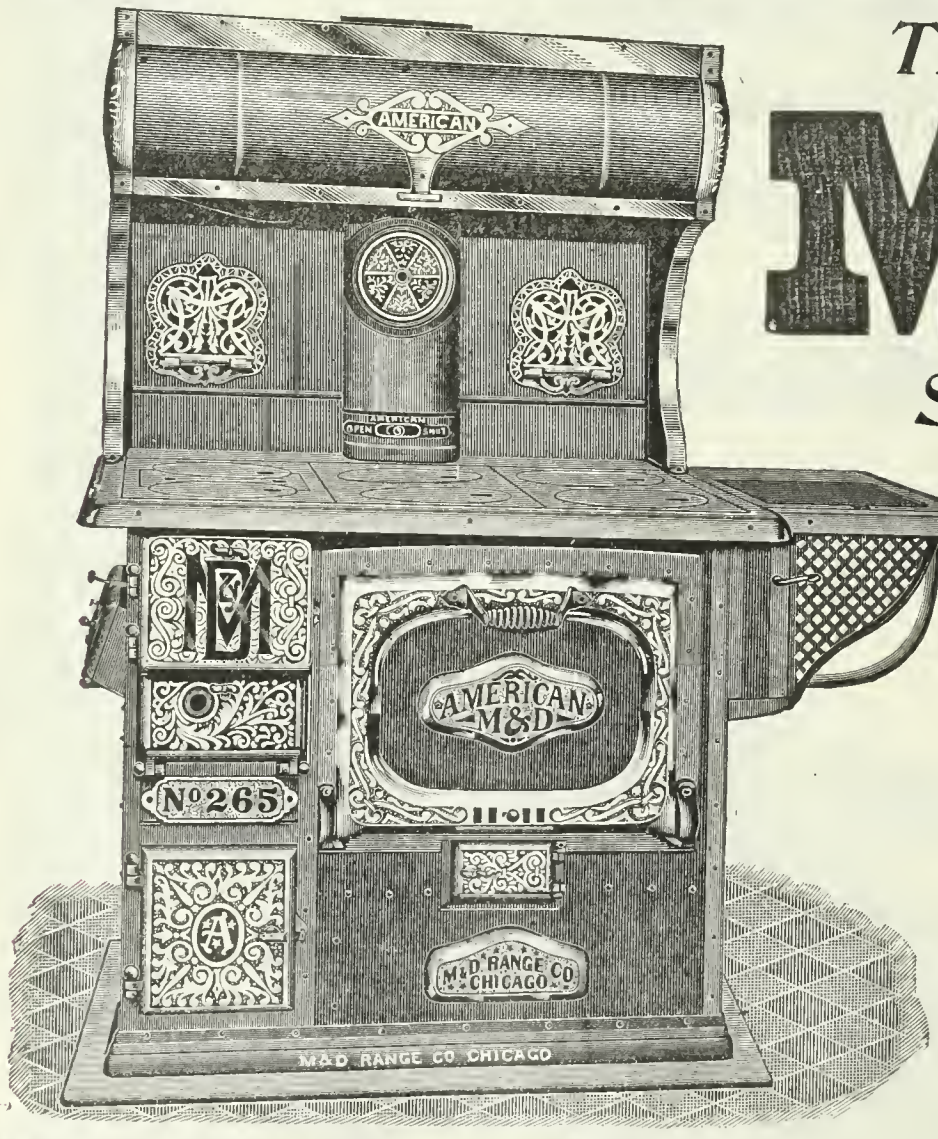


A new and distinct type of construction thoroughly tried and tested. Possessing more area of heating surface to area of grate surface than any other furnace manufactured.

Notice construction of cast iron heating flues, each one directly over and in contact with fire. Can we mail you catalogue and prices?

The **BOYNTON FURNACE CO.,**

NEW YORK, CHICAGO.



The American

M & D

Steel Range.

BEST ON EARTH.

Made in 4 sizes, 16-18-20 and 22 inch ovens.

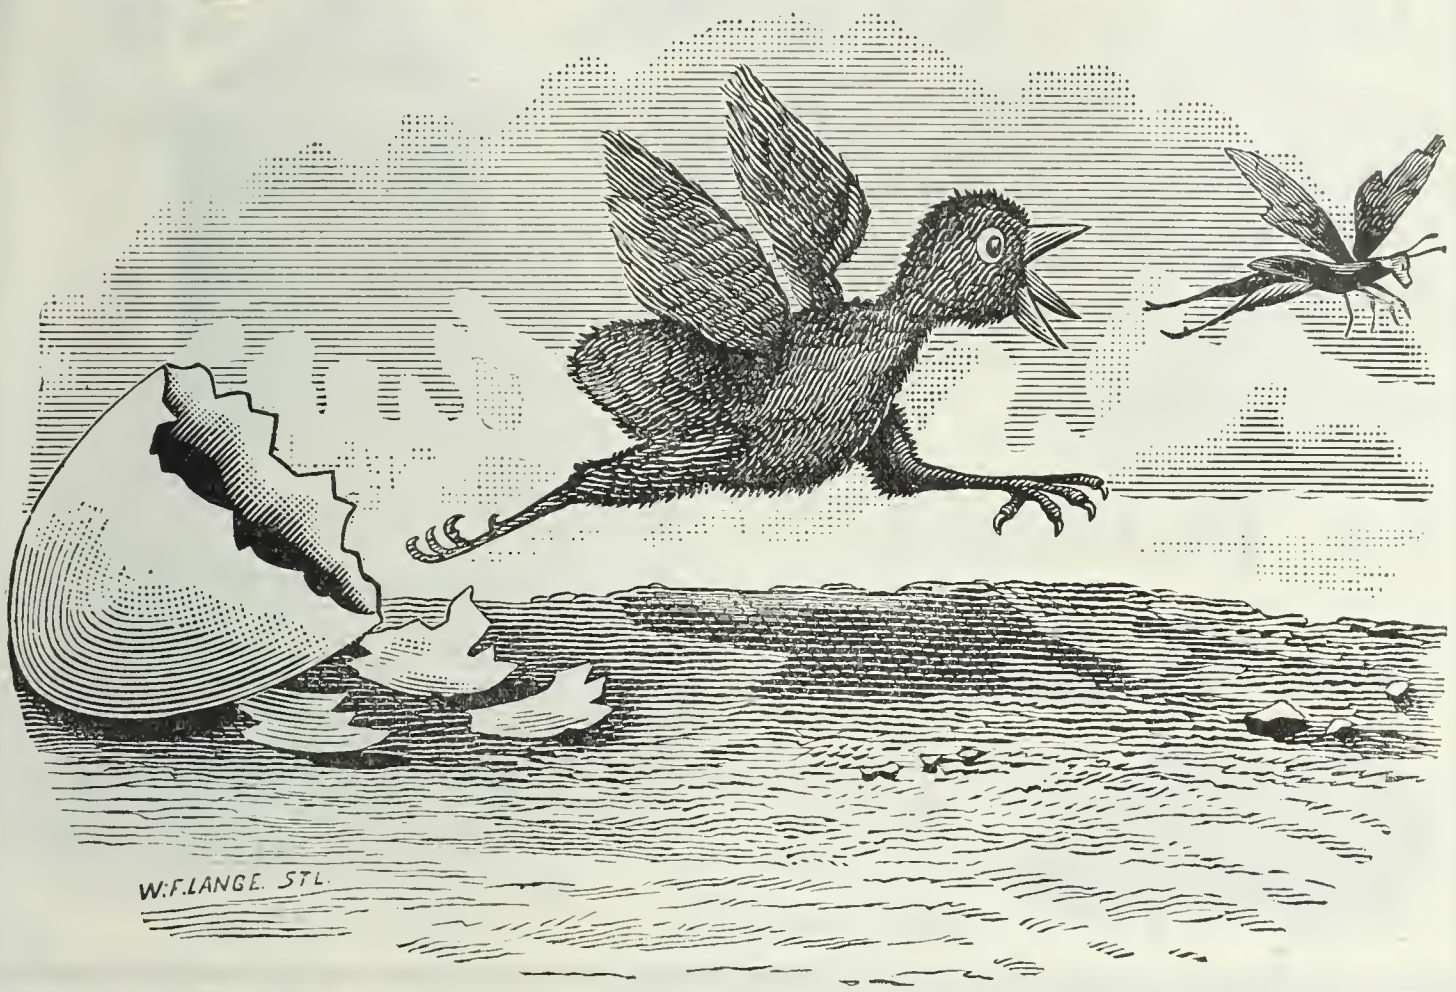
Portable reservoir, white enameled inside and out, or encased reservoir, as desired. Ovens iron framed, back flue made of heavy cast iron. ***Duplex, Dockash*** or ***Wood Grate, all slide out. Large poke door on end with or without feed pouch.***

This range will win out over all others in your city.

We make all sizes Family, Hotel and Combination Steel Ranges.

M & D RANGE COMPANY, = 96-98 Lake Street, Chicago.

"Quick Meal"



"Quick Meal" ENAMELED POLISHED Steel Ranges

Perfect in Construction, Perfect in Design and Appearance.

The Corner Tube construction gives their Side and End Walls a Smooth, Neat Finish and leaves no creases like those found in all riveted ranges.

The Steel Plates used in their Ovens are very heavy and well braced and will not warp. Every piece of the body and all holes in the body are cut and pressed out in large dies, consequently fit absolutely true.

"Quick Meal" Steel Ranges look well, last well, bake well, sell well and Stay Sold.

They are Friend Makers.

Ringen Stove Co.

ST. LOUIS.

Model Oak

Entirely New Line for 1901.

We use the old name, but the numbers are different.

The Round Air Tight Register is ground into its seat on the inside of the ash pit door and will remain at any degree of opening required to supply air for combustion through the opening.

The register construction is such that the **Grate Handle** can be pulled out through the register opening

The Extension on Top of the Fire Pot extends up inside of the steel drum and is cast solid with the fire pot so it cannot twist and warp.

The Sectional Ring fits over the flange turned out on the bottom of the steel drum.

The Ash Pan fits tightly all around the edges of the ash pit.

The joints remain tight.

The price is just right.

Ask for more information.

M TRADE MARK

Moore's Quick Oven Stoves

M TRADE MARK

A Straight Proposition

The Bottom of the Bottom is more important for you to know about than the top of the bottom. The top of the bottom may be apparently all right, and yet the bottom of the bottom be all wrong and so lacking for proper braces that it will HUMP ITSELF on the least provocation.

OUR BOTTOMS are all straight. We are at the bottom of the Steel Cook Stove business—made the first one, and have made more of them than all our imitators put together. We make them right, that's why—make the comparison yourself, and you will find that the bottoms in Moore's Steel Stoves are straight.

JOLIET STOVE WORKS, JOLIET, ILLINOIS.

PRICES ARE REASONABLE.

PHILADELPHIA STOVE AND IRON FOUNDRY,

1625 to 1635 N. 5th Street, PHILADELPHIA, PA.

AIR TIGHT HEATERS.

Our line in these comprises everything from the cheapest to the very finest finish possible to produce. Our manufacturing facilities and daily output justify us naming prices below any possible competition. This fact has enabled us to establish Wholesale Agencies in nearly every large city in the United States and makes it possible for us to supply the Dealer "Near His Door," saving time and freight. We also manufacture **Steel Ranges, Steel Cooks, Cast Ranges and Cooks, Hot Blast Coal Heaters, Oaks, Laundry Stoves, Radiators, etc.,** all up-to-date goods.

Write us for particulars and we will put you in the way of making some money.

EXCELSIOR STOVE & MFG. CO., - Quincy, Ills.

IT *ISN'T* good business to try to change a customer's choice.

It *IS* good business to use your knowledge of the goods that you are familiar with, calling attention to superior points of excellence and explaining as fully as possible why one article, of about the same general appearance, may be a great deal better, more economical and more satisfactory in every way, than another at about the same price.

It's easy to do this in range selling if you have the "***Home Winthrop.***"

In other ranges you can't tell your customer of any particular difference in their real worth without telling what isn't so.

With the "***Home Winthrop***" you can easily show the difference and explain why and how it is better. Your customer can see for himself.

There's no range handsomer in appearance.

No other range heats ***ALL of five sides of the oven, or has a dust flue*** which takes ***all*** the dust up the chimney when you shake the grate.

No other range will do the same amount of baking and boiling with as little fuel.

The "***Home Winthrop***" has every modern attachment common to other ranges that is of any value whatever.

It stands alone as having special valuable improvements not to be had on any other range.

Test it that you may prove to your own satisfaction how much better it is and how little fuel is necessary.

Set it anywhere, under any conditions where any cooking range can have a severe test, and you become an advocate of the "***Home Winthrop***" range always.

THE ETNA FURNACE

Is a furnace worth talking about and selling.

It is the result of twenty years' experience in hot air practice, and knowing the wants and the requirements necessary to produce su cessful, satisfying results we made the Etna accordingly.

The Etna contains many strong, practical features not found in the majority of others. We feel satisfied they will meet the approval of every dealer who has been up against the heating problem and encountered its difficulties. We have smoothed out some of the rough places.

READ THE CATALOGUE. SENT FOR THE ASKING.

Pittsburgh Stove & Range Company

PITTSBURGH, U. S. A.

BRIGHTON AIR-TIGHT HOT BLAST.

Patent Applied for.

SOMETHING NEW!

THIS is not an every day "Air Tight Stove" that almost every stove foundry makes. While the general construction is the same, the principle is different

This stove is furnished with a blow pipe fastened to inside of feed door and extends inside to the center of fire pot and is controlled by a screw register on outside of feed door.

DIRECTIONS FOR USING:

Close up all openings below feed door and regulate your fire entirely by screw register in the feed door.

By following these instructions you will produce more heat with this stove and consume less fuel than with any other stove made.

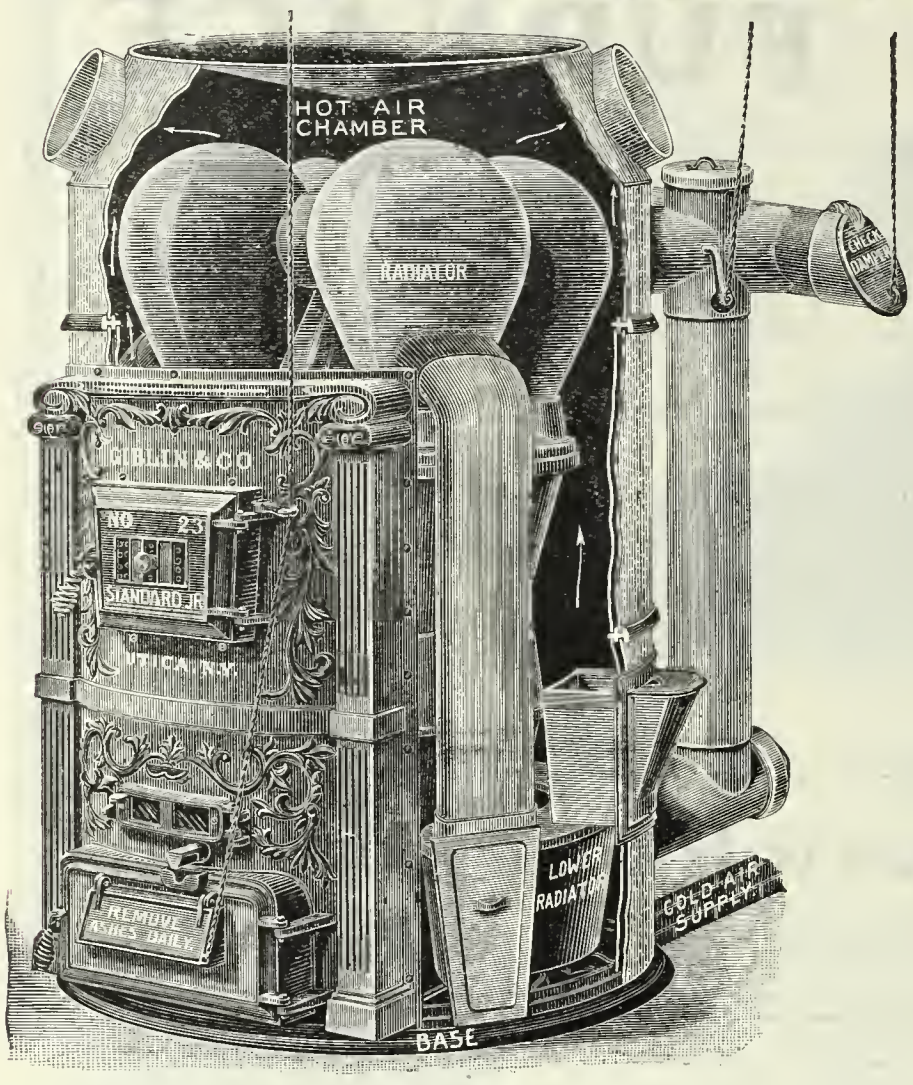
WRITE FOR PRICES AND SECURE THE AGENCY FOR THE BEST LINE ON EARTH.

JOHN A. SCHULTE & CO., Cincinnati, O., U S. A.

Manufacturers of

Steel Ranges, Cast Ranges, Oak Stoves, Etc.

TOUCH A MAN'S POCKET



and you touch a sensitive spot. If your customer asks for a furnace and you furnish him with the cheapest furnace obtainable, it surely is not the best and he will judge all other furnaces by what he gets He will, by using the cheapest furnace, burn more coal than he should; will burn it imperfectly.

IT WILL

cause more work, need frequent repairs, make him thoroughly dissatisfied. Such are the results of a direct draft furnace. We present the furnaces illustrated herewith to

SHOW

what indirect draft furnaces can accomplish. Nobody now uses a direct draft heating stove, because of the waste of fuel and the impossibility of regulating it.

These Furnaces

are in furnaces what base burners are in stoves and

Secure

for the user the benefit

of **Heat** without

wasting fuel They are operated with a steady, low fire, providing an even, continuous temperature

In Every Room.

Whichever dealer secures the agency of these furnaces is sure to get the bulk of the business; and because he is selling something different from all other dealers will make sales at a good profit and make every one sold an advertisement for his business.

Dealers who have sold other furnaces and have found no profit in the business should investigate the merits of these furnaces and secure the agency and exclusive territory.

——— ———, Mass, August 26th, 1901.

DIGHTON FURNACE CO, Taunton, Mass.

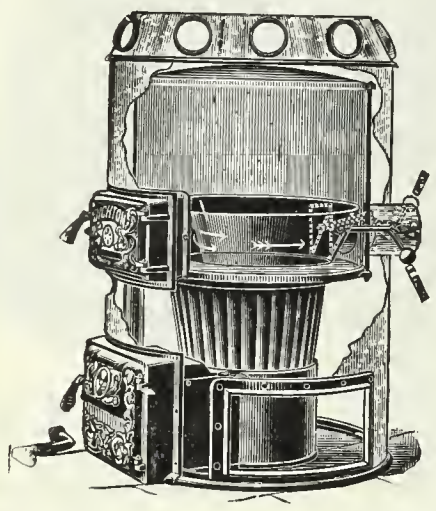
Gentlemen:—Will you please ship me 3 No. 21 "**DIGHTON**" Furnaces, with Casings, Cone Top.

Last winter I put in 2 of the "**DIGHTONS**" for this party and now he wants three (3) more. Please ship at once as he wants 2 of them in before September 20th.

Also send 10 10 x 14 Black Japanned Registers and Borders.
13 8 x 10 " " " "
60 feet 7 inch Hot Air Pipe. 20 8 inch Hot Air Elbows.
75 " 8 " " " 18 7 " " "

Yours respectfully, ——— ———

Our price for the "DIGHTON" is very much less than what other Furnaces of anywhere near equal worth are sold for.



Our prices for Registers, Borders, Hot Air Pipe and Fittings are guaranteed to be as little; probably less than goods of equal quality are sold for.

We earnestly solicit a trial order for a "DIGHTON" Furnace.

We can and will help you to introduce and promote the sale and give you the exclusive sale of it in your locality.

DIGHTON FURNACE CO., - - - Taunton, Mass.

Front Rank Hot Air Furnaces

are built on vertical lines; air comes in direct contact with entire heating surface.

The Front Rank Fire Chamber is one solid sheet of closely riveted steel; being lined above the fire lines with genuine fire clay tiling it is the most durable made.

The radiators are very large and have an unusual area of heating surface in comparison with the size of fire pot.

These furnaces burn hard or soft coal or coke. We also make wood burning furnaces.

Send for our catalogue, it will give you a better idea of what we make.

LOUISVILLE, KY., Apl. 5th, 1901.

THE STANTON HEATER CO.,
Martin's Ferry, Ohio.

Gentlemen:—Your favor of the 3d inst. is received asking our experience with the Stanton Heater which you put in for us during the fall of 1899. In reply we will say that it gives us pleasure to express our entire satisfaction with this Furnace. While we have had no severe weather this winter there have been several quite cold snaps, but our offices have been very comfortably heated, and our coal bill (Pittsburgh coal) has been quite moderate compared with other Heaters we have used.

The satisfaction the Heater has given us can be best expressed by saying that we have not heard the Furnace mentioned once this winter. You can see, therefore, that we have had absolutely no cause for complaint.

Yours very truly
ROBINSON-HUGHES & CO.

Furnace Heating.

A Practical and Comprehensive Treatise on Warming Buildings with Hot Air, by William G. Snow, with an Appendix on Furnace Fittings. 170 pages; size, 6 x 9 inches. Cloth bound. Price, **$1.50.**

This is the only book that has been brought out which presents a systematic and reliable treatment of the warm air furnace system of heating.

It deals with the various types of furnaces, their construction, proper location and setting, together with furnace fittings, and all matters pertaining to the installation of furnaces and to effective and economical heating by warm air. The subject is discussed for the first time by a competent author possessed of a scientific education and a practical training, who presents positive rules, based on a long experience, for guidance in designing furnace systems for dwellings and other buildings where this popular method is employed. The various details of furnace work are described simply and at such length that the volume will be valuable to all who are in any way interested in the subject. It is recommended to practical furnacemen, to architects, builders and house owners, and to tinners and plumbers in suburban sections who do furnace work. To all these it will prove a reliable text-book and guide.

PARTIAL SUMMARY OF CONTENTS BY CHAPTERS.

Chapter I.—Furnaces—Is devoted to Furnace Construction—The Relative Proportion of Furnace Parts—Secondary Heating Surface—Economy and Efficiency—Heating Capacity and Exposed Wall Surface—Manufacturers' Ratings of Their Own Productions, etc.

Chapter II.—House Heating—Compares Furnaces and other apparatus, and describes Method of Setting Brick and Portable Furnaces—Location and Area of Cold Air Supply—Cold Air Rooms and Air Filters—Return Ducts and Air Circulation—Size of Hot Air Pipes—Location of Registers, etc.

Chapter III.—The Combination System—Discusses Heating Distant Rooms with Radiators—Balancing the System—Location of Water Heater in Furnace—Capacity of Water Heaters—Size of Radiators, etc.

Chapter IV.—Air—Deals with the Necessity of Ventilation—Water Needed to Moisten Air—Expansion of Air—Velocity of Air in Tubes, etc.

Chapter V.—Heating and Ventilation of Buildings—Considers the Size of Furnaces Required—Fresh Air Room and Supply—Air Circulation—Size of Flues—Use of Stack Heaters—Size of Heating Coils in Vent Flues, etc.

Chapter VI.—Heating of Public Buildings, Churches and Stores—Is given to the Size of Furnaces Required—Grate Surface in Ventilated Buildings—Air Supply—Size of Heating and Ventilating Flues—Size of Stack Heater, etc.

Chapter VII.—Fan-Furnace Combination System—Is devoted to Positive Warm Currents from Fan Systems—Location of Fan and Driving Apparatus—How Good Furnaces are Aided by Fans—Types and Efficiency of Fans—Area of Ducts and Flues, etc.

Chapter VIII.—Temperature Control.

Chapter IX.—Estimate and Contract Blanks.

Chapter X.—Value of Fuels. The Proper Size for Furnace Chimneys—with tables.

APPENDIX.

Furnace Fittings.—A section of 45 pages dealing with the Making of Furnace Casings—Metal Cold Air Boxes—Making Furnace Bonnets and Collars—Making Pipe and Elbows—Register Boxes and Stack Shoes, etc.

Sent postpaid on receipt of price, $1.50.

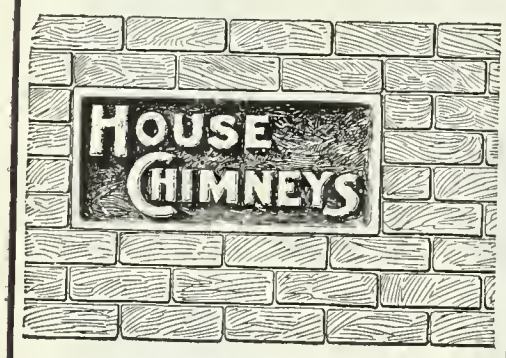
A 62-PAGE PAMPHLET

Comprising a Series of Articles and Letters on *Chimney Troubles and Their Remedies* published under the title



Contains a compilation from the columns of THE METAL WORKER, of articles and correspondence relating to house chimneys, defective flues, and kindred topics, comprising a source of information of the most practical and reliable nature, on overcoming difficulties which occur in the working of chimneys, flues, etc.

To all who are interested in flues and drafts, in their relation to stoves, furnaces and house heating apparatus, this book will prove instructive and helpful.

The Contents are as follows

Page.

POINTS ON CHIMNEYS - 7–32
An illustrated article by J. L. Bixby, Jr, describing many details in chimneys, which cause trouble, and giving remedies. An important table is presented, of the sizes of chimneys required in dwelling houses, based upon the amount of work to be done.

DEFECTIVE FLUES - - - 33–35
This article presents information resulting from a wide, practical experience of the writer, and gives sound advice on some of the details of chimney construction.

HOW TO IMPROVE A WEAK CHIMNEY - - - - - - 36–40

VARIOUS FORMS OF VENTILATORS or CHIMNEY TOPS 41–45

CONDENSATION IN STOVE PIPES - - - - - - - 46, 47

SMOKE PIPE FOR WOOD FURNACES - - - - 48

REMEDYING DOWN DRAFT IN CHIMNEY - - - - 49–51

CONNECTED FLUES DESTROY DRAFT - - - - - - - 52–55

FAILS TO BAKE ON BOTTOM 56–62

40 good Illustrations help to make the Text clear.

Judgment

In business matters ought to make it plain to you that it is just as important to you to use good Asbestos Furnace Cement and Stove Putty in the manufacture of your furnaces as it is to use good iron. **COLEBROOK'S ASBESTOS FURNACE CEMENT AND STOVE PUTTY** is the best that can be manufactured. We have furnished the largest manufacturers of furnaces and stoves in the country, and are still doing it. We are ready to furnish you. Why not? Send us your next order. Put up in all size removable cover cans, tubs, barrels and half-barrels.

THE NEW HAVEN NOVELTY MACHINE CO., New Haven, Conn., U. S. A.

WHY YOU SHOULD USE A No. 5 FIRE POT.

$4.50 Net.

It is light, strong, and can be easily carried.
It produces a strong, blue flame which is intensely hot and free from smoke. The flame can be regulated as the user desires.
A kettle of metal and a pair of coppers may be heated at the same time.
The burner hangs on a swivel joint and can be pointed up or down.
The top section may be removed, exposing **the open fire, which can be used as a torch.** The flame then may be applied direct to the point where heat is desired. It is unequalled in thawing frozen pipes, taking soil pipes apart, making overhead or upright joints, flowing bath plugs, or any similar work.
There are many other advantages which will suggest themselves to you.
It requires but little gasoline to do a large amount of work and will save you its cost in the saving of gasoline alone in a short time. When you buy, get the best there is. If it bears our name it means your money back if you are not pleased.
Jobbers sell at factory price, or we ship direct on receipt of $4.50.

The Kelsey Warm Air Generator

Study the construction of the Kelsey and the principle employed in warming the air, and you will be convinced of its efficiency.

In the Kelsey the air is warmed thoroughly and evenly by passing in separate channels through the cast iron sections.

There are from nine to seventeen of these sections in a Generator, according to its size.

Each section weighs about 70 pounds, and has 8 square feet of heating surface.

These immense surfaces and this great weight of cast iron, being in direct contact with and over the fire, are kept heated to any required degree, with a most economical consumption of fuel.

The Kelsey Method of Warming the Air Is the Best Method. ***Send for Booklet.***

The Shop and Business Management.

Personal supervision over shop and salesroom, direct oversight of outside work, and general management of the office, are the usual duties devolving on proprietors of plumbing and sheet metal working shops, of whom the great majority are graduates of the shop and not of the office. They frequently and justly pride themselves on their skill and proficiency in their handicraft and their ability to supervise the work of their employees, and years of apprenticeship and training have taught them the necessity of watching with care the most minute details of workmanship. It is thus not surprising that there is often a disposition to give closer attention to the practical work of the shop than to the business management. The training of many proprietors of successful shops, so far as a knowledge of business is concerned, is, on the other hand, limited and imperfect, and has been only casually and very gradually acquired. It thus contrasts unfavorably with the exact, systematic and painstaking methods which are characteristic of enterprising and successful men in other branches of trade.

Had as many years been spent in store and office in constant touch with customers and commercial men as were spent in the shop, and in immediate contact with its work, the proprietor would doubtless recognize more adequately the importance of good business management, and give closer attention to the work of the office in buying goods and supplies, keeping accounts, cultivating trade, and in other ways contributing to the success of the enterprise.

It is not necessary to make any comparison as to the relative importance of the mechanical and the business side of a plumbing and metal working shop. There is opportunity for the best and most up to date methods in connection with its work. This will contribute directly and largely to its success. But at the same time there is danger that an engrossing attention to the mechanical part of the buisness may result in neglect of the equally important work of the office, with the result that the skill and enterprise in the shop will be handicapped by lax and shiftless methods in the office, to the serious detriment of the best interests of the business as a whole.

Skill in Labor.

It is only natural that there are wide differences of opinion as to the time and effort needed to acquire skill in any branch of labor. Generally speaking, exaggerated opinions prevail, one reason being that tradition keeps alive past experience before perfected machinery intervened. An experiment made by a leading sheet manufacturer is particularly interesting at this time of trouble in the rolling mill. Some time since a likely young man applied for work at a sheet mill. He proved to be a young American, who had found that teaching in a country school held out too little promise for the future. He was willing to and did begin as a common laborer. The general manager, however, issued orders that he be advanced from post to post as soon as he had acquired the skill to do justice to the work in hand. He was close watched, and in eleven months after leaving the ranks of common labor the man was put in charge of a sheet train as roller, which secured to him wages averaging from $8 to $10 per day. This, of course, was a record performance made by an intelligent, ambitious and physically well equipped man. We are told, however, that two years is no unusual period for good men to acquire the skill and experience to fit them for rolling sheets in a modern mill. Yet the impression does prevail even in very well informed circles that nothing but many years of slow advancement will qualify a man for the responsible work of a sheet roller. An occurrence like a strike is apt to have other effects besides that of dispelling the idea of rapidly acquiring skill, conspicuous among which is the impetus which it gives to improvement in machinery. Every manufacturer must be aroused to the necessity of making himself more and more independent of skilled and highly paid labor, particularly when it assumes the attitude, collectively, of such a body as the Amalgamated Association. We believe that the plans for developing continuous rolling and for the introduction of such methods as the Norton process of sheet rolling will be more energeticaly pushed in the future than they would have been had peace prevailed.

The Strike.

Manufacturers as the employers of labor have been watching the course of the steel strike with more solicitude and care than the general public or even the commercial classes. It has affected many of them more or less directly in its influence on the market for the raw material, but is at least equally interesting from its bearing on the relations between employers and their workmen.

From the very outset of the strike there has been little doubt in the minds of informed observers as to its outcome. The questions remaining are merely as to the extent of the defeat of the Amalgamated Association and the terms of settlement. Unless all signs fail, this strike has marked a new phase in the history of organized labor. Despite the popular outcry against trusts, general sympathy is unmistakably arrayed on the side of the United States Steel Corporation. Sober minded and conservative men have reached the conclusion that whatever may be the right of labor to organize, the right of the individual to work must be paramount to every other consideration. It is a hopeful sign when even a political convention declares that while in favor of organized labor it is still more in favor of law and order. Unfortunately for the Amalgamated Association,

it has learned little from its past defeats and its numerous mistakes, so that it typifies that radical element in union labor which seeks to enforce its views by intimidation. Fortunately there remain a vast number of labor organizations who do not thrust themselves into public prominence with strikes and broken contracts, but whose ways are rather those of peace and conciliation. To those to whom organized labor is more than a passing phase there comes the hope that the acute phase of the trouble is slowly passing away, to be replaced by a quieter and more orderly course.

The cry for arbitration in this strike has been much less strenuous and insistent tnan usual, for the conviction is slowly growing that what was once exploited in the daily press as a panacea for all labor troubles is but a poor dependence in cases of serious differences. It is difficult to apply it in the first instance, since it cannot be made compulsory, and it is usually accompanied by the illogical suggestion of selecting as arbitrators some prominent men noted for their character and probity, but entirely ignorant of the complex relations of employer and employee, and entirely unfitted either by training or experience to pass upon the business questions involved.

One of the most interesting results of the strike has been the greatly strengthened position of the United States Steel Corporation as a thing to be permanently reckoned with in the industrial world. Prophets were not wanting who foretold at the very inception of the organization that a great labor strike would some day paralyze the energies of the great concern, bringing impotence and disaster in its train. The Corporation will apparently emerge stronger than ever from the conflict, and with removal of the dark cloud that threatened their future. In this case a great industrial consolidation has shown a wisdom and energy which have done much to confirm the public confidence.

The monthly blast furnace statistics of *The Iron Age* for September last show a moderate decline in the current production of pig iron, the weekly capacity of the furnaces in blast being placed at 299,861 gross tons, as compared with 303,847 tons on August 1. The decline is explained as being due principally to the stoppage of four furnaces of the National Steel Company, having a total weekly capacity of 10,000 tons. This reduction in the output, however, was partly offset by the starting of furnace plants in other parts of the country. While there has been an accumulation of furnace stocks of pig iron in some districts, there has been a decline in others, leaving a net reduction in stocks of about 10,000 tons for the month. An interesting fact bearing upon the pig iron situation is the blowing in of a number of new blast furnaces, all of which are modern, and will either swell the output or crowd older, weak plants out of the ranks.

A QUESTION OF DISCOUNTS.

An interesting matter, which caused a great deal of discussion, recently came up between a hardware and stove salesman and one of his customers. The customer had for some time been paying the salesman 40 per cent. discount on a certain line of goods, and on the occasion referred to had decided that market conditions justified him in asking for a lower price. He said to the salesman that he would have to do 5 per cent. better. The salesman asked him to make up a list of the goods for which he would like to place an order, and then said that in view of the size of the order and the conditions prevailing he would allow an "extra 5." The buyer thanked him for the reduction made, and said: "Of course, this makes the discount 45 per cent." "No," said the salesman, "the discount is 40 and 5, not 45, as to make the discount 45 would be a reduction of over 7 per cent., and that is more than I would be permitted to give. I meant, when I agreed to give an extra 5, that it would be just what that expression means and not a 'straight' 5." The buyer and the salesman then had a long discussion relative to the difference between an "extra" 5 and a "straight" 5.

Prices and Catastrophes.

One of the most obscure phenomena of the stock market is the decline of prices upon the death, or anticipated death, of the head of the State. War, pestilence and famine are afflictions which interrupt trade and destroy wealth to such an extent that any danger of one of them could not fail to cause a good part of the community to turn its property into money. There are governments so highly centralized and so strictly personal that the death of the monarch or dictator creates uncertainty as to the maintenance of public credit or the development of commercial legislation, which must indispose men to buy for a time and increase the willingness to sell. The Czar of Russia is well known to be averse to war; no one knows anything about his heir; the Czar's death, therefore, might not unnaturally create uncertainty and apprehension and incline men to turn property of variable value into coin, in which shape it could be hoarded or be easily transported to some safer field of investment. President Diaz is equally well known for his determination to maintain order in the republic and to sustain the public credit at all costs, and his power is hardly short of that of a dictator. His death, especially if it were sudden, would inevitably raise some question regarding the stability of the government and the payment of its obligations, and these things would affect prices in Mexico pretty widely until it were known what sort of a man would succeed him.

But in this country there is no reason why the danger of the President's death, or even the actual event, deplorable as it would be, and although it were by violence instead of disease, should make men anxious to sell and reluctant to buy securities. The national credit is long established beyond question, and the integrity of the currency fully secured. Civil order is as certain under one President as another, and is perfectly secure if there were no President at all, in view of the very limited power which the President has over legislation and even over the foreign relations of the country.

But the stock market is influenced by a multitude of forces. No man pretends to know all of them, and it happens that no one knows just who constitute the stock market, for this is made up of all the buyers and all the sellers, and not alone, or chiefly, the members of the exchanges. Therefore there is always an uncertainty about how other people will act. The man who sees no reason why the attempt to kill the President should reduce values still has an idea that it may lead some one else to sell, or may indispose persons to buy what he is carrying on a margin or on borrowed money, and he may sell merely to be sure of selling before the market has been lowered by the selling of others.

An influence of this sort is, of course, ephemeral; it may be severe for a short time; it cannot last long or go far. Happily, the Government does not consist of any one person nor is the business of the country entirely dependent upon the Government.—*The Iron Age.*

Exports to China are beginning to assume their normal proportions. The July figures of the Treasury Bureau of Statistics show the total exports to China from the United States at $2,622,475, against $1,349,697 in July, 1900. For the seven months ending with July, 1901, the total exports to China were $9,703,787, an increase of more than $600,000 over the corresponding seven months of the preceding year. Our exports to China in July were larger than in any preceding July, a fact which seems to indicate that our commercial relations with China are not likely to permanently suffer as a result of the events of the past year. While nearly all the articles of export show a marked increase, it is, however, in cottons, mineral oils, lumber and bicycles that the increase is most pronounced.

THE NEW YORK STOVE TRADE.

The middle of September has been reached without the stove trade having felt any of the rush that usually comes with the fall business, although in New York there is plenty of evidence that the transfer of stock from manufacturers' warehouses to the stove dealers' showrooms is progressing smoothly, and some houses report the volume of business, so far, in excess of that of last year. The statement is also made that there is no overwhelming supply of stoves, particularly in some lines, and expression is given to the hope that this may lead to an advance in the price of stoves. Whether this hope will be fulfilled is a moot question. At present there seems to be a variety of prices in the market which lacks the firmness that would be generally beneficial. Notwithstanding this certain houses are holding some of their goods at prices 5 and 10 per cent. higher than those generally ruling, and these concerns expect, before the season closes, to find no difficulty in moving their stock.

As yet there has been no weather cool enough to suggest the approach of winter, and to make the need of repairing or replacing old stoves keenly felt. A seasonable cold snap, however, cannot now be long deferred, and then a rush is expected by the stove manufacturers, who are preparing to meet it. The facilities for handling a fall rush in the stove trade are better than ever before, but if any difficulty is experienced in securing stoves promptly it will be well to consider that the railroad and transportation companies do not make the same provision to serve the stove dealer as do the manufacturers.

Dealers by this time should have a fair idea of what they will need and place their orders so as to avoid disappointment. There is no excuse for further delay on the score of possible concessions in prices. The manufacturers have watched the depletion of their stocks with satisfaction and know that the rush has not yet come. Consequently they feel no necessity of offering inducements just to make a showing on their order books. Those goods which have tin plate and sheet iron in their equipment are more likely to stiffen than to soften in price owing to the scarcity of such material and the high prices ruling for it owing to the strike at the rolling mills.

STOVE PRICES HARDENING.

Indications are now appearing which point to a general advance in the price of Oak stoves and other cooking and heating apparatus made largely of sheet steel. Western representatives of some prominent manufacturers of Oak stoves have been advised that hereafter no more orders will be accepted at the price heretofore prevailing, and a new discount is named which makes an advance of more than 5 per cent. It is claimed by these manufacturers that the prices of Oak stoves have for some time ruled so close to actual cost as to make the trade realize very little, if any, profit. The great advance in the cost of sheet steel has so seriously increased the cost of manufacturing these stoves that an advance has been made imperatively necessary. They further fortify their position by stating that, unless the supply of sheet steel is speedily increased by the starting of more sheet mills, they will be unable to furnish some sizes of stoves, as their stock of the necessary sheets has been completely exhausted, while for other sizes they have but a limited quantity of the necessary sheets.

This is not an isolated case, but represents the experience of quite a number of stove manufacturers, and, although most of the large stove makers are represented to have been so fortunate as to lay in good stocks of sheets before the strike, it is believed that the production of sheet steel goods will be so curtailed by the shortage suffered by other manufacturers that the supply will be considerably under the quantity usually available. Stove dealers for some time have been making their purchases on an extremely conservative basis, conducting what is termed a hand to mouth business. They have not been disposed to take any chances of prices being reduced before they disposed of their season's stock, and have been under the impression that they were acting wisely by keeping themselves in readiness to take advantage of any downward tendency that might manifest itself. It now seems quite probable that those who defer the purchase of a sufficient supply of goods to cover the trade which they can reasonably expect will make a mistake. The season is nearly at hand when stove consumers will urgently need stoves and when they will expect their regular dealers to be able to supply them immediately upon application. It will then be impossible for many of the dealers to secure just the kind of stoves they need and to have them shipped just when wanted. They can expect to pay higher prices for what they are able to get, and probably may be compelled to take something different from what their customers desire.

Welcome Furnaces.

The Syracuse Stove Work, Syracuse, N. Y., and 231 Water street, New York, are adding to their line a variety of styles of hot air furnaces under the name Welcome, which are shown in a new catalogue just issued. The A series of the Welcome is made with both cast iron and steel radiators, with sectional fire pots and labor saving grates. The radiators are so constructed as to secure indirect passage of the products of combustion through the furnace and to utilize their heat. The B series of furnace is made with a sectional fire pot and large upper dome, from which the products of combustion pass to the steel radiator, where they make an entire circuit of the furnace before escaping to the smoke pipe. These furnaces are made both portable and brick setting. The C series of furnace is made with both steel and cast iron radiators, expsing a large amount of heating surface, and designed to secure an indirect pasage of the hot gases through the furnace. The D series is divided into the 400 and 500 series, made with both steel and east iron radiators, and designed to meet the needs of the trade where competition is strong. The catalogue also shows, by means of broken views, the A series and C series of Welcome furnaces, arranging for combination warm air and hot water heating. The furnaces vary in size from 16 to 34 inch fire pots. The catalogue gives the full dimensions of all the various parts and the sheet iron work, and one page is devoted to the rated heating capacity in cubic feet for their furnaces and combination heaters. Two pages are devoted to the various sizes of Welcome registers which the house are putting on the market. The last page is devoted to a system of exhaust ventilation for use in connection with hot air furnaces in private residences and other buildings.

The Anthra Cinderella Oak

is the subject of a four-page folder which has been issued through the office of Western Sales Agent W. D. Sager of the Pittsburgh Stove & Range Company of Pittsburgh, Pa. The stove is a double heater and intended for using hard or soft coal or wood as a fuel. The design is handsome in its ornamentation, nickel being judiciously employed at a number of points to bring about striking contrasts with the black surfaces. Touching its constructive features, special reference is made to the air blast, which is said to be entirely new as applied to an Oak stove, and valuable in point both of economy and cleanliness. It is introduced by placing a hollow cast iron ring with perforations on the inside between the top of the fire pot and the body of the stove. Cold air is drawn through openings in the main front directly under the feed door, becoming superheated in its passage, and is discharged over the top of the fire, thus aiding in the combustion of smoke and gases and producing, the company claim, the best result for the fuel consumed. The fire pot is extra heavy; the ash pit is large and roomy, and the feed door is equipped with screw draft for checking the fire, while the lower portion provides abundant illumination. The dust flue is constructed by connecting the back of the ash pit with the

smoke pipe elbow by means of a pipe through which the dust is drawn direct from the ash pit to the fire, entirely independent of the body of the stove. The Anthra Cinderella is made iu four sizes with diameter of fire pot ranging from 12 inches iu the smallest to 18 inches in the largest size.

Champion Steel Ranges.

A neatly printed catalogue in two colors, profusely illustrated and bound in deep greeu paper covers with side title in silver effects, is being distributed to the trade by the Champion Steel Range Company of 137-139 Viaduct, Cleveland, Ohio. The publication consists of 44 pages and is known as "Catalogue No. 5." The matter relates to the various lines of Champion steel ranges, which are manufactured by the company In sufficient styles and sizes to meet various requirements. Emphasis is laid upon the saving in fuel effected by the use of these ranges, the construction of which is said to differ from others in that they do away with either the cumbersome sand box or cement bottom, thereby resulting in a saving in weight. The arrangement of the air flue below the main heatlng flue is such that the air is conducted through the ash pit to the combustion chamber, and in passing under the main heating flue it becomes heated, thereby producing, it is claimed, a more perfect combustion and economy In fuel to the extent of the heat imparted to the air in Its passage.

The ranges are made of cold rolled steel plates, carefully fitted and riveted together, and are liued with a heavy quality of asbestos. The fire box is lined with 2-inch Savage fire brick and fitted with duplex grate. The oven is so braced as to prevent warping and yet not to Interfere with the heatlng of it. The oven doors open down, forming a shelf and are so balanced that they can be opened and closed with ease. The lines of goods considered include the Champion Active, Champion Marquart, and Champiou Junior. In connection with the descriptive matter tables are presented showing the sizes in whlch the goods are made, the dimensions of the ovens, top surface, size of cooking holes, and list prices. A feature of the closing pages is iuformation for the dealer when ordering repairs and settlng up stoves.

Accompanying the catalogue is a folder of the company's new double flue, hot blast Champion, which is referred to as effecting a saving of one-third in fuel. The special features of construction include interchangeable key plates, pouch feed, roll top closet, screw draft aud encased cast white enamel portable reservoir.

The Graff Furnace Company.

President William M. Seymour of the Graff Furnace Company, 208 Water street, speut a part of this week in Scranton, Pa., where the company have erected a large modern foundry and plant for the manufacture of rauges and hot air furnaces. For some time past they have been finishing and shipping all the goods at their old plant, at Elizabethport, N. J., to their New York warehouses. Early this week the final shipment of tools, flasks and equipment was made to the new establishment and the old plant was vacated. Mr. Seymour was on the ground at Scranton to see the new plant put into operation. The first heat from the cupola was run off and disposed of by the molders in the foundry in his presence, and the new plant is now in working order.

It is to be expected that some details will need adjustment, but the company are now in full possession of a fine plant, which will enable them to turn out the Faultless and Hero furnaces and ranges so as to promptly meet the demand that the enterprise of the concern has created. Their line of goods is extensive and varied, being well adapted to those who cater for a fiue custom trade as well as those who thrive where competition is the strongest. One of the company's newest productions, now on exhibition at their New York showroom, is the Hero range for builders' use, which appears in a fine new dress, adding a fresh attractiveness to its well earned popularity. The company also have a complete line of steam and hot water heateres. They invite correspondence and investigation of the Faultless and Hero lines.

Sunshine Heating Stoves.

A few weeks ago we reviewed in these columns an attractive catalogue of ranges and cook stoves which was being sent out to the trade by the Readiug Stove Works of Reading, Pa., and we now have before us a copy of a similar publication relating to thelr portable heatiug goods. In conuection with the present issue the company request those who did not receive a copy of the first book to notify them and one will be forwarded. As regards size of page, quality of paper, illustrations, binding, &c., the latest volume is in keeping with the one first reviewed. In presenting it to the trade special attention is called to the Suushine cook stoves, the Daisy Sunshine and the Sunshine Hot Blast, these being referred to as "extra sellers."

The leadiug place is giveu to the Golden Sunshine revertible flue base burner, of graceful proportions and rich exterior, made both as a single and double heater and embodying features of construction which render it powerful in operation. The Regal Sunshine is a member of the same class, and the mauufacturers state that it represents the best that has yet been accomplished in the building of a hard coal heating stove. In this no features have been retained whlch experience and commou sense have condemued, but, on the other hand, several novel, iugenlous and useful iunovations in design and construction are combined with those time tried features which stand approved by the company's experience of over 30 years in the art of stove building. The assortment of Oak stoves which are offered embraces a number of haudsome patterns In sufficient variety to meet the usual requirements. The company claim that the Sunshine Oak, "as remodeled and improved for the season of 1901, is by many points the leadlng stovc of its class." Such attention has been given to the construction of this stove, the makers say, as to produce a maximum amount of heat with a minimum consumptlon of fuel, while at the same time every item of convenience has been covered and durability maintained.

The Sunshine Hot Blast, whlch is made in three sizes, has au outside body of polished steel lined with corrugated iron. The grate is of the center dlscharge, anticliuker type; the fire pot is sectioual and made of sufficieut weight to be durable, and the upper section extends up far enough to protect the sheet iron body without Interfering with the best heating results. Several broken views of the stove are presented, showing the internal construction.

The closing pages of the volume are given up to a varied assortment of air tights, globe, cannon, box and laundry stoves, as well as an extended illustrated description of the Sunshine Fireplace Heater. The other features include directions for setting up and operating stoves, ranges and furnaces, and a comprehensive index alphabetlcally arranged.

Monarch Heaters.

An interesting little catalogue of 32 pages which is being sent out by the Monarch Stove Mfg. Compauy of Mansfield, Ohio, calls prominent attention to the Monarch gas heaters and the Monarch asbestos lined ovens. The heaters are intended for using natural or artificial gas as a fuel, and embrace a variety of styles capable of filling every conceivable demand. The company state that every pattern in the line is "original in construction, economical in operation, beautiful in design and finish, and wonderful in results." The Monarch Ventilator, No. 164, has been improved for this season by the substitution of cast iron fire box section in place of sheet steel. It is referred to as a "calorific wonder," and the equal of a hard coal base burner. Under the name Monarch the company also offer a combination of an open fire place and radiator, this being one of their greatest sellers. A new pattern for 1901 is

the Monarch, No. 69, which has the same body, burner and asbestos baek wall as their No. 67, but without the radiator tubes at the rear. Many other heaters of the radiator type are shown, together with hot plates, ovens, &c.

Striking It Rich.

The Estate of P. D. Beckwith, Dowagiae, Mich., have issued a particularly attractive book under the above title. The book takes as its theme the experiences of gold miners. The cover bears several pictures lithographed in eolors, one of whieh shows a group of miners in a cabin enjoying the comfort of a Round Oak stove. The contents of the book begin with a narration of miners' experiences, and leads up to their "striking it rieh." An analogy is ingeniously drawn between such miners and those who after suffering discomforts from the use of the wrong stove discover the right one, which brings pleasure. A full description is then given of the Round Oak stove. This description is enriehed by illustrations showing the special points of the stove. The narrative proceeds to a discussion of the advantages of the Beckwith air tight, which is followed by a description of the Round Oak room heater. The next subject taken up is the Round Oak furnaee, the special features of which are fully set forth. Comprehensive treatment is given to Round Oak ranges and cooks. Attention is called to the fact that both steel and cast ranges are made under the Round Oak trade-mark. The book is interspersed with good points under the head of "nuggets." The mining idea is maintained throughout, not only in the allusions whieh are made to the Round Oak goods, but also in the charaeter of many of the illustrations.

Universal Stoves and Ranges.

We have received from Cribben & Sexton Company, with office and works at Erie and Ontario streets, Chicago, Ill., a copy of their illustrated eatalogue and price-list of Universal stoves and ranges for the season of 1901-1902. It is a volume of nearly 200 pages, measuring 6 x 9 inches in size, and bound in heavy paper eovers, the design of whieh represents a casting, with the name and address of the company and a *fac-simile* of their trade-mark in bold relief. Upon opening the cover the first thing to attract the eye is a *fac-simile* of the warrant, guarantee and security bond which the eompany issue with their goods. In the arrangement of the printed matter steel ranges are first considered, these being offered under the generic name, Universal, and embracing an assortment calculated to meet all possible requirements. Among the early pages of the volume special attention is given to the white poreelain oven door linings used in eonnection with the Universal stoves. The eompany state that this porcelain lining is fused to the iron at an intense degree of heat, making the union perfect and permanent, and on this account it will stand any heat to which the stove may be subjected.

Following the steel ranges attention is given to east goods, including cooks and ranges, after which heating stoves are considered, the Regal Universal occupying the place of honor. This is an extra heavy base burner having large circulating air flue, double heater attachment, loose fire pot, easily rotated, and which can be taken out through the front door, and duplex grate. It is made in three sizes without, and one size with oven, and is designed for using hard coal as a fuel. The Lillian, among the low priced base burners, is furnished with Ransom shaking grates, antomatic swing cover, capacious ash pit and fire pot, which is removable through the upper front doors. Other goods include Oak, Cottage Parlor, Franklin, Globe, Cannon, Todd and Box stoves in great variety.

The catalogue concludes with price-lists of hollow ware, pipe shelves, warming shelves, &c. The question of repairs has not been overlooked in the compilation of the catalogue, and the dealer will find for his guidance in ordering stove repairs a number of skeleton cuts of eook stoves, ranges and heaters, with the parts numbered, and referring to accompanying tables, giving correct names.

Garland Soft Coal Specialties.

The Michigan Stove Company have issued a special trade edition of the *Garland Magazine*, whieh treats of hot blast, down draft, self feeding and retort stoves, designed specially for the use of soft eoal. The Hot Blast Oak Garland is a stove in which the eoal is fed from the top and the hot blast draft is always in operation, except when starting the fire. Air is sprayed on the hottest part of the fire, making perfect combustion and turning the coal into eoke, which then burns like hard coal with a saving of one-third of the fuel. Direct radiation is obtained from the fire pot, whieh is exposed. This stove is described as a perfect smoke and gas consumer and keeps fire 36 hours. It is provided with the company's patent combined serew draft register and grate shaking door, rendering the stove absolutely air tight when the draft is closed. The Magic Garland is also an air tight stove, which is a smoke and gas burner. It has a hot blast hanging from the top of the stove and closed by a revolving cover. This stove has a feed door in front. The ash pit door and screw draft are fitted air tight by machinery. The fire pot rests on strong supports and is the same cone cover center shaking grate as is found in the eompany's oak stoves.

The Solar Garland is another type of air tight stove fed from the top This stove has a hot blast draft also hanging from the top of the stove. The ash door and damper are likewise fitted air tight by maehinery. The Radiant Garland is a self feeding slaek burner for soft coal, which is of a highly ornamental pattern, being richly decorated with cast fret work. The Retort Oak Garland, another self feeding stove for soft eoal, has made a remarkable record for its perfect fire keeping qualities. It is stated that by following the directions a fire need be built but once during an entire season. This stove possesses all the advantages, in its perfect fire keeping, of a hard coal base burner. It has a cone draw center grate which enables the fire to be easily freed from clinkers. This stove has a brilliant illumination and is very handsomely decorated. The leading features of all these stoves are set forth in handsomely exeeuted illustrations.

Loth's Cook Stoves, Ranges and Heaters.

What is known as Catalogue No. 5, covering goods for the season of 1901-1902, has just been issued by the W. J. Loth Stove Company of Waynesboro, Va. The coneern, who were established in 1890, manufacture various lines of cook stoves, ranges and heaters adapted to meet the requirements of the Southern trade. The company state that they reeently enlarged their plant, installing new machinery, and that since the last edition of the catalogue was issued they have brought out some new patterns. In the arrangement of the matter the opening pages are devoted to the usual announcement to the trade, some suggestions to eustomers on the subject of setting up a stove, directions for operating stoves, hints about chimneys, and a statement relating to terms, &c.

The leading place in the work is given to the Diamond, a six-hole range for eoal or wood, offered in three sizes, following which is Loth's Fannie, an attractive five-hole range made in many sizes for eoal or wood; the Zip, a low priced two-hole range; the F. F. V., a four-hole cook stove, made in six sizes; Loth's Marvel, an attractive cook made in one size only, and embodying the modern features; Loth's Fame, for wood only; the New South, and the Wonder, the latter being referred to as a new cook stove for hard times. Among the heaters we find the Blue Ridge, Franklin, a line of Cottage Parlor, Cannon, Globe and Box stoves, as well as a number of patterns of Airtights. A line of hollow ware and more or less extended reference to stove repairs complete the catalogue.

The M & D Ranges.

The M & D Range Company, 96 to 100 Lake street, Chicago, have issued illustrated circulars which call attention to their steel ranges and combination steel and gas ranges. The company make a great variety of steel ranges. The assortment which they present includes very large ranges, designed for the use of hotels, restaurants, public institutions and other purposes necessitating the employment of facilities to prepare meals for a great number of persons. It is claimed that the company build the heaviest goods of this character made by any manufacturers. The large ranges are built with as many sections as may be required, all of which are connected as one range. They also manufacture the usual sizes for domestic purposes. These sizes present a full assortment of styles to meet the necessities of any family. The combination range was first brought out by this company, and has proved a popular piece of kitchen furniture. The arrangement is such that either coal or wood can be used in running one part of the range, or gas can be used in operating the other part. This enables the range to be used according to the season or in conformity with any other special requirements. The M & D combination range is handsomely made, and is fitted with a ventilated roll curtain top if desired. A special circular illustrates one of the new United States war ships as an appropriate accompaniment to a list of war vessels, transports, revenue cutters, steamships and other vessels on which the M & D steel ranges are used entirely for cooking.

Buck's Stoves and Ranges.

One of the handsomer stove catalogues of the season is that which has been issued from the press by Buck's Stove & Range Company of St. Louis, Mo. The 168 pages of letterpress are bound in heavy board covers in imitation of white enamel, embellished with a *facsimile* of the company's trade-mark in old gold. A feature which the dealer will appreciate, especially if he keeps his stove catalogues on file, is a back title, consisting of the name and address of the company, the number of the catalogue and the year of issue. The printing is upon a fine quality of surfaced paper and the illustrations are in keeping with the general standard of excellence of the rest of the work.

In their greeting to the trade the company refer at considerable length to the great white enamel line, and point out how impossible it is to show in black and white the beauty and utility of this line of goods. A number of pages at the outset are devoted to a consideration of the question of quality, the matter of claims and repairs, the draft, with directions for operating stoves, and diagrams showing a few of the causes why a stove is often condemned when the fault is solely with the chimney. The leading place in this handsome catalogue is given to Buck's steel range, which is illustrated by means of an engraving in which the nickeled, bronzed and black iron surfaces are faithfuly represented. This range embodies those features which experience has shown to be desirable, and which typifies all that is best in range construction. Steel ranges occupy something like 40 pages of the catalogue, after which we find 25 pages devoted to cast ranges.

Steel and cast cook stoves are next in order, after which we find the heaters, with Buck's Radiant base burner in the leading place. The latter is represented by means of a handsome engraving, showing the contrast of nickeled parts with black iron surfaces, while others show some of the styles in which the heater is offered. Buck's hot blast oak series embraces a number of interesting constructions, following which attention is given to Buck's Old Style Oak heaters, with under draft and straight fire pot. The catalogue concludes with a miscellaneous assortment of Franklin, Todd, Cottage Parlor, Box, Globe, Cannon and Laundry stoves and with telegraphic code arranged alphabetically.

THE 56-page catalogue and price-list which is being distributed by the Henry N. Clark Company, 56-58 Union street, and 43-45 Friend street, Boston, Mass., shows a variety of Heating Stoves, including several entirely new patterns for this season's trade. Prominence is given to several lines of sheet iron surface burners embodying the modern improvements, a number of Oak Stoves of pleasing exterior, together with Airtights, Cottage Parlor, Box, Cannon and Laundry Stoves. Attention is also given to Oil Heaters, Galvanized Portable Ovens, Basket Grates, &c.

ODD PLATES.

ONE of the latest advertising posters distributed by the Lehigh Stove & Mfg. Company of Lehighton, Pa., is of most striking design and carries in conspicuous letters the caution, "Don't Keep House Without a Lehigh Stove." The picture with which the poster is embellished represents a colored bride and groom just taking their departure from the house in which the ceremony has evidently taken place, and they are being started on their journey with the accompaniment of rice and old shoes in lieu of the proverbial slippers. It represents a striking study in many respects, and affords an excellent opportunity for humorous comment. Hung in a dealer's store, the poster cannot fail to instantly attract attention, which was obviously the intent of the artist who prepared it, and at the same time it serves as an excellent medium for keeping the name "Lehigh" prominently to the front. The poster is bound at the top and bottom with metal strips, and has an eye for suspending it upon the wall.

THE HENRY N. CLARK COMPANY, 56-58 Union street, Boston, Mass., are sending out a circular letter calling the attention of the trade to a few facts in relation to their Stove, Furnace and Range Repairs. They have been in the business 20 years, and recently consolidated with the late T. A. Westcott by purchasing his entire business, including patterns, good will, &c. The company carry a large stock covering an immense variety of repairs, and state that they have business connections with every prominent manufacturer in the country. Many repairs that cannot be obtained in Boston or elsewhere, the company claim, can be promptly procured through them.

WILMOT, CASTLE & Co., Rochester, N. Y., are just issuing a very attractive pamphlet in the interest of their Stove Pipe Radiator, entitled "A Modern House Warming." The cover bears a design in a two color effect showing a cottage residence, thermometer and one of their Radiators. These Radiators are designed to be connected with the pipe of a steam boiler, Hot Air Furnace, kitchen Stove or parlor Heater, either in the same room with the Stove, or in a room above. It is pointed out and emphasized by means of testimonial letters that these Radiators prevent overheating of the chimney, utilize heat that would otherwise go to waste, and are capable of heating from one to three chambers, according to the size used and the character of heating apparatus with which they are connected. A judicious distribution of these little booklets by the Stove dealers would go far toward bringing in a profitable trade.

W. J. BURTON & Co., Detroit, Mich., are bringing to the notice of Stove dealers throughout the country the merits of their Fuel Economizer and Radiating Damper for use in connection with the pipe of Stoves, Ranges and other heating apparatus. They are sending out an interesting illustrated pamphlet showing the internal construction of the device with the wings opened and closed to regulate the draft. The Economizer is also shown in connection with a parlor Heater for heating a chamber above. It is observed that by its use heat can be enjoyed in an additional room without expense, labor or dirt. Testimonial letters are also presented from those who have used the device with satisfactory results.

THE CHATTANOOGA STOVE COMPANY, Chattanooga, Tenn., are contemplating a large addition to their foundry, with a view to providing increased facilities.

THE KELSEY FURNACE COMPANY, Syracuse, N. Y., are directing the attention of the trade to the merits of

the Kelsey Warm Air Generator by means of a colored card which they are sending through the mail. It carries the statement that "the house that Kelsey heats cannot be anything else than a perfectly and properly heated house." Reference is made to the fact that while the study of heating apparatus is not highly exciting, yet it is very necessary if one intends to keep the home at a comfortable temperature during the cold months of the year. The company state that the problem of heating a given number of rooms and maintaining an even, comfortable temperature on the coldest days, as well as on moderate days, and at the same time furnishing the proper quality of heat as well as the quantity and doing the work economically is one which only a Kelsey can solve.

The Duffy-Trowbridge Stove Mfg. Company, Hannibal, Mo., have purchased a large piece of property with a view to extending their already large Stove works. The property comprises what is known as the Patton factory building and the ground attached to it. This property extends an entire block and gives the company the advantage of 300 feet of additional railroad track. The factory is a large brick and frame building, which will for the present be used for storage purposes.

The Excelsior Stove Mfg. Company, Quincy, Ill., recently increased their capital stock from $60,000 to $80,000. The company's business had grown to such an extent that the additional capital was necessary.

The Union Stove Repair Company, Chicago and Omaha, are conducting a business which they state is the result of long years of agitation by the Stove manufacturers of the country for some central place for the distribution of original repairs. Through this company can be obtained the original repairs for most of the leading Stove establishments, thus presenting a convenience which can hardly be overestimated by the trade. The company have prepared an order book which they term "Original Order Book," which is designed on an absolutely new plan and is believed to enable orders for repairs to be made out more accurately and with less liability to mistake than anything heretofore issued. This order book contains a large number of blanks, each of which is connected with a stub on which the details of the order can be entered for preservation by the dealer. The blank is detached and sent in to the Stove Repair company. The blank has columns carefully headed covering all the necessary information to insure accuracy. A copy of this order book is furnished with the first shipment of Repairs to all customers..

W. H. Colebrook Sons & Company, Syracuse, N. Y., are not likely to be forgotten by the Stove and Furnace trade when in need of Cement and Putty, as their circulars are well calculated to leave a lasting impression. A little rubber fish attached to a card bearing the statement, "We're Still Fishing for Your Order," and a poetical reference to Colebrook's brand is the latest from the house.

New York's Latest Model Tenement.

We have referred on more than one occasion in these columns to the good work that is being done in New York City by the City & Suburban Homes Company in the erection of model tenements for the better housing of the poorer classes of the population, who are now too often forced to inhabit crowded and unsanitary tenements in the congested districts of the city. None of the model tenements now in existence, however, will compare in magnitude and in perfection of equipment with the building of this character for which plans were filed a short time ago by the corporation above mentioned. Especial interest attaches to this building in that it is practically the first to be erected under the new Tenement House Law.

The building will have a frontage on Avenue A extending the entire block from Seventy-eighth to Seventy-ninth streets, will be six stories in hight and will contain 186 separate apartments of three and four rooms each. The *façade* will be of golden buff colored bricks, with Indiana limestone and terra cotta trimmings. The entrances will be of polished colored granite, the vestibules will be wainscoted with marble, and the floors of the entrance and staircase halls of colored inlaid tiles. The roof will be of plastic slate, and the fire walls will be carried above it so that it can readily be transformed into a roof garden or playground for the children should this be found desirable. There will be eight staircases, inclosed in heavy brick walls, with absolutely fire proof floors, stairs, doors and windows. The first floor will contain nine stores, 16 apartments and a number of shower and tub baths for the use of tenants, while each of the upper floors will be divided into 34 apartments.

The aim of the architects, Harde & Short, who spent several years in the study of the economic planning and construction of improved model tenements, is to make each apartment in itself a complete home, with plenty of light, air and ventilation. Each will be supplied with a gas range for cooking, hot water from the basement, steam heating, dust shoot leading to the cellar, where there will be a special furnace for consuming the sweepings, refrigerator space in each private hall, letter box, speaking tubes and electric vestibule door openers. There will also be dumb waiters, and a complete laundry and steam clothes drying apparatus in the basement. A feature that would doubtless be highly appreciated by tenants of some of the higher class flat houses of the city will be sound proof floors and partitions which will separate each apartment from its neighbor.

The entire structure has been so planned that there will be no interior vent shafts of any kind, but the rooms will have from one to three windows opening directly on the street, yard or large open courts. When the building is completed it is the intention of the owners, the City & Suburban Homes Company, to commence work on a second section in the rear, fully as large as the one now under way and separated from it by a 20-foot roadway. When these improvements are fully carried out accommodations will be afforded for a greater number of people than are to be found in many of the smaller towns and villages of the country.

Large Shipments of Gas Stoves, Washing Machines, Etc.

A. Van Der Laan & Co., 18 Broadway, New York, importers and exporters, are the branch of a house in Rotterdam and Amsterdam, Holland, who export general lines of American manufactured products as well as foodstuffs, &c. Their business is mainly confined to Holland and Belgium. They recently placed with the Criterion Mfg. Company, 443 Greenwich street, New York, what they believe to be the largest export order for gas stoves so far given in this country from continental Europe. During August 575 gas stoves were shipped, one lot of 102 cases going August 24 by the "Enxinia," and early in September another order for 980 gas stoves was placed with the same concern, the last lot measuring about 200 tons, shipment of which has been arranged by the Phœnix Line steamer sailing September 21. A recent shipment of 600 washing machines was made in one lot, and since the beginning of the current year, so far, 6000 have been sent forward. They have also forwarded direct to France recently 15 cases of stoves and radiators. The business of the New York house is entirely with the main houses in Holland.

Scott & Bobb have lately engaged in the Hardware, Stove and Plumbing business at 812 North Kansas avenue, Topeka, Kan.

M. R. O'Neill, wholesale and retail dealer in Hardware, Stoves, &c., Fargo, N. D., has opened a branch store at Sisseton, S. D., under the firm name of O'Neill & Gilmer, with Mr. Gilmer as resident manager. They will carry a complete line of Hardware and Furniture and would be pleased to receive catalogues, &c.

The Abingdon Trap Company, Abingdon, Ill., who were organized about two years ago for the manufacture of Mouse and Rat Traps, are meeting with an increasing sale for their Eli Trap. They have commenced to appoint resident agents in different parts of the country.

Office Rules of a New York House.

Conspicuous on one of the walls of the store of Neal & Brinker, wholesale and retail dealers in hardware, cutlery, &c., and Eastern and export agents for a number of well-known manufacturers, 18 Warren street,

Office Rules:

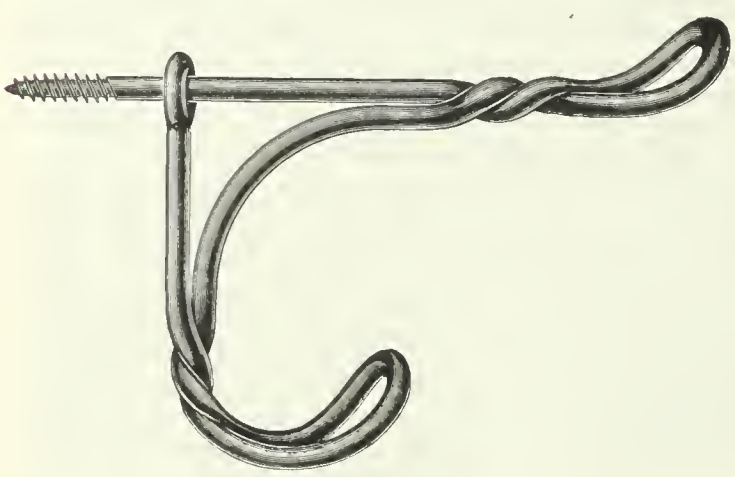
NEAL & BRINKER,
Hardware,
18 WARREN ST., NEW YORK.

New York, are the office rules which are set forth in the illustration given herewith. They also appear on the back of their business card. While the rules are of a facetious character, it will be observed that they emphasize the necessity of giving strict attention to business. It will be noticed that a good deal of time is allowed for customers, while "friends" and other interruptions are given insignificant attention.

The King Coat and Hat Hook.

The accompanying cut illustrates a wire coat and hat hook put on the market by the Parker Wire Goods Company, Worcester, Mass. It is pointed out that the brace



The King Coat and Hat Hook.

is fastened at both ends by twisting, and that the bearings are broad on both top and bottom hooks. The correctness of construction and the strength and neatness of the hook are alluded to. It is made in 2½, 3 and 3½ inch sizes, coppered, japanned, chestnut bronzed, retinned, brass plated, nickel plated and of brass.

A RECENT FIRE slightly damaged the store of Smith & Becker, Camden, N. Y., wholesale and retailers dealers in Shelf and Heavy Hardware, Stoves and Tinware, Agricultural Implements, Sporting Goods, Sash Doors, Blinds, &c.

The Red Man.

During a recent celebration of the Red Men at Laredo, Texas, the Red Man whose picture is printed herewith kept guard in the window of Deutz Bros. This display was the handiwork of Wm. H. Curry, to whose lot falls the window trimming.

The head of the Indian was formed of a large White Pitcher, the ears and the nose of plaster paris, the shoulders of a Steak Plate, and the neck of a scalloped Bowl. A large Feather Duster with daubs of Paint on some front feathers was stuck into the Pitcher as a head dress. The face, &c., were decorated with Yellow Ocher, Ultramarine Blue and Vermilion. To form the body a shelf was put on a bracket fastened to the back wall of the window, and this shelf formed the support for shoulders and head. For the chest and body a large knitted Game Bag was tacked over the edge of the shelf. The legs were formed of two Leather Carbine Scabbards, the feet of heavy water proof Hunting Shoes. Hunting Leggings were put on and, coming up the legs, covered

The Red Man.

the part where Scabbards were put in the Shoes. The arms were formed of Leather Pistol Scabbards stuck into each other and fastened together by strings in the back of same, and also fastened to the shelf for support. The fingers were Clothes Pins stuck to the Scabbards, with an empty Paper Shell stuck on each. A loaded Cartridge Belt, fastened around the waist and supported from the back, held a Revolver in a Scabbard, a Bowie Knife and an Ice Hatchet that served as a tomahawk. A Winchester Carbine rested against a box beside the figure, and the floor was covered with sand. In the very front of the window the name of the firm was formed of Cartridges placed in the sand. Drapery and flags were used for decorations. All the goods shown were from stock, including the Flags, which are handled in this store.

In the absence of a Pitcher a stone mason's Mallet set on Tin Pans could be decorated and made to form a good likeness of an Indian.

This display attracted very marked attention, which is the general result where grotesque displays are made from store goods, and many a laugh was had at the Red Man.

SOUTHERN HARDWARE JOBBERS' ASSOCIATION have just issued a little pamphlet concerning the *personnel* of the association. It gives the officers and members of the executive and standing committees for the ensuing year, and also the membership of the organization comprised in the States of Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Texas and Virginia and District of Columbia and Indian Territory.

AMONG THE STEAM FITTERS.

A considerable stir has been made among heating contractors throughout the country by the recent advances in the price of wrought iron pipe and the higher cost of radiation. A prominent Western contracting house are authority for the statement that, in consideration of these advances what, at the old prices, would have been rated as a $500 heating plant will now cost at least 20 per cent. more, provided steam fitters are careful to avoid loss on their work. Nevertheless, the shipments of boilers and radiators have been increasing in volume as the season has advanced, and there are many estimates out for large and small work that must be done to make the buildings available, and these contracts must be awarded. A New York contractor is reported to have said that the advance would make a difference of $3000 in one contract that could not be protected, and that careful attention would be necessary to prevent a serious loss.

Many building contractors have delayed closing their heating contracts, and now face the necessity of delay in completing their structures owing to the difficulty in getting the necessary pipe, even at the advanced prices that must be paid. Shipments are made more promptly by the jobbers who have stock than by the mills, the latter being much behind in their orders, owing to the strike.

Furthermore, the jobbers are getting much more for their promptly shipped stock than the mills are quoting for the same material. Apparently it is a time for the heating contractor to go very carefully about closing contracts until he is sure that he can get the material required, and at a price that will enable him to do the work at a profit. Aside from the unusual conditions brought about by the strike, the market on most of the material in the heating trade has held about as well informed buyers expected.

Kieley & Mueller's Catalogue.

A catalogue of 72 pages has recently been issued by Kieley & Mueller, 7-17 West Thirteenth street, New York. The title page gives the addresses of the various branches of the house, and is followed by a well arranged index. The firm call special attention to their long experience in producing steam specialties, and to the fact that where their goods are used the house shares the responsibility, inasmuch as it is guaranteed that they will perform the work for which they are intended. The first 14 pages are devoted to pressure regulating valves for both low and high pressure, reducing valves and several styles of noiseless back pressure valves and exhaust valves. Another section of the catalogue is devoted to the Kieley steam traps for both high and low pressure; some designed to stand pressures up to 250 pounds. A new low pressure grease trap is shown, designed for use in connection with heating systems in which exhaust steam is used. The Kieley cantilever expansion steam trap, a special strainer connection for all makes of steam traps and the Aqua water feeder are other specialties which are shown. The well known Champion return steam trap and pump feed is followed by the New Century steam separator, and the Multi-Tubular oil and grease trap. The Mueller condensation receiver and automatic pump governor and its variations occupy four pages. Condensation pumps, the Mueller boiler feeder, the Kieley positive acting pump governor, and the Rockaway automatic pump governor are also represented. The Climax damper regulator occupies several pages, showing its application and records where it has been used. The Thermo temperature controller, for maintaining a regular temperature of the hot water supply and avoiding the waste of steam, is shown in connection with the tanks used in apartment houses. A variety of other specialties are also shown. The closing pages of the catalogue contain useful information for steam fitters and engineers.

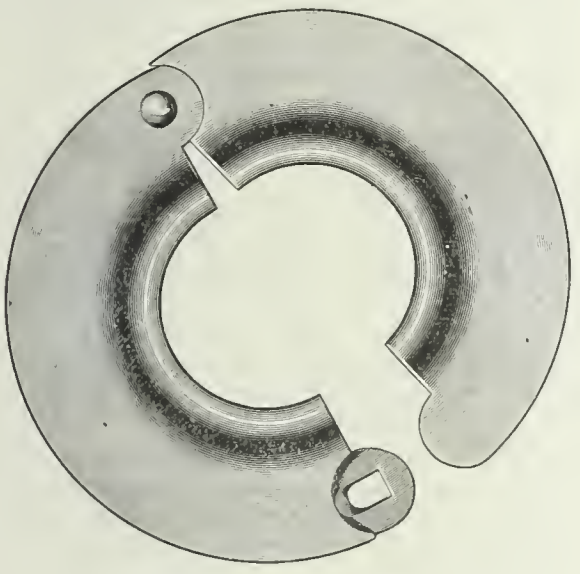


Fig. 1.—Plate Open.

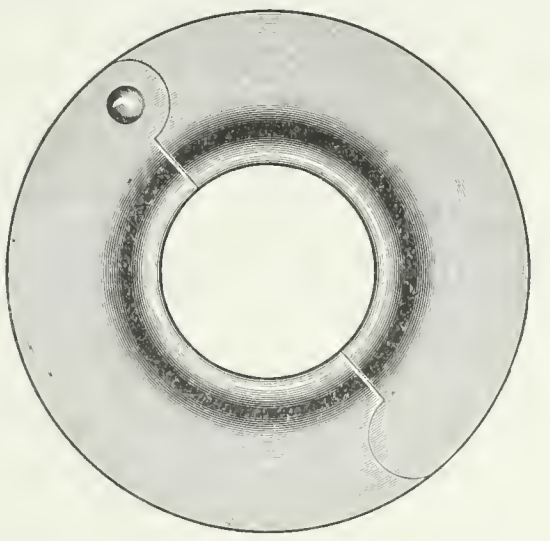

Fig. 2.—Plate Closed.

A NEW FLOOR PLATE.

A New Floor Plate.

In the accompanying illustration we show a new floor plate which is just being put on the market by the Beaton & Corbin Mfg. Company, Southington, Conn. In Fig. 1 the plate is shown open so that it can be slipped around the pipe. Fig. 2 shows the plate closed. In construction, as will be seen, it is made in two parts riveted together so as to form a hinge. On the underside of one part is a nib with catches in the opening provided in the other part to hold the parts together when placed on the pipe. This nib is made to stand at a right angle on one side so as to fasten the parts when caught in the hole shown and inclined on the other so as to gradually slip in place as the two parts are forced together. The plates are fitted so that the different parts are held so tightly together that the joint is very close, presenting a neat appearance. The plates are furnished in different styles of finish, from plain to full nickel plate. They are made of cast iron in a variety of sizes adapting them for plumbers' and steam fitters' use.

McAuliffe & Co., Providence, R. I., are remodeling the plumbing system in the Comanchet mansion, the residence of ex-Governor Sprague, at Narragansett Pier. The work will include 15 bathrooms, besides other fixtures. They are also reconstructing the plumbing in the residence of James Hanley.

UNFAIR CONDITIONS OF SPECIFICATIONS.

A contributor to the *Official Bulletin* of the National Association of Master Steam and Hot Water Fitters presents the following, which will be of interest to all who do contract work:

A specification accompanied by plan, that clearly expresses exactly what is required as to quantity, quality and arrangement of materials, unaccompanied by ambiguous requirements, is not likely to bring out unfair bidding. If such plans and specifications were always furnished to steam contractors there would be no occasion for this article. On the contrary, however, a very large proportion of the specifications on which master fitters are asked to submit bids are so indefinite as to details of quantity and quality as to be practically worthless as a guide to the owner's requirements.

The architect who issues such loose specifications usually protects himself and the owner by a series of ingenious and utterly unfair requirements, which place the responsibility for his own shortcomings on the shoulders of the contractor. These unfair requirements usually take the form of reserving to the architect unrestricted discretionary powers, and subjecting the contractor to conditions which could not be sustained in any court of equity.

Many master fitters do not read the general conditions accompanying specifications, and frequently in bidding to general building contractors the general conditions of the specifications are not shown to them. In many cases where the bidders are familiar with these general conditions they raise no objection to them, trusting that everything will come out all right, and knowing also that if they do object to them the architect will try to place the work in the hands of another contractor who will accept the responsibility.

It is the writer's intention, therefore, to call the master fitters' attention in this article to some of the more unfair of these requirements of specifications. The examples quoted are taken from specifications which have been submitted to him at various times for bids. The first reads as follows:

These specifications are intended to cover all work necessary to make a complete and workmanlike job, and any materials, piping, valves, devices or changes necessary to accomplish this end, omitted from these specifications or not shown on the accompanying plans, shall be furnished by the contractor without extra charge, the same as if specified or shown in full. The plans are intended merely as a guide to the contractor and not as exact working drawings; and if any changes are required in the arrangement of the work, such changes and materials required for these changes shall be made and furnished without extra charge.

Any contractor who will deliberately sign, as part of a contract, specifications containing such a clause, deserves no sympathy. Fate does not intend that he shall continue in business.

All the quotations that follow are taken from one specification, and will serve to illustrate how far it is possible for an architect to make himself the absolute dictator over the contractor and his work, provided he is permitted to do so. Only those requirements which are most unfair are quoted, by no means all of them being included. The first clause I will quote from this rather remarkable specification reads as follows:

Anything shown on the drawings and not mentioned in the specifications, or *vice versa*, is to be furnished or executed the same as though both shown on the drawings and called for in the specifications. The drawings and specifications will be taken as a whole and not separately, as they illustrate and explain each other, and it is their true intent and purpose to include everything proper for a thorough and satisfactory completion of the work (excepting things specially noted to the contrary in these specifications), although such thing may not be particularly mentioned.

A contractor has a proper right to object to a clause of this kind, although it is in general use. It is obviously intended to cover the architect's shortcomings and oversights. In the limited time given to make estimates on work it is impossible to make such comparison between plans and specifications carefully, nor is there any reason why the contractor should assume the architect's obligations. Should there be omissions from plans or specifications which have escaped the bidders' attention, there is certainly no equity in forcing the contractor to assume responsibility for them and give the owner something for which he is not paying.

The drawings and specifications will remain the property of the architect. They are to be used only for the work for which they are prepared. They are numbered and an account will be kept of those given into the custody of each contractor, and they are to be returned to the architect immediately upon completion of the work for which they are made. A certificate for final payment will not be issued until they are so returned.

Contractors should refuse to return plans and specifications unless they have received a final certificate of approval of work done; otherwise, should a dispute arise and reach the courts, the contractors have surrendered their most valuable evidence.

In case of any doubt or difference of opinion as to whether the detail drawings conform to the plans and specifications, or as to any or all questions arising out of them, the decision of the architect shall settle everything in dispute relating to each separate contractor's work, and he shall also settle all disputes of every kind that may occur between any two or more of the contractors, in any way relating to anything connected with any of the contracts, and his decision shall be binding and final on all parties concerned.

To empower one of two parties interested to settle all questions that may arise between them is inherently unfair. It is obvious that should a contractor object to detail drawings furnished him long after the contract has been signed, on the ground that they do not conform to the plans on which he bid, or on which his contract was based, the architect, being the other party interested, should not have the power to settle such dispute. It should be a matter of arbitration. Neither should the architect be authorized to settle all questions that may arise; such authority is entirely too broad and sweeping.

This clause reads like the remark of a certain unscrupulous politician, who said, "I do not care how the people cast their votes, as long as we do the counting." The architect, in this clause, assumes the place of the courts, and while there are many cases which can be satisfactorily settled by a tactful architect, the writer does not believe it wise to agree to a clause so sweeping.

He (the contractor) shall be responsible for all accidents occasioned to or by his work, no matter how same shall occur, or to any part of the same up to the time of its final completion and acceptance by the owner, and he shall make the same good to the architect's satisfaction.

This clause is so absolutely unfair as to require no special comment.

No contractor shall make any claim upon the owner, either for an extension of time or for extra payment on account of delay or damage which it may be claimed has been caused by any other contractor employed upon the work or building by the owner, the several contractors being responsible to each other; and no contractor shall make any claim for an extension of time or for loss of any kind, by reason of the time at which drawings are furnished, examined and completed by the architect, nor on account of any action or failure to act on the part of the architect.

This remarkable clause is a general let out for the owner and his architect, and a general let in for the contractor. Nobody assumes any obligation for anything, except the unfortunate contractor, and he is to assume any and every responsibility that properly belongs to the architect, owner or other contractors employed by the owner, and say nothing. It seems as if the next step after deliberately accepting such a condition should be to apply to the courts for the appointment of a guardian.

The foreman is to be a person satisfactory to the architect, and any instructions or notices given to him shall be of the same force as if given to the contractor. It shall be his duty to see that the work done by the contractor by whom he is employed is carried out, not only in accordance with the drawings and specifications, but in a thorough and first-class manner in every detail, and to see that the work is thoroughly protected at all times.

The last part of this clause makes it possible to force the contractor to give an owner a dollar's worth of work for 50 or 25 cents. It plainly states that if the plans and specifications do not require a first-class job, he is to see that the work is done as the architect may direct. The unfairness of this clause is plainly evident.

The selections from general conditions of specifications quoted and commented on above are only a few of those used in a majority of specifications submitted by architects for bids, and later attached to contracts. Master fitters throughout the country, I have no doubt, can furnish others equally unfair. The responsible contracting master fitter has a proper right to object to signing contracts containing such conditions.

The writer has frequently discussed with architects the unfairness of conditions of specifications such as quoted herewith, and the reply usually made is that they (the architects) must make the general conditions so binding that the irresponsible or incompetent contractor cannot escape.

In other words, the master fitter who has striven for years to run his business honestly and fairly is put on a plane with the incompetent and dishonest contractor. It seems to the writer that a far better method on the part of the architect would be to discriminate in the invitations to bid between the competent and responsible and the incompetent and irresponsible contractor, by shutting out the latter from the bidding. The responsible master fitters throughout the country can contribute largely to this desired result by refusing to accept such unfair conditions of specifications. The man who has nothing to lose is always willing to take chances and to submit to any and all conditions imposed.

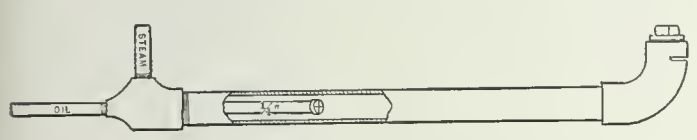
Specifications should be so carefully drawn as to fully describe just what the contractor will be required to furnish, and where this is not done the architect should

not be intrenched behind unfair general requirements which give him the power to force the contractor to give the owner work which his specification failed to describe.

The irresponsible contractor is attracted by such a specification, as by sharp practice he may be the winner, and he is usually willing to chance it. Itis the writer's opinion that the contractor who is willing to agree to any and all unfair conditions is a menace to the trade generally, and is a dangerous man for both the owner and his architect to tie fast to. No amount of watching will secure from him an honest job.

A Crude Oil or Tar Burner.

At the meetlng of the Pacific Coast Gas Association at San Jose, Cal., July 16-18, Charles Hughes contributed to the "wrinkle" department the description and sketch, presented herewith, of a burner for crude oil or tar: "It is constructed entirely of pipes and fittings, such as are found around all gas works and machine shops. The larger or outer pipe, being ¾ inch by 18 inches long, is screwed into a tee. Through the stralght opening of the tee, which is bushed down to required size, a ¼-inch pipe is screwed, whlch enters into the ¾-inch pipe about



A Crude Oil or Tar Burner.

6 inches, and is capped as shown in the drawing. The cap has an opening in the form of a cross, which is filed or sawed through the end to allow of the flow of oil. The large pipe carries on its furnace end an ell, plugged. A slot is filed or sawed of the proper size for the size of the flame deslred. The steam is admitted to the large or outside pipe through the side opening of the tee, as per drawing. The author of this drawlng has had excellent results from the use of this burner; in fact, much better than were obtained from some of the expensive burners on the market, the cost of the burner being comparatively nothing."

New York City Notes.

Thomas A. Barry, formerly of 217 West Broadway and who for the past two years has been in New Mexico for his health, dled at his late residence, 896 East 156th street, last Tuesday. The funeral services, which took place last Frlday, were attended by many members of the Master Plumbers' Association, of which Mr. Barry was a member.

* * *

In addition to the large amount of work that Milton Schnaier & Co. have on hand, they have found time to fit up a show window at their shop, 347 Columbus avenue, as a twentieth century bathroom. The exhibitlon is one of the finest of its kind ln the city.

* * *

The plumbing trade is well represented in the September Grand Jury for New York County, Thomas J. Cummins and George B. Brown being members.

* * *

The shop of Paul S. Bolger at 378 Park avenue is one of the busiest in the city at the present tlme. Mr. Bolger has the contract for the Mount Sinai Hospital at Fifth and Madlson avenues and 100th and 101st streets. There will be eight buildings in the plot and it is intended to be one of the finest hospitals ln the country. Mr. Bolger is also overhauling the entire plumbing in the Hoffman Arms at Madison avenue and Fifty-ninth street.

* * *

Trade still continues brisk among the majority of the plumbers and few capable journeymen are on the street. Material is scarce in some lines and this is causing delay on many jobs.

Heating and Plumbing Notes.

The Walker & Pratt Mfg. Company of 31-35 Union street, Boston, Mass., have just lssued a new catalogue devoted to the New Walker Boiler for hot water and steam heating. This boiler is of the horizontal, return flue, vertical sectional type of push nipple construction. The construction provides a substantial base for supporting the sections. The base contalns a grate of a labor saving type. An upper and lower crown sheet ls used in the construction to increase the heating surface exposed. The flues are so arranged as to secure a long fire travel and extract the principal heat from the gases. The Boilers are made with fire chambers 17, 22 and 32 inches wide, and ln 19 dlfferent sizes, varying in capacity for carrying from 400 to 3650 square feet of hot water surface.

The Pierce, Butler & Pierce Mfg. Company of Syracuse, N. Y., and 46 East Twentieth street, New York, are sending to the trade a very neat pamphlet devoted to the Florida and Tropic Boilers. After giving the guarantee and ratings, the Boilers are shown by means of general and broken views, so that an accurate idea of the construction and operation can be readily gained. The Florida Boilers are made for steam and the Tropic for hot water. The steam Boilers vary in capacity from 375 to 2100 square feet as surface burners, and from 200 to 1000 square feet as base burners. The water Boilers vary in capacity from 625 to 3550 square feet as surface burners, and from 325 to 2125 square feet as base burners.

The H. H. Dauphinee Company, Providence, R. I., have just completed the plumbing and steam heating in three houses for D. Bouchard, using Sunshine Boilers. They are also engaged on a number of other heating and plumbing contracts.

The Bridgeport Boiler & Pipe Covering Company, 54 Middle street, Brldgeport, Conn., are representatives of the H. W. Johns Mfg. Company, New York, and the Eastern Granite Roofing Company of New Jersey. They are engaged in furnishing and putting large quantlties of material on hot water and steam pipes and hot air pipes, as well as Frost Proof Covering to prevent freezing in plumbing systems.

The plumbing establlshment of J. M. Donovan, 6 Province street, Boston, Mass., was recently entered by thieves, who stole $100 worth of tools and materials.

An Interstate Conference of Master Plumbers and Sanitary Engineers was in session in Sydney, New South Wales, at the time of the dispatch of the last Australian mail. A draft constitution and by-laws had been adopted, several resolutions dealing with the question of materials and contracts were being discussed in committee and the association's labors appear to promise important results. The name of the new association is to be the National Association of Master Plumbers of Australasia, and its aims and objects will be largely identical with those of the American National Association of Master Plumbers.

A 60-page illustrated catalogue recently published by the Smooth-On Mfg. Company, Jersey City, N. J., is a very interesting and instructive book. It tells all about the different Smooth-On Cements, what Smooth-On is, how it is used, gives illustrations for its use and tells why it is valuable to the engineer, machinist, iron and steel founder, steam fitter and plumber.

A. C. Mosley of Westfield, Mass., has the contract for plumbing the Westfield Town Hall. Pearce & Cox of Boston have the contract for steam fitting.

Advices from Rock Island, Ill., report a valuable find of clay in the hills near Sears, in that State. The clay is known as seam mud, a light variety used in the manufacture of sanitary earthen ware. It is said to be comparatively rare. The only places in which it is found in quantities are Trenton, N. J., and Kokomo, Ind. The vein at Sears ls said to be 20 feet in thickness and only a few feet below the surface. The discovery, it ls believed, will lead to the founding of an important pottery industry in or near Rock Island.

The Cahill Iron Works, Chattanooga, Tenn., have completed an addition to their plant which they purpose to use for the manufacture of Enameled Bathtubs, Kitchen Sinks, &c.

Gibbons & Donohue have moved their plumbing shop to the new Viola Block on Ward street, Great Barrington, Mass.

The school controllers of Allegheny, Pa., have awarded the contract for heating and ventilating the new High School to McGinness, Smith & Co., Pittsburgh, Pa., at their bid of $42,377. The James Hay Company bid $41,300. The Board had employed W. K. McGinness as heating engineer, with the agreement that in case the contract was awarded to his house no charge would be made for his services in preparing the plans and specifications and superintending the installation of the plant. But in case the contract was awarded to another firm he was to be paid a commission of 5 per cent. on the cost of the job. If the contract had been awarded to the James Hay Company the cost to the Board would have been $43,365, while it was awarded to McGinness, Smith & Co., for practically $1000 less.

Quartermaster E. W. Hollyday, at Fort Caswell, N. C., will receive bids until September 30 for plumbing and electric wiring one field officers' quarters, two captains' quarters, one barrack, one mess hall and kitchen and one detached lavatory.

The City Council of Shreveport, La., has decided upon the construction of certain proposed sewers that will cost $97,000.

The Universal Sanitary Mfg. Company is the title of a new pottery in New Castle, Pa., the buildings for which are just completed. It is a local enterprise with $100,000 capital. The company have six kilns, and will make Sanitary Goods. New Castle is developing into a pottery town. The present pottery enterprises are all said to be backed by ample capital and seem to be under enterprising, intelligent management.

C. H. Smith of Athol, Mass., has opened a branch plumbing shop at Millers Falls.

Graves & Rockwood, heating contractors and plumbers, East Aurora, N. Y., are moving into more spacious quarters, where they will have a better opportunity to show their goods in a building next door to their old stand.

J. B. Carroll, 36 La Salle street, Chicago, is advising the trade by means of a huge postal card of the merits of the Hahn Acetylene Burner. The Hahn Burner is having a phenomenally large sale, which is due to the peculiar features of its construction, through which are secured very satisfactory results. The gas and air being brought together in proper proportion, there is no formation of carbon on the burner tips and maximum efficiency is thereby secured. The Burner is claimed to possess the greatest possible durability, having a strong metal frame and indestructible lava tips.

Kerwin Brothers, 101 South Pearl street, Albany, N. Y., inform us that they have been awarded the contract for new sanitary plumbing, with Opalite tiling in the bathrooms for the Governor's Executive Mansion in Albany, the job amounting to about $10,000. They also have the contract for plumbing School No. 12, which is said to be one of the largest and finest school buildings in the State.

Charles H. Carter of Waterford, N. Y., informs us that since his succession to the plumbing and heating business formerly carried on by Carter & Lund he has been kept busy with a number of desirable contracts.

The South Chester Pipe & Tube Company, Chester, Pa., are now rolling Pipe up to 12 inches in diameter. Heretofore the largest Pipe rolled was 10 inches in diameter.

The plumbing shop of Burke & Hill, 32 Prospect avenue, Buffalo, N. Y., was destroyed by fire on September 6.

The Supervising Architect at Washington, D. C., will receive bids until October 31 for the heating apparatus for the United States Post Office at Stockton, Cal.

New Firms and Changes.

The Elysian Supply Store Company have been incorporated in Hoboken, N. J., with a capital of $125,000, to manufacture Plumbers' Supplies, by Fred. A. Verdon, Thomas Crellin and Francis J. Verdon.

The Isaac P. Taggart Heating & Mfg. Company have been incorporated in Philadelphia, Pa., with a capital of $10,000, to deal in Heating Supplies.

The Hill-Anderson Plumbing Company have been incorporated at Columbus, Ohio, with a capital stock of $5000 by E. E. Hill, J. E. Hill, J. C. Anderson, A. E. Anderson and A. C. Makinzie.

American Manufactures in South Africa.

United States Consul-General James G. Stowe, at Cape Town, South Africa, in a recent report to the State Department, has this to say in respect of the importation of American goods into Cape Colony:

To make a list of all the articles of American manufacture sent here during the last four years would occupy many pages. They have, in the great majority of cases, been found efficient and durable. "That is another handy American trick," is a common saying. We cannot enter a home but what are seen some greatly appreciated American made articles. Our kitchen ware and furniture adorn many a home. The natives are astounded when they see light, strong and efficient American agricultural implements at work in the field. The American organ is a frequent sight, and scholars sit in the schools at neat and comfortable desks "made in America." American pews in the churches make poor services less tedious. The old and heavy English knives and axes are passing away, and the American hatchets and scientific axes are cutting the kindling wood for the home and hewing down the forests. Where six yoke of oxen were once seen pulling an 8-inch plow, our American plows with one yoke now do the work, and the day is fast disappearing when it takes from six to eight yoke to draw a wagon; one American wagon, carrying the same load, can be drawn with two yoke, or a good team of horses. Imitation American products are ever present, but there is always something about them, some little addition or change, that discloses their origin.

The Rochester Mechanics' Institute

The Mechanics' Institute of Rochester, N. Y., has favored us with a copy of the annual Circular of Information on the courses of instruction for the seventeenth year of the institution, which begin September 26, 1901, and close April 26, 1902. The institute is now housed in the new Eastman Building, the gift of George Eastman, which covers nearly an entire block and which was specially designed for the purpose of giving instruction in a variety of courses by day and evening classes, covering general education and practical subjects. The classes which are of special interest to our readers are mechanical drawing, steam engineering and electricity. There is also a department of domestic science and art for women. The cost of the instruction in the different courses is nominal and is not sufficient to bar any ambitious young person. The institution is equipped to do a valuable work and cannot fail to be of great benefit to those who avail themselves of its advantages. It is calculated to make its impress for the public good widely felt.

We have received with the compliments of Joseph T. Ryerson & Son, Chicago, Ill., a copy of a little pamphlet entitled "The Strange Story of Shan Dai, Pharaoh's Chief Boiler Maker." This story was written by R. R. Shuman, editor of the *Boiler Maker and Sheet Metal Worker*, and printed in that magazine in serial form. It is now published in pamphlet form in response to a large number of requests from those who have read it serially. The fanciful tale is written in an attractive manner, and its interest is hightened by a number of excellent illustrations of Egyptian scenes, which add to the verisimilitude of the story.

THE YOUNGSTOWN IRON & STEEL ROOFING COMPANY.

As noted in these columns last week, the new four-mill sheet plant of the Youngstown Iron & Steel Roofing Company at Youngstown, Ohio, was put in successful operation on Wednesday, September 4. The plant has been under erection since January of this year, at which time the Youngstown Iron & Steel Roofing Company decided to build a sheet mill, and for this purpose increased their capital stock to $300,000. After the consolidation of the sheet mills had been made the concern found some trouble in getting prompt deliveries of sheets, and after a careful study of the situation decided that their interests would best be served by having a mill of their own, which would insure them a steady supply of sheets and of the kind particularly adapted to their purposes.

The history of the roofing business shows that steel sheets for roofing purposes do not last as long as Iron, and for this reason the Youngstown Iron & Steel Roofing Company, when they determined to build a sheet mill, decided that they would make iron sheets, which are better adapted to their purposes and which they believe will last longer on the roof than steel. With this in view, the company placed contracts for two double puddling furnaces, a squeezer, bar mill and four sheet mills. The squeezer, bar mill and sheet mills were placed with the Braddock Machine & Mfg. Company, at Braddock, Pa., who made remarkably quick time in building and delivering the machinery. The main building is of steel construction, 300 feet long by 130 feet wide, and contains four hot mills, with accompanying roughing rolls, two cold mills, a sheet bar mill, two double puddling furnaces, squeezer, shears and other equipment. The building is commanded by a 40-ton electrical traveling crane, furnished by the Niles Tool Works Company of Hamilton, Ohio. The boiler plant contains two batteries of 600 horse-power each Sterling water tube boilers, also four Mehan waste heat boilers of 300 horse-power each. The machinery is electrically driven, power being furnished by a 150-kw. generator. The company have their own switch, giving them direct connection with the Erie, B. & O., Pennsylvania lines, Lake Shore and Pittsburgh & Lake Erie systems. It is the intention to also make a limited amount of steel sheets.

Sheet bars are received on their own tracks in 25 to 30 foot lengths and sheared, after which they are taken to the heating furnaces, reheated and rolled into sheets. The bar mill is not yet ready to start, but it is the intention of the company when it is running to break down their own billets into bars, believing by doing this they can get bars better adapted to their requirements. The company have also built a galvanizing plant and will furnish galvanized sheets of iron and steel, as well as black. It is contained in a building 150 x 60 feet and has modern equipment. The sheet mill is located on a site containing 7 acres of land, and foundations are already in for two more hot mills, which will be added in a short time. The concern have also about finished a new and very complete office building, which they expect to occupy in a short time. It is furnished with kitchen and dining room, the intention being to furnish meals to the employees. It has also toilet rooms and everything necessary for a first-class office building.

The business of the Youngstown Iron & Steel Roofing Company was established in Youngstown in 1894 in a small way, and has steadily grown since that time. About two years after the business was started the company took up the manufacture of metal lathing and bridge flooring, in which they have built up a very large trade. Two years ago the Youngstown Range & Stove Company were incorporated, the plant being located just beside that of the Roofing Company, the concern making a specialty of the manufacture of the Youngstown steel range, a high class range, for which they have had a large demand. The new sheet mill will supply the entire requirements of both the Youngstown Iron & Steel Roofing Company and the Youngstown Range & Stove Company, and will also allow the concern to be sellers of sheets in the open market. They have already entered a large number of orders and their surplus product for the balance of this year is practically under contract. Much of the success of these two concerns is due to John O. Pew, who has been general manager of both since their inception. Mr. Pew is thoroughly versed in the requirements of the roofing trade, and believes that by having control of the sheet mill and knowing the stock that is going into the sheets it is possible to furnish better roofing to the trade than ever before. The two concerns have the same officials, these being L. E. Cochran, president; G. M. McKelvy, vice-president; Mason Evans, secretary and treasurer, and John O. Pew, general manager.

Washington Charcoal Iron Tin Mills.

McClure & Co., dealers in tin plate and metals, whose offices and warehouses are located at 211, 213 and 215 Second avenue, Pittsburgh, Pa., with branch warehouse at 115 North Seventh street, Philadelphia, Pa., have recently purchased a large majority of the stock of the Washington Charcoal Iron Tin Mills, at Washington, Pa. McClure & Co. have always been stockholders in this concern, but desired a change in the management. They will continue to sell the entire output of the plant, which at the present time amounts to a daily output of 750 base boxes, and can assure the trade very much better service under the present management. It is the intention to double the capacity of the works in the very near future. New officials hve been elected, as follows: Thomas G. McClure, president; J. J. O'Connor, vice-president, and P. J. McNulty, secretary and treasurer.

Ratios of Tin Plate Sizes.

A book that will be of value and convenience to all who use tin plate has just been issued by the American Tin Plate Company, New York. It is entitled "Ratios of Squares and Odd Sizes of Tin Plate." The book, which is copyrighted, is 5½ x 10¼ inches in size, and has 30 pages of fine paper, and is well printed and bound with gilt edges in a black leather cover. The opening page is used to enumerate the variety of goods manufactured by the company, while the second page gives rules for using the various tables and explains the use of the ratios provided. Tables are also presented giving the United States standard gauge and weights for sheets, the standard weights and gauges of tin plates according to trade terms, and the net weight per box of tin on the basis of 112 sheets of 14 x 20, also of taggers tin and trunk iron.

By the use of the ratios with the tables, by dividing or multiplying the price or base price, the weight or base weight, with the number of boxes given, the equivalent number of base boxes, the ratio of sizes not given, the ratio of irregularly packed boxes or the ratio of extra long sheets can be readily determined. The book will be valuable for reference to all who use tin plates, as with its aid all required information regarding weights, sizes, &c., of tin plates can be readily obtained without delay.

The Youngstown Iron, Sheet & Tube Company.

Some time ago the Board of Directors of the Youngstown Iron, Sheet & Tube Company, at Youngstown, Ohio, decided to increase the capital stock from $1,000,000 to $2,000,000. The annual meeting of the stockholders of the company was held in Youngstown on Tuesday and they voted unanimously for the increase. It is probable that the additional capital will be used to build a large open hearth steel plant. Work on the buildings of the Youngstown Iron, Sheet & Tube Company at Hazelton is progressing rapidly, and the concern will be in the market in three or four months as makers of iron sheets and iron tubes. The old Board of Directors was re-elected, and George D. Wick was elected president and treasurer; James A. Campbell, vice-president and general manager; W. H. Foster, sec-

retary, and W. C. Reilly, auditor. W. H. Foster is a new official and was formerly with Myron R. Arms in the sheet business at Niles, Ohio.

FLASHINGS.

THE G. DROUVE COMPANY of Bridgeport, Conn., are doing the Galvanized Cornice work for St. Mary's Parochial School.

F. H. SNEATH, 54 Pratt street, Hartford, Conn., has been awarded the contract for placing Slate roofs on 17 buildings at Fort Mansfield, Napatree Point, R. I., for the United States Government. He also has a number of other large contracts.

M. H. G. GUNTHER, representing W. H. Mullins, Salem, Ohio, is spending a few days in the East and was a caller at *The Metal Worker* office this week.

JAMES E. KELLY & SON, Bridgeport, Conn., have recently completed some large contracts for Gravel Roofing, and are putting in a water tight cellar for John Boyle in New Britain.

THE LEFEBVRE ROOFING & CORNICE COMPANY of St. Paul, Minn., have filed amended articles of incorporation changing their name to the Lefebvre-Deslauriers Roofing & Cornice Company, and increasing the capital stock from $10,000 to $20,000.

THE claim that the Republic Iron & Steel Company, through their labor commissioner, James H. Nutt, had been asked by the Amalgamated Association to sign the scale for five years, is denied. It is probable, however, that when the time comes next year to arrange the wage scale the Republic Iron & Steel Company will ask that the Amalgamated Association make itself an incorporated body, in order that the contracts entered into between the two would have legal standing in a court of equity.

GEORGE D. EVANS, formerly manager of the Lisbon Works of the American Tin Plate Company, Lisbon, Ohio, has resigned to become manager of the new mill being built by the Carnahan Tin Plate & Sheet Company at Canton, Ohio.

THE CARNEGIE SHEET IRON COMPANY have been granted a charter with a nominal capital of $1000. The new concern are building a two-mill sheet plant at Carnegie, near Pittsburgh, and are an identified interest of the Carnegie Tube Company, which concern are building a tube mill at Carnegie.

A VERY handsomely printed pamphlet containing a series of photo-engravings of their different Sheet mills has been issued by the American Sheet Steel Company, whose headquarters are at the Battery Park Building, New York. The series includes Vandergrift, Bridgeport, Ohio, McKeesport, Scottdale, Niles, Piqua, Cambridge, Leechburg, Wellsville, Chester, West Virginia, Struthers, New Philadelphia, Scottdale, Canal Dover, Muncie, Canton and others. Facing each page of works photographs is a picture illustrating the different steps in the manufacture of Sheets from the steel to the shipping warehouse. A number of tables of weights, net prices of Galvanized Sheets, &c., are added.

THE STANDARD IRON & STEEL COMPANY have been organized by Pittsburgh and New Castle capitalists, and propose to build a mill at New Castle for rolling refined Iron Bars and Iron Sheets. The new plan will contain 10 or 15 double puddling furnaces, heating and refining furnaces, a 12-inch mill and two hammers. The Sheet mill is to contain six hot mills and two cold mills. The output of the prospective concern is given as from 60 to 75 tons a day.

IT is possible that the Monongahela Works of the American Tin Plate Company, on the South Side, Pittsburgh, which now contain 14 mills, may be reduced to eight when the plant is started up. The Monongahela Works is badly crowded for room, and may eventually be removed to some other more favorable location.

FOLLOWING upon a rumor to the effect that the Cambridge plant of the American Tin Plate Company would be dismantled, a report was circulated to the effect that A. W. Brown, who was formerly president of the Cambridge Iron & Steel Company and until recently vice-president of the American Sheet Steel Company, would build a new mill to supplant it. We are advised by Mr. Brown that such statements are absolutely untrue, as he has no intention of building either Tin or Sheet mill.

W. A. PORTER, who has been secretary and treasurer of the E. W. Bliss Company of Brooklyn, N. Y., has just been elected vice-president of the company. H. C. Seaman is secretary and L. H. Gould treasurer.

THE ALCANIA COMPANY of Pittsburgh, Pa., who for the past two years have been operating a two-mill Tin Plate plant at Avonmore, Pa., have been incorporated with a capital stock of $250,000. The incorporators are: W. H. R. Hilliard, Arthur C. Fording, William C. Weichsel, Mahlon M. Garland and Oliver Wylie. It is understood that the company contemplate an extension of their plant.

THE CONNEAUT CAN COMPANY of Conneaut, Ohio, have been incorporated with a capital stock of $50,000, for the purpose of erecting a Tin Can and Stamping plant. Z. H. Thompson, H. A. Truesdell, O. C. Lillie, A. J. Packerd and A. C. Andrews are the incorporators.

THE CARNAHAN TIN PLATE & SHEET COMPANY, Canton, Ohio, have notified the trade that they will have six mills in operation about November 1. The company propose to manufacture high grade Iron and Steel Sheets in Terne Plates.

THE E. W. BLISS COMPANY, Brooklyn, N. Y., are sending out a 24-page illustrated catalogue of their Drop Hammers and Trimming Presses. One of the opening pages contains information regarding the special points of superiority embodied in their Stiles Drop Hammers. A number of styles of these Hammers, suitable for varied purposes, are illustrated and described, tables being given showing the different parts of the machine, with their weights and sizes. The Hammers are made in weights from 50 to 2000 pounds. The Bliss Cornice Makers' Drop Press is especially mentioned. These Presses are designed for stamping or embossing and paneling large sheets such as are used by metallic cornice and ceiling makers. The Bliss Straight Sided Trimming Presses are also given notice in the catalogue, together with a few other specialties made by the concern.

A Struggle with the English Language

The struggles of foreigners who attempt to write business letters in English have often been the subject of humorous comment. An example of such a letter, which indicates that the writer has been endeavoring to frame his ideas in English by the aid of a lexicon, has recently been received by George M. Clark & Co., Chicago. Omitting the name and address of the writer, the letter is as follows:

"*Sirs.*—I passed your honorable letter of 1st inst. and catalogue. Undoubtedly there may been possibly any business here what could grow important and successively.

"But before it shall been necessary to show here any of your best and most usually apparatus for your account. You may reflect this observation, and write me your opinion up the subject.

"Please inform you up my person by the ———— Company, New York."

The employment of oil fuel is increasing rapidly in California and Texas. In San Francisco a number of manufacturing and other concerns have recently equipped their boilers for the use of oil. Among these may be instanced the San Francisco *Chronicle*, which has just introduced an oil plant for generating steam in its boilers. The result has been to do away with the black smoke and soot which poured from the chimney of the plant when soft coal was used. It is purposed now to establish in San Francisco a number of large tanks in which quantities of oil can be stored, to be drawn upon as desired by those who are using it for fuel purposes. A great recommendation of oil fuel, apart from its cleanliness, is that it is claimed to produce energy at a lower cost than coal.

The Steel Strike.

The steel strike still "drags its slow length along" without indication of immediate settlement, notwithstanding that at the meeting of the General Executive Committee of the Amalgamated Association held in Pittsburgh on Saturday and Monday, the committee by a unanimous vote instructed President Shaffer and the Advisory Board to end the strike on the terms proposed by C. M. Schwab, president of the United States Steel Corporation, to the committee of labor leaders which conferred with him in New York last week. The terms of the proposition made by Mr. Schwab to this committee and under which the General Executive Committee ordered President Shaffer to end the strike, are as follows.

American Tin Plate Company—Will proceed under scale signed last year, except Star, Crescent, Banfield, Monessen and Demmler mills, which are now running and will continue to run nonunion.

American Steel Hoop Company—Will sign for all mills signed for last year.

American Sheet Steel Company—Will sign for all mills signed for last year, except Old Meadow, Saltsburg, Hyde Park, Canal Dover and Cambridge.

With reference to our nonunion mills we will make no conditions with the Amalgamated Association, except giving the assurance that it is our intention to pay as high general wages in our nonunion as in our union mills.

For some reason President Shaffer has so far refused to order the men back to work, claiming that to do so would be equivalent to a surrender on the part of the Amalgamated Association.

At the meeting on Monday President Shaffer stated to the members of the Executive Committee that if they were dissatisfied with his course in the strike, and if they thought a settlement would be hastened by his resignation, he would resign his position at once. President Shaffer was assured that if he tendered his resignation it would be accepted. There is no denying the fact that great dissatisfaction exists among the officials and the men of the Amalgamated Association over the course pursued by President Shaffer during the strike, and it is probable his connection with the association will be terminated in a short time. He has acted repeatedly against the advices of the Advisory Board, while the men who went out on strike have been hoping for weeks that it would be declared off and they could go back to work. President Shaffer has held out promises that if the men would stand out for another week or two they would win the fight and all would secure their old positions. This had the effect of renewing the courage of the men, but at the same time the United States Steel Corporation were proceeding steadily in the starting up of their idle mills, and as fast as a mill has been started it has been taken from the union list and placed among nonunion mills, to be operated in that manner always hereafter. Even should the strike be declared off and the United States Steel Corporation through their constituent companies sign the scale for their idle mills which were signed for last year, the Amalgamated Association, by reason of losing so many mills, will have been weakened very seriously, and it will be many years before the association will be as strong as it was before the strike was ordered, if it ever gets that strong in membership again. The officials see now that the strike was a mistake and are anxious to rectify it as far as possible, but President Shaffer is stubborn and refuses to call the strike off.

THE TIN PLATE MILLS.

The American Tin Plate Company are making good progress in getting their idle tin mills started, and this week steps were taken to put the Monongahela Works, an eight-mill plant in Pittsburgh, in operation. A number of men from the Star and Monessen mills have been sent to the Monongahela Works, and the mill will start off with a very large number of skilled men at work. The Star, Demmler, Crescent, Monessen and Banfield mills, it is understood, will all be running to full capacity within a week. At the Demmler Works of the American Tin Plate Company the following notice was posted Tuesday evening:

The present and former employees of the United States Works of the American Tin Plate Company are referred to the official statement of the company in the press August 27, as follows:

"The American Tin Plate Company deny that there are any negotiations on foot looking for a settlement of the strike, and authorize the statement that mills put into operation during the strike will be continued nonunion and all men going to work now will be retained in their positions."

The employees of this mill are hereby officially notified that this applies directly to the United States Works at Demmler, Pa., and that anything that has occurred or may occur in the future cannot affect the operation of this plant on a strictly nonunion basis. John R. Phillips, district manager; J. K. Lauck, superintendent; M. M. Leeds, third vice-president.

After the Monongahela Works are running full, the next tin plants to be started will be the Pittsburgh and Pennsylvania works, at New Kensington, about 20 miles from Pittsburgh.

THE SHEET MILLS.

The American Sheet Steel Company have in full operation more than 60 per cent. of their total number of sheet mills, and the list is steadily growing. The Reeves Works, at Canal Dover, is running practically full. It is probable one or two other works, among them the Wood plant at McKeesport, will be started within a short time.

THE TUBE MILLS.

The first violence in the tube mills was committed at the National Tube Works on Tuesday evening, when two men at the plant were assaulted and seriously injured. From 400 to 500 men are working at the National Tube plant, and hundreds of others would go to work but are afraid to do so. The National Tube Company have taken steps to institute injunction proceedings to prevent the McKeesport strikers from interfering with the operation of the National Works. The Pennsylvania and Continental tube works in Pittsburgh and the Riverside works at Wheeling are still idle, with the exception of a few departments. It is probable that a determined effort will be made to get the National Tube Works running full, and after this is done the other three idle plants will be started. The men who are idle and who see their positions being taken by other men are hoping that they will be ordered to go to work before this week is out.

The strike is in that condition that it may be called off any minute.

Geo. Callahan & Co., 218 Front street, New York, report increased sales of their pipe joint cement, roof cement and elastic paint oil. The increased sale of their paint oil, they state, proves that they have a good article, as the declining price of linseed has not diminished the volume of their business in this commodity, as might be expected. The sales, on the contrary, they claim to show a constant increase, regardless of the price of linseed oil. The reason for this they assume to be that their customers have discovered that paint made with their oil possesses exceptional elasticity and durability, the latter quality being especially noticeable when the paint is used for roofs that have to be walked over. The concern refer to their stove putties and enamels and furnace cements as containing no petroleum oil, and claim for their paste cements that they are made of materials that have a holding and durable quality, the oils used in every composition being quite different from the mixtures of petroleum that are put in cheaper cements.

An Australian correspondent, writing from Melbourne, under recent date, says that American goods continue to bid for the Australian market, but it is a fact that the trade latterly is no more than holding its own. It is certainly not increasing to any extent. American agents in Australia do not seem to be hustling so keenly after trade as hitherto, possibly awaiting tariff developments, and American ranges, stoves, grills, &c., he says, are losing ground. In plumbing goods, such as baths and sanitary fittings, American manufacturers are gaining a hold, but the efforts in the line of pushing this trade are spasmodic instead of persistent.

THE LETTER BOX.

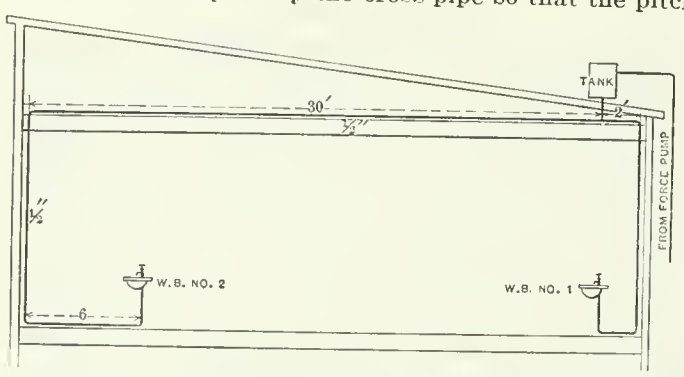
Inquiries in regard to practical questions of general interest are invited, in reply to which we shall be glad to receive suggestions and information from our readers.

Correspondents are requested in all cases to give their names and addresses, which will not, however, be published or disclosed without their consent.

PITCH PIPE UP TO TANK.

From J. S. C., Goldsboro, N. C.—When a job of plumbing is piped, as in the plan shown herewith, we find that water runs all right at basin No. 1, but not at No. 2 if the tank is emptied and then refilled unless the air is sucked out of the pipe. Then it will start to run again. We want to change the piping so that this trouble will be avoided, and would like to know what causes the trouble and how to apply a remedy.

Answer.—The pipe which runs over to the service pipe to No. 2 seems to be air bound. The long run of 30 feet has probably been made without any thought of providing a pitch from the drop end to the tank so that the air in the pipe can escape as the water runs in. So it is trapped, and after the pipes partially fill the air stops the flow when the pressure is only the few pounds due to the hight of the tank. The air causes the trouble, and it is only necessary to lay the cross pipe so that the pitch



Pitch Pipe Up to Tank.

up to the tank will be preserved throughout its full length to allow the air to escape as the pipe fills up. Then the tank can be emptied and refilled without interfering with the flow at the basin No. 2.

PUTTING ON STANDING SEAM ROOF.

From T. S. C.—We shall be glad to have *The Metal Worker* inform us if there is more than one method of putting on a standing seam tin roof, and which is considered the better way.

Note.—Standing seam roofs are put on so that the finished seam stands from ¾ to 1 inch high. This is done by both hand tools and machine tools. There are some who consider that the use of hand tools is better. So far as turning the edges of the sheets is concerned, if this is done uniformly one method is as good as the other. The locking of the two edges on adjoining sheets together at the top is done both by hand tools and machine tools called seamers, and if the work is carefully done there is little choice between the two methods, it being held by those who favor the hand process that the lock can be made much tighter when a mallet and the hand seamer are used. However, as there is no occasion for these seams to be water proof in a roof that has a proper pitch and is properly connected with the gutter, this is of little importance. The greater proportion of the standing seam tin roofs on buildings are put on with machine tools and give satisfactory service. Owing to the great saving of time effected by the use of machine tools, few use the hand tools, except where the roof is so steep that the machines cannot be used.

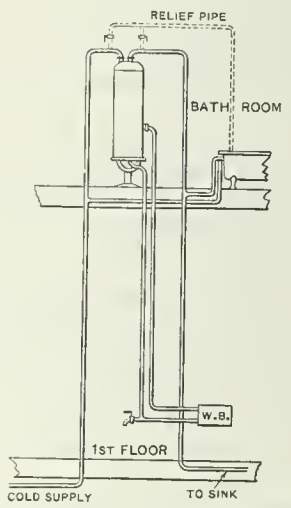
WHO MAKES THE NASH VENTILATOR?

From G. D. S., Philadelphia.—In answer to the inquiry of "C. S. M.," New Haven, Conn., in *The Metal Worker* of August 31, I would state that the Nash ventilator is made by the patentee, William Nash, 1920 Mount Vernon street, Philadelphia, Pa.

WILL BOILER IN BATHROOM CIRCULATE?

From E. B. M., Grant, Pa.—Please inform me if I can place a boiler in a bathroom over the kitchen and connect it with the range so that there will be good circulation if the piping is arranged as shown in the sketch herewith.

Answer.—There is nothing in the piping as shown that should interfere with the operation, unless it be the dip in the hot and cold service pipes at the top of the boiler. Air might collect there and stop the flow



Will Boiler in Bathroom Circulate?

unless a small air relief pipe with cocks, as shown by dotted lines, was arranged to allow the air to escape. If there is a strong street pressure this may not be needed, and it could be added at any time if required. The end should be led to discharge over the bathtub or some other fixture, so that any water that may come with the escaping air would create no annoyance. Boilers have been placed in bathrooms quite frequently, in order to gain space in the kitchen. They afford a comfortable warmth in the bathroom in winter, but the effect is not so desirable in summer.

RED PEPPER FOR RED ANTS.

From C. B. B., Palm Beach, Fla.—Will some one please tell me how to get rid of ants? They are small red ants about ⅛ inch long, and so far I have been unable to find anything that would drive them away.

Note.—Probably some of our readers can suggest a remedy. In the meantime, we would suggest that the places where the ants haunt be sprinkled with snuff or red pepper. Another method is to set a greasy plate where the ants run so that they will be caught in the grease, when they can be disposed of by scalding.

SHOULD A NEW TIN ROOF BE LAID OVER AN OLD ONE?

From W. & Y., Michigan.—We would like to hear from the readers of *The Metal Worker* in regard to placing a new tin roof over an old one. Is it better to put a new tin roof over the old one, provided the new tin is painted on the under side; or is it better to take off the old roof and put on a new tin roof without painting on the under side?

ADDRESS WANTED.

P. W., P. O. Box 992, is requested to send name and address that we may communicate with him for further information relating to water heater.

The Knecht Brothers Company, Cincinnati, Ohio, are sending out a pamphlet devoted to their friction sensitive drill, which will be interesting to those who have use for a drill press in their shops. A cut gives a good idea of the construction and a detailed description furnishes full information in reference to the apparatus and its use. The catalogue also gives a number of testimonial letters from those who have used these drills with satisfactory results.

TRADE REPORT.

MARKET SUMMARY.

Pig Tin is about ¼c. lower, with better demand for futures.

Copper is dull and unchanged.

Pig Lead is quiet and without change.

Spelter rules dull and weak.

Hallett's Antimony is a shade lower.

Nickel is firm and unchanged.

Aluminum continues in good demand at former prices.

Tin Plates are still very scarce, with prices nominal.

Black and Galvanized Sheets are also scarce, and jobbers' prices are higher.

Patent Planished Sheets have been marked up 1c. a lb.

Russia Iron Sheets are ½c. higher.

Old Metals are dull and unchanged in price.

Sheet Copper is moving in good volume, and is firm in price.

Foundry Pig Iron is more active and firmer in tone.

Hardware is moving in excellent volume, and prices are firm in nearly all lines.

Wrought Iron Pipe is scarce, and prices are strong, but without further change.

Plumbers' Brass Goods are in active demand; prices were reaffirmed by manufacturers.

Cesspools, in new list, show advance in price.

Plumbers' Wood Work is firm, with higher tendency in prices.

Oilers are about 10 per cent. higher.

Wire Nails are in good demand at unchanged prices.

Cut Nails are somewhat irregular in price, but in fair demand.

Wire is still in heavy demand and firm in price.

Window Glass prices are unchanged.

White Lead is unchanged.

Linseed Oil is more active and stronger.

Spirits Turpentine is firm in price and in fair demand.

METAL MARKET.

NEW YORK, September 13, 1901.

Pig Tin.—The market for Pig Tin declined during the week until Thursday, the most noticeable feature being the entire disappearance of the premium on spot. Owing to the fact that the demand throughout the country runs more heavily in the direction of future deliveries spot metal is holding a relatively weak position. The increase in the volume of business done in futures during the week was marked, serving to renew the strength of the market toward its close, when prices began to react in an upward direction, closing firm at about ¼c. below the figures given in our last report. Small lots of Straits Pig rule at 26¾c. to 27c. per lb.

Copper.—No special change has been developed in regard to this metal. Some considerable transactions are reported to have been consummated during the week at prices which ruled below the current market rates. A subject which has created considerable discussion in the trade this week is a statement put forth by a leading Copper broker in New York City to the effect that one of the largest Copper selling interests had accumulated something like 135,000,000 lbs. of metal, due to the decrease in the home consumption and in exports. Buying is still on a conservative scale, and it is likely that consumers will continue to purchase sparingly while prices remain on what is generally considered to be too high a level. Meanwhile, retail prices show no change. Small lots of Lake Ingot continue to be quoted at 17¼c. to 17½c. per lb., and Casting Copper at 16¾c. to 17c.

Sheet Copper.—The demand for Sheet Copper continues in satisfactory volume. The mills are said to be well supplied with orders for early deliveries. Consumers, however, are not buying much ahead. The consumption of Sheet Copper this season appears to be considerably ahead of that of former years. A good deal of material is going into structural work in the shape of Cornices, Tiles, &c. Prices remain firm on the basis of 21c. per lb. from store.

Pig Lead.—No change of any kind has taken place in this market. Business is quiet and small lots of American Pig are quoted at 4.60c. to 4.62½c. per lb. St. Louis reports that a normal demand for Pig Lead prevails in that market, prices ruling about the same as a week ago.

Spelter.—This metal is dull and prices without change. Good Western brands, in small lots, are quoted at 4.45c. to 4.50c. per lb. St. Louis advices indicate a better demand for Spelter, orders being for larger quantities and prices somewhat higher.

Sheet Zinc.—Jobbers quote Sheet Zinc in 600-lb. cask lots at 6¾c. per lb., and smaller quantities at 7c. The demand is of ordinary type, and the article shows no change in any respect.

Antimony.—Prices are a shade easier, and the demand is of normal proportions. Hallett's is quoted at 8½c. to 9¼c. per lb., and Cookson's at 10½c. to 11c. in small parcels.

Nickel.—This metal chows no change. Prices are still firm, small lots being quoted at 60c. to 65c. per lb.

Aluminum.—Unchanged prices and an active demand are the features of the market for this metal. No. 1 Ingot, guaranteed 99 per cent. pure, is quoted in small lots at 37c. per lb., and in 100-lb. lots at 35c.

Tin Plates.—The market for Tin Plates remains in just about the same position as outlined in our last report. The available supplies of Plates are still extremely light, and in some cases, such as Coke Squares of the more popular sizes, there is an actual famine. Consumers, in many instances, are obliged to buy Plates of heavier gauge and better finish than they would ordinarily use for their purposes. But where there is immediate necessity they are glad to get whatever they can pick up and to pay any price for the same. Under the circumstances buyers are naturally taking nothing beyond what absolute necessity dictates; consequently the volume of transactions during the week has been comparatively small. As the American Tin Plate Company have succeeded in resuming operations in some of their mills consumers are looking for some relief, but unless a very much larger number of mills than have already been started are put into operation at an early date the market will be practically unaffected, as all the material that is being turned out is already appropriated by the larger consumers, and it will take months after the resumption of the mills before the company can put any material on the open market. Prices are purely nominal. American Bessemer Coke Plates IC, 14 x 20, are selling in small lots at New York and corresponding points anywhere from $7 to $8 per box.

Sheets.—Notwithstanding that a number of the American Sheet Steel Company's mills are in operation, the situation as regards the supply of Sheets shows no signs of improvement. Both Black and Galvanized Sheets are still as hard to get and bring as high prices as ever. There is no abatement in the scarcity, and prices are almost anything that is asked, provided deliveries can be made within a reasonable time. Jobbers' prices in New York are ruling nearly 10c. per 100 lbs. higher than a week ago. No. 27 One Pass Cold Rolled Soft Steel Sheets in small lots (which is the only way in which they can be bought) rule at about 4.20c., and Galvanized Sheets

at 60 per cent. off the list. Patent Planished Sheets are especially scarce and jobbers are asking about 1c. advance over last week's prices, the A quality ruling at 12c. and the B quality at 11c. per lb. There has been quite a run on the available stocks of Genuine Russia Iron, with the result that prices on that commodity have risen about ½c. per lb., ruling at 11c. to 11½c.

Chicago advices are as follows: Large buyers with heavy unfilled contracts report that they are receiving less than half of the quantity of Sheets due them. This shows how much business is being restricted by the strike in the Sheet mills. The quantity received from the mills is so small that the consuming trade is constantly kept in a state of aggravation. Jobbers are unable to accumulate their usual assortment of sizes and prices depend on the disposition of the seller or the character of the buyer. Black Sheets may be quoted at 4c. to 4.25c. for No. 27, but it is impossible to secure some sizes at any figure. Galvanized Sheets are quotable at 60 and 5 to 65, but it is also extremely difficult to get some sizes.

Old Metals.—A slightly better movement is noted in Scrap Iron, but other Old Metals are dull, and prices have not quotably varied. Dealers are paying about the following for moderate sized lots, delivered at New York or corresponding points:

Heavy Copper	per lb. 14½c.
Light and Tinned Copper	per lb. 12½c.
Heavy Brass	per lb. 9 c.
Light Brass	per lb. 7½c.
Lead	per lb. 4 c.
Tea Lead	per lb. 3¼c.
Zinc	per lb. 2¾c.
No. 1 Pewter	per lb. 18½c.
No. 2 Pewter	per lb. 9 c.
Tin Plate Scrap, per gross ton	$8.00
Wrought Iron Scrap, per gross ton	$10.50 to 11.00
Heavy Cast Scrap, per gross ton	10.00 to 10.25
Stove Plate Scrap, per gross ton	6.75 to 7.00
Burnt Iron, per gross ton	5.00 to 5.50

THE PIG IRON MARKET.

CHICAGO.—Transactions are steadily growing more numerous. The business of the past week was considerably greater than that of the preceding week, and some commission houses report their trade now approaching something like genuine activity. Inquiries are being received for Foundry Iron, calling for much larger quantities than buyers have lately been taking, which shows more confidence in the future. The local foundrymen are beginning to purchase Iron to some extent, but the great bulk of buying has so far come from establishments outside of the city. Strong Foundry Iron running low in phosphorus is very scarce and in good demand. The local furnaces are absolutely without stocks and their product is sold far into the future. Southern furnace companies report small stocks on hand and a better demand from other centers of consumption, and intimations are given of a possible early advance of perhaps 50c. a ton. We quote as follows:

Lake Superior Charcoal	$17.00 to $18.00
Local Coke Foundry, No. 1	15.50 to 16.00
Local Coke Foundry, No. 2	15.00 to 15.50
Local Coke Foundry, No. 3	14.50 to 15.00
Local Scotch, No. 1	15.75 to 16.25
Ohio Strong Softeners, No. 1	16.00 to 16.50
Southern Silvery, according to Silicon	14.90 to 15.15
Southern Coke, No. 1	14.65 to 14.90
Southern Coke, No. 2	14.15 to 14.40
Southern Coke, No. 3	13.65 to 13.90
Southern Coke, No. 1 Soft	14.90 to 15.15
Southern Coke, No. 2 Soft	14.15 to 14.40

PHILADELPHIA.—During the past week an active demand for Pig Iron was in evidence, and some very satisfactory sales were made. The general tendency has been toward a larger business, and in many cases at better prices, but not enough so to warrant any general revision of quotations. The scarcity of Iron at most of the Eastern furnaces precludes the expectation of increased stocks, but how far that will be offset in other districts is what the trade are anxious to find out. Prices for city and nearby delivery are about as follows, and from 25c. to 50c. less at points within a radius of 100 miles, South or West: No. 1 X Foundry, $15.50 to $16; No. 2 X Foundry, $14.75 to $15.25; No. 2 Plain, $14.25 to $14.75.

PITTSBURGH.—Foundry Iron continues quiet, and prices are weak. We quote Bessemer at $15.75 to $16, and No. 2 Foundry at $14 to $14.25, f.o.b. Pittsburgh. Reports are that even lower prices have been made.

CINCINNATI.—There has been a fair normal run of business the past week, quite a few 1000-ton orders have been booked, and the number of 300 to 500 ton sales have added considerable to the total tonnage. Most of the buying has been in Foundry grades, the greater portion being for this year's delivery, though most of the larger orders were for the first half of 1902. Prices are gradually stiffening, and it is not believed that there are any offerings whatever than the minimum figure given here. The outlook is for a fair steady trade with hardening price. We quote, f.o.b. Cincinnati:

Southern Coke, No. 1	$13.50 to $13.75
Southern Coke, No. 2	13.00 to 13.25
Southern Coke, No. 3	12.50 to 12.75
Southern Coke, No. 4	12.00 to 12.25
Southern Coke, No. 1 Soft	13.50 to 13.75
Southern Coke, No. 2 Soft	13.00 to 13.25
Southern Coke, Gray Forge	12.00 to 12.25
Southern Coke, Mottled	12.00 to 12.25
Ohio Silvery, No. 1	15.00 to 15.50
Ohio Silvery, No. 2	14.50 to 15.00
Lake Superior Coke, No. 1	14.50 to 15.00
Lake Superior Coke, No. 2	14.00 to 14.50
Lake Superior Coke, No. 3	13.50 to 14.00

ST. LOUIS.—While the demand for Pig Iron has not materially increased inquiries are good, conditions are considered favorable, and every indication points to an active market in the near future. Furnaces have made no changes in prices. We quote as follows for cash, f.o.b. St. Louis:

Southern, No. 1 Foundry	$14.25 to $14.50
Southern, No. 2 Foundry	13.50 to 13.75
Southern, No. 3 Foundry	13.00 to 13.25
Southern, No. 4 Foundry	12.50 to 12.75
No. 1 Soft	14.00 to 14.25
No. 2 Soft	13.50 to 13.75

CHICAGO REPORT.

Scrap Iron and Steel.—The demand is better, and prices are beginning to move upward. Dealers quote the following buying prices, in carload lots, Chicago delivery:

	Per net ton.
Country Wrought Scrap	$11.00 to $12.00
Machinery Cast	10.00 to 10.50
Malleable Cast	10.00 to 11.00
Stove Plate (free from burnt)	7.00 to 7.50
Burnt Iron and Grate Bars	5.50 to 6.00
Sheet Iron and Hoops	6.00 to 7.00
Plow Steel	9.00 to 10.00
Breaking Stock	9.00 to ....
No. 2, such as Shovels, Hoes, &c	.... to 7.00
Old Boilers—whole (Iron)	6.00 to 7.00
Old Boilers (Iron) cut in single Sheets and Rings	9.50 to 10.00
Old Gas Pipe and Boiler Tubes	10.50 to 11.00
Cast Borings	4.00 to 4.25
Turnings	9.50 to 10.00
Horseshoes	12.00 to 12.50

Old Metals.—A modeate movement is reported with values steady. Dealers quote buying prices on small lots as follows:

	Per lb.
Copper Wire and Heavy	14¾c.
Copper Bottoms	13¼c.
Copper Clips	14¼c.
Red Brass	13⅜c.
Yellow Brass	9½c.
Red Brass Borings	11½c.
Yellow Brass Borings	8¾c.
Light Brass	7¾c.
Pipe Lead	4 c.
Tea Lead	3½c.
Zinc	2⅝c.
Pewter, No. 1	19 c.
Pewter, No. 2	10 c.

Old Rubber.—The tendency of values is downward at present. Dealers' buying prices are as follows:

	Per net ton.	Per lb.
Garden Hose	$23.00	.....
Air Brake Hose	42.00	.....
Rubber Shoes	....	7½c.
Rubber Car Springs	....	4¾c.
Inside Bicycle Tubing	....	21 c.
Oustide Tubing	....	7¼c.
Black Rubber	....	4¼c.
White Rubber	....	8½c.

Rags.—Buying price of good country Mixed Rags, Chicago delivery, is 70c. to 80c. per 100 lbs., in any quantities.

Anthracite Coal.—The demand is much stronger. Stocks are low, especially of Stove and Chestnut sizes. The schedule for carload lots is as follows:

	Grate.	Egg and Stove.
Chicago	$5.75	$6.00
Milwaukee, Wis	5.75	6.00
St. Louis	6.20	6.45
Kansas City, Mo	8.25	8.50

THE HARDWARE TRADE.

The volume of business is excellent and both jobbers and retailers are covering their wants in nearly all lines with liberal orders. Most of the larger trade have already purchased goods for the season's business and are buying now to complete, or perhaps replenish in some cases, their stocks. The delay on the part of the manufacturers in making shipments causes a good deal of correspondence, and in some lines serious inconvenience is occasioned by the scarcity of goods. This is the case especially in Tin Plates and Sheets and goods in the manufacture of which these products are used. In many other lines, however, the difficulty of obtaining raw material is delaying the output of goods. The stocks of Heavy Hardware in the hands of manufacturers and jobbers are generally light. Prices as a rule are decidedly firm, especially in heavy goods. The effect of the strike in interfering with the operation of the mills is felt in several directions in giving a temporary strength to the market and causing higher prices for the time being. In lines in which there is a decided scarcity, as, for example, Wrought Pipe, those who have stocks on hand are advancing prices and reaping good profits. With the indications of a speedy termination of the Steel strike, and with the good news of the President's steady and rapid recovery, the market is regaining the confident tone which was for a time disturbed by the attempted assassination, and the prospect of an active and satisfactory fall business is excellent.

NOTES ON PRICES.

Plumbers' Brass Goods.—At the meeting of the Plumbers' Brass Goods Association, which was held in Detroit, Mich., on September 6, the present prices were reaffirmed. The impression that a further advance would be made at this meeting was proved erroneous. It is considered unlikely that the Brass Goods manufacturers will elevate prices above the present level, where they will probably remain at least during the balance of the year. It is unlikely that any recession will occur, as the demand for Brass Goods continues heavy and the manufacturers are all well filled up with orders, and in most cases are behind with their shipments. The market for Brass Goods may be described as decidedly firm.

Plumbers' Wood Work.—Notwithstanding the fact that the Wood Work branch of the Plumbing Supply trade is reputed to be overrun with manufacturers, yet it is a matter of common knowledge that the supply of Plumbers' Wood Work is quite inadequate to the demand made upon it by the trade this season. All of the manufacturers are said to be greatly behind on their orders, and jobbers who at the present time are carrying a good stock of this class of goods are reaping handsome returns from their sales. No orders are being taken at the prices prevailing a few months ago, and any change that is likely to occur will be pretty sure to show a material advance. This fact is due entirely to the unusually heavy demand existing for goods for prompt shipment.

Cesspools.—A new price-list for Hydrant Cesspools and Cesspool Bell Traps of all kinds has just been issued by the Central Foundry Company of New York. The lists are to be found in the new catalogue and price-list issued by this concern. As the Central Foundry Company are the controlling factor in the manufacture of Plumbers' Cast Iron Goods, the new list will undoubtedly be adopted by all other foundries making this class of goods. The changes in the lists are so radical that it is desirable that immediate attention should be called to them. Heretofore Cesspools were never listed without the Inverted Bells being included in the price. The new list, however, shows separate lists for Plain Cesspools and for the Cesspools with the Bell Traps included. Another feature of the list is the inclusion of prices for Galvanized Cesspools and Stable Grates. The new prices are as follows:

Hydrant Cesspools.

Size.	Plain.	Galvanized.
10 x 10 x 6 inches deep	$0.90	$1.40
12 x 12 x 6 " "	1.00	1.50
14 x 14 x 6 " "	1.15	1.75
16 x 16 x 6 " "	1.30	1.95
18 x 18 x 6 " "	1.60	2.50

Hydrant Cesspools, with Bell Trap.

Size.	Plain.	Galvanized.
10 x 10 x 6 inches deep	$1.40	$2.10
12 x 12 x 6 " "	1.50	2.25
14 x 14 x 6 " "	1.65	2.50
16 x 16 x 6 " "	1.80	2.75
18 x 18 x 6 " "	2.10	3.25

All have 2-inch Bottom Outlets.

Plain Cesspools.

Size.	Standard.	Extra heavy.
6 x 6 inches, with 2-inch outlet	$0.75	$1.25
9 x 9 " " 3-inch "	1.00	1.50
9½ x 9½ " " 4-inch "	1.25	2.00
10 x 10 " " 4-inch "	1.50	2.75
12 x 12 " " 4-inch "	2.00	3.25
13 x 13 " " 4-inch "	2.50	3.75
14 x 14 " " 4-inch "	2.75	4.00

Plain Cesspools, with Bell Trap and Hinged Strainer.

Size.	Standard.	Extra heavy.
6 x 6 inches, with 2-inch outlet	$1.00	$1.50
8 x 8 " " 3-inch "	1.25	1.75
9 x 9 " " 3-inch "	1.35	1.85
9½ x 9½ " " 4-inch "	1.60	2.25
10 x 10 " " 4-inch "	2.00	3.00
12 x 12 " " 4-inch "	2.50	3.50
13 x 13 " " 4-inch "	3.00	4.25
13 x 13 " " 5-inch "	3.50	4.75

Large Cesspools, with Bell Trap and Grating.

Size.	Painted.	Galvanized.
12 x 12 x 10 inches deep	$3.75	$7.50
12 x 15 x 10 " "	4.00	8.00
15 x 15 x 10 " "	4.25	9.00
16 x 16 x 10 " "	4.50	10.00
18 x 18 x 10 " "	10.00	20.00

Stench Traps.

Size.	Painted.
6 x 6 inches, with 2-inch outlet	$1.00

Registers, Ventilators, &c.—As noted in our last report, a new and thoroughly revised list, bearin date September 2, has been adopted by several of the leading manufacturers of Hot Air Registers, Ventilators, &c. An important change, and one which serves the convenience of the trade, is in making the different finishes of Registers subject to a uniform discount. This line of goods has for some time been characterized by much unevenness of price, especially on the common goods and sizes most in demand, the manufacture of which has been taken up by new concerns. While there is still some irregularity in the prices of the different manufacturers this is a time of the year when there is an active and urgent demand for this line of goods and manufacturers who have complete stocks from which orders can be promptly filled are in a position to obtain somewhat better prices than a short time ago. The new lists on Black Japanned and White Japanned Registers are given below and the discounts applying to these and other finishes and related goods are as follows, terms 60 days net, or 2 per cent. discount for cash in 10 days:

Black Japanned Registers, Ventilators, Faces and Borders	70 %
White Japanned Registers, Ventilators and Faces (separate list)	70 %
Bronzed Finishes in Imitation of Gold, Silver, Copper and Bronze	70 %
Nickel Plated	70 %
Electroplated in Brass, Bronze, Copper, Oxidized Silver	70 %
Wall Frames	70 %
Heavy Round Gratings	70 %
Ventilating Plates	70 %
Cold Air Inlets	70 %
White Porcelain Enamel Registers, Ventilators, Faces and Borders	60 %
Solid Brass and Bronze Metal Registers, Ventilators, Faces and Borders	50 %

Registers, White Japanned.

List Sept. 2, 1901. Price each.

Size of opening.	Register.	Register face.	Wall frames. 2 in. deep.	Wall frames. 4 in. deep.
4½x 6½	1.70	.85	...	...
4 x 8	1.80	.90	...	...
4 x10	1.90	1.05	...	...
4 x12	2.15	1.30	...	...
4 x13	2.95	1.45	...	...

Extra heavy Black Japanned Faces are furnished at 50 per cent. advance upon the ordinary Faces. Black and White Japanned Ventilators for cords are 50 cents list extra on all sizes up to 14 x 14, and $1 list extra on all sizes above.

Asbestos.—This commodity is in a somewhat anomalous condition, in that while the raw materials are higher than last year, contracts for which are in the main made for a year's supply, the manufactured products are somewhat lower. This is accounted for principally by the intense competition among manufacturer and distributer. The increased demand in the trade for the various forms of manufactured asbestos resulted in higher prices earlier in the season because the producers were not prepared to make adequate and prompt deliveries, but prices now in round lots to close buyers are about as follows: Building Felts, 2½ cents per pound; Mill Board, sheet, 40 x 40 inches, 3½ cents per pound; Mill Board, roll, thicker than 1-16 inch, 3½ cents per pound; Mill Board, roll, 1-16 inch and less, 2½ cents; Rope and Wick Packing as low as 14 cents, although a fair range would be 15 to 18 cents, one of the largest companies selling more at the latter than former price. Some business has been accepted as low as 3¼ cents for Mill Board in sheets thicker than 1-16 inch.

Oilers.—There has been an advance by several of the manufacturers of Zinc, Brass and Copper Oilers, and prices on these goods are about 10 per cent. higher.

Chain.—The manufacture of Chains is seriously interfered with by the existing strike, and there is a good deal of difficulty in obtaining goods. Under these circumstances some of the manufacturers are withdrawing quotations as not in a position to execute orders with promptness. Manufacturers or jobbers who have a stock of Chain on hand are able to realize higher prices.

Wire Nails.—Business in Wire Nails keeps up in large proportions, and, in the main, at regular prices. Some trouble is experienced in obtaining prompt shipments from the mills, who are unable to accumulate stock. Small lots from store at New York are quoted at $2.60 per keg.

Cut Nails.—The scarcity in the standard sizes of Cut Nails is becoming so pronounced that shipments are delayed in consequence. Some mills report that they are two weeks or more behind in their orders, owing to the difficulty in obtaining material from which to cut Nails. The demand is about of usual proportions. The ad-

vance in price of 5 cents per keg is not exacted in all cases of purchases from store in New York. Small lots from store are quoted at $2.18 to $2.30 per keg.

Wire.—The demand for Plain Wire continues heavy and has shown very little, if any, falling off. The mills are shipping their Wire as fast as it is turned out. The tone of the market is strong, small lots of Plain Wire being quoted at 2.60 cents per pound, and Galvanized at 3 cents.

Glass.—A meeting of the National Window Glass Jobbers' Association was held at Detroit, Mich., last week with representatives of the Window Glass combines in attendance. Reports have been in circulation that an advance in price was made at the meeting. Such is not the case, and quotations remain unchanged. It is stated that the lack of demand did not justify an advance in price.

White Lead.—No change has been made in the price of White Lead in Oil during the successive declines which have recently taken place in the prices of Linseed Oil. Some brands of White Lead are irregular in price, but standard makes are held well up to quotations, which for retail lots are 7 to 7¼ cents per pound.

Linseed Oil.—The last decline in the price of Linseed Oil on September 5 has stimulated the demand and caused a stronger feeling in the market as supplies are being absorbed. The retail price of Raw Oil is now quoted at 51 to 52 cents per gallon, Boiled Oil being 2 cents advance on Raw.

Spirits Turpentine.—Reports from the South are to the effect that the crop movement is becoming less and that stocks are light. Local prices are no higher than they were last week, but are quite stiff at 37½ to 38 cents per gallon for moderate sized lots. The demand at this point is fair.

TRADE NOTES.

WATERBURY BRASS COMPANY, Waterbury, Conn., advise us that business in their new store at Providence, R. I., has been constantly increasing since they took possession some months since, and they are now carrying a larger stock in all lines than ever before. The company have had a store in Providence for many years, but business increased to such an extent that they were compelled to seek more commodious quarters, which were secured at 131 Dorrance street and 152 Eddy street, where they have what is perhaps the finest store of its kind in this section of the country. Much of the prosperity of the company in the territory covered by the Providence store, which includes Rhode Island and Southeastern Massachusetts, is attributed to the efficient work of P. F. Parsons, who has managed this branch for nearly 20 years.

L. & R. WISTER & Co. of Philadelphia, for the purpose of offering better facilities to their Western trade, have opened an office at 331 Fourth avenue, Pittsburgh, under the management of Stewart B. Marshall, who for several years held a responsible position with the Dunbar Iron Company.

THE PITTSBURGH REDUCTION COMPANY of Pittsburgh, with works at New Kensington, Pa., and Niagara Falls, N. Y., and manufacturers of pure Aluminum, have let contracts that will about double the capcity of the Niagara Falls works. The contract for the building has been given to the McClintic-Marshall Construction Company of Pittsburgh, and the material is now being turned out in the works of this concern at Pottstown, Pa.

AT PITTSBURGH H. C. Reymer, a creditor of the Star Enameling & Stamping Company of Allegheny, Pa., has petitioned for a receiver for the company. The liabilities of the concern are placed at $40,000 and the assets at $80,000. The concern have a capitalization of $65,000.

THE AMERICAN BRASS COMPANY have secured control of the Holmes, Booth & Haydens Company, Boston, Mass. The present concerns comprising the combination known as the American Brass Company are: The Coe Brass Company of Torrington, Conn.; the Ansonia Brass & Copper Company of Ansonia, Conn.; Benedict & Burnham Mfg. Company, and the Waterbury Brass Company of Waterbury, Conn., and the Chicago Brass Company of Kenosha, Wis.

THE plant of the Wisconsin Graphite Company, at Allegheny, Pa., which was recently destroyed by fire, will be rebuilt immediately.

In July the imports of pig iron into the United Kingdom from the United States amounted to 319 tons, as compared with a maximum of 12,847 tons in January, 1901. The imports of "unwrought steel" were 65 tons in July, compared with the maximum of 16,647 tons in January, 1901.

PERFORATED METALS

STEEL, IRON, COPPER, ZINC, BRASS, TIN, and all other metals PERFORATED AS REQUIRED for

Grain Cleaning and Mining Machinery, Woolen, Cotton, Paper and Pulp Mills, Rice, Flour and Cotton Seed Oil Mills, Sugar and Malt Houses, Distilleries, Filter Presses, Stone, Coal and Ore Screens, Brick and Tile Works, Filters, Spark Arresters, Gas and Water Works, Oil, Gas and Vapor Stoves, Coffee Machinery, &c., &c.

Standard Sizes Perforated Tin and Brass Always in Stock.

The Harrington & King Perforating Co.,

Eastern Office, 284 Pearl St., NEW YORK. 217 North Union St., CHICAGO, ILLS., U.S.A.

CLASSIFIED LIST OF ADVERTISERS.

Acetylene Gas Burners.
Carroll, J. B., Chicago, Ill.

Acetylene Gas Generators.
International Heater Co., Utica, N. Y.

Agricultural Furnaces.
Giblin & Co., Utica, N. Y.

Aluminum Ingots.
Janney, Steinmetz & Co., Phila., Pa.

Aluminum Scrap Buyers.
Janney, Steinmetz & Co., Phila., Pa.

Aluminum Sheets.
Janney, Steinmetz & Co., Phila., Pa.

Architectural Ornaments.
Friedley & Voshardt, Chicago, Ill.

Ball Cocks
Foster, F. W, Mfg. Co., Boston, Mass.

Black Plates.
American Tin Plate Co., New York.

Boilers, Range.
Koven, L. O. & Bro., 50 Cliff St., N. Y.
Wolff, L. Mfg. Co., Chicago, Ill.

Brass Goods
Jenkins Bros., 71 John St., N. Y.
Zero Valve & Brass Mfg. Co., Buffalo, N. Y.

Brass Sheets, Rolls, &c.
Huugerford, U. T. Brass & Copper Co., 121 Worth St., N.Y.

Burners, Acetylene.
Carroll, J. B., Chicago, Ill.

CanMakers' Tools and Machines.

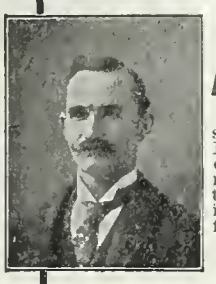
Sheet Metal Pattern Drafting

A course of instruction by mail for tinsmiths, coppersmiths, plumbers, sheet-iron workers, furnace workers, skylight makers and others that will enable a student to "strike out" working patterns for all kinds of sheet metal work. This is what a student says:



His Course More Than Paid for Itself

I am a tinsmith, and consider your course in Sheet Metal Pattern Drafting one of the best investments I ever made. Before I was half through I had realized from it more than the money paid for the whole course.

M. E. TOBIAS,

Galvanizing and Tinning.

A Practical Treatise on Coating with Tin and Zinc, with a Special Chapter on Tinning Gray Iron Castings. By W. T. Flanders. Size 5½ x 8 inches. 93 pages, 40 illustrations. Cloth bound. Price $2.00.

The author of this work has made a specialty of galvanizing and tinning, and has been employed to erect plants in various parts of the country, also to instruct the owners, so that, in all instances, they have been able to operate them successfully. The subject of galvanizing is, therefore, treated from the standpoint of an expert and in a practical manner. The selection of materials and apparatus for erecting plants of large and small capacity is treated, together with instructions for their equipment and accompanied by many illustrations of the plants and of the tools and appliances. Plain directions are given for the preparatory treatment of metals and articles to be coated, and every detail which is of importance in successfully applying to metals a secure and attractive coating is described. The tinning of articles is treated in the same practical manner. The difficulties found by many who have attempted to tin malleable and gray iron castings are explained and methods for doing the work made simple.

CONTENTS.

Galvanizing.

Locating a Plant and Selecting a Kettle.
The Galvanizing Room.
Tanks for Acids and Other Purposes.
Tools for Galvauizing.
Filling and Firing a New Kettle.
The Use of a Pyrometer.
Materials Used in Galvanizing.
Building and Setting Kettles.
Removing Scale with Sulphuric Acid.
Cleauing Sandy Castings with Sulphuric Acid.
Preparing the Work for Dipping in the Zincing Bath.
Drying the Work.
The Heat of Zinc.
Dipping the Work in the Molten Metal.
The Formation of Dross in the Kettle.
Running Over, or "Sweating," Zinc Dross.

Tinning Malleable Iron, Wrought Iron and Steel.

Preparing the Work.
Tools and Kettles.
A Tinning Plant.
Plan of Tinning Plant.
Removing Scale and Rust with Sulphuric Acid.
Cleaning Sandy Castings by Sulphuric Acid.
Cleaning Sandy Castings with Hydrofluoric Acid.
Removing Paint or Grease.
Tinning with a Single Kettle of Tin.
Tinning with Two or More Kettles of Tin.
Passing the Work Through the Tinning Kettles.
Tinning Wire in Coils.
Tinning Steel Spoons and Similar Articles.

TINSMITHS' HELPER and PATTERN BOOK

WITH USEFUL RULES, DIAGRAMS and TABLES

= By H. K. VosBurgh =

NEW AND IMPROVED EDITION

A USEFUL handbook for tinners and other mechanics, treating simple problems in pattern cutting, such as are of daily occurrence in the shop.

An elementary manual for the young tinsmiths: A handy reference for all sheet metal workers.

120 Pages
53 Figures

An Invaluable Pocket Companion **$1.00**

Section 1 ~ Pages 1-66
Diagrams and Patterns

Demonstrates in a simple way, and by means of illustrations and descriptive text, about 50 examples of sheet metal pattern work, such as the method of cutting can breasts, flared tinware, scale scoops, oval boiler covers, lips for measures, elbow patterns, &c.

Section 2 ~ Pages 69-88
Epitome of Mensuration

Compiled with regard to the requirements of the tinner, describing how to find the area of a circle, the circumference of a circle, the contents of a sphere, a cylinder, a cone, and other information relating to the work of a tinsmith.

Section 3 ~ Pages 89-120
Tables, Rules, Recipes

Gives tables of the weights of sheet metals, including the weight of black sheet iron, sheet lead, and galvanized iron sheets with their dimensions; the weight of lead pipe per foot; the weights of tin plates, sheet copper and sheet zinc. Several pages are devoted to tables giving the areas and circumferences of circles, the capacity of cans, the number of barrels in cisterns and tanks, sizes of tinware in form of frustum of a cone, &c., and practical receipts, including mixtures for solders of different kinds, soldering fluxes, and various cements.

Cloth Bound, $1.00 Postpaid

A Few Points About
The Dover Elbow:

No unsightly seams or corrugations standing out to give it a bunched appearance.
The outside can be polished, as it presents a smooth, even appearance.
The seams are folded on the inside.
No corrugations to reduce diameter and collect soot.
No seams to corrode and rust.
It is made on a scientific principle. It is the same diameter as the pipe.
It is handsome. It is strong. It is the best elbow on the market.

Corrugated Iron, Steel Roofing, Eave Trough,
Conductor Pipe, Wire Hangers.
Dover Nested Stove Pipe.

THE REEVES MANUFACTURING CO.,
CANAL DOVER, OHIO.

A UNIVERSAL REMEDY FOR LEAKY ROOFS.

The valuable qualities of a good roofing cement are firm adhesiveness and elasticity. These qualities the ***American Seal Builders' and Roofers' Elastic Oil Cement*** possesses. It will adhere firmly to Slate or Me al and will not crack or crumble. It is especially recommended for repairing leaks around chimneys, dormer windows, skylights, scuttles, firewalls and any place that requires fixing on a roof, either Slate, Tin or Shingle.

This Cement will answer to repair *a roof* when *Solder* cannot be used.

PUT UP In Barrels, about 800 lbs. In Tubs, about 112 lbs. In 25 and 50 lb. Pails. In 5, 10 and 15 lb. Pails.

Special Discount to Jobbers and Large Buyers.

Plain Talks About Metal Ceilings.

SELECTING THE DESIGNS.

The design that looks best in a room largely depends upon the room itself and what it is used for.

Thus, certain styles are more suitable for churches than others; certain ones for hospitals; certain ones for school, for office, for home, for stores, restaurants, and so on through the list.

Also, the size of the room must always be taken into consideration.

Heavy girder work, deep panels, or bold, massive ornamentation don't look right in small rooms—they belittle the room.

Neither do shallow panels or small figures for ornamentation look right on large high ceilings—the room belittles them.

The point is to preserve the proper balance between room and ceiling so that neither one will detract from the other. This result is easily obtained with

"BERGER'S Classik" TRADE MARK METAL CEILINGS

The variety of artistic styles we offer permits you to choose something suitable for the kind of room the celling is to be used in.

The variety of patterns in each style makes it easy to select a combination appropriate to the size of the room.

Thus we meet both horns of the dilemma and give the purchaser ample chance for making the right selection.

If you are in doubt, however, give us details—we make a special study of such matters—it is more than probable that we can help you out.

The New Metal Worker Pattern Book.

425 Pages. 744 Illustrations.
Size 10 x 13 Inches.

A new treatise on pattern cutting as applied to all branches of sheet metal work.

Cloth Bound, Price $5.

This work contains a collection of **218** problems and an elaborate explanation of the principles of pattern cutting, including Triangulation.

It embodies the problems of the former Metal Worker Pattern Book, all of which have been revised, and many of which have been entirely rewritten and solved by more approved methods. To these have been added **75** new problems and much other new material and explanatory matter, making this work a model of completeness in every respect.

ARRANGEMENT.

In point of arrangement the new work far surpasses the former one in that the problems are classified under three different heads, and simply indexed, and also that by means of a table of contents any required department of the work can be easily found.

CONTENTS.

While Chapter VI, comprising the greater part of the work, is devoted to the solution of problems, the five preceding chapters thoroughly explain the principles of pattern cutting, and place the student in possession of the preliminary information necessary to a thorough understanding of the subject.

SUMMARY OF CONTENTS.

I. Terms and Definitions—15 pages.
II. Drawing Instruments and Materials—13 pages.
III. Linear Drawing—6 pages.
IV. Geometrical Problems—35 pages.
V. PRINCIPLES OF PATTERN CUTTING—25 pages.
VI. PATTERN PROBLEMS (3 Sections)—325 pages.
  1. MITER CUTTING.
  2. FLARING WORK.
  3. TRIANGULATION.

All Tinners, Cornice Makers and Sheet Metal Workers should be provided with a copy of

The New Metal Worker Pattern Book.

Price $5, post or expressage paid.

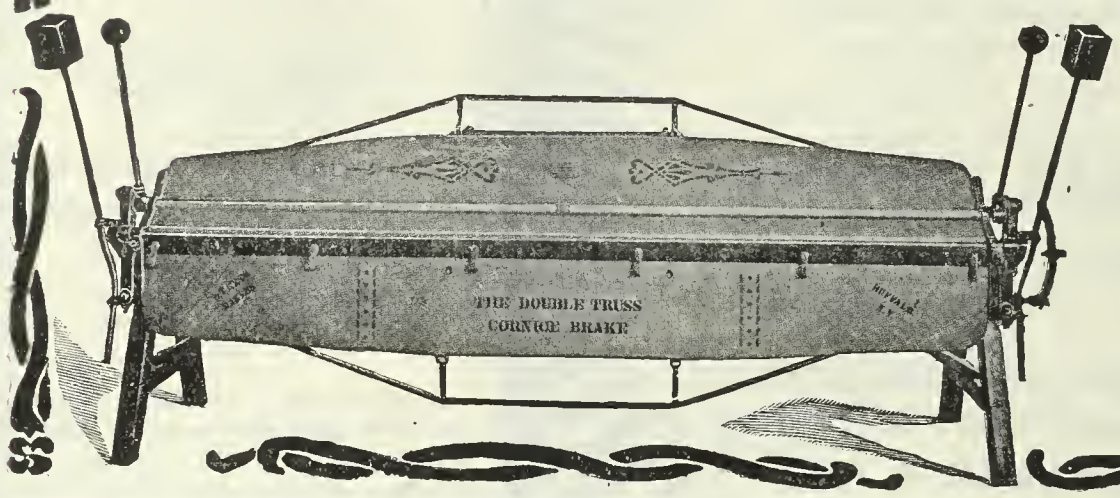
THE DOUBLE TRUSS CORNICE BRAKE.

This is the most practical brake on the market.
It is the most practical because, in the first place, it is lower in price than any other Cornice brake that will do perfect work.
Secondly, because its practical construction enables you to use it to the most profitable advantage.
When you hear about a good thing in your line of business, investigate it. Turn on it the light of reason and consider its money-making possibilities.



Let us send you information regarding our double edge on front leaf, for making fine members and corrugations.

The Double Truss Cornice Brake Co.,
1453 Niagara St.,
BUFFALO, N. Y.

A PERFECT FOLDER for STOVE PIPE and CYLINDERS.

Niagara
Adjustable Pipe Folder.

The old style Stove Pipe Folders (Wright's, &c.) cannot be relied on to turn locks of even and uniform widths. The Folder herewith shown overcomes this difficulty entirely.

The Niagara Adjustable Pipe Folder is sure to produce a lock of uniform width the entire length, as variations in the hardness of the material have no influence whatever. It also possesses the advantage of having an adjustable gauge for locks from 3-16 to ⅜ inch wide. Length 30 and 42 inches.

MADE BY

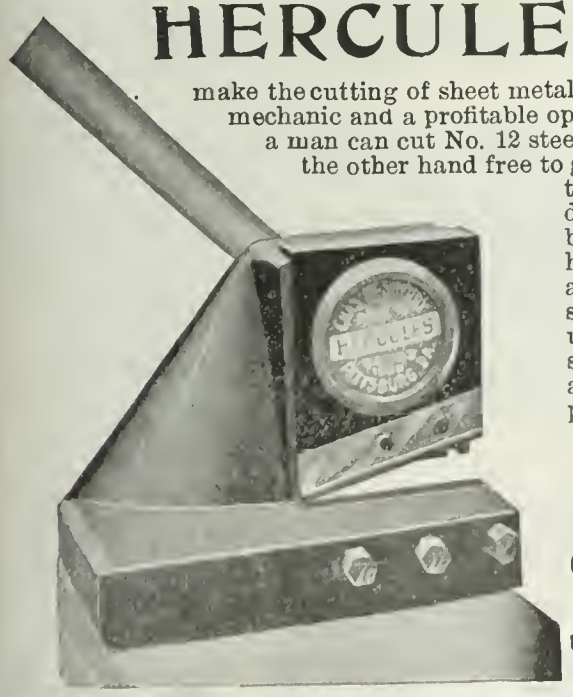
CORNICE MAKERS' SQUARING SHEARS.

With Lever Arc, Automatic Gauge. Will cut No. 22 iron

97 inches long.

HERCULES SHEARS



make the cutting of sheet metal of heavy gauges an easy task for the mechanic and a profitable operation for the employer. With them a man can cut No. 12 steel with one hand on the lever, leaving the other hand free to guide the stock while cutting elbows, ties and circles, as small as 8 in h radius; this is done without burring or buckling either piece, thus avoiding hammering and straightening, which add to the cost of the product. Thev split sheets of any width or length up to No 12 gauge, cut wire or bar-steel ⅛ inch thick, cut off and mitre angle iron ⅛ inch thick, and do it perfectly.

PRICE, - - $35.00.

Paragon Point No. 3.—LARGEST RADIATING SURFACE.

The Paragon Furnace has more square inches of radiating surface, per size, than any other hot air furnace. There are three drums, every square inch of which is reached by the products of combustion. Then, too, the Paragon has the additional heating surface afforded by the upper radiator, which is absent in other makes.

This point means that the Paragon gives an abundance of pure, warm air, and not the small quantity of overheated, parched air given out by other furnaces.

RINGEN STOVE Co. SAINT LOUIS

Model Steel Range

For Hard Coal, Soft Coal or Wood.

They are **Models** of all the good things, useful and beautiful, that can be embodied in a modern range. Their popularity, on account of their many good points, has led many imitators to copy them as near as they dare, but as the oven doors, dampers, fire-box and other features are covered by patents, the imitations are still behind in the race, so far as construction and operation are concerned, and we feel confident that a comparison will result in a most favorable impression as to our claim that they are **Models of Beauty** and just the one range above all others that it will pay the dealer to handle. The large and constantly growing trade we enjoy on the **Model Steel Range** has been built up purely on its merits and not through a lot of extravagant "fake" advertising.

Write for prices and discounts.

Artistic Enameled Steel Ranges.

ALWAYS BRIGHT, NEAT AND CLEAN.

Do not confuse ***Artistic Enameled Steel Ranges*** with the ordinary black baked Japan used on other ranges.

The "ARTISTIC" is the only enameled range on the market.

You should see a sample. Can be washed with soap and water.

Artistic, practical; the best steel range.

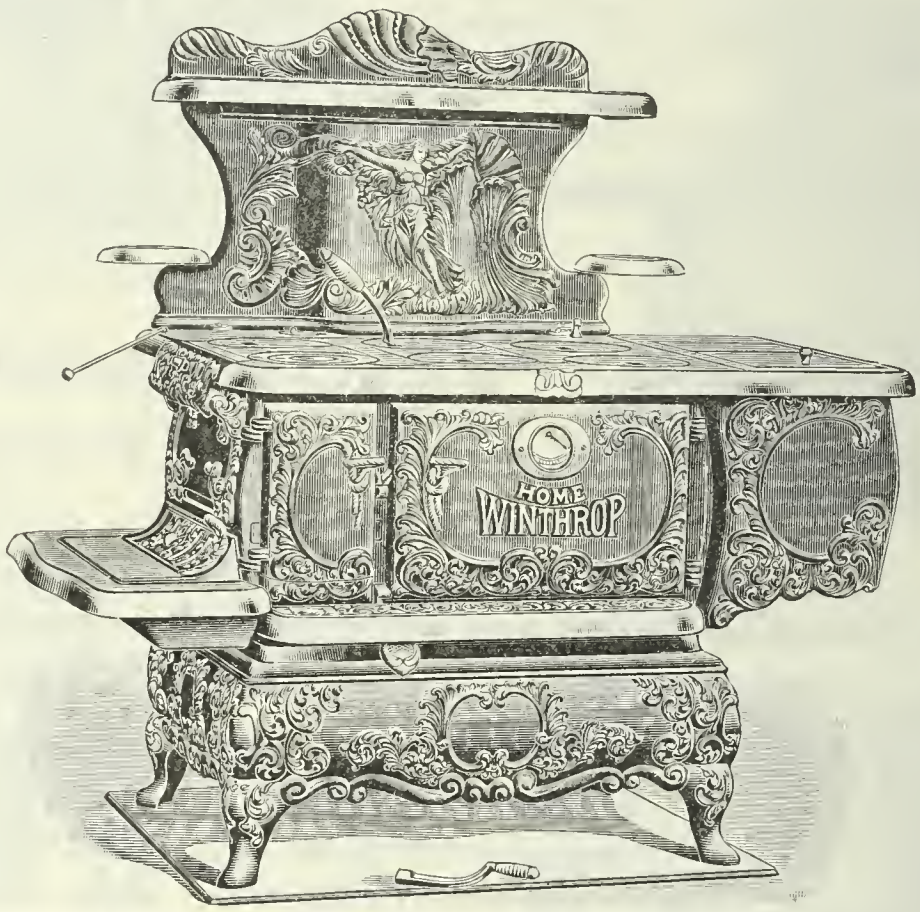
SEND FOR DESCRIPTIVE CIRCULARS AND CATALOGUE.

Artistic Enameling Works, - - St. Louis, Mo.

THE "HOME WINTHROP" has every modern attachment that is of any practical use, common to other first-class ranges.

The "HOME WINTHROP" requires one-third less fuel than any other range and bakes just exactly as well in the afternoon with an old fire as in the morning with a new fire.

ALL of FIVE SIDES of the oven are heated and heated evenly.



In selling the average modern range, some far-fetched argument is necessary, one make not being essentially different from twenty others; the greatest value in any of them could be changed in two minutes by changing the name on the oven door.

The "HOME WINTHROP" is constructed differently and there are good common sense REAL reasons why it will and does do better and more economical work.

The price is 20% less than other ranges having the same fire box and oven measurements are sold for.

DIGHTON FURNACE CO., Taunton, Mass.

Moore's Air-Tight Heater

Ground Joints Make Perfect Air-Tights

Much of the success of Moore's Air-Tight Heater, lies in the perfection of the base door, all joints being ground to within $\frac{1}{1000}$ of an inch of actual contact.

The lever by which the draft slide is operated is also an exceedingly satisfactory device, as it enables one to accurately register the admission of air, and gives complete control of the fire.

SEND FOR CATALOGUE AND PARTICULARS.

TUBULAR HEATING AND VENTILATING CO.

232 Quarry St., PHILADELPHIA, PA.

New Leader Furnace

POINTS OF CONSTRUCTION

ASH-PIT has great depth, with flush front. Full sized door.

Grate in full view, making the removal of ashes very easy—*not so with low ash-pit doors.*

Not a square inch of solid substance to obstruct the draft, avoiding clinker formation.

Grate is easily taken apart as there are no bolts used. The cutting off of corroded bolts takes time and costs money.

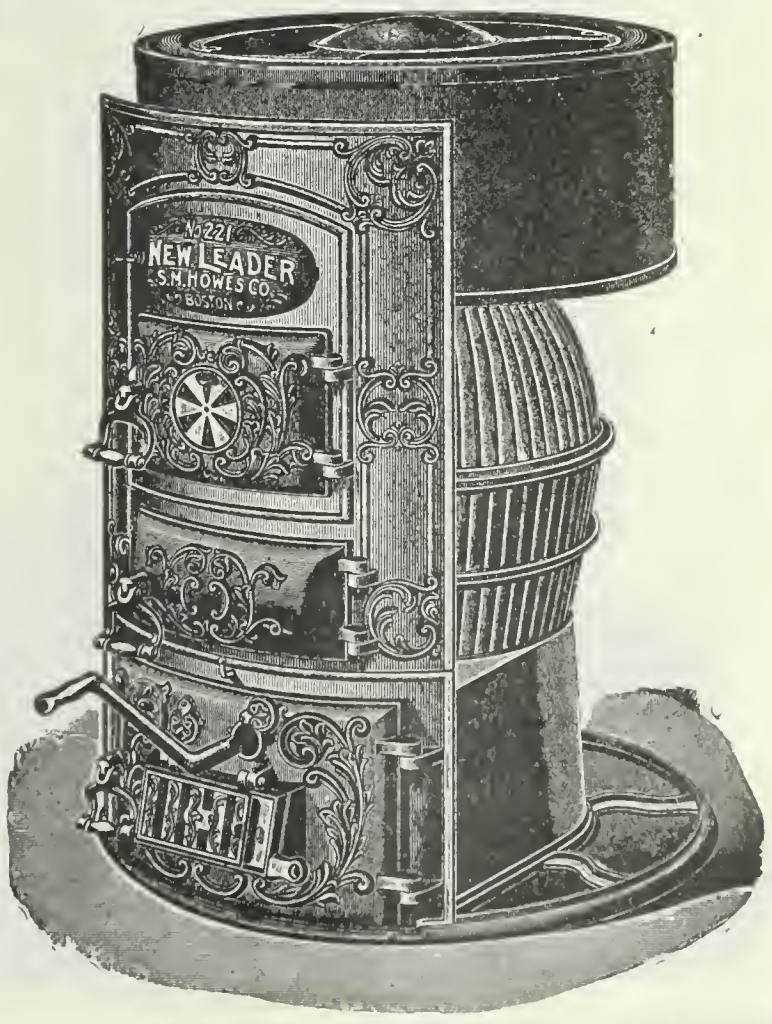
By simply removing the plate in front of the cogs the bars can be replaced by unhooking them from the yokes. This is a new and desirable feature.

Feed Dome is made in one solid casting from fire pit to radiator and offers a large surface for the direct rays of the fire.

Fire Pot is made in two sections, heavy and particularly durable.

Dust Flue is placed in front of the furnace and extends from ash-pit to feed dome. It is large and has a damper.

Radiator is mounted with best quality refined steel.



5 SIZES:

20, 22, 24, 26, 28 in. fire pot.

Bright Idea Steam Boiler.

Nothing Equal to It.

It was Goethe, you recollect, who declared that "to find some one who thinks as I do strengthens my belief." Well, here's what one individual who has thoroughly tested the

GURNEY

"Bright Idea" Heater

thinks of it: "My house is large and exposed, but I can heat the whole of it with the mercury at zero outside. I believe there is nothing equal to the 'Gurney' for heating a house."

If such testimony were rare, of course it would carry less weight, but when we assure you that we have on file hundreds of letters of the same tenor, it seems almost impossible for you not to comprehend the excellence of the "Gurney" Heaters.

But, having comprehended it, why not make use of it? Become our agent and then you'll share its benefits. For just so long as merit finds appreciation, just so long are "Gurney" Heaters bound to sell in increasing numbers.

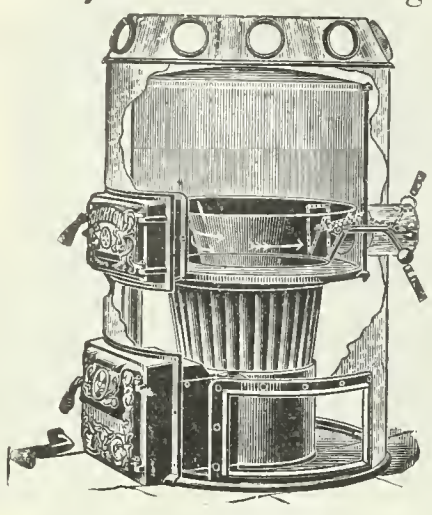
MILWAUKEE, WIS.

IF SOME Furnace Manufacturers spend fifteen or twenty thousand dollars a year for advertising a name, and as much more for the expense of conducting a big city store, how much do they have to add to the net manufacturing cost of each Furnace if they sell 3500 Furnaces a year?



If a "DIGHTON" Furnace will heat a given number of cubic feet with less fuel, distribute the heat to the different rooms as evenly, last as long without repairs, and the cost to you is from one-third to one-half less than others, how long should it take any man of average ability to get his fair proportion of Furnace business in his locality?

Did you ever hear anybody who has used a "DIGHTON" say they were dissatisfied with it?

DIGHTON FURNACE CO., Taunton, Mass.

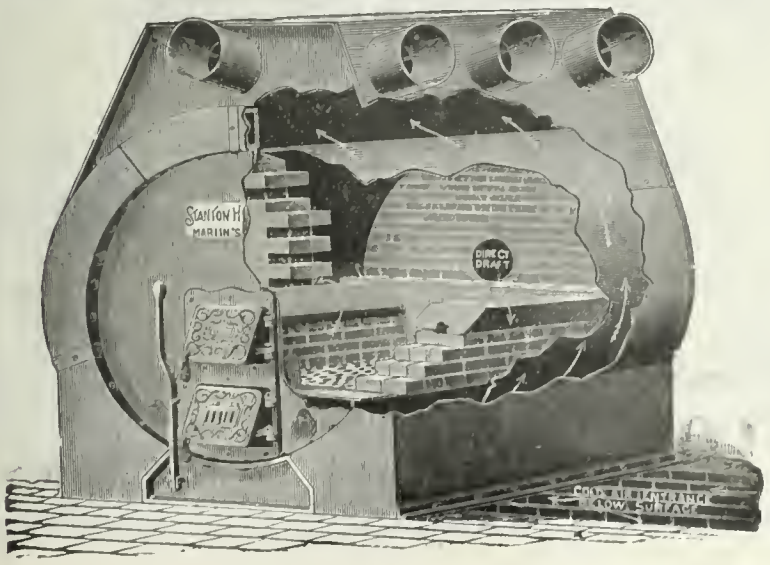
The Stanton Seamless Heater,

PORTABLE CASED.



LOUISVILLE, KY., Apl. 5th, 1901.

THE STANTON HEATER CO.,
Martin's Ferry, Ohio.

Gentlemen:—Your favor of the 3d inst is received asking our experience with the Stanton Heater which you put in for us during the fall of 1899. In reply we will say that it gives us pleasure to express our entire satisfaction with this Furnace. While we have had no severe weather this winter there have been several quite cold snaps, but our offices have been very comfortably heated, and our coal bill (Pittsburgh coal) has been quite moderate compared with other Heaters we have used.

The satisfaction the Heater has given us can be best expressed by saying that we have not heard the Furnace mentioned once this winter. You can see, therefore, that we have had absolutely no cause for complaint.

Yours very truly
ROBINSON-HUGHES & CO.

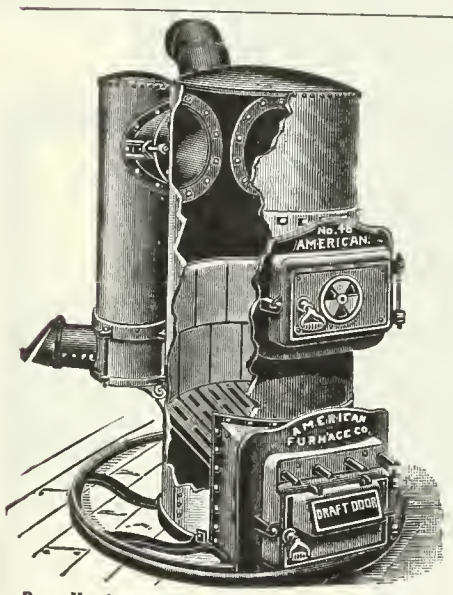
The Graff Furnace Co.,

208 WATER ST., NEW YORK.



Burn Hard or Soft Coal, or Coke. Large Doors.

About Fire Pots.

We formerly lined our fire pots with cast iron—then they cracked and warped. Now we use fire brick for lining and will guarantee it for five years. The lining is replaced through the fire door.

The **AMERICAN FURNACE** is made strong in places where other furnaces have proven weak; it is made of heavy steel and riveted tight like a boiler. Will burn any kind of fuel.

You can only build up a permanent furnace business by handling a first-class furnace. We manufacture for the better class of trade.

Furnace Heating.

A Practical and Comprehensive Treatise on Warming Buildings with Hot Air, by William G. Snow, with an Appendix on Furnace Fittings. 170 pages; size, 6 x 9 inches. Cloth bound. Price, **$1.50.**

This is the only book that has been brought out which presents a systematic and reliable treatment of the warm air furnace system of heating.

It deals with the various types of furnaces, their construction, proper location and setting, together with furnace fittings, and all matters pertaining to the installation of furnaces and to effective and economical heating by warm air. The subject is discussed for the first time by a competent author possessed of a scientific education and a practical training, who presents positive rules, based on a long experience, for guidance in designing furnace systems for dwellings and other buildings where this popular method is employed. The various details of furnace work are described simply and at such length that the volume will be valuable to all who are in any way interested in the subject. It is recommended to practical furnacemen, to architects, builders and house owners, and to tinners and plumbers in suburban sections who do furnace work. To all these it will prove a reliable text-book and guide.

PARTIAL SUMMARY OF CONTENTS BY CHAPTERS.

Chapter I.—Furnaces—Is devoted to Furnace Construction—The Relative Proportion of Furnace Parts—Secondary Heating Surface—Economy and Efficiency—Heating Capacity and Exposed Wall Surface—Manufacturers' Ratings of Their Own Productions, etc.

Chapter II.—House Heating—Compares Furnaces and other apparatus, and describes Method of Setting Brick and Portable Furnaces—Location and Area of Cold Air Supply—Cold Air Rooms and Air Filters—Return Ducts and Air Circulation—Size of Hot Air Pipes—Location of Registers, etc.

Chapter III.—The Combination System—Discusses Heating Distant Rooms with Radiators—Balancing the System—Location of Water Heater in Furnace—Capacity of Water Heaters—Size of Radiators, etc.

Chapter IV.—Air—Deals with the Necessity of Ventilation—Water Needed to Moisten Air—Expansion of Air—Velocity of Air in Tubes, etc.

Chapter V.—Heating and Ventilation of Buildings—Considers the Size of Furnaces Required—Fresh Air Room and Supply—Air Circulation—Size of Flues—Use of Stack Heaters—Size of Heating Coils in Vent Flues, etc.

Chapter VI.—Heating of Public Buildings, Churches and Stores—Is given to the Size of Furnaces Required—Grate Surface in Ventilated Buildings—Air Supply—Size of Heating and Ventilating Flues—Size of Stack Heater, etc.

Chapter VII.—Fan-Furnace Combination System—Is devoted to Positive Warm Currents from Fan Systems—Location of Fan and Driving Apparatus—How Good Furnaces are Aided by Fans—Types and Efficiency of Fans—Area of Ducts and Flues, etc.

Chapter VIII.—Temperature Control.

Chapter IX.—Estimate and Contract Blanks.

Chapter X.—Value of Fuels. The Proper Size for Furnace Chimneys—with tables.

APPENDIX.

Furnace Fittings.—A section of 45 pages dealing with the Making of Furnace Casings—Metal Cold Air Boxes—Making Furnace Bonnets and Collars—Making Pipe and Elbows—Register Boxes and Stack Shoes, etc.

Sent postpaid on receipt of price, **$1.50.**

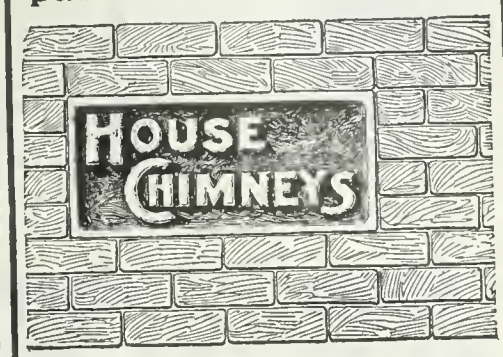
A 62-PAGE PAMPHLET

Comprising a Series of Articles and Letters on *Chimney Troubles and Their Remedies* published under the title



Contains a compilation from the columns of THE METAL WORKER, of articles and correspondence relating to house chimneys, defective flues, and kindred topics, comprising a source of information of the most practical and reliable nature, on overcoming difficulties which occur in the working of chimneys, flues, etc.

To all who are interested in flues and drafts, in their relation to stoves, furnaces and house heating apparatus, this book will prove instructive and helpful.

The Contents are as follows

Page.

POINTS ON CHIMNEYS - 7–32
An illustrated article by J. L. Bixby, Jr, describing many details in chimneys, which cause trouble, and giving remedies. An important table is presented, of the sizes of chimneys required in dwelling houses, based upon the amount of work to be done.

DEFECTIVE FLUES - - - 33–35
This article presents information resulting from a wide, practical experience of the writer, and gives sound advice on some of the details of chimney construction.

HOW TO IMPROVE A WEAK CHIMNEY - - - - - 36–40

VARIOUS FORMS OF VENTILATORS or CHIMNEY TOPS 41–45

CONDENSATION IN STOVE PIPES - - - - - - 46, 47

SMOKE PIPE FOR WOOD FURNACES - - - - 48

REMEDYING DOWN DRAFT IN CHIMNEY - - - - 49–51

CONNECTED FLUES DESTROY DRAFT - - - - - - 52–55

FAILS TO BAKE ON BOTTOM 56–62

40 good Illustrations help to make the Text clear.

ABOUT ESTIMATE BOOKS

For Plumbers and Heating Men

Your Contract and Estimate Record Book for Plumbers is one of the best books that ever came into our house and we would not be without it for three times the amount it cost. We can figure without omitting anything with accuracy at a very short time. We think that every plumber should not be without this valuable book.

W. C. BENNETT & CO., Haverhill, Mass.

We have used an estimate book for three years and could not do without one. Would say that yours is far superior to any yet used and can cheerfully recommend it.

W. R. PARK & SON, Taunton, Mass.

A great advantage. Prevents the leaving out of small items, which amount to more than the cost of the book in a very short time.

CHAS. W. COOMBS, Lawrence, Mass.

Your Contract and Estimate Record Book has been of great use to me in both the saving of money and labor, and I would highly recommend it to any or all master plumbers.

THOMAS P. DOHERTY, Taunton, Mass.

These testimonials are a few of many, and indicate both that a well arranged estimate book, which provides complete lists of items to be figured upon, is a time, labor and money saver, and that the *"CONTRACT AND ESTIMATE RECORD BOOKS"* come up to this requirement.

THE EDITIONS ARE AS FOLLOWS:

CONTRACT AND ESTIMATE RECORD BOOK FOR PLUMBERS

OFFICE EDITION.

200 Pages. Arranged for 100 Estimates. Size 8 x 11 inches. Cloth bound, $1.50

500 Pages. Arranged for 250 Estimates. Size 8 x 11 inches. Cloth bound, $2.50

POCKET EDITION.

200 Pages. Arranged for 50 Estimates. Size 3½ x 8 in. (oblong). Flexible cloth binding, $0.50

CONTRACT AND ESTIMATE RECORD BOOK FOR STEAM AND HOT WATER HEATING

200 Pages. Arranged for 100 Estimates. 7 x 12 inches. Cloth bound, $1.50

NOTE. The omission of one item in an estimate on a plumbing or heating job might result in the loss of all profit. These books provide a reliable, accurate, business-like record, and a sure means of avoiding loss due to mistakes and omissions.

Sent prepaid on receipt of price.

JUST PUBLISHED.

Practical Hints on Joint Wiping,

For Beginners in Plumbing.

SIXTH EDITION, ENLARGED.

With an Appendix Giving a Selection of Practical Letters and Articles Compiled from THE METAL WORKER.

66 Pages. 41 Illustrations. Paper, 25 Cents.

This edition contains besides the two original articles on joint wiping, by experts, a selection of letters and articles on various important phases of the subject

These include the following:

Joint Wiping on Copper Pipe.
Wipe Joints on Brass and Iron.
Wiping Joints on Tin Pipe.
Wipe Joint on Lead and Iron Pipe.
To Make Tight Joints.
Froze the Pipe to Wipe a Joint.
Wiping Joints Without a Furnace.
The Effect of a Jar on a Hot Wiped Joint
What Caused the Joint to Break?
Strength of Joints in Lead Pipe
Good Wiping Solder.
Durability of Coarse Solder.
Plumbers' Paste.
Cleaning Solder.
What Breaks Wiped Joints?
Hard Solder to Resist Ammonia.

The first article in the book is written by a practical plumber, and is illustrated from photographs representing the hands and tools when wiping joints in various positions. The second, by an expert joint wiper, is also illustrated from photographs and will prove of great assistance to learners. Ample instructions are given on preparing the pipes previous to wiping the joints, with full descriptions of all tools and appliances used. The pamphlet, in short, gives all the assistance that description of the work can furnish and is the most practical and complete account of joint wiping that is published.

William McKinley.

Truly can it be said that the heart of the entire nation has been wrung by the tragic ending of the life of William McKinley. The universality of the mourning for the murdered President is not more evident than its sincerity. To the memory of very few personages in the world's history have such splendid tokens of reverence and affection been rendered as those witnessed this week. During his whole public career William McKinley identified himself closely with the people who had intrusted him with position and power and who had learned to love and trust him for his high standard of devotion to duty, his patriotism and his sagacious judgment in the conduct of affairs no less than for his admirable personal qualities. His career was typically American. As soldier, as Congressman, as Governor and as President his public services were brilliant, consistent and honorable. In all the relations of his life, both public and private, his character was without fear or reproach. History will record that under President McKinley this country attained a remarkably high degree of prosperity and secured a leading place among the nations of the world. Worthy to be engraved upon his monument and to live in the minds of his countrymen are the words uttered by him in his last public speech at the exposition on the day before his assassination: "Let us ever remember that our interest is in concord, not conflict, and that our real eminence rests upon the victories of peace, not those of war."

American manufacturing industries have lost in William McKinley a consistent, eager and intelligent champion. During his long public career he kept in close touch with the productive industries and acquired a profound and accurate knowledge of their requirements. An acknowledged leader during a long and bitter struggle, he rose as his opportunities grew, and only a few days before he fell under the assault of an assassin he had outlined, in precise and convincing terms, the policy which changed conditions and progress hold out as likely to be most beneficial to our country. The loss of such a leader, under circumstances so distressing, will be sorely felt by our great manufacturing industries. The confidence in the earnestness and ability of a man like William McKinley is of slow growth. There must be a period of watching and waiting until his successor has justified his claim to those qualities which are the conditions of leadership. The blow of the loss inflicted and the uncertainties involved in a change fall upon the country at a time when, as Mr. McKinley himself so vividly pointed out in his last public speech, we were enjoying unexampled prosperity. The hope is justified that there will be no wavering in our advance, it being certain that our progress will not be stayed.

The Difficulties of Consolidations.

That the consolidation of manufacturing interests, even though covering a good proportion of the product affected, does not in itself secure exemption from the difficulties and misfortunes of trade finds another illustration in the annual report just rendered by the Standard Rope & Twine Company. From this it is seen that the business of the past year was very unsatisfactory, resulting in a loss of $500,000, as against a small profit the year preceding, while on $12,000,000 of capital stock no dividend has ever been paid. Some of the troubles of the company are ascribed to the violent fluctuations during the year in the price of hemp, of which under a heavy advance the company found itself short, and so was obliged to cover at a loss. The arrangements made for the marketing of their products also proved expensive and unsatisfactory. Meanwhile outside competition has been aggressive and growing. In the opinion of those who are well informed in regard to the matter the very liberal values at which the different plants were originally taken in has much to do with the difficulties by which the company have been confronted. Experience in this case enforces anew the futility of looking to consolidation as a sure remedy for the ills of trade. Wisely effected and administered the union of manufacturing interests is often permanently advantageous, but there are peculiar dangers connected with both the organization and the administration of such enterprises.

The Stability of Our Business Interests.

The manner in which the financial and mercantile interests have withstood the shock occasioned by the President's lamented death is not only a renewed testimony to the strength of our institutions, but also an indication of the substantial basis upon which the prosperity of the country rests. It is evident that the wheels of commerce and industry will continue to revolve and that the country will still enjoy a widespread prosperity in which practically all classes will have their share. In connection with President Roosevelt's induction into office, apart from the personal respect and confidence with which he is regarded, it is gratifying to note that he has already indicated his recognition of the importance of maintaining and extending American trade, a policy which wisely carried out will give to this country, in its relations with the markets of the world, a still more commanding position.

The Importance of Careful Buying.

No commercial business can be successful unless goods are sold at a living profit, and in sufficient quantity. In these days of fierce competition the selling price must be such as will not only retain but at the same time attract trade.

In order that such selling prices may be realized, and

still a profit secured, purchases must be made at the lowest possible figures.

A very decided advantage comes to the close buyer. He can sell at the same prices as his less careful competitor and make a longer profit, or he can cut or undersell him and make the same profit. He is more likely to attract trade and thereby do a larger and an increasing business.

Plumbers and sheet metal workers are not always the most careful buyers. The reason for this, in part at least, may be found in the fact that they are not simply merchants in the ordinary sense of the term. As a storekeeper and a seller of regular goods, the plumber or metal worker is a merchant, but as a repairer or more especially as a sanitary or artistic expert, as a preventer of disease, and as a maker of special articles, he has something of a professional position, and bases his charges on the cost of materials used and the labor spent upon them, adding a fair profit and something for the special knowledge required.

In work of this character, in which labor and skill are a large part of the charge, it is not quite so essential that there be the same care in the buying which is indispensable in the case of the simple tradesman. At the same time careful buying will yield the merchant plumber or metal worker additional profits, as surely as it does the tradesman. The difference is that the former can often exist and not buy carefully, while the merchant must buy with care or not succeed in his business.

Time spent in buying is by no means wasted. It yields a larger result than any other time spent in the store. Profits are increased, opportunities for enlarging business are discovered, and one's position in the trade is improved.

Some small dealers labor under the impression that jobbers and manufacturers favor customers who do not try to buy closely. They think that the extra prices paid buy accommodations. This is a grave mistake. Commercial houses of standing prefer to deal with men who do business according to business principles. They will esteem and favor the man who knows what he wants, who is posted in regard to the market, who appreciates the right thing when he gets it, who pays his bills promptly.

Exports from the United States for the 12 months ending August 31, 1901, amounted to $1,500,613,236. This is the first time in the history of our export trade that the figures for a 12 months' period have crossed the billion and a half line. The Bureau of Statistics of the Treasury Department, in its monthly statement of imports and exports, gives the total of exports for the last 12 months and compares it with the corresponding 12 months in preceding years, showing that the exports during the five-year period from August 31, 1896, to August 31, 1901, increased more than 50 per cent. In the same period the imports increased less than 15 per cent. The phenomenal growth in exports from this country is also illustrated in another form by the fact that the monthly statements for more than two years past have not fallen below the $100,000,000 line. This showing is one to inspire a pardonable pride and gratification.

A preliminary statement giving the status of the manufacturing interests of the State of Connecticut and of the principal industrial centers of that State last year, just issued by the Census Bureau, shows that there were in 1900 9128 manufacturing establishments in Connecticut yielding a total product of $352,824,106. The capital employed was $314,696,736, an increase of 38 per cent. over 1890. The total wages paid to workers in Connecticut industries in 1900 was $82,767,725, an increase of 24 per cent. over 1890. The increase in the number of manufacturing establishments in the State amounted to 33 per cent. and their production to 42 per cent. New Haven leads the list of manufacturing centers with 1236 establishments and an annual output of $40,762,000, Hartford coming second with 832 establishments and nearly $38,000,000 output, and Waterbury, Bridgeport and New Britain following. Of the cities named Waterbury showed the greatest gain—namely, 90.7 per cent. over 1890.

Still again the art of tempering copper has been discovered, this time by a resident 'way down in Maine. As usual, he has been experimenting for years and has experienced all the customary drawbacks. Report has it that he has exhibited a copper hatchet with an edge apparently as keen and strong as steel, also a stone chisel and several broadswords.

The Labor Troubles in the Iron Trade.

It is to be hoped that the termination of the strike in the rolling mills of the United States Steel Corporation will mark the end for a long time of labor disturbances in the iron trade. No other branch of manufacturing industry has been so seriously disturbed from this cause during the past fifteen months. Last year the Western bar iron mills, the sheet mills and the tin plate mills were closed in consequence of a disagreement over the wage scale for more than three months, and this year the sheet mills and tin plate mills, with some of the Western bar mills, have again suffered from protracted labor troubles, which have thus caused considerable restriction of production. Not only have the manufacturers of iron and steel rolled products been harassed from this cause, but manufacturing consumers have to a great extent been seriously embarrassed in the prosecution of their operations.

The interference with business resulting from these strikes has not alone affected the operations of these companies. The general public has been interested in a great many ways. The numerous local tradesmen depending on the patronage of the workmen in the mines and mills have had their business seriously restricted and undoubtedly failures have been caused among them. Transportation on the railroads has been cut down, and the operations of manufacturing consumers depending on the production of the mills closed by strikes have been greatly injured. In some cases it has actually been necessary to close factories simply because the materials necessary could not be obtained from other sources to enable them to continue in operation.

The workmen who have been concerned in these labor troubles should take to heart their disastrous experience and permit the iron trade to have a long rest from any similar occurrence. It would be well if the iron trade could be kept entirely free from any disturbance of this character for a long period of years. It seems in looking back over these difficulties that not one of them was justified. In fact, most of them were due to circumstances which now appear to have been of a trifling character, such as should have been settled within a few hours, or at furthest a few days. Bitterness has been engendered in addition to the heavy loss in wages, and in numerous instances lucrative positions have undoubtedly been sacrificed whlch are now being filled by other men. The whole history of these various occurrences is deplorable, particularly when viewed from the standpoint of the workmen themselves. They were the principal sufferers. They have found that even though the employing companies consist of corporations whose stocks are quoted in Wall street, that fact did not deter the managers of the corporations from strenuously resisting the claims made by the men. This is an unexpected development, as the leaders of the men had supposed that the Wall street connection would make these companies exceedingly vulnerable to such an attack. The resistance which has been made so successfully should convince them that in the future no unreasonable demands can be made with any hope of success. The lesson has been expensive to all parties concerned, but it should have a wholesome effect.—*The Iron Age.*

THE WESTERN STOVE TRADE.

Western stove manufacturers are now looking for a great increase in the demand for heating stoves. The forerunner of this demand is the increased business which they have recently been doing in filling orders for stove repairs. This indicates that heating apparatus is being overhauled and put in shape for the advent of cold weather. As people usually defer action of this kind until cool winds cause them to seriously think about artificial heat, it is to be expected that new stoves will be found needed in many cases, and orders for these will be hastily sent in. The first orders for stoves have seldom been of sufficient size to enable dealers to stand much of a run on their stock. One or two frosty mornings will bring the demand up to the manufacturers, and they will in every instance be expected to ship the stoves from their warehouses immediately upon receipt of the order, whether it is received by mail or wire, and even though it may find the shipping department working overtime on similar "hurry-up" orders.

Charles W. Adams.

Charles W. Adams, who for many years was prominently connected with the stove trade, died on Tuesday, September 10, at Virgil, Ill. Mr. Adams was born in New England and had attained an age of over 70 years. He was a practical molder, having learned his trade in Massachusetts, and for a long time was employed in the old Boston & Maine Foundry in Boston. He was also a singer of marked ability, winning distinction among professional vocalists while a young man. Mr. Adams was a veteran of the Civil War. He was wounded at Fredericksburg, Va., and the wound was so severe that it compelled his discharge; but upon his recovery he re-enlisted and served through the war. On resuming his occupation as a molder he became connected with the stove trade. He was for a time foreman for the Fuller & Warren Company, at Troy, N. Y., and was afterward engaged in the same capacity by Perry & Co., at Sing Sing, N. Y. About 1882 he became connected with the Chicago Stove Works of Chicago as foreman of the molding department, and was soon promoted to be superintendent. During his incumbency of this position the long lockout at the Chicago Stove Works occurred, in 1885. Advancing years caused his practical retirement from active duties in 1895. Since that time he has been rendering such service as his age and declining health would permit, severing his connection permanently a few months since.

Anchor Stoves and Ranges.

The illustrated catalogue and price-llst known as No. 36 which has been issued by Terstegge, Gohmann & Co. of Louisville, Ky., presents an extensive assortment of Anchor stoves, ranges and heaters for the season of 1901-1902. Steel ranges occupy a number of pages in the early part of the catalogue, these embodying the modern lmprovements, and are offered in sufficient styles and slzes to meet all reasonable requirements. The cast goods are of attractive exterior and are up to date ln all respects. The leading place among the heaters is given to the Anchor radiator, which is of rich ornamentation and is made in several sizes. It is intended for using soft coal as a fuel, and it is claimed by the manufacturers to be especially suited to this climate, because, owing to lts air tight construction, the fire ls under perfect control and can be made to burn fast or slow. Other goods includc attractive oak constructions and surface burners, cottage parlor, globe, cannon and laundry stoves. Miscellaneous goods and stove hollow warc complete the catalogue.

A POSTAL CARD which is being sent out by the Gobeille Pattern Company, Cleveland, Ohio, refers to a cheap Oak Stove which they havc designed and which is likely to be of interest to Stovc manufacturers generally. By a simple improvement in the base, retaining the ash pan and a few other expedients, a Stove has been designed which presents an attractive appearance, and yet the company state the weights will not go above 8 pounds per inch fire pot diameter.

A REMEDY FOR ALL STOVE TROUBLES.

This is the time of year when stove dealers are so busy selling stoves that they overlook many of the little details that will be sure to make them trouble before the year dies. Complaints will come in that the range doesn't bake; that the stove doesn't heat; that no heat comes from the register to the upper room from double heating stoves; that the grate was made of poor iron and melted with the first fire, and a multitude of kindred reflections on the honor of the stove dealer who palmed off poor apparatus on his confiding customers. This year being 1901, the beginning of a new century, may be a miraculous one and the usual complaints may fail to materialize. But I have strong doubts in the matter, and, feeling that I should be glad to alleviate the troubles that I am satisfied must come, I will suggest a few points which all the young men in the trade can use to overcome any of the difficulties that may be brought to their attention.

In the first place, all of the air that goes out of the top of the chimney should only find entrance to it through the draft slide in the stove connected with it. If my young friend will carefully consider this rule he will see to it that the chimney is properly constructed before he connects the stove with it. He will then be careful to see that the stove pipe does not enter too far in tne chimney and that the stove pipe hole will permit the use of a collar on the pipe, so as to practically cut on the entrance of any air around it into the chimney. He will go further, in case of a complaint, and examine the stove to see if putty has been omitted from any of the joints, or has been shaken off in shipping. For if air can get in at some unexpected point it will surely cut off the draft, make the parlor stove throw out gas and fail to prove a strong heater, and it will make the kitchen stove get red hot on top and fail to bake.

There is an old axiom that two things cannot occupy the same space at the same time. If a parlor heater has a pipe run up to a register in the floor of a room above, it is a perfectly safe conclusion that the upper room cannot be heated if the air that is in the room cannot in some way get out and make room for the hot air to enter through the register. It is not always well to open a door to another room, for it is probable that the stove will not heat the two rooms. In some instances benefit has been derived by placing another register in the floor of the room and a fretwork plate on the ceiling of the room below, so that the cold air in the upper room can drop down into the room where the parlor heater is located, and thus set up a circulation which will aid the heating of both rooms.

The third point is in reference to the burning out of grates. Foundrymen melt pig iron by placing a strong heat underneath it, and as the cupola is run oftentimes there is heat both under and above the pig iron to be melted. Now if this is the practice in melting iron in foundries, the iron in the grate of a stove can only be melted under the same conditions. These conditions are often found in stoves, particularly where the ash pit has not been cleared of the ashes and a new lot of hot ashes and coals are shaken through the grate so as to lie underneath it and very close to it. Then, when a draft is given to the stove, these coals underneath burn up very hot, and, with the hot coals and ashes underneath the grate and the hot fire above it, thc grate will be sure to melt or warp so as to be unfit for further service.

Three main points have been given here which are the basis on which all investigation of troubles relating to stoves may be made. There is no mystery in anything that pertains to the operation of a stove. Its satisfactory operation is a very simple matter and there is nothing difficult to understand about it. Whenever any of the modern stoves give trouble on any of the points mentioned, there is no occasion for any worriment of mind to find out some peculiar, unusual or extraordinary thing. All that is required is a start along the lines presented for the discovery of some infraction of these ruics which cannot be violated without causing trouble. These investigations can be made just as read-

ily by the younger men employed in the establishment as by the gray haired veterans.

Such investigations and the treatment of customers must always be done with a most liberal use of common sense and courtesy. If a customer has a wrong idea, a blunt statement of the fact should be avoided. When people are wrong they are not any too anxious, as a rule, to be told so, and they should be made aware of their position by a careful explanation made in the most courteous manner. Their confidence will be gained and their good will retained if a course is pursued which allows their common sense to reach the same conclusion which the expert knows must be the final outcome. It is better to proceed on a courteous explanatory course in most instances than on any other. When an unreasonable customer is found, then patience and endurance must be used in addition to common sense and courtesy, and his impatience and unreasonableness will be worn out by a continued good natured deference to his position, accompanied with a reiteration of the facts that will never vary. The largest drafts that will be made on those who come in contact with complaining customers will be on their general information and good nature.

The Clover Triumph Range.

We illustrate herewith the Clover Triumph range, which is being manufactured by the Philadelphia Stove & Iron Foundry Company of Philadelphia, Pa. We are

The Clover Triumph Range, with Oven Door Open, Showing Draw Out Shelf.

informed that this line of ranges, which is furnished in three styles, with three sizes of ovens, embodies a number of improvements and labor saving devices not found in connection with any other range of its class. The ranges are described as "rich in design, perfect in workmanship and manipulation and made specially to appeal to particular people." A noticeable feature of the line is the automatic oven itself, a device patented December 4, 1900, and now being furnished only with the Clover Triumph ranges. This arrangement, which is simple and effective, is fitted directly to the oven door, and by the ordinary movement of opening which the shelf is drawn out of the oven and is supported by the door, a weight of 20 pounds or more being safely and conveniently carried. On closing the door the shelf is automatically returned on the slides to its position in the oven and is released by a slight turn of the door knob. This also enables one, if so desired, to open the door without withdrawing the shelf. The Philadelphia Stove & Foundry Company report a heavy demand for this line of ranges, the special oven attachment meeting with great favor.

HOW TO SELL STOVES.

BY OBSERVER.

This is a problem that is interesting both to the wholesaler and the retail stoveman, for on its solution depends the profit or loss to those engaged in the trade. Naturally the burden of labor, enterprise and work of increasing the sales rests largely upon the manufacturers. But, unfortunately, they cannot do all that is necessary. Moreover, they have the right to expect that the stove dealer shall make persistent, continuous and intelligent effort to this end. They are always ready to give him the benefit of their best ideas, so there is no excuse for the dingy, unattractive array of stock in this line which many stores contain, nor for the perfunctory attention given to customers and the delay in naming a price, due to want of information, that are so often experienced by the buyer, and which really show a negligence that is entitled to no consideration.

MAKE NEAT DISPLAYS.

That this portrays the condition existing in many stores where stoves are sold is indisputable, and yet manufacturers protect all dealers alike, by selling them goods at special prices, while refusing more money for the same stoves from individuals who are not in the trade, thus reserving their product to be disposed of through the trade channels, so that the stove dealer can arrange to get profitable prices. The manufacturer has a perfect right to expect that all who are so favored will keep up with the progressive spirit prevailing in all other lines of retail trade. It is only fair that the expenditure in effort and advertising by stove makers to popularize their product should be supplemented by an expenditure of at least a portion of the profits derived from trade protection, as well as by courteous salesmanship and an active canvass to bring the stoves to the attention of the people in the community where the retail stove dealer has his store. The sample rooms of the manufacturers are good examples of how the retail dealer should display the stoves in order that the first impression received by prospective purchasers may develop into a sale at a fair price.

PLAN METHODS.

All businessmen have some dull periods, and these should be utilized to plan methods for increasing their sales. This is particularly true of those who handle stoves, as the principal rush in these goods comes in the fall, when the greatest amount of trade is secured by those who have used means for bringing it to their stores. It is useless to complain of the furniture and other stores taking away the business of the stove dealer. The thing for the stove dealer to do is to adopt similar methods to those used by such houses. People buy their clothes, groceries and even their pills where they are presented most attractively, and where they are treated most courteously. Sales are more likely to be made where the goods receive the best description of their manufacture and features of merit, as well as explanation of their operation and use, by salesmen who are courteous in their manners and neat in appearance.

ADVERTISE.

If the stove dealer should place in his local paper an advertisement as interestingly worded as those of the dry goods or notion houses, people who have but a passing interest in the matter would be apt to drop in to see what he offered for sale. If a boy put a circular in their market basket or put it under their door, consideration would be given to the enterprising house who thus attract their attention. If the department store, installment house, or furniture dealer uses this means to bring trade to his establishment, and has stoves for

sale, the stove dealer has so much greater need for adopting similar methods. Nobody ever saw a fly paper covered with flies, neither will every advertisement or circular bring in a lot of customers. They can be depended upon to bring in some, and when they do come they must be made to feel perfectly welcome and at home, and be given interesting information that they will remember. There is nothing new under the sun, and it only needs an intelligent explanation of any old thing to give the visitor a pleasing impression which may lead to a latent want being developed into an active demand, and result in a sale.

POINTS TO BE REMEMBERED.

The stock of the stove dealer must be clean, as well as the place in which it is displayed. It must be well arranged and not too crowded. A study of the stove, range, parlor heater or furnace must be made so that the salesman will be thoroughly familiar with its special recommendations. The circulars of the manufacturer and the explanation of the traveling salesman should be carefully considered to aid in impressing customers favorably. It is not enough for the proprietor to have this information, but they should be explained to his assistants until they thoroughly understand them and can bring out all the points of the goods in an entertaining and instructive manner.

CONSULT WITH SALESMEN.

To plan such a method of selling and keeping stock and to keep the whole scheme going will require mental effort and physical energy. Benefit will be derived from thinking and planning out several base plans with suitable diversions and talking them over with the boys or men who must be largely depended upon to carry them to success. Such consultations with those who sell is absolutely necessary for success. It is the custom with some of the best houses to call their salesmen together periodically and hold what is practically a school for selling. It is an excellent practice, and should be followed by the stove men. Those who sell stoves and do plumbing, tinsmithing or any other kind of mechanical or mercantile business cannot afford to let their stove trade be taken away from them. It cannot be done if the suggestions outlined are not only taken up and followed, but improved upon. Any stove dealer who has ambition along these lines and needs assistance need only visit the private office of the stove manufacturer that he buys from, and explain that he wants to push his stove business, and he will be sure to get valuable assistance, and the dose can be repeated whenever he applies.

CREDIT SYSTEM AND COLLECTIONS.

The season for stove selling is now at hand, and those who have not formed any special plan should carefully observe all the little incidents that might have added to their fall trade and make notes of them, so that when the dull season arrives they may formulate a plan for some other season which will enable them to gather in a larger stove trade. If they have to compete with the credit system they should find out all the details of using it. Care should be taken to arrange for the payment of the bill for the stove when the sale is made. This will greatly facilitate the collection of it, and will enable the dealer to meet the bills of the stove manufacturer when they come due. These are the methods of those who have made inroads in the stove trade, and their adoption will benefit the regular stove dealer, who, by all means, should not let men who know less about stoves than he does walk away with the profitable branch of his business from want of a little enterprise on his part.

The March-Brownback Company of Pottstown, Pa., are about enlarging their manufacturing facilities, and have awarded the contract to Davidheiser & Wiand for an addition to their foundry which will give them accommodations for 15 more molders. The new building will be 60 x 55 feet in size and is to be located between the foundry and cleaning department, where the pattern shop stood before the fire and which has never been rebuilt.

The B. C. Bibb Stove Company.

We have received from the B. C. Bibb Stove Company of Baltimore, Md., copies of two catalogues which they are sending out, one relating to the leading lines of fire place heaters which they manufacture, and the other to hot air furnaces. The former consists of 30 pages and gives among other things a brief history of the Baltimore fire place heaters, which are miniature furnaces to be put in fire places in the same way as open grates, either with or without mantels, for the purpose of warming the room above as well as the one in which the heater is situated. They are self feeding and illuminating, giving much the same cheerful effect as the low down grate. The heaters are offered under the names Lombard, Arundel, Capitol, Washington, Grand, Diamond and the Radiant. Sectional views are presented in connection with directions for the proper manner of setting Bibb's original Baltimore made fire place heaters, after which are many pages giving testimonial letters from those who have used the goods.

The catalogue of hot air furnaces consists of 42 pages and illustrates and describes the Bibb sanitary hot air furnace, which is made in portable form and also for brick setting. A feature of the early pages of the catalogue is directions for setting furnaces so as to give the most satisfactory results in operation. Several tables are presented showing the capacity of pipes and registers, and reference is made to the Peerless improved sanitary hot air heater, made in three sizes for hard or soft coal. Nearly one-half of the catalogue is given up to testimonial letters, and there is in addition a list of names of those who have the Bibb sanitary furnace in use.

Art-Garland Base Burners.

The Michigan Stove Company have issued a special trade edition of the *Garland Magazine*, which is devoted to the subject of base burners. Their full line of base burner is illustrated, comprising the Art-Garland Junior, Art-Garland modeled series, Sunlight-Garland, Art-Garland home series, Art-Garland new series, Art-Garlaud duplex series and Art-Garland reflection top. This line of base burners comprises an extraordinary variety, enabling the taste of any buyer to be supplied. The assortment extends from moderate priced to the most expensive construction, but all are tastefully designed and artistically decorated.

Among the distinctively new styles shown in this collection of stoves is the Sunlight-Garland for anthracite coal and crushed coke. This stove is of Colonial design, and is a decided departure from the type of base burner so long the favorite in the trade. The body of this stove is made of Wood's best polished sheet steel. Inserted in the steel are a number of mica doors which furnish full illumination. The internal construction is the same as that found in the standard Art-Garland line. Ample hot air circulating flues are provided. The appearance of this stove while unique is certainly very attractive. The finest stove shown in this collection is, of course, the Art-Garland reflector top, which is characterized as the "Emperor of base heating stoves." This stove is a fine specimen of elaborate ornamentation.

ODD PLATES.

An interesting little booklet which is being distributed by Rathbone, Sard & Co. of Aurora, Ill., bears the title, "Points of Excellence in the Acorn Line." This is a special booklet brought out to commemorate the 71 years during which Acorn Stoves have been manufactured. As the title indicates, the little work presents a description of the goods made by the company named, each line of goods receiving brief comment, and all in a way to interest the dealer. For 59 years Acorn Stoves were made only in Albany, but in 1890 a large plant was established at Aurora, Ill., both establishments having a total capacity of over 100,000 Stoves annually. In 1830 there were 35 names on the pay roll, while at the present time there are over 1200. Since the foundry started in Albany the record shows a total of over

4,000,000 Stoves made and distributed over every State in the Union and in nearly every country on the globe. The little book will be found of particular interestt to salesmen and dealers, owing to the many "selling points" which are contained within its covers.

THE ST. LOUIS STEEL RANGE COMPANY of St. Louis, Mo., is the name of a new concern just incorporated, with a capital stock of $2000, by Louis Y. Winter, Frederick L. Neal, William C. Moore and Charles Reber.

THE ODIN STOVE MFG. COMPANY of Erie, Pa., are sending out a 40-page catalogue and price-list illustrating and describing Odin Gas Heaters and Appliances for the season of 1901-1902. The leading place is given to the Tri-Process, which is substantially made of cast iron throughout, with the exception of the radiating tubes, which are of planished steel. Various forms of the Odin Gas Heater are shown, with open and closed front; the Bengal Odin, built entirely of steel and designed to sell at a low price, together with Circular Heaters, Burners, Mixers, &c.

THE CHARTER OAK STOVE & RANGE COMPANY of St. Louis, Mo., with their customary enterprise, have recently sent out some very neat and attractive novelties. One is an aluminum coin with a bright 1901 cent indented in it, and bearing the words "Good Luck" on either side. Above the cent are the emblems of good fortune—a four-leaf clover, a horseshoe and a wish bone. On the reverse side reference is made to the coming St. Louis World's Fair in 1903. The second novelty is a miniature of a Charter Oak Range in the form of a charm, in bright gilt finish.

SOME leaflets which are being distributed by the B. C. Bibb Stove Company of Baltimore, Md., call attention to a few of the attractive Stoves and Heaters which this enterprising house are offering the trade. Mention may be made of the Bolton Double Oven Portable Range, which is suited to the requirements of a large family, restaurant or small hotel. It is heavy in construction and attractive in its ornamentation. Another novelty in the Severn, a four-hole Cook Stove, made in two sizes and furnished with the modern improvements. In the Druid the company have a very attractive Air Tight Heater, with cast front and sheet iron body. It has cast inside sectional linings 12 inches high, encircling the entire inside of the body and protecting it from the fire. There is a swinging smoke curtain inside the feed door and a boiler hole in the top, underneath the fret work swing cover. Another air tight, intended for burning wood, is known as the Wizard. It has heavy cast top and bottom, the latter being dished and ribbed to insure strength and durability. It is made in three sizes.

THE EUREKA STOVE & HEATING COMPANY of Illinois have filed articles of incorporation with Secretary of State Cook, at Jefferson City, Mo., the capital stock being placed at $2500. Of this amount $1500 is to be employed at Puxico, Mo.

WE have received from the Abram Cox Stove Company, Philadelphia, Pa., a reproduction of a photograph of the late President McKinley, which the company are distributing, not as an advertisement, but as a souvenir of one of our most able Presidents. The company state that this was considered by Mr. McKinley to have been his best photograph, and that he selected it as his official likeness. In referring to the President the company, in a letter which they are sending with the picture to their friends in the trade, say that he was "a man who will go down to history as the central figure in the panorama of our years of greatest prosperity, and we sincerely trust that, in the interest of true Americanism, you will have this picture framed and hung where all who enter your office may see it."

A. C. BARSTOW of the Barstow Stove Company, Providence, R. I., arrived in New York this week from a short trip abroad. His first news of the assassination of President McKinley was received at Gibraltar, and he was quite overwhelmed to learn of his death when the steamer reached the Nantucket Shoals lightship on September 17.

HENRY SWARTZ, manager of the Philadelphia branch of Charles C. Heath & Co., Baltimore, Md., manufacturers and jobbers of Stoves, Ranges and Heating Goods, reports a very favorable condition of trade at this time. Mr. Swartz has recently returned from a trip to Northern New Jersey and Pennsylvania, and says "he found all his old friends, and they were all more than ever with him."

THE B. C. BIBB STOVE COMPANY, Baltimore, Md., have recently occupied their new building, which adjoins their store on Light street. The building, owing to the extensive and growing trade of the company, was a needed improvement. It is 80 x 37½ feet in size, of brick, with Indiana limestone trimmings, and five stories in hight. The addition enables the company to double their capacity for the display and sale of goods, having a plate glass show window frontage of 80 feet on the first floor, and additional facilities for storage and manufacturing purposes on the upper floors. The Bibb Company announce that the fall season's trade has been quite satisfactory with them; in fact, even better than last year, and the conditions for future trade are considered very good.

Philadelphia Hardware Merchants' and Manufacturers' Association.

At a meeting of the Hardware Merchants' and Manufacturers' Association of Philadelphia, held on the 17th inst., the following resolutions relative to the death of Mr. McKinley were adopted:

Whereas, President William McKinley has been struck down by the blow of an assassin and now lies in honored state in the Capitol of these United States, which he so ably and successfully served; and,

Whereas, Our whole country stands dressed in mourning to declare its sad sense of the loss sustained in his death, while from Maine to Texas and from the Atlantic to the far off isles of the Pacific is heard the tones of sorrow and the lamentations of grief; and,

Whereas, Even foreign countries join us in these demonstrations of grief and gracefully offer to share our sorrow in loving sympathy; therefore be it

Resolved, By the Hardware Merchants' and Manufacturers' Association of Philadelphia:

That we recognize the signal ability, courageous earnestness and personal integrity of our late President, and fully realize the fact that to him were presented some of the weightiest problems and responsibilities which have come to our country since the time of Abraham Lincoln.

That we appreciate his sterling character and his manful part in bringing to our land the public security and prosperity which it now enjoys, and feel that in losing him we lose a man faithful to a high sense of duty and self sacrificing, and devoted in carrying out whatever measures were necessary for our welfare.

Resolved, That, as we mourn his loss in being struck down by the hand of treachery, we rejoice that the life and work of President McKinley will for years to come be an inspiration and help to the youth of our land.

Resolved, That we place on record this minute of our affection and esteem, and pray that the Ruler of all nations, who has guided us so marvelously in the past, may be our refuge in years to come, and may now, in this time of sorrow, bring comfort and peace to those who mourn.

The entertainment which was to have been given to the Pennsylvania wholesale hardware and supply merchants by the association has been postponed for 30 days. The assassination of President McKinley has produced such a profoundly sympathetic feeling that it would be quite incongruous to do much entertaining at the present time, hence the postponement until the middle of the coming month.

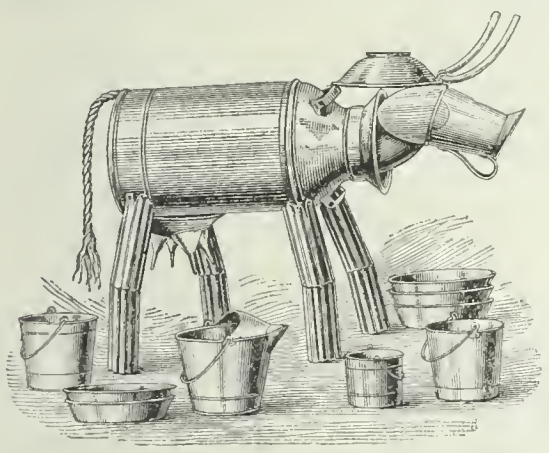
New England Hardware Dealers' Association.

The first meeting of the New England Hardware Dealers' Association for the autumn and winter season was held at the United States Hotel, Boston, September 11, at 5 p.m., G. W. Burditt, presiding. The business session was very brief. No formal entertainment having been provided at the close of an excellent dinner, J. W. Calderwood favored the company with several vocal selections, which were much appreciated, and President Burditt called upon Charles E. Adams of Lowell,

who recently returned from a trip to Europe. While abroad Mr. Adams visited many of the boards of trade and in a general way observed mercantile and manufacturing conditions in Great Britain and Germany. Being president of the Massachusetts State Board of Trade, he was entertained by similar organizations in England, and his brief address referred particularly to the workings of these organizations, and especially of the English National Board of Trade, which consists of 86 associations. Mr. Adams said that a short time ago the London Board of Trade held a meeting at which were represented 250 boards of trade of Great Britain and Ireland.

The Tin Cow.

A unique dairy supply display was made in the shape of a Tinware cow and exhibited by Frank B. Merrill, Allison, Iowa. As seen in the illustration, the body of the cow is made of a Milk Can, being supported on legs of Corrugated Pipe. The head is composed of a Tin Pitcher and a Basin, while the horns are formed of Bicycle Handle Bars. A Rope constitutes the tail, and the



The Tin Cow.

construction of other parts can be seen from picture. To complete the exhibit, Pans, Palls, Churns, Butter Bowls, &c., were placed around the cow.

This display attracted more than its share of attention. This was partly due to the fact that an illustration of the cow was used in Mr. Merrill's advertisements in the local papers, thus giving it wider publicity than is usually accorded to Bossy.

AVOIDING DUST IN STOVE AND HARDWARE STORES.

Goods would show up more attractively and much labor would be avoided if there was no such thing as dust in stove and hardware stores, and if the necessary sweeping and the shining up of the sample stoves did not cause so much of it. A remedy which, if not absolute, at least affords a material relief from the dust nuisance, has been thoroughly tested in the store of S. W. Damon, at New Britain, Conn. The simplicity of the application with the reduction of labor that attends it will make a description of the method interesting reading to many.

The remedy, which is adapted to any floor from the nice hard wood to the old rough floor that has seen much hard usage, consists of a liberal coat of floor oil, such as many dealers carry in stock and sell to customers. It is best to make the first application on a Saturday night so that the oil can soak in and not leave the floor too greasy when trade begins on Monday morning. It has been found by experience that the grease is not sufficient to be destructive to the clothing of customers, yet keeps the dust down, and the store can be well swept without raising much dust. This results in a great saving, not only in the labor of keeping the shelves and goods clean but also in the goods themselves, as they do not so soon become shopworn. The oiling of the floor when once done well need not be renewed more than once in three months unless the weather is extraordinarily dry or heavy trade brings dust and wear.

Where stoves are kept on the floor with general hardware a great deal of dust is usually raised in keeping them clean. This can be largely avoided by substituting old rags for rubbing them off in place of the brush and feather duster. When they can be had, old woolen goods are most desirable, as they are soft and reach every crevice. If care is taken to shake the dust out of these cloths out of doors, a very dusty stove can be made to look as if it had had a new shine without raising any dust in the store. The use of the cloth insures every part of the stove being cleaned, which is not the case with feather dusters or brushes. The special gloves sold for this work are very good and by their use the hands do not become begrimed. Then the nickeled parts of the stoves are not dulled if care is taken to keep them clean. These parts can be polished with clean cloths until the stove is sold, when they may need removing to receive a thorough cleaning.

Oiled floors and the use of rags for dusters will save the goods, keep them looking brighter, reduce the labor and avoid dust if some judgment is used and supervision is given to those who do the work.

Stove and Hardware Dealers.

Litchfield & Frazer, Lone Oak, Texas, have been succeeded by Litchfield & Cole, who will continue the Hardware, Stove and Agricultural Implement business at the old stand.

Goff & Daggett have bought the Hardware, Stove, Plumbing and Heating business formerly conducted by Levasseur Bros., Massena, N. Y.

Scott Bros., Harris, Mo., have disposed of their Hardware, Stove and Agricultural Implement stock to S. N. Garriott, who has removed it to Half Rock, Mo., where he is now in business.

The September dinner of the New England Iron and Hardware Association, which was to have been held at the Point Shirley Club, Boston Harbor, on September 17, has been indefinitely postponed owing to the death of President McKinley.

About October 20 the Pelham Hardware & Supply Company, Pelham, Ga., will embark in business in Pelham, Ga. Lee Hanks of Pelham is president of the company and will look after their management. The new concern will carry a full line of general Hardware, Stoves and Agricultural Implements.

Shawnee Hardware Company, Shawnee, O. T., have incorporated their wholesale and retail Hardware, Stove, Agricultural Implement and Sporting Goods business with a capital stock of $20,000. The company state that they now occupy four times the floor space they did at the beginning of the year.

C. W. Simon has lately purchased the Hardware, Stove and Sporting Goods business formerly conducted by F. E. Tackley, Pawnee City, Neb.

Hughes Bros. have recently commenced business in Rexburg, Idaho, handling Shelf Hardware, Tinware, Stoves, Sporting Goods, Furniture, &c.

C. E. Redfield & Son are successors to Irvin Underwood, Ruthven, Iowa, dealer in Shelf Hardware, Stoves, Tinware, &c.

R. L. Wupperman has bought the interest of his partner in the Hardware firm of Wupperman & Suchart, Sequin, Texas, and will continue the wholesale and retail business in Shelf Hardware, Stoves and Tinware, Sporting Goods, &c., under his own name.

William Furbish has bought the Loree Hardware, Stove, Tinware and Sporting Goods stock at Marshalltown, Iowa. The new proprietor is adding largely to the stock thus acquired.

Smith & Waterman are successors to Wyman & Waterman in the Hardware, Stove, Farm Implement, Buggy and Wagon and Sporting Goods business in Grant, Iowa. A 20-foot addition to their storeroom has recently been built.

Pediment Mitering on Wash.

A New York correspondent sends us a sketch of a straight pediment mitering on a wash and asks that we show the method of obtaining the blanks or patterns. If there is another method beside triangulation he would prefer it, but if not the latter method would do. He says that a problem of this sort would be very helpful, as many of these pediments and window caps are made in sheet metal instead of stone or granite.

The sketches accompanying the above inquiry are reproduced in Fig. 1 of the annexed diagrams. They show a cornice passing around a curved wall, upon the sloping roof or wash of which is placed the pediment in question. The line A C B of the plan, indicating the face of the pediment, shows it to have an equal projection at all points from the curved wall. Thus, while the pediment moldings are designated as straight, and it is presumed they are intended to appear straight in the front elevation, they must necessarily be curved in one or the other of two ways, according to the interpretation to be put upon the diagram. The plan leaves us somewhat in doubt as to the nature of the roof and the soffits or lower sides of the several members of the pediment molds. If the lines at A and B of the plan running toward the center X, and apparently showing the sides of the roof of the pediment at its base, are to be accepted as drawn—that is, not parallel to the line of the apex at C—they would indicate that the roof is a spiral or warped surface, and that the soffits of the moldings, which should properly be parallel to the roof, also partake of the same twisted character. If such is intended, we refer our correspondent to an article on the subject of the spiral conveyor published in our issue of April 22, 1899. The roof and all parallel surfaces, if drawn according to the above supposition, become similar to the form of the flange in a spiral conveyor. As stated in the article referred to, the blanks from which such surfaces are to be constructed require more or less stretching at both edges to bring them to the desired form. While the roof surfaces are not referred to in the inquiry, their form determines the character of the moldings of the pediment.

In Fig. 1, as in the case of many other drawings accompanying inquiries sent to *The Metal Worker*, certain disparagements exist. The distance A B of the plan, for instance, does not agree with the width of the pediment at its base in the elevation at the point marked 7′ 9″. As the drawing sent is said to be to a specified scale, it is possible that the curve A C B is intended only to show the extreme face or projection of the pediment in plan, and that the lines A and B drawn toward X are intended to show the limits of the curve rather than the base of the pediment. An interpretation which, therefore, seems more probable than that above assumed, is that the roof and all the soffits recede on straight lines, thus being simple inclined planes devoid of wind or twist. A side view of the pediment as thus constructed will appear as shown at the right in Fig. 2. Since the intersection of any inclined plane with a cylindrical surface produces an ellipse, the course of the moldings of the pediment as they follow both the curve of the wall and at the same time the plane of the roof must thus be elliptical.

The problem, according to the latter supposition, involves forms quite uncommon in architectural work, but the principles governing the same are those employed wherever a change or raking of stay is required. The forms produced by the above conditions are such, however, that while triangulation is the proper method to be employed in developing the blanks for the moldings, it is possible that other methods may be substituted. To simplify our work, we show in Fig. 2 the elevation, section and plan of a design similar to that of Fig. 1, but better adapted to the purposes of demonstration. Having less pitch than that of Fig. 1, its moldings have therefore a greater proportion of curve in a given length, while a portion only of the profile shown in Fig. 1 is used, since the treatment of the part used may easily be extended to the whole.

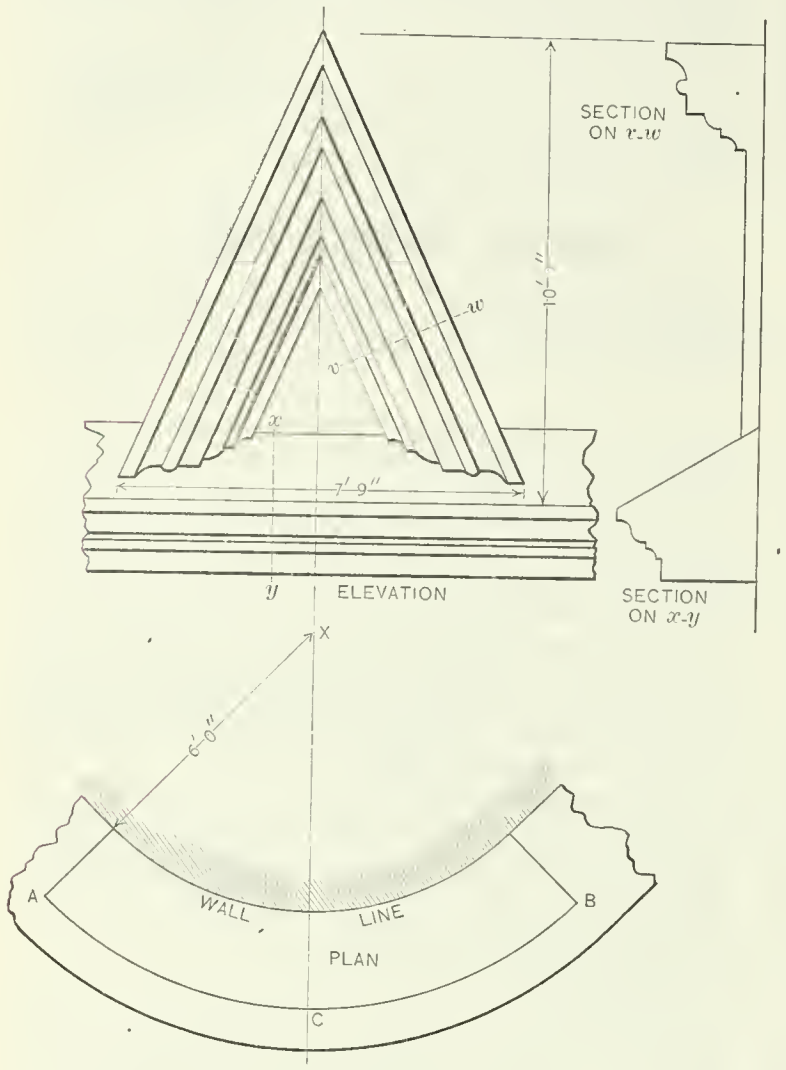


Fig. 1.—Reproduction of Correspondent's Diagram.

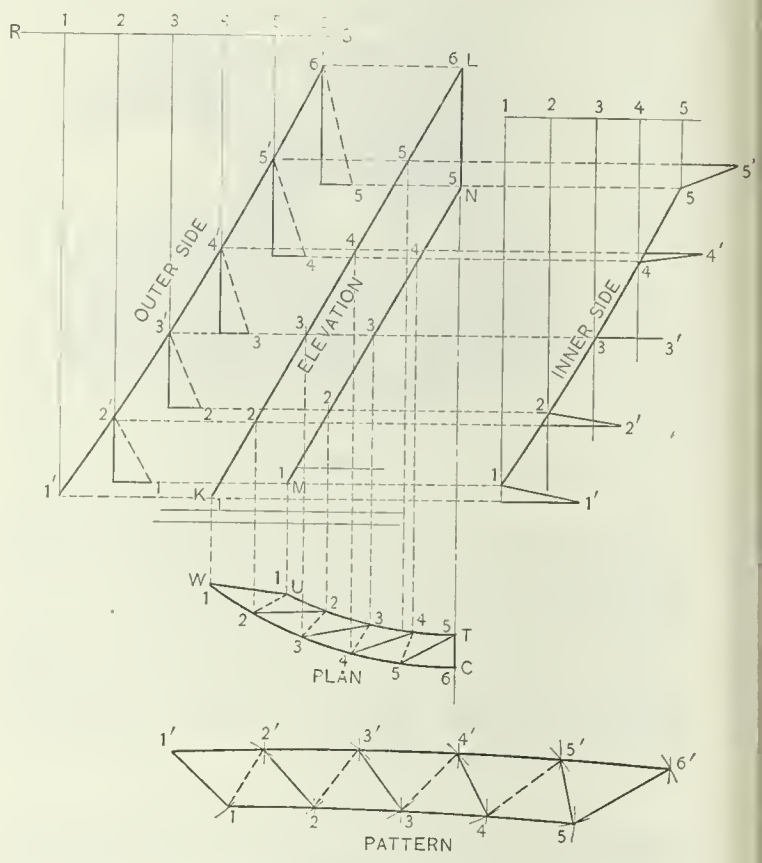

Fig. 3.—Plan and Elevation of Blank for Mold in Fig. 2, with Pattern Obtained by Triangulation.

PEDIMENT MITERING ON WASH.

In order to more thoroughly understand the nature of the forms under consideration it will be well to first enter into a short analysis of the same.

A more perfect idea of the form of the moldings can be obtained by extending them to include not less than a quarter of a circle in plan, thus obtaining, as it were, a whole, of which the mold required is a part. Therefore first extend the wall line B D of the plan in Fig. 2 to E, completing the quarter circle, and from E erect a perpendicular into the elevation indicating one side of the cylinder in that view. Now extend the lines of the pediment moldings in elevation till they cross the outline just drawn, finishing the same as shown at F. To save space the elevation of the extended molding is allowed to cross a portion of the plan, which we hope will cause no confusion. If the elevation as thus completed be considered for the moment to be that of a wall, rectangular in plan, the profile F will then represent that of a level return, and it will be seen that, as is always the case when an inclined mold meets a level on one at the angle of wall, the profile of one of the molds (in this case the level mold at the foot) must be raked in the regular manner, as shown at F, in order to form a miter. Since, however, the wall is cylindrical instead of rectangular, the only conclusion to be drawn is that the pediment mold must, from its crossing with the center line, undergo a gradual change of profile as the sides of the cylinder are approached, where its profile must be as just obtained at F.

In view of this change of profile, the surface of a blank for such a mold becomes variable in flare. The only scientific method, therefore, of arriving at a true pattern of the same is by triangulation. The conditions here, as in many other problems, are, however, such that it is a question how to discriminate between that which is geometrically accurate, involving thereby much labor, and that which, if less accurate, is more expedient, especially in the case of the patterns for blanks for raised molds, where the result depends as much upon the manipulation of the work under the hammer as upon the shape of the blank.

The method of determining the patterns will be governed somewhat by the construction adopted. As the pediment thus partakes of the nature of an arch in a circular wall, what the pattern cutter really requires more than the pattern for the blanks is a correct templet or form to assist him in raising the mold, as with such assistance any approximately correct blank can by proper manipulation be brought to the required form. Since, as above stated, the profile of the mold is different at each point, it will be advisable to adopt such a construction as will bring all the flat surfaces into correct position, and at the same time form an angle or groundwork into or against which the mold can be placed and fastened after raising, and which will at the same time provide a guide or templet in perfecting the curve of the mold during the operation of raising. An enlarged sectional view of the mold, showing a con-

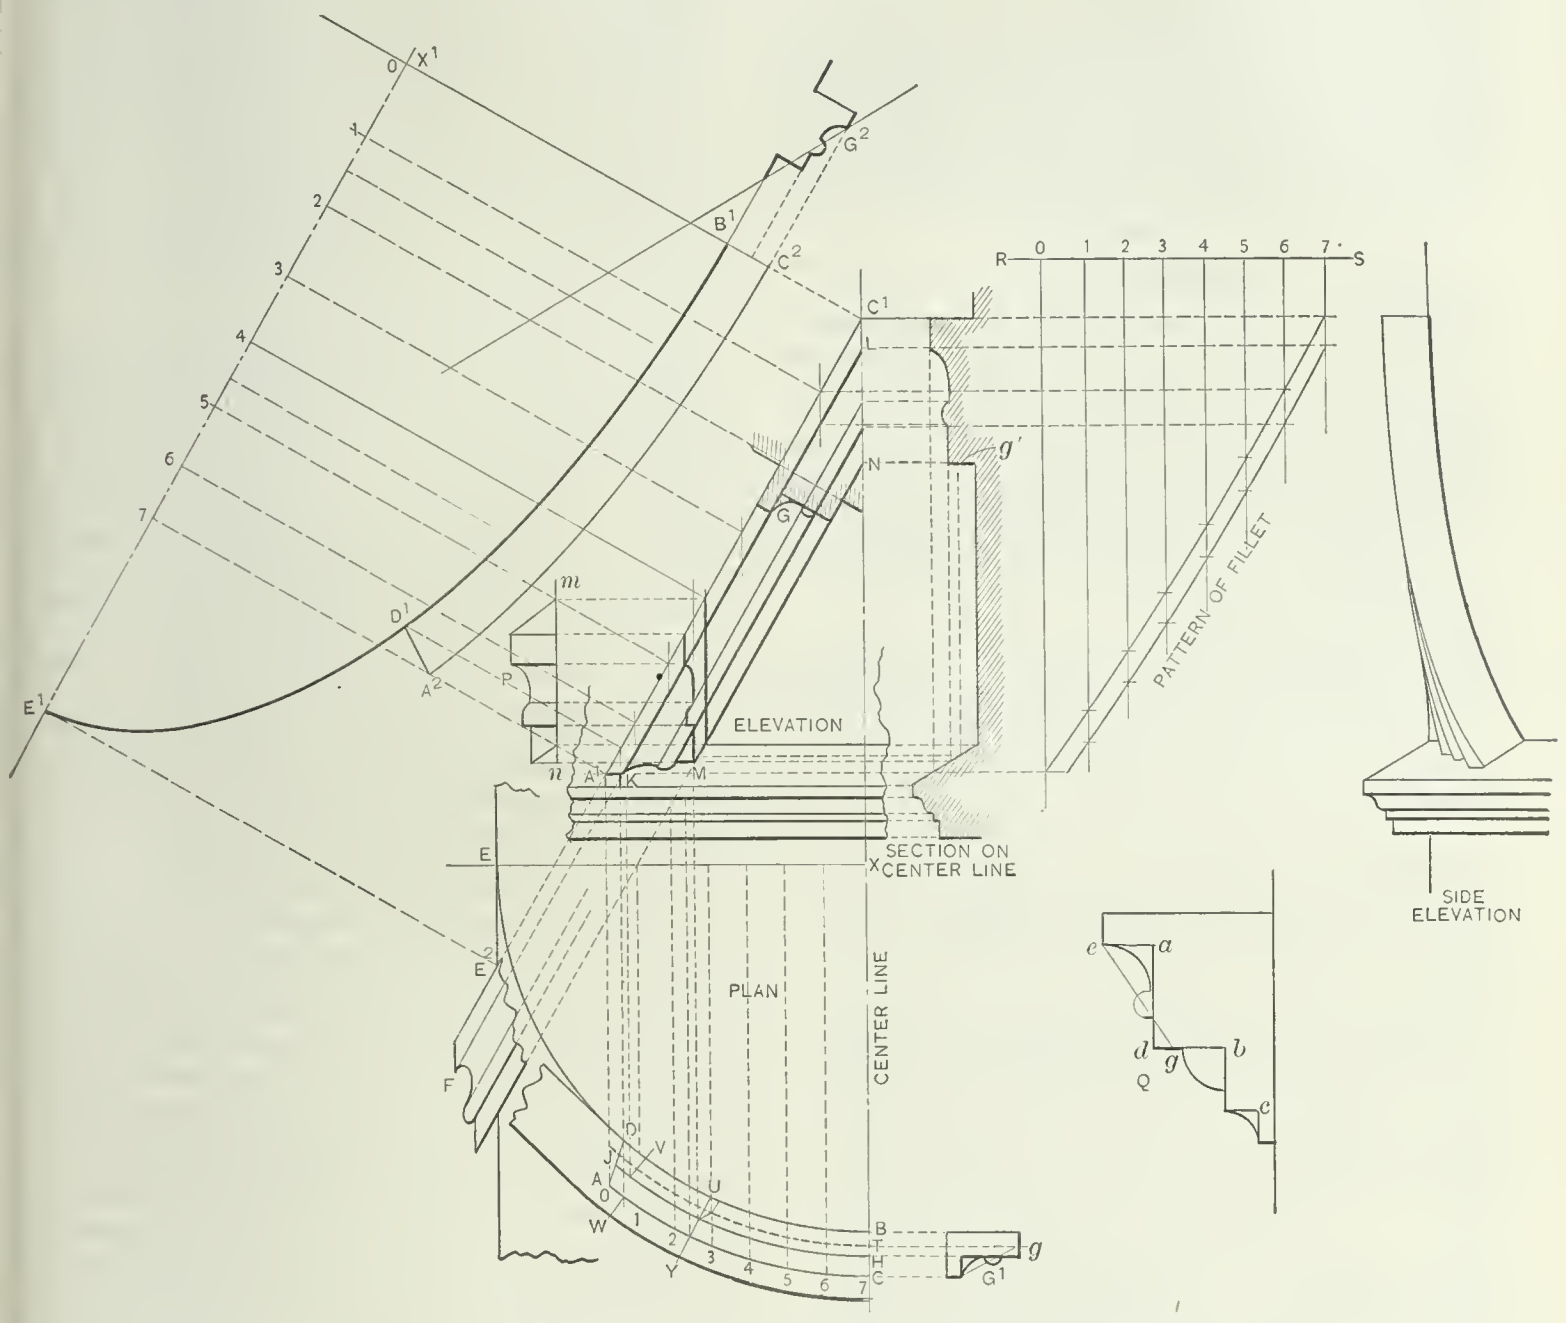

Fig. 2.—Plan, Elevations and Sections, Showing Method of Obtaining Curves of Pediment Molds.

PEDIMENT MITERING ON WASH.

struction based upon this idea, is shown at Q of Fig. 2. The section includes the entire profile as given in Fig. 1, the upper portion only being used in the demonstration. As will be seen by inspection, the flat surfaces—that is, the vertical faces of some of the fillets and the horizontal surfaces or soffits—are extended inward behind the molded forms, meeting and joining at points *a*, *b* and *c*, for which joints perfect miters can be developed. Referring now to the profiles shown at G and G^1 of Fig. 2, it will be seen that the upper fillet of the mold is part of a cylindrical surface whose plan or profile is shown by the line A C and whose radius is X C, while the lower fillet and all that surface shown from *a* to *d* in section Q is part of a cylindrical surface whose plan is the line V H.

To obtain the pattern, therefore, of the upper fillet of the mold, that member must be considered for the time being not as a part of the mold of which G is the profile, but as part of a great cylinder whose profile is A C, mitering against two plane oblique surfaces, one of which is the roof of the pediment, shown by the line A^1 C^1 of the elevation, the other surface being the plane of the soffit K L, corresponding to *e a* of profile Q. Therefore divide the arc A C of the plan into any convenient number of equal spaces and place a stretchout of the same on any line, as R S, drawn at right angles to the sides of the cylinder in elevation. From the several points on A C erect lines cutting the miter lines A^1 C^1 and K L of the elevation, and from the points of intersection with the same carry lines parallel to R S, cutting corresponding lines of the stretchout, thus obtaining the pattern as there shown. The pattern for the surface forming the back of the mold and the fillet below, corresponding to *a d* of profile Q, is obtained in an exactly similar manner, V H being its plan or profile and K L and M N its miter lines.

The patterns for the roof and soffits, these surfaces being as before explained oblique planes intersecting the sides of a cylinder, are composed of elliptical curves, the method of obtaining which is no different from that employed in the problem familiar to all—viz., that of cutting a hole in a sloping roof to fit against a round pipe. The roof A^1 C^1 in this case fills the space between two pipes or cylinders, one of which is shown in profile by the line D B of the plan, and the other by the line A C. Its pattern can be most easily obtained by the usual operation of raking. For this purpose the points on A C used in the former operation may be used again. Intersections from them having been already obtained on A^1 C^1, the roof line in elevation, lines may now be carried from each of these points of intersection at right angles to A^1 C^1, cutting any parallel line as E^1 X^1, forming part of the major axis of the ellipse. Set off from E^1 X^1 on each of the parallel lines just drawn the distance of corresponding points on A C as measured from E X of the plan. A line traced through the points so obtained, as shown from A^2 to C^2, will give the front line of the pattern. The line of the back corresponding to a section of the wall B D may be obtained in exactly the same manner from a series of points assumed on B D of the plan. Project lines, as before from them, first to A^1 C^1, then to E^1 X^1, and set off on the same from E^1 X^1, the distances of points in B D from E X, thus obtaining the line B^1 D^1 and completing the pattern of the roof. In order to more clearly show the nature of the curves of the roof and the line which the molding must follow, the complete quarter ellipse or section on C^1 E^2 of the elevation corresponding to B E of the plan is shown by B^1 D^1 E^2. For the soffit corresponding to *e a* of profile Q, the lines A C and J H of the plan with K L of the elevation are used in the same manner as described in obtaining the pattern of the roof, while J H and B D of the plan with M N of the elevation are used in obtaining the pattern for the soffit corresponding to *d b*.

The patterns for the fillets and soffits having been cut by the methods above given, the joining of their edges insures of itself the cornet profile of those members at the different parts of their course. A templet is thus formed in which all the principal lines of the mold are established, and the filling in, as it were, of the molded portions becomes as much a matter of manipulation as of science.

Since as above stated, triangulation is the only strictly correct method of arriving at a pattern for the blank, the essential points of such an operation will be briefly outlined. The angle of flare for the portion to be raised must first be determined by a line drawn upon the profile at G^1, and the stretchout of such portion be set off on this line. On account of the smallness of profile, G^1, this can be more clearly shown on profile Q, where *e g* shows the angle or assumed profile of the blank, the stretchout of the mold (the cove and bead), extending from *e* to *g*. From the point corresponding to *g* on profile G^1 project a line to the center line at T, and from X as center with X T as radius, draw an arc indefinitely representing the plan of the inner or lower edge of the blank. The projection of point *g* from the wall line may now be set off from the wall line of the sections on the center line, as shown at *g'*, and a line from *g'* first dropped upon the wash of the level cornice, and carried thence horizontally to intersect with M N of the elevation. A line from this intersection dropped into the arc from H of the plan at U, and a similar line dropped from K of the elevation into the arc A C of the plan at W, will complete the plan of the blank.

To avoid a confusion of lines the elevation and plan of the blank with the method of triangulation are shown in Fig. 3, in which corresponding parts bear the same reference letters as in Fig. 2. Divide the both lines of the plan into any convenient number of equal spaces, as shown by the small figures. Since the inner line is the shorter, one less space may be used in it than in the outer. Connect points in C W with those of similar number in T U by solid lines, and with those of next lower number by dotted lines. These several lines crossing the plan will form the bases of a series of right angled triangles, whose hypothenuses when obtained, will give correct distances across the pattern. On account of the arch being curved in plan the elevation does not give the true length of the upper and lower edges of the blank. These distances must, therefore, be obtained by development—viz.: For the outer line of pattern erect lines from the several points assumed in C W of the plan, Fig. 3, cutting K L of the elevation, and upon any horizontal line as R S set off a stretchout of C W and draw the several measuring lines as shown. Horizontal lines from the several points on K L intersecting measuring lines of corresponding number will give the required development. This operation is exactly the same that employed in obtaining the inner line of the pattern of fillet in Fig. 2, the reason for which is obvious, since both lines must be of the same length. Should this operation be conducted upon the drawing shown in Fig. 2, the points originally assumed upon the plan in that view could be used, in which case the spaces upon the line K L as obtained from the plan and given in the pattern of the fillet could be used in the development of the pattern. The line giving the true length of the inner edge of the pattern is obtained in exactly the same manner as shown at the right in Fig. 3.

In constructing the several right angled triangles whose hypothenuses are to give the required measurements across the pattern, their altitudes have been obtained upon the measuring lines of the previous operation by projection from the elevation, as shown. Thus the bases of the triangles at the left are on lines projected from the points on the inner or shorter side of the elevation while their altitudes are determined by the projection of lines from points bearing the next higher number on the outer side of the elevation. The lengths of the bases are equal, respectively, to the lengths of the dotted lines crossing the plan, and the hypothenuses 1 2′, 2 3′, &c., shown dotted, are therefore the true distances across the pattern on lines corresponding to the dotted lines of the plan. The bases of the triangles at the right of the elevation, which are equal in length, respectively, to the solid lines crossing the plan are upon lines projected from points on the outer side of the elevation, while their altitudes are determined by lines from points of the same number on the inner side of the elevation, the hypothenuses 1 1′, 2 2′, &c., being the

correct distances across the pattern on lines corresponding to the solid lines of the plan. The method of constructing the successive triangles forming the pattern from the hypothenuses of the several triangles in conjunction with the spaces in the developments of the two sides is clearly shown in the pattern; the figures bearing primes belonging to the outer side of the pattern, while those of the inner side are without. Being the same as that employed in the final operation of all problems in triangulation, the method requires no further explanation.

On account of the irregularity of the mold, due to its change of profile as explained above, the cutting of a blank by any method is at best but an approximation. If it is desired to employ the method of cutting blanks usually applied to circular molds, to the present or any similar case, the curve, which is elliptical, must first be approximated by an arc of a circle, or perhaps by a combination of arcs, according to its extent. The curve to which the mold in question must be raised is, of course, that obtained at the outer edge of the roof and shown by A^2 C^2 of Fig. 2. The center of an arc which will approximate this curve will be found by experiment to be somewhere on the line C^2 X^1 extended, which may be designated as Z, but is too far from X^1 to be shown in the diagram. To find the length of radius for a blank first place a profile of the mold in correct relation to the oblique projection, as shown at G^2, through which draw the line of flare as previously explained (as shown on profile Q), and extend the line of flare till it meets a line from Z drawn parallel to X^1 E^1. The distance from the point of intersection to the outer point of G^2 will be the length of the desired radius. The distance of point Z from B^1 in the diagram, Fig. 2, is 6⅜ inches, while the length of radius found, as explained, is 13 inches as measured on the diagram, or about 48 feet by the scale of the diagram.

In consideration of the constant change of profile in the mold at each successive point, it may be advisable to construct one or more stays to assist in bringing the blank to its proper form, especially if the mold were in a similar case extended further along toward F than that shown in Fig. 2. As a vertical section of the mold is more easily obtained than one at right angles to the lines of the elevation, and answers the purpose just as well, such a section may be developed as shown at P. Draw a line Y U across the plan at any desired point toward the center X. Divide the curved portions of profiles G and G^1 into corresponding spaces and carry lines from the several points in profile G^1, first horizontally to the center line, then from the center X around the curve, cutting the line Y U of the desired section. From the several points of intersection thus obtained erect lines to the elevation, which intersect with lines from points of corresponding number from profile G drawn parallel to A^1 C^1. Lines connecting the several points of intersection will give the elevation of the desired section or stay. From the several points of intersection so obtained carry lines horizontally, cutting any vertical line as *m n*. Upon each of the horizontal lines set off from *m n* the projection of corresponding points in profile O, as measured from the wall line. Lines traced through the points of intersection will give the desired vertical section of the mold. This operation is not shown in full on account of the smallness of the drawing, but will no doubt be understood.

In the solution of any similar problem it should be noted that the more nearly horizontal the moldings of the pediment are drawn the more nearly will their curve approximate the arc of a circle; and the change of profile being for the same reason less, the more regular in flare will their blanks become, and the more applicable will be the rules governing circular molds. On the contrary, the more nearly vertical the moldings of the pediment are placed the more nearly straight will they become and the less need will there be of applying any rule or method referring to curved molds, as a perfectly straight mold formed to the required profile (as G) in the regular way could easily be brought to the curve by proper hammering.

A New Tin Mining Company.

The organization of a tin mining company to operate in the Black Hills of South Dakota is reported to be in progress in Detroit, Mich. The company will be known as the United States Tin Mining Company and will associate together some prominent men in Michigan and Ohio. A mining journal printed at Deadwood asserts that Elmer J. Miller, Collector of Customs of Columbus, Ohio, and B. R. Noble of Yale, Mich., have purchased the Century and Tin King mines in the South Hills for the new company for $100,000. These mines are great producers, it is claimed. The ore is not of very high grade, but exists in very large, easily worked deposits. The new company will erect steam hoist plants immediately, and put in mills next spring. These mines were originally part of the property developed by the Harney Peak Tin Company, formed by English and American capitalists. The company did some fine business for a time, and then through litigation many of their mining claims were tied up, and relapsed to the Government by time limitation. It is some of these relocated claims that the United States Tin Mining Company have purchased.

FLASHINGS.

THE Sheet mills of the Anchor Rolling Mill plant in Pittsburgh, Pa., now being operated by Neal Brothers of that city, are reported to be in full operation.

THE CARNEGIE SHEET IRON COMPANY of Pittsburgh, Pa., have been incorporated with a capital stock of $1000 by R. G. Gillespie, W. H. Skivington, D. R. Torrance, J. H. Paul and T. R. Ellison. The company propose erecting a Sheet plant at West Carnegie, Pa.

THE HAMPDEN CORNICE WORKS, Springfield, Mass., have the contract for furnishing the large skylights for the new building of James Clifford's Sons at Lenox. They also have the contract for the metal work and slate roofing on the Central street school addition, and a large order for ash chutes for A. A. & S. T. Ball.

F. W. STELLING, Hartford, Conn., has the contract for the metal work on the new Wethersfield avenue school house.

C. G. BRUNNCKOW, Providence, R. I., has the contract for the copper work, including roof, ventilators, &c., on the boiler house for the Rhode Island State House.

C. H. WILLISTON, Fall River, Mass., has the contract for 80 squares of gravel roofing on the new store houses of Cheney Brothers, at South Manchester, Conn.

CUMMINGS BROTHERS, Holyoke, Mass., have the contract for roofing the foundry of the Holyoke Machine Company. They have completed the roofing of the Parsons Paper Company's mill, and are at work on the new mill being erected by M. E. Cummings.

AT a meeting of the Board of Directors of the Parkersburg Iron & Steel Company of Parkersburg, W. Va., held last week in Pittsburgh, it was decided to increase the Sheet plant now under construction for the company, from a four-mill to a six-mill plant.

W. H. GRIFFITHS, who recently sold his interest in the Washington Charcoal Iron & Tin Mills, at Washington, Pa., to McClure & Co. of Pittsburgh, will build a new Tin mill at Washington, to contain either three or four mills.

THE BANFIELD WORKS of the American Tin Plate Company, at Irondale, Ohio, are being practically dismantled, the mills being removed to another works. The wash house and tinning department will be allowed to remain and will be used to coat the plate made in the new Tin Plate plant at Chester, W. Va.

ALAN W. WOOD of the American Sheet Steel Company has returned to Pittsburgh from Europe.

The German puddle mills threaten to go to law about the pig iron contracts made for 1901 delivery with the pig iron syndicate.

Ideal Boilers.

The American Radiator Company, Chicago, have just issued an exceediugly haudsome catalogue which treats of their Ideal line of steam and hot water boilers. This catalogue is in every respect a beautiful specimen of book work. The pages are large, enabling the use of engravings of a brilliant size to clearly bring out the points of the apparatus illustrated. The eugravings are reproductions of photographs and are of the highest staudard of artistic excellence. Red ink is used for titles and catch lines. The book is bound iu heavy paper covers of Capri blue with title printed in ox heart red. The title on the cover is inclosed in a reproduction of the company's four-leaf clover trade-mark. The outline of this device is executed in white by an ingenious method of priuting which imitates the work of a brush, causing it to stand out in bold relief. The cover is further embellished with numerous reprodnctious of the company's monogram iu silver. A blue silk cord is attached to the book to enable it to be easily hung up.

An iutroductory chapter outlines the policy of the company. They state that they do not, under any circustances whatever, furnish estimates of the cost of a heating plant for an owuer, architect or heating contractor, aud do not make piping plans for anybody. It is their aim aud inteut to deal only with those regularly established in the trade. Subsequeut pages are devoted to statements relative to the character of the material used by the company and the nature of the construction of the goods which they turn out.

The boilers which are illustrated in the catalogue comprise the Ideal sectioual 36-inch steam boiler, Ideal sectional 36-inch water boiler, Ideal sectional 24-inch steam boiler, Ideal sectional 18-iuch water boiler, Ideal sectional 12-inch steam boiler, Ideal Premier steam boiler for hard coal, Ideal Premier water boiler for hard coal, Ideal Premier steam boiler for soft coal, Ideal Premier water boiler for soft coal, Ideal Portable steam boiler, Ideal Portable water boiler, Ideal Iuvincible steam boiler, Ideal Inviucible water boiler, Ideal Junior water boiler, Ideal Junior steam boiler and Ideal sectional tank heater.

The liue of boilers presented by this company is unusually compreheusive and is designed to meet every possible requirement. The sectional boilers are intended for use iu large systems where round boilers of the circular fire pot are not made of adequate capacity to carry the required amount of radiation. These sectional boilers are very convenient for installation, as the largest parts may easily be taken through doors or windows. The sections of these boilers are connected with tapered push nipples, which possess decided advantages over the use of headers at the top and sides. The use of these nipples effects a material saving in hight and also secures a liberal steam space above the crown sheet for thorough diseugagement of the steam. All the sectioual boilers are provided with opeuiugs in the frout section for the purpose of introducing a coil of pipe over the fire, enabling water to be heated for cooking and toilet purposes during the season when the heating apparatus is used.

The line of vertical boilers has been increased by the addition of new models, thus making the apparatus offered by the company still more varied and giving the user a greater choice of patterns. In looking over the catalogue the reader will observe that the company have paid much attention to adapting their apparatus to the use of soft coal as well as authracite. This is a feature in the constructiou of heatiug apparatus which is becoming more and more necessary as the use of soft coal for domestic purposes iucreases. Vast sections of the country are far from the deposits of anthracite coal and cannot obtain it except at very high cost, but have abundant supplies of soft coal. The adaptation of high class heating apparatus to the use of soft coal is greatly appreciated in such localities.

The last ten pages of the catalogue are devoted to practical suggestious to the trade. Directions are given how to obstruct chimneys and how to make counections with chimneys to secure best results. Numerous illustrations are presented which couvey a great deal of valuable information on the subject of securing proper draft. Directions are furnished which are intended as a guide in the selection of a boiler which will prove of much value to heating engineers and house owners.

Edwin H. Sedgwick.

Edwin H. Sedgwick, treasurer and general manager of the S. Wilks Mfg. Company, 53 to 55 South Clinton street, Chicago, died in that city on the 10th inst. Mr. Sedgwick was 59 years of age, and was born in Hunter, Dutchess County, N. Y. He removed to Chicago iu 1868 aud was for a time iuterested in the hardware business with Miller Brothers. Subsequently he was engaged in the commission business and afterward operated on the Board of Trade, continuing in that line for 15 years. In 1892, in connection with N. S. Bouton, he purchased the business of the S. Wilks Mfg. Company, which had been established in 1857. For the past nine years he was the manager of the business of this company. His death was the result of a complication of ailmeuts, his illness having continued for over a year. A son, E. W. Sedgwick, succeeds him as manager, and another son, H. M. Sedgwick, is secretary of the company. They are manufacturers of the well-known Wilks water heaters and also of tanks and steam generators for all purposes for which hot water or steam is required.

Steam Fitters' and Plumbers' Supplies.

The F. N. Du Bois Company, Twenty-fifth street and Ninth aveuue, New York, are adding steam fitters' supplies as a uew department to their plumbing supply business. The house have arranged to carry iu stock a complete liue of fittiugs, valves and brass goods, as well as safety valves, pressure regulators, steam traps, pump governors and smaller appliances used in the construction of a modern heating system. The company are also just bringing out two new specialties in plumbing goods; one is a drum trap made with the bottom closed without solderiug, and the brass trap screw, iustead of being soldered in as heretofore, is now spun with the body of the trap, so that the cover makes au air tight fitting against the lead, which is spun over the brass threaded part. The other device is a standard to which an ornamental soap and sponge holder is attached. This standard is made of brass tubing about 1¼ inches in diameter, and stands 4 feet high, finished, with an acorn at the top. The bottom is fitted securely into a floor flange 6 iuches in diameter, with screw holes for fastening to the floor. While this fixture may be called a soap and sponge holder staudard, incidentally it does most importaut service as a support for iuvalids, infirm or elderly persons wheu they step into the bathtub, numerous accidents having occurred from the bathtub being slippery, causing a fall when there was nothing that could be grasped to afford a support.

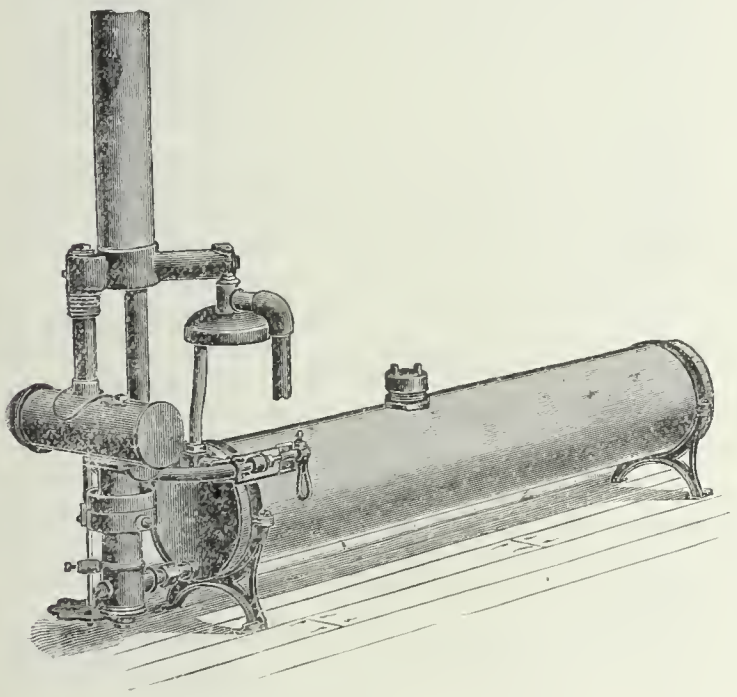
Gasoline Fire Pots and Torches.

The Clayton & Lambert Mfg. Compauy, Detroit, Mich., are issuing an entertaining little pamphlet entitled "Gasoline Fire Pots and Torches," giving the conversatiou of a salesman and a customer about how to purchase such goods. Good illustrations are iuterspersed with the text, the first showiug the entrance of the customer aud the salesman with his liue of samples. The cuts conform with the text. Thus, where strength is mentioned as a feature, the salesman is shown standing on one of the fire pots. Iu connection with the air pump, the various parts are so shown that the explanation is readily understood. The ease with which the top section can be removed is also the subject of a picture. This top section may be used for heating soldering coppers, or the cover may be removed for heating a soldering pot over the burner. When the top is removed the flame is available as a torch, allowing the fire pot to be used for thawing frozen pipes, taking soil pipe apart, melting off brass work from lead pipe, and a variety of other work. The burner swivel and its features are also illustrated and explained. The remainlng pages of the catalogue, 52 in uumber, are devoted to

the company's standard line of fire pots for tinners' and plumbers' use, alcohol torches for gas fitters, torches for painters' use and torches for lighting with gasoline. On the last two pages are shown the parts, which are made interchangeable, so that the appliances can be readily repaired.

Gasoline Gas Lighting Apparatus.

In the accompanying illustration we show an apparatus that is being put on the market by the Incandescent Lighting & Stove Company of Cincinnati, Ohio, designed to generate gas for illnminating purposes from gasoline, and especially adapted for lighting stores, halls, churches or places where a nnmber of lights are used. The machine consists of a tank, generator and a governor, and contains some new featnres, and is claimed to work on a new principle. The generator is connected with the tank by pipes leading from both top and bottom. This is to preserve the same level of gasoline in both parts and to secnre an equal pressure. It is also said to prevent a leakage of gasoline from the needle valve. The gas is generated by means of a flame under the generator, which is controlled in size in accordance with the qnantity of gas used, any reduction of pressure hav-



Gasoline Gas Lighting Apparatus.

ing the effect of increasing the amount generated. In connection with the governor there is a safety escape for any excessive quantity of gas that might be generated under any conditions. It is claimed that the generator can be heated up in less than one minute, and after it is once heated the gas may be turned on to the service pipe throngh the mixing tube, where it takes up 95 per cent. of air before reaching the service pipe. The valves located on this pipe are controlled by the governor, which supplies the flame under the generator. It is pointed out that the best light is obtained from gasoline gas when the gas is delivered to the burners at a uniform pressure, and that the governor provided with this machine maintains a uniform pressure, whether use is made of one light or many. Another feature of the apparatus is the filling can furnished with it. The construction is such that when the tank is filled to the desired extent air is stopped from entering the can, preventing the flow from it, and the valve shnts off the entrance to the tank, so that no air can get into it. It is further pointed out that the construction is exceptionally strong, and that in case of fire bnrning around the apparatus the gas generated would escape through the safety pipe and avoid all possibility of danger of explosion at the point where the apparatus is located.

FRANK I. LESSARD, Springfield, Mass., will do the plumbing and the Whitcomb Stove Company the heating in the new house for F. W. Lathrop.

FIRE HAZARDS OF HEATING SYSTEMS.

The great diversity of devices and methods in use for honse warming, due to the varying conditions of fuel supply and climatic requirements, says *Insurance Engineering*, presents to the underwriter a range of fire hazards which compels the careful study of all the conditions to enable him to snggest to the nser the proper safeguards to prevent disaster.

The surveyor or inspector finds his attention called to problems ranging from the old fashioned open fire place, with wood for fuel, such as grace and make cheerfnl our country homes, to the wood or coal burning stove, and up to the more modern and complicated steam, hot water and hot air furnaces, now so common in the eqnipment of city and town houses, with a sprinkling of natnral gas grates or stoves, and an occasional encounter with the kerosene oil device, each demanding special expert knowledge as to constrnction and use, and the exercise of good jndgment in the snggestions necessary to make safe snch defects as may be discovered upon investigation.

Statistics of fire losses from heating appliances seem to place stoves and stove pipes at the head of the list, followed closely by hot air and indirect steam heating devices; then in regular order, open fires, wood and coal, hot water and direct steam heat; oil stoves, and last, natural gas. Considering the record of fires from heating apparatns as a whole, the only conclnsion to be reached is that carelessness is at the base of each of these accidents, either as a defect in the original installation of the apparatus, or as the result of recklessness and the neglect in its after use and care. With a desire to consider briefly some of the salient points of hazard incident to the methods of house warming, we take up the different devices in the sequence of the statistical record as above noted.

Stoves and Stove Pipes.—Where such devices are to be used for heating or cooking, they should be free from cracks or other imperfections which would admit of the escape of coals or sparks; should be set upon solid platforms of brick, or in metal pans with raised sides and legs 3 inches in hight, in either case being large enough to extend well in front of the ash pit and thus protect the floor. Stoves should not be set within 18 inches nor their pipes within 10 inches of any wood work, lath or plaster partition or other combustible material, except when conditions will not permit otherwise, and then all combustible material should be protected with bright tin sheeting, with a space of not less than ½ inch between it and the combustible.

Stove pipes shonld be well and frequently supported by wire; each joint should overlap the other toward the stove and be carefully riveted to prevent the escape of sparks. Fires should not be dumped into the ash pit except upon a bed of dead ashes of not less than 2 inches thickness. All pipes shonld enter the chimney or flue horizontally and in plain sight. Pipes entering flues vertically, or passing throngh blind or unnsed attics, where they may not be frequently inspected, are prolific canses of fires, particularly in country houses.

Hot Air and Indirect Steam Heating.—The furnace should be set upon a very solid foundation in order to prevent the sagging or cracking of its walls. The top or dome of the enveloping walls should not be less than 18 inches from the unprotected wood work or lath and plaster ceilings, and its smoke pipe or flue should be a like distance from combustibles. The ash pit should be sunken, or the floor in front of it be of brick, stone or concrete, not less than 36 inches wide. The inclosing walls of the furnace should not be less than 12 inches from all combustible material, and the inlet or cold air dnct should be entirely of iron or other metal.

Hot air flues or condnits should be made of heavy, bright tin plates with well soldered lock seams, and be kept at least 10 inches from all wood work or other combnstibles. Where it is necessary to carry them through or into wooden or lath and plaster partitions, the flues should be double—*i. e.*, one inside of the other, with an air space of not less than ½ inch between the two, and be properly braced to insure rigid separation throughout. Where register boxes are set in floors or

partitions, the wood work should be framed around them to leave an air space of not less thau 2½ inches, and be protected by flashings of bright tin extending from the outer edge of the register opening to and through the floor beams or partition. Each register should be set in a frame of soap stone not less than 2½ inches wide, and 1 inch thick, firmly and well set in cement or plaster of paris.

At least oue of the registers of the system should be so arrauged as to insure its being constantly open, either by the removal of the vanes of the valve, or by wiring the same open, so that closing would be impossible. Heater fire pots should be carefully examined before use each season, to discover and remedy defects due to the burning out of their walls or the destruction of the luting at the joints of the same, whereby coals might fall into the surrounding air space and ignite dust or other combustibles which are liable to accumulate therein.

Hot Water ond Direct Steam Heating.—The samc general care in setting and arrangement should be followed as suggested under the item on hot air and indirect steam heating devices, and in addition all pipes used for the conveyance of hot water or steam should be kept free from contact with wood work or other combustibles by the use of metal thimbles or sleeves, provided with interior lugs or radial points, to provide an air space where the pipes pass through floors or partitions. Fires from hot water systems occur from the high temperature reached by the water on account of obstructions or retardation of circulation in the pipe system, whereby the heat generated is sufficient to cause the ignition of the wood or other combustible material already partially carbonized by long continued high temperatures. Similar dangers attend the use of direct steam heat, and are augmented by the possibility of the superheatiug of the steam in the boiler, owing to low water.

Oil Stoves.—The fire record of these devices is largely out of proportion to the number in use for heating purposes, and the only practical method of eliminating the hazard of their presence appears to be that of entire prohibition, as even under the most favorable conditions of use they have proven extremely dangerous.

Natural Gas.—Heating by this means is restricted to limited areas of the country, and when the supply is sufficient to insure a full supply at constant pressure, the hazards of its use are quite mild, provided the piping has been properly installed and has passed a rigid test for leaks, and the flues for carrying off the products of combustion have been constructed for the purpose. When, however, the supply is weak and restricted, and the consequent pressure variable, the hazard of its use is vastly augmented, for with low pressure and small supply the user is inclined to open the valve in the supply pipe to its fuliest extent in order to secure a good blaze; and when, later, the pressure is increased from any cause, the small blaze is turned into one of great intensity and power, and is liable to ignite combustibles at a distance.

The only practical means of reducing this hazard lies in the use of an automatic high and low pressure regulating valve in the main supply pipe whereby the flow of gas will be automatically cut off when the pressure either rises above or falls materially below normal, at which it is set to act. Such controlling devices are open to purchase in the districts where natural gas is a factor, and the use of the same should be made obligatory.

New York City Notes.

No new work of importance was given out this week, but every one is busy on old contracts. Journeymen are nearly all busy; consequently the troubles between the factions are overlooked and Amalgamated and Brotherhood men are working together in many shops without friction.

* * *

Manhattan Branch adjourned its regular meeting after passing resolutions in honor of the late President McKinley.

President Isaac J. Brown of the Greater New York Association has had trouble with the muscles of his knee, but his many friends are glad to see him out again.

* * *

Considerable trouble has been experienced by the Law Committee of Manhattan Branch. In some cases which have prosecuted liceused plumbers have come forward and assumed responsibility for work done by uulicensed plumbers, thus procuring the discharge of the defendant.

Heating and Plumbing Notes.

John Carney of New York City has been at Salisbury, Coun., for the past five weeks superintending for his father, M. Carney, at Philmont, N. Y., the installation of a steam heating plant at St. Austin's School. Three thousaud feet of American Radiators were used, about half of the direct-indirect type, in the school, and the balance, of the direct type, in the dormitory. A Capitol Boiler was used for the work.

The New Home Furnace Company, Norwalk, Conn., are sending to the trade a little booklet devoted to the New Home Steam and Hot Water Heaters. These Heaters are of the vertical sectional return flue type. They are made with grates from 24 to 32 inches in width and 13 differeut sizes, rated to carry from 450 to 2700 square feet of direct steam radiation. The boilers are said to have stood the test of four years of actual service.

S. E. Dibble, New Haven, Conn., is plumbing the residence of Benjamin Keller and installing a Hub Hot Air Furnace in this house, and also in two houses for T. J. Crogan, and two Hub Furnaces in the house of Miss B. Cassion.

C. S. Eames, Bridgeport, Conn., has just completed the iustallation of Advance Hot Water Boilers, made by the Pierce, Butler & Pierce Mfg. Company, Syracuse, N. Y., in the residence of C. H. Sanford. He has also used their Perfect Hot Water Heaters in the residences of E. L. Graves anu Julius Pfau, where he is also doing the plumbing. He is also engaged on plumbing and heating contracts at Fairfield and Noroton, and has recently completed the plumbing and heating of a big couutry house on Long Island.

Edward Mahl, Hartford, Conn., has the plumbing contract and Libby & Blinn the heating contract for the new Wethersfield Avenue School House.

Libby & Blinn, Hartford, Conn., are installing a Mercer Boiler, made by the H. B. Smith Company of Westfield, Mass., in the residence of E. S. Goodrich.

The Abendroth & Root Mfg. Company of Brooklyn, N. Y., have purchased the plaut of the Wright Engine Company, at Newburg, N. Y., and will equip the building as a complete modern foundry.

The show windows of the American Radiator Company's salesroom in New York were filled with an appropriate display of flags and crape this week as a tribute to the dead Presideut.

Fred. Fox, Jr., Chattanooga, Tenn., has been made a member of the Executive Committee of the Natioual Association of Master Plumbers by President E. D. Hornbrook, owing to ill health preventing George W. Walther of Baltimore from serving. Mr. Walther was appoiuted at the Kansas City Convention.

Menzies & Menzies, New Haven, Conn., have recently finished the plumbing in a fine residence for Abner Hendee, usiug Mott's Silent Closets, with patent floor connections. They also have the contract for plumbing Charles J. Rice's new house, and have just commenced the installation of the plumbing and steaming system in the Keut laboratory at Yale.

T. Oakes & Son, Hartford, Conn., have the contract for plumbing the Farmiugton Country Club and are overhauling the plumbing in the residence of J. Lampson, and will place new shower baths aud lavatories in the gymnasium at Trinity College. They also have the

contract for furnishing the Chandeliers for a number of fine residences and apartment blocks.

THE HOLYOKE LEAD PIPE COMPANY of Holyoke, Mass, are reported by the New Haven, Conn., *Record* as having been sold by J. H. Bolt to M. H. Baker for $20,000.

T. J. LYNCH, Holyoke, Mass., has the contract for plumbing the new block which T. J. Moriarty is building.

THE CHATTANOOGA PIPE & FOUNDRY COMPANY, Chattanooga, Tenn., recently filled an order for 100 tons of Soil Pipe and Fittings for the municipal government of Guadalajara, Mexico.

W. A. T. SMITH, New Haven, Conn., is putting Kelsey Warm Air Generators in the residences of Dr. Fred. Sumner Smith at Chester, Conn.; Miss M. E. Scranton and Dr. F. B. Ferguson, New Haven.

THE BARLOW BROTHERS COMPANY, Waterbury, Conn., have recently completed a new heating system in the stable of H. L. Wade. They are also installing a hot water heating system in the residence of David Porter and a heating system in the new Library Building.

BIDS will be received until October 4 by the Supervising Architect at Washington, D. C., for rearranging the steam boilers in the United States Court House, Custom House and Post Office Building at Omaha, Neb.

EDWARD B. LYNCH of the plumbing firm of Lynch & Richardson, died at his home, in Littleton, N. H., on September 13.

AT PITTSBURGH James W. Arrott filed a bill in equity in the United States Circuit Court against the Standard Sanitary Mfg. Company, a corporation of New Jersey, doing business in Allegheny. Arrott claims an infringement of a patent for an improvement in dredges for pulverulent material. An injunction and accounting are asked for.

New Firms and Changes.

THE WATER HEATING MFG. COMPANY of Milwaukee, Wis., have been incorporated with a capital of $55,000 by Emanuel Detweiler, Charles Scholl and H. J. Mathews.

M. RYAN, formerly of Williamsport, Pa., has opened a plumbing establishment in Pittsburgh.

THE MANSFIELD PLUMBING COMPANY, 231 Washington street, Passaic, N. J., have been incorporated, with a capital stock of $20,000, of which $7600 is paid in.

The Weary Drummer.

We have received the following verses from a gentleman prominent in the trade, who encountered them in the course of his summer outing. They will be appreciated by many a "Knight of the Grip" as well as by the trade:

The hotel "bus" from the midnight train
Brought only one passenger through the rain.
A traveling man—tired, weary and sad;
For he had toiled all day and trade was bad.

Not a single order on his book,
The disgust he felt showed in his look;
With a careless hand he wrote his name
On a page of the book unknown to fame.

The drowsy clerk the signature scanned,
Then a letter placed in the drummer's hand.
See how he starts, while a smile of delight
Comes over his face at the welcome sight.

Thus clouds of despair will ever appear
To the traveling man sometimes in the year,
Are often dispelled by such simple means
As one friendly letter—how queer it seems.

So wives, sweethearts, mothers and chums,
If you know where we'll be when Sunday comes,
Write to us there if time will permit,
Draw on us at sight and we will remit.

The organization is reported of a company in St. Louis, Mo., who propose establishing a permanent exposition of manufactured products in that city. A seven-story building, 100 x 150 feet, to be erected in the business center of St. Louis, will contain about 150,000 square feet of space, to be sold to manufacturers who desire to place their products on exhibition. It is intended to have the building complete and ready for opening by July 1 next year.

The Steel Strike Settled.

The strike in the sheet, hoop and tin plate mills in the Central West, which has been in force since July 13, has been settled on terms dictated by the United States Steel Corporation, and at a serious cost to the Amalgamated Association. It became evident soon after the strike had been started that President Shaffer and the Executive Committee of the Amalgamated had made a serious mistake in going into a fight, and had the strike lasted two or three weeks longer not a single mill owned by any of the constituent companies of the United States Steel Corporation would have been union, but on the contrary, all would have been nonunion, and the United States Steel Corporation would probably never again have had any dealings with the Amalgamated Association. By the terms of the settlement the Amalgamated Association has lost some valuable mills and a large number of its members. It is doubtful if the association will ever again be as strong as it was before the strike started. It has practically no following whatever in the sheet mills of the American Sheet Steel Company, is recognized only in one works of National Steel Company and in only six mills of the American Steel Hoop Company, has no hold whatever on the tube mills of the National Tube Company and has lost five or six of the larger tin plate mills, where formerly the scale was signed for all but one mill. In addition the Bay View and Joliet mills of the Federal Steel Company, for which the Amalgamated scale has been signed for years, will be started up nonunion and the men will have to return to work as individuals. Whether the Amalgamated Association can continue to exist with so few members and such a small following among the mills is a question. The association has been unfortunate in having a man for its president who was weak and too easily led by members who did not understand the true situation. The Amalgamated Association is badly torn by internal dissensions, and it will take a long time to heal the breaches which have been created since the strike started and in the manner in which it has been settled.

The idle mills of the American Sheet Steel Company, the American Tin Plate Company, National Steel Company and the American Steel Hoop Company are rapidly getting started, and before this month is out it is probable that all the mills of the constituent companies of the United States Steel Corporation that are in shape to run will be in full operation. Preparations are being made to start the Wood mills at McKeesport on Monday. President Shaffer has not yet given out his promised statement as to the terms under which the strike was settled, but claims that he has notified the lodges. There is a good deal of feeling against Shaffer, and it would seem his position is in jeopardy. The National Tube Works, at McKeesport, are in full operation, but affairs at the Riverside plant in Wheeling are still unsettled.

THE TIN PLATE MILLS.

Before the strike was declared the Amalgamated Association scale was signed by the American Tin Plate Company for all their mills with the single exception of the Monessen works at Monessen, Pa. In the two months that the strike was carried on the managers of some of the works of the American Tin Plate Company were very active and succeeded in starting not less than half a dozen mills. These works in the future will be operated nonunion and are as follows: Monongahela, Star and Demmler works, at Pittsburgh, Banfield works, at Irondale; Crescent works, at Cleveland. In addition, the Monessen works, at Monessen, continue nonunion, making six of the larger tin mills that will not sign the scale in the future.

THE SHEET MILLS.

The Amalgamated Association has practically lost its hold entirely in the sheet mills of the American Sheet

Steel Company. The following is a list of the union plants of the American Sheet Steel Company, with the number of mills in each:

Union Sheet Mills.

	Mills.		Mills.
Ætna-Standard Works....	23	Dresden Works.....	4
Cambridge Works.....	7	Falcon Works.....	4
New Philadelphia Works..	8	Piqua Works.....	4
Midland Works.....	6	Struthers Works.....	5
Canton Works.....	6		
Dennison Works.....	4	Total.....	71

The following works are nonunion, there being included eight mills in the Vandergrift equipment which are nearing completion, and are expected to be in operation shortly:

Nonunion Sheet Mills.

	Mills.		Mills.
Vandergrift Works.....	29	Wellsville Works.....	8
Apollo Works.....	6	Canal Dover Works.....	9
Hyde Park Works.....	5	Scottdale Works.....	8
Saltsburg Works.....	4	Old Meadow Works.....	9
Leechburg Works.....	10		
Dewees Wood Works.....	11	Total.....	96

It is probable that most of these small mills, notably those at Canton, Dennison, Dresden and one or two other places, will be dismantled and removed to the Kiskiminetas Valley. At the Hotel Lincoln conference in Pittsburgh, on July 13, Persifor F. Smith, acting for the American Sheet Steel Company, offered to sign the scale for the W. Dewees Wood, Wellsville, Old Meadow and Saltsburg mills, and also for all other sheet mills for which the scale had been signed before. This will give an idea the losses the Amalgamated Association have sustained in the sheet mills.

THE TUBE MILLS.

The Riverside works of the National Tube Company at Wheeling and Benwood, W. Va., will, it is stated, resume operations on Monday. These works will be the last of the plants of the National Tube Company thrown idle by the strike to start. The Riverside works are among the largest and most modern of the company. All of the Pittsburgh works of the National Tube Company resumed operation on Thursday evening, after idleness in honor to President McKinley's memory. At McKeesport, the same evening, all of the 12-lap weld and the six-butt weld furnaces of the National Tube Works started in full.

THE STEEL MILLS.

The Amalgamated has lost all the mills of the National Steel Company for which the scale had formerly been signed, except the Mingo Junction works, at Mingo Junction, Ohio. While it is not generally known, yet it is a fact that when the Shenango Valley works, at New Castle, starts up this week, it will be as a nonunion mill and the men will have to return to work as individuals. The nonunion mills of the National Steel Company, where organized labor is not recognized in any way, are as follows: The Ohio works, at Youngstown; the Shenango Valley, at New Castle; King, Gilbert and Warner works, at Columbus; Bellaire works, at Bellaire, and Buhl works, at Sharon. In addition the Joliet and Bay View mills of the Federal Steel Company will, in the future, be nonunion. From the above it will be seen that the Amalgamated has sustained some serious losses, and with the internal dissensions that exist in its ranks the association is in a very perilous condition.

THE CONFERENCE.

The conference at New York on Saturday, September 14, at which the strike was declared off, was between the officials of the Amalgamated Association and the three constituent companies of the United States Steel Corporation, these being American Tin Plate Company, American Sheet Steel Company and American Steel Hoop Company. The National Steel Company, or the National Tube Company, were not represented in the conference and no action was taken as to their mills. C. M. Schwab, president of the United States Steel Corporation, was not present at any of the conferences, the settlement of the strike being left entirely to the officials of the three constituent companies named above.

A very important feature in connection with the settlement of the scale is that in the agreement made between the Amalgamated Association and the American Sheet Steel, the American Steel Hoop and the American Tin Plate Company, the scale will hereafter be recognized as a contract between the Amalgamated Association and the three concerns named above, and this will prevent the Amalgamated Association from breaking faith with all the concerns, should trouble arise with any one of them in the settlement of the scale in the future. It was the desire on the part of the officials of the constituent companies of the United States Steel Corporation to prevent a repetition of the contract breaking done this year by the Amalgamated Association when it shut down the mills of the American Tin Plate Company, the Federal Steel Company and the National Steel Company because of a dispute in the settlement of the scale for the hoop and sheet mills. There will be no chance for contract breaking in the future, as under the terms of the agreements made contracts have been drawn and recognized as such by both sides. While the strike has been officially declared off by President Shaffer, he had not, up to Monday evening, furnished the men with a statement of the conditions surrounding the settlement of the strike and many of the men were at a loss to know whether to return to work or not. There is a bitter feeling against President Shaffer and other officials of the Amalgamated Association, and some startling changes in its officers before long are very probable. The men who went out on a sympathy strike and who are members of the American Federation of Labor have lost one to two months' work and will not get any strike benefits. In addition, many of them will lose their positions. It will probably be a week or ten days before all the idle mills get started, but it is the intention to put the mills in operation as fast as possible. It is probable that most of the tin plate mills, also the New Castle and Bellaire works of the National Steel Company and the Bay View and Joliet works of the Federal Steel Company, will be started this week.

THE CONTINUOUS SCALE.

We understand that there was brought up for consideration at the conference the question of adopting a continuous scale and that the representatives of the Amalgamated Association expressed themselves in favor of the adoption of some well matured scheme which shall avoid the recurrence of the danger of annual contests. No such proposal was actually adopted, the scale being signed for the current scale year.

It is probable, however, that there will be embodied in future agreements a clause which shall require either side to give three months' notice of the termination of the agreement, and that work shall continue undisturbed during that period, which is to be employed in arranging terms for a settlement.

So far as the Amalgamated Association is concerned such a continuous scale would put an end to the annual mass meeting, which is so expensive and cumbersome.

TRADE NOTES.

A CHARTER has been granted to the Consolidated Mfg. Company of Pittsburgh, Pa., with a capital stock of $250,000. The company propose to manufacture Steel Novelties, including Curtain Hangers, Plating Material and a patent Bottle Stopper. J. H. Skelly is president of the concern, I Leonard Aronson, vice-president; W. H. Sykes, treasurer, and B. H. Petter, secretary. It is stated that the new company will give employment to several hundred hands.

THE FOOT WARMER & HEATER COMPANY of 451 Farnsworth street, Bordentown, N. J., have been incorporated with a capital of $100,000 to manufacture Foot Warmers. William J. Robinson, Charles H. Whittaker and Christopher G. Boland are the incorporators.

CHARLES F. BROOKER, president of the American Brass Company, has returned from an extended European trip.

RALPH B. MONTGOMERY, formerly private secretary to Charles M. Schwab, president of the United States Steel Corporation, is now representing H. W. Johns Mfg. Company, in Pittsburgh, with offices at 220 First avenue, in that city.

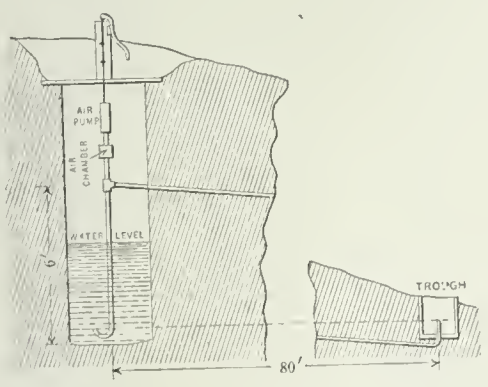
THE LETTER BOX.

Inquiries in regard to practical questions of general interest are invited, in reply to which we shall be glad to receive suggestions and information from our readers.

Correspondents are requested in all cases to give their names and addresses, which will not, however, be published or disclosed without their consent.

APPARATUS UNNECESSARY TO SIPHON.

From I. Z. T., Hawley, Conn.—I have read the article in *The Metal Worker* of August 24, entitled "Will a Siphon Work?" I had been aware that water contained air, but did not expect that sufficient air would gradually separate and lodge in the neck of a Siphon to choke the passage of water. If the movement of water through a siphon becomes more speedy in its course than the natural speed of air moving upward in water, it would seem that the preponderating force of water would keep both moving toward the discharge. With a slower flow the effect may be different. I have planted in a well a siphon made of ¾-inch galvanized iron pipe to be used for watering stock. The foundation frame will not admit of a swift flow, but I hope to arrange to have a siphon operate several weeks or months successfully without attention. The diagram given herewith shows the siphon and details which I propose constructing. It will be noticed that both ends of the siphon are turned upward and terminate at the same horizontal level. This is to prevent the water from leaving the siphon, even if the well becomes exhausted, and also the air will not pass downward through 2 or 3 inches of water to enter and choke the siphon. The supply and discharge ends of the siphon are about 80 feet apart and the short leg of the siphon is about 6 feet long. I have arranged for an air pump or valve, very small in size and well made, to exhaust the air from the top of the siphon should it accumulate. It is fitted so tight that it will not allow air to leak into the air chamber when the pump is out of use. It is made also to detach if necessary for repairs. The air chamber should be made of copper of a large size so that it will store an accumulation of air from the long service and permit an unobstructed flow. It would be



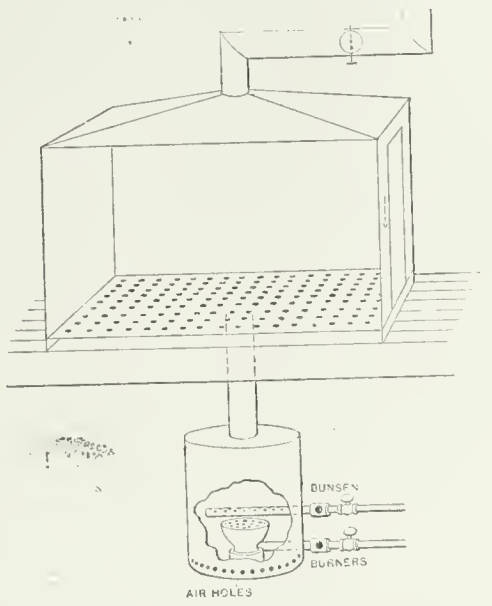
Apparatus Unnecessary to Siphon.

cheaper, however, if a smaller sized air chamber were used. The soil between the well and the watering trough is of such a nature that a pipe cannot be readily sunk so that the water could run by gravity and the siphon be avoided. I should be glad to have your opinion as to the advisability of the arrangement which I propose.

Note.—If the level of the water in the trough is the same as that of the surface of the water in the well the siphon cannot be relied upon for transferring water from the well to the trough. There must be a fall of a few feet in the long leg of the siphon in order to enable it to operate. While a siphon made of iron pipe will operate, the numerous joints that will be necessary and the character of the metal will permit air to enter more freely than through a lead pipe, which is better for the purpose. The air pump and chamber are unnecessary to the operation—particularly the pump. All that would be necessary is a stop cock on the pipe connecting at the top of the siphon, and a pipe running from the upper side of this stop cock to the surface of the ground, terminating in a funnel. Then if any air accumulates, to the extent of interfering with the operation of the siphon, it is only necessary to fill the funnel and pipe with water when the stop cock can be opened and the air will rise and the water flow in to fill its place. The accumulation of air can be detected by the slow flow of the water through the siphon as it accumulates.

TROUBLE WITH DRYING OVENS.

From W. K., New York.—In order to help "D. & K." out of the difficulty reported with their drying oven in *The Metal Worker* of August 31, I submit herewith a sketch which, I think, shows the best way for them to arrange their drying apparatus. From my experience



Trouble with Drying Ovens.

with ovens heated by gas and all kinds of ovens, I find the arrangement shown to be the best, and for dry heat it cannot be beaten. When gas is used there is no coal, no ashes and no dirt, and the drying is done cleanly and quickly. Two burners are shown in the sketch; one, a round one, placed in the center of the air heater and the other, a pipe burner, passing around its sides, both working on the Bunsen principle. The heater should have a tight bottom and be provided with a door so that the burners can be readily got at for cleaning or repairing in case of necessity. There should be as many ½-inch holes as can be got in around the bottom of the heater, 1 inch above the bottom, and the number and size of the holes should be increased with the size of the heater and the work to be done. A thermometer can be put at either end of the oven if desired.

From C. J. M., Paterson, N. J.—Having read the trouble reported by "D. & K." in *The Metal Worker* of August 31 with their drying oven, I would say that there should be no surprise that satisfactory drying was not accomplished when they kept the air in circulation. The use of a heater and hot air for drying purposes is to carry off the moisture from the material to be dried. When the air is heated it increases its capacity for absorbing moisture, and when it passes over the wet material the moisture from it is absorbed and taken away. In consequence, instead of the air being returned to the heater with the moisture it has absorbed, the air should be discharged with this moisture. This is the principle which underlies all successful drying apparatus. "D. & K." will have much better success if they increase the size of the hot air pipe leading into the oven and put a still larger pipe at the top of their drying oven to allow the air to pass away. The placing of a damper in the outlet pipe to govern the flow of air somewhat will be found beneficial.

NEW TIN ROOF OVER OLD ONE.

From W. & S., Middleville, N. Y.—In looking over *The Metal Worker* of September 14 we notice the inquiry of our Michigan friend in regard to laying a new tin roof over an old one. In reply we would say our experience has been that it is a very bad practice. One roof in particular which we put on this way, using a very good quality of plate and painted on the under side, lasted but a little over a year. We think the tendeney to collect and hold moisture between the sheets caused the trouble.

From C. L. T., Trenton, N. J.—Having seen the inquiry of "W. & Y.," in *The Metal Worker* of September 14th, in reference to laying a new tin roof over an old one, I would say that if the old tin roof is put on with a flat seam and the sheathing under it is good, there is no reason why the new tin should not be laid over it without painting on the under side, provided a good, heavily coated plate is used. However, there is no pleasure in doing this kind of work. Our shop has put on one roof under such conditions, and while there has never been any trouble with it, it took more time to put it on than if it had been put on the bare sheathing boards. We first went all over the old roof with a heavy mallet and flattened down smooth any points that rose above the general level. We soon found in nailing the tin on the roof that stouter nails than are ordinarily used were necessary. If the old roof is reasonably tight and no steam or moisture can get at the inside of the new tin, there will be no danger of rust. If there is a possibility of moisture rising, a good rosin sized paper should be used under the new tin. The old roof which we recovered was put on with a flat seam, as was also the new roof. If there is a probability of the new roof being walked on it will be far better to use paper between the two roofs.

From J. S. C., Goldsboro, N. C.—In reply to the inquiry of "W. & Y." in *The Metal Worker* of September 14 as to whether a new tin roof should be laid over an old one, I would say that it should not be done under any circumstances. It will cause a sweating between the two that will eat out the new roof in a few years. We have had experience along these lines.

DURABILITY OF WIRE AND CUT NAILS.

From S. T. T., Adams, N. Y.—I notice in *The Metal Worker* of August 24 an interesting article in relation to the durability of wire and cut nails. In selling nails to carpenters and builders and even to farmers this matter often comes up for discussion among them. The consensus of opinion seems to be largely in favor of the durability of the cut nail for shingling and for other purposes where the nail is liable to rust, a few customers utterly repudiating the wire nail. Is it not a fact that the cut nails of to-day made of steel are quite as susceptible to the action of moisture as the steel wire nail? There is little reason to doubt that the old fashioned iron nail was an improvement in this respect over the steel nail, but is the cut nail of to-day made of steel by some of the various processes now known to the manufacturers any more durable than the wire nail? If any of your readers have made thorough investigation upon this point I am sure their experience would be appreciated by others.

Answer.—Rolling plate for cut nails forms a scale on both sides of the metal. Observation has shown, we are advised, that a coat of rust first forms on the rolled sides of iron cut nails. This deposit of rust, however, can be knocked off, bringing some of the metal with it, leaving a smooth surface. After being in use for years rust attacks the cut sides of the nail and eats it away until it becomes thin along its entire length. On the other hand, rust is said to attack first the cut sides of a steel cut nail, and the result is a honey combing of the nail. The deterioration of steel cut nails is thus much more rapid than that of iron cut nails. With steel wire nails the process of annealing the metal before the wire is drawn removes all scale and leaves the metal, so to speak, raw. This is referred to as giving rust a chance to attack the steel wire nail more quickly than the steel cut nail.

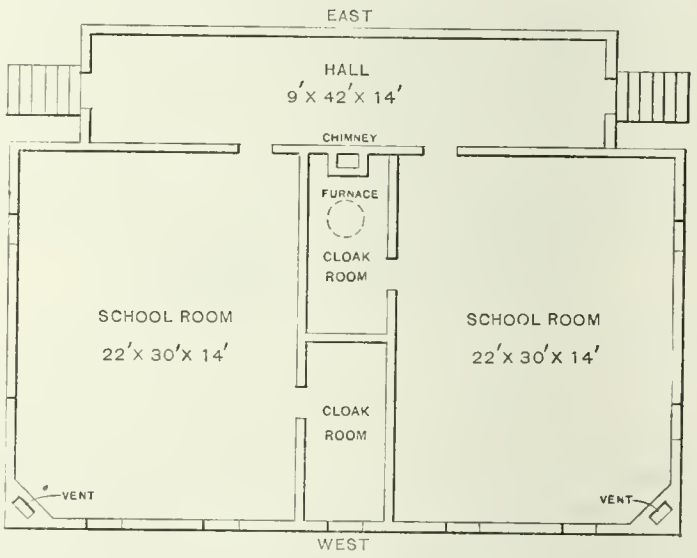
WHY WAS LEAD PIPE DESTROYED?

From S. & M., Piedmont, W. Va.—We send you inclosed a small piece of lead pipe that was put in the ground 3 feet from the surface four years ago. This particular pipe was buried in a filling composed of coal ashes and coal cinders, and was put in to replace a galvanized iron pipe that had been eaten through in a year by the action of chemicals evolving from the cinder pile, which according to our understanding was either sulphurous or sulphuric acid, and which lead pipe is supposed to withstand. We are, therefore, nonplussed to find this lead pipe literally eaten up wherever it goes inside the lot running to the house. But the most singular part of it is that outside the fence, along the street, where there is a filling composed entirely of cinders, the lead pipe main, of which this is a branch, is perfectly sound and good, and it does not show any erosion whatever, while the one from which this is taken is eaten up and full of holes. What combination of acids or alkalies would have this effect on lead pipe is what we would like to know. For your information we would further state that this pipe goes to supply a boarding house, and it may be possible that the chambermaids have for years been throwing slops over the ground. The solution may be in the fact that some of these slops containing urine, in combination with the sulphuric acid, which is undoubtedly in the cinders and ashes, has caused it. We can find no one here who can tells us this, so ask your assistance.

Answer.—The chemicals acting upon the lead pipe appear to be acetic acid and carbonic acid gas, both of which will combine with the lead, forming what is known as white lead. The acetic acid or other vegetable acids will attack the lead, and the carbonic acid generated by the fermentation of the garbage will finish the destruction of the lead or any other pipe ordinarily used for service pipe. To preserve the pipe cover it with asphalt applied hot or with hydraulic cement thick enough to keep the pipe free from seepage water.

FURNACE QUESTIONS ON SCHOOL HOUSE HEATING.

From J. M., Arkansas.—Will *The Metal Worker* kindly inform me the best way to heat four rooms and the hall of a school house, a plan of which is presented here-



Furnace Questions on School Heating.

with? It is the intention that a large hot air furnace shall be used. What would be the proper size of the heat stacks for the second floor and the hot air pipes for the first floor, and what sized registers should be used on both floors? Where would be the proper place to locate them, and where would be the best place to take the cold air from?

Note.—Our readers who have had experience in school house heating are invited to lend their assistance to this correspondent. Meanwhile we would suggest that the book, "Furnace Heating," which can be furnished by our book department, and which has a chapter devoted to school house heating, will give our correspondent valuable information on the subject.

TRADE REPORT.

MARKET SUMMARY.

Pig Tin is about ¼c. lower.

Copper is dull and without change.

Pig Lead is unchanged in demand or price.

Spelter is firmer and in better demand.

Antimony is unchanged.

Nickel remains firm and in good demand.

Tin Plates are still scarce, with spot prices high.

Black Sheets continne high in price with supplies light.

Galvanized Sheets are a shade lower on resumption of mills.

Old Metals are in better demand, prices unchanged.

Sheet Copper is moving in good volume at unchanged prices.

Pig Iron shows strength and increased movement.

Hardware conditions are satisfactory; prices are well maintained and demand keeps up well.

Plumbers' Supplies are moving in good volume, with prices strong.

Wrought Iron Pipe is still scarce and high in price.

Corn Poppers have been advanced in price.

Wire Nails are in good demand at unchanged figures.

Cut Nails are rather scarce, prices show some variation.

Wire is in active demand and prices firm.

White Lead prices are irregular.

Linseed Oil has advanced 15c. a gallon.

Spirits Turpentine is quiet and firm in price.

METAL MARKET.

NEW YORK, September 20, 1901.

Pig Tin.—Considerable business was transacted during the week under review, but it was principally for fnture deliveries, involving shipments to be made up to the end of the year. The market fluctuated somewhat, and declined during the close on the strength of a sharp break in London, due to the fact that American buyers are not taking spot Tin to any extent. The announcement by the Dutch Government that they would sell the same qnantity of Banca next year as was sold this year, estimated to be about 2500 tons every two months, contribnted toward the weakness. Jobbers are quoting Straits Pig in small lots at 26½c. to 27c. per lb.

Copper.—The market is dull and nominal, showing no improvement. Very little bnsiness ls being negotiated, and the controversy regarding the large unsold stock of the principal producers has had a bad effect on business. While it was generally believed that these stocks were very large, it was not thought that they aggregated the alleged 135,000,000 lbs. Small lots of Lake Ingot contlnue to be quoted at 17¼c. to 17½c. per lb. and Castlng Copper at 16¾c. to 17c.

Sheet Copper.—The demand for Sheet Copper contlnues fairly active and without special features of interest. Prices are unchanged on the basis of 21c. per lb. from store.

Pig Lead.—There is no change in this metal, either ln general conditions or prices, which remain on the basis of 4.60c. to 4.62½c. per lb for small lots of American Pig. St. Louis advices report a fair demand in that market, with no changes in prices since last report.

Spelter.—This metal is firmer, owing to the settlement of the Steel strike. The galvanizers have purchased freely and the general consuming interests have done likewise, fearing a marked advance which was calculated to follow a re-entering of the galvanizing interests into the market. We understand, however, that the American Sheet Steel Company were using considerably more Spelter than was generally thought, as the works which were not affected by the strike were operating beyond their normal capacity to compensate for the loss of the mills that were shut down. Good Western brands in small lots are quoted at 4.45c. to 4.50c. per lb. There are renewed rumors regarding progress in the direction of an international consolidation of Zinc interests. We are informed that the negotiations which have been pending for some time in Europe, looking toward a restricted production, are nearing a successful termination. It is said that the Belgian producers have been standing in the way somewhat, but are expected to be brought into line very shortly. There have also been recent negotlations here in the direction of bringing the American miners and smelters together. Certain large interests which are of great importance and which have throughout all similar negotiations held back from any of the proposed schemes are taking a similar stand and show no disposition to enter the present agreement. It is hoped by the promoters of the European combination that an agreement can be arrived at with the American producers restricting the amount of Zinc Ores exported from this country. On the whole, while the European negotiations may be progressing favorably, there is at present apparently no assurance of success as regards the American end of the transaction. A representative of certain American interests is now abroad and is mentioned in connection with the European proceedings, but it is believed in the trade that he is representing more particularly his own concern rather than any combined interests of this country.

Sheet Zinc.—The demand for Sheet Zinc is of moderate proportions and prices are unchanged, jobbers quoting 600-lb. cask lots at 6¼c. per lb. and smaller quantities at 7c.

Antimony—Is unchanged. Hallett's in small parcels is quoted at 8½c. to 9¼c. per lb., and Cookson's at 10½c. to 11c.

Nickel.—No change has taken place in this metal. Prices are firm, small lots being quoted at 60c. to 65c. per lb.

Aluminum.—There is an active demand at former prices. No. 1 Ingot guaranteed over 99 per cent. pure is quoted in small lots at 37c. per lb. and in 100-lb. lots at 35c.

Tin Plates.—The settlement of the Steel strike and the probable resumption o foperations at most of the Tin Plate mills at an early date has created an easier feeling in the market. While the renewed activity at the mills removes to some extent the fear of an absolute famine in Tin Plates during the coming winter, but little relief from the present stringency can be expected for some weeks to come. Whatever mills are now operated are run on orders taken some time ago, and it is said that the American Tin Plate Company have enough of such orders to keep their plants busy practically for the balance of this year. Qnotations are purely nominal. American Bessemer Coke Plates, I C, 14 x 20, are at present selling in small lots at New York and corresponding points anywhere from $7 to $8 per box. Wherever Plates can be obtained in sufficient quantities, however, these prices can be materially shaded. On the other hand Spot Plates are quoted at as high and in some cases even higher prices. Welsh Plates have declined during the week 4½ pence per box.

Sheets.—Now that the strike is over the supply of Sheets will soon be materially increased and buyers will get more prompt deliveries. The American Sheet Steel

Company are behind in deliveries, and it will be several months before they have caught up with back orders. The outside mills are also well filled up for the balance of the year. The present high prices of Sheets seem assured for the next two or three months. Some of the very firm, No. 27, One Pass Cold Rolled Soft Steel Sheets, for delivery next year, but without a fixed price, the official prices of the American Sheet Steel Company to govern these contracts. Jobbers' prices in New York are very firm, No. 27, One Pass Cold Rolled Soft Steel Sheets in small lots, rule at about 4.20c. Galvanized Sheets are a shade lower, 60 per cent. to 60 and 5 per cent. off the list being now the ruling quotation.

Chicago advices are as follows: Manufacturers of winter necessities, such as Stove Pipe, Elbows, &c., are seeking supplies in every direction, and are taking any sizes of Black Sheets they can secure, regardless of waste in cutting. Other consumers of Sheets are also taking what they can find, as stocks are very badly broken. Although the strike is over, it will be two or three weeks before the mills get into good running order and regular shipments can be decided upon. The supply of Galvanized Sheets is somewhat better than that of Black Sheets, but buyers are also being subjected to much inconvenience and cannot always secure the quantities they need. No. 27 Black Sheets are held at 4c. to 4.25c., and Galvanized Sheets at 60 and 5 to 65 for small lots from store.

Old Metals.—Scrap Iron is in better demand, but Old Metals of other descriptions continue dull. Prices are without quotable change. Dealers are paying about the following prices for moderate sized lots, delivered at New York or corresponding points:

Heavy Copper	per lb. 14½c.
Light and Tinned Copper	per lb. 12½c.
Heavy Brass	per lb. 9 c.
Light Brass	per lb. 7½c.
Lead	per lb. 4 c.
Tea Lead	per lb. 3¼c.
Zinc	per lb. 2¾c.
No. 1 Pewter	per lb. 18½c.
No. 2 Pewter	per lb. 9 c.
Tin Plate Scrap, per gross ton	$8 00
Wrought Iron Scrap, per gross ton	$10.50 to 11.00
Heavy Cast Scrap, per gross ton	10.00 to 10.25
Stove Plate Scrap, per gross ton	6.75 to 7.00
Burnt Iron, per gross ton	5.00 to 5.50

THE PIG IRON MARKET.

New York.—While earlier in the month there was some buying on the part of some of the pipe interests, no transactions of moment have been closed during the past week, which has been rather quiet. We quote: Lehigh, Schuylkill and Virginia Irons, No. 1, $16 to $17.50; No. 2 X, $14.75 to $15,75; No. 2 Plain, $14 to $14.50; Tennessee and Alabama brands, No. 1 Foundry, $14.50 to $15; No. 2 Foundry, $14.25 to $14.50; No. 1 Soft, $14.50 to $15; No. 2 Soft, $14.25 to $14.50; No. 3 Foundry, $13.25 to $13.50; No. 4 Foundry, $12.75 to $13.25.

Chicago.—All commission houses report a larger volume of business. A great deal of buying consists of medium quantities. About 10,000 tons were placed under contract in lots of 1000 to 2000 tons. Spot Iron is in active request. Dealers who make a business of producing iron to supply the earload trade report that they have no difficulty in disposing of everything ordered long before it arrives at Chicago. A great deal of inquiry is in hand for all classes of Iron for deliveries covering the first half of next year. Some of the furnace companies are refusing to take any orders for delivery beyond March 1. The outlook is so encouraging that an advance is confidently expected, particularly on Southern brands. We quote as follows:

Lake Superior Charcoal	$17.00 to $18.00
Local Coke Foundry, No. 1	15.50 to 16.00
Local Coke Foundry, No. 2	15.00 to 15.50
Local Coke Foundry, No. 3	14.50 to 15.00
Local Scotch, No. 1	15.75 to 16.25
Ohio Strong Softeners, No. 1	16.00 to 16.50
Southern Silvery, according to Silicon.	14.90 to 15.15
Southern Coke, No. 1	14.65 to 14.90
Southern Coke, No. 2	14.15 to 14.40
Southern Coke, No. 3	13.65 to 13.90
Southern Coke, No. 1 Soft	14.90 to 15.15
Southern Coke, No. 2 Soft	14.15 to 14.40

Philadelphia.—The demand for Pig Iron is very active, consumers from all points having been good buyers during the past week or two. The local trade, as well as that in New England, appear to want a great deal of Iron, and so many orders have been entered that makers are beginning to feel very indifferent about taking more, unless at extreme prices. Some furnaces are not quoting at all, as they have about as much business as they can handle for this year, besides a fair amount for the first quarter of next year. Consumption is undoubtedly very heavy, but the unusual activity is in a measure due to the absolute exhaustion of stocks and the consequent necessity for replenishing as quickly as possible. Prices for city and nearby deliveries are about as follows, and from 25c. to 50c. less at points within a radius of 100 miles South or West: No. 1 X Foundry, $15.50 to $16; No. 2 Foundry, $14.85 to $15.25; No. 2 Plain, $14.35 to $14.75.

Pittsburgh.—The Bessemer Iron market seems to be slightly firmer in tone. Foundry Iron is in better demand, but prices are no higher. We quote Bessemer Iron in small lots at $15.75 to $16, and No. 2 Foundry at $14 to $14.25, Pittsburgh.

Cincinnati.—The market for Pig Iron is in a very fair condition just now. The situation is a strong one, and trading shows a healthy normal state of affairs. While there may possibly be a little Southern Iron yet to be had on the basis of the minimum figures, it is generally recognized that there is but one price at which Iron can be had, and that is on the $10.50 Birmingham basis. The buying is chiefly confined to lots of less than 1000 tons, and mainly for this year's delivery. We quote, f.o.b. Cincinnati:

Southern Coke, No. 1	$13.50 to $13.75
Southern Coke, No. 2	13.00 to 13.25
Southern Coke, No. 3	12.50 to 12.75
Southern Coke, No. 4	12.00 to 12.25
Southern Coke, No. 1 Soft	13.50 to 13.75
Southern Coke, No. 2 Soft	13.00 to 13.25
Southern Coke, Gray Forge	12.00 to 12.25
Southern Coke, Mottled	12.00 to 12.25
Ohio Silvery, No. 1	14.60 to 15.00
Ohio Silvery, No. 2	14.10 to 14 60
Lake Superior Coke, No. 1	14.50 to 15.00
Lake Superior Coke, No. 2	14.00 to 14.50
Lake Superior Coke, No. 3	13.50 to 14.00

St. Louis.—A very satisfactory condition appears to exist in the Pig Iron market, and the outlook for a heavy business later on is very promising. On all sides are reported numerous inquiries and an exceedingly good demand for this time of the year. The furnaces are well booked for several months ahead, and there is no inclination to shade present prices. We quote as follows for cash, f.o.b. St. Louis:

Southern, No. 1 Foundry	$14.25 to $14.50
Southern, No. 2 Foundry	13.50 to 13.75
Southern, No. 3 Foundry	13.00 to 13.25
Southern, No. 4 Foundry	12.50 to 12.75
No. 1 Soft	14.00 to 14.25
No. 2 Soft	13.50 to 13.75

CHICAGO REPORT.

Scrap Iron and Steel.—Trade is in better condition, as consumers are now disposed to buy more freely. Dealers quote the following buying prices, in carload lots, Chicago delivery:

	Per net ton.
Country Wrought Scrap	$11.00 to $12.00
Machinery Cast	10.00 to 10.50
Malleable Cast	10.00 to 11.00
Stove Plate (free from burnt)	7.00 to 7.50
Burnt Iron and Grate Bars	5.50 to 6.00
Sheet Iron and Hoops	6.00 to 7.00
Plow Steel	9.00 to 10.00
Breaking Stock	9.00 to ....
No. 2, such as Shovels, Hoes, &c.	.... to 7.00
Old Boilers—whole (Iron)	6.00 to 7.00
Old Boilers (Iron) cut in single Sheets and Rings	9.50 to 10.00
Old Gas Pipe and Boiler Tubes	11.00 to 11.50
Cast Borings	4.00 to 4.25
Turnings	9.50 to 10.00
Horseshoes	.... to 13.00

Old Metals.—Prices are unchanged, the demand being only fair. Dealers quote buying prices on small lots as follows:

	Per lb.
Copper Wire and Heavy	14¾c.
Copper Bottoms	13¼c.
Copper Clips	14¼c.
Red Brass	13⅝c.
Yellow Brass	9½c.
Red Brass Borings	11½c.
Yellow Brass Borings	8¾c.
Light Brass	7¾c.
Pipe Lead	4 c.
Tea Lead	3¼c.
Zinc	2⅝c.
Tin Foil	22 c.
Pewter, No. 1	19 c.
Pewter, No. 2	10 c.

Old Rubber.—Business is light. Dealers' buying prices are as follows:

	Per net ton.	Per lb.
Garden Hose	$23.00	.....
Air Brake Hose	42.00	.....
Rubber Shoes	....	7½c.
Rubber Car Springs	....	4¾c.
Inside Bicycle Tubing	....	21 c.
Outside Tubing	....	7¼c.
Black Rubber	....	4¼c.
White Rubber	....	8½c.

Rags.—Buying price of good country Mixed Rags, Chicago delivery, is 70c. to 80c. per 100 lbs., in any quantities.

Anthracite Coal.—Dealers are enjoying a fine demand, caused by cooler weather and frosty mornings. The supply in local yards is fair. The schedule for carload lots is as follows:

	Grate.	Egg and Stove.
Chicago	$5.75	$6.00
Milwaukee, Wis	5.75	6.00
St. Louis	6.20	6.45
Kansas City, Mo	8.25	8.50

THE HARDWARE TRADE.

There was unquestionably something of a disturbance to the regular movement of business as a result of the assassination of the President. The public mind was so engrossed by the tragedy that attention was for the time taken away from business. There was also a question as to the effect the President's death would have upon commercial matters, and an element of serious uncertainty was thus introduced. Some entertained apprehensions that there would be something of a financial revulsion which would interfere with commercial and industrial interests, and some grave prognostications were thus indulged in. Fortunately the course of the market has been most reassuring, and the confident tone which prevails indicates the strength of the situation and the ground for anticipating a continuance of existing prosperity. Things in trade circles are quickly resuming their wonted aspect and activity. The termination of the steel strike is one of the elements which contributes to the confidence of the trade. It is recognized that an important gain has been made in establishing the principle that manufacturers are entitled to run their own business. The coming of the strike, while interfering with business in a way that caused considerable inconvenience, had probably a good deal of influence in maintaining the market directly affected at a critical time when a break in some lines might otherwise have occurred. The shortage of goods of many kinds, owing to inadequate supply of material, still continues, but with the renewed operation of the mills it is anticipated that this condition will soon be corrected. Comparatively few manufacturers have anything like full stocks of goods, and the supply in hands of jobbers and retailers is in many lines light, if not broken. It will thus be some time before there will be an opportunity for the accumulation of goods, and meanwhile it is expected that the demand will be large.

NOTES ON PRICES.

Plumbers' Supplies.—The demand for Plumbers' and Steam Fitters' Supplies continues active and the shortage of goods in certain lines is still as marked as ever, causing considerable inconvenience to contractors, jobbers and consumers. Prices are strong all along the line, but no further advances have been recorded.

Wrought Iron Pipe.—The end of the steel strike holds out encouragement for some measure of relief to the stringency that has prevailed in the Wrought Iron Pipe market for several weeks past. Meantime the demand for all sizes of Pipe used for heating purposes far exceeds the supply and a scarcity is likely to be felt for some time to come, as it will take some weeks before the increased output of the resuming mills of the National Tube Company will be able to make any great impression on the market. Prices are very firm and high and are likely to remain so until the present pressure of demand is relaxed.

Registers.—While a good proportion of the manufacturers of Hot Air Registers, Ventilators, &c., have adopted the new list referred to in our last issue, a good many of the jobbers are still selling from the old list. There is also some irregularity in demand.

Corn Poppers.—An advance has recently been made by the leading manufacturers of Corn Poppers. The demand for this line is, as usual, active at this season.

Wire Nails.—The demand for Wire Nails is of good volume. It is expected that the mills will soon be in position to supply the requirements of the trade more promptly. New York quotations for small lots from store continue at $2.60 per keg.

Cut Nails.—Conditions in the Cut Nail market remain unchanged. Trouble is experienced in getting prompt shipments. In the New York market the recent advances in price is not held to in all cases. Small lots from store are quoted at $2.18 to $2.30 per keg.

Wire.—An active demand is reported for Plain Wire. The mills making the same are still somewhat behind in deliveries. Prices are firm and without change at 2.60c. for Plain Wire and 3c. for Galvanized in small lots.

Window Glass.—The demand for Window Glass continues moderate, and the market is without new or interesting features. According to reports there was a proposition before the Glass meeting at Detroit, about two weeks ago, to reduce prices. The proposition was not favorably received, but the intimation of the necessity of lower prices for the preservation of the Glass combine is taken as an indication of the growth of cooperative factories. Prices are without change, jobbers' quotations being 80 and 20 per cent. discount for less than car lots from store.

White Lead.—The recent advances in the price of Linseed Oil and the consequent unsettled condition of the market are likely to affect the demand for White Lead in Oil. Owing to the previous rapid decline in the price of Oil, irregularities in Lead prices became more pronounced, but the higher prices of Oil may have the effect of steadying the White Lead market. The retail price of America White Lead in Oil is now 7 to 7¼ cents per pound.

Linseed Oil.—On September 12 City Raw Linseed Oil was advanced 5 cents per gallon. Lower prices previously ruling had stimulated demand, and spot supplies had been about exhausted. On the 16th inst. another advance was made in City Raw, amounting to 10 cents per gallon, bringing the retail price up to 66 to 67 cents per gallon. Boiled Oil is 2 cents per gallon advance on Raw. The cause of the last advance is attributed to a sharp advance in seed. There is little Oil obtainable for prompt delivery, and quotations on future deliveries are for prompt acceptance. From present indications no relief is expected until new seed comes into the market more freely.

Spirits Turpentine.—The week has been one of little activity in the Turpentine market. Large buyers are not in the market, and demand has been confined to jobbing lots. Prices have been firm and unchanged at 37½ to 38 cents for small lots.

We are indebted to James M. Swank, general manager of the American Iron and Steel Assoeiation, for a copy of his pamphlet, "Iron and Steel at the Close of the Nineteenth Century." The publication of 40 pages is crowded with useful information. It opens with a general review of the iron and steel industries and contains a chronological record of the leading events in the development of those industries in the United States down to the close of the nineteenth century. Tables are presented giving detailed statistics of the production of leading articles of iron and steel in the United States for the year 1900, the last of the nineteenth century, also a variety of useful statistical information compiled from the reports of the American Iron and Steel Association and the official figures of the Bureau of Statistics of the Treasury Department.

It has been computed that the strike has cost the city of McKeesport $1,000,000 in wages and the loss of one large industry.

Water Proof Blue Prints.

Those who have experienced the annoyance of having blue prints discolored and blurred by rain, and moisture in general, will appreciate, says *Mines and Minerals*, a simple and inexpensive method of water proofing the prints which renders them completely impervious to weather and water. The water proofing medium is refined paraffin, and may be applied by immersing the print in the melted wax, or more conveniently as follows: Immerse in melted paraffin until saturated a uumber of pieces of an absorbent cloth a foot or more square, and when withdrawn and cooled they are ready for use at any time. To apply to a blue print, spread one of the saturated cloths on a smooth surface, place the dry print on it with a second waxed cloth on top and iron with a moderately hot flat iron. The paper immediately absorbs paraffin until saturated and becomes translucent and highly water proof.

The lines of the priut are intensified by the process, and there is no shrinking or distortion. As the wax is withdrawn from the cloths, more can be added by melting small pieces directly under the hot iron. By immersing the priut in a bath of melted paraffin, the process is hastened, but the ironing is necessary to remove the surplus wax from the surface, unless the paper is to be directly exposed to the weather and not to be handled. The irons can be heated in most offices by gas or over a lamp, and a supply of saturated cloths obviates the necessity of the bath.

This process, which was originally applied to blue prints to be carried by the engineer corps in wet mines, is equally applicable to any kind of paper, and is convenient for water proofing typewritten or other notices to be posted up and exposed to the weather.

To Drill Holes in Glass.

In order to drill a hole in glass it is necessary, says the *Pottery Gazette* of Londou, to have a hard and well tempered steel drill. This may be prepared by heating to a dull red, and then plunging into mercury so as to become hard. It is, however, necessary to temper the shaft of the drill. Imbed the point of the drill in a piece of lead. The temperature of the shaft of the drill can be raised by means of a blow pipe till there is a blue color nearly to the point. The drill and lead together are now immersed in cold water, when the first will be ready for work. This tool, when mounted in a holder and with the point moistened with turpentine, attacks glass rapidly. Do not press too heavily when working the drill, and if possible work from both sides of the glass successively. To eularge a hole thus obtained, use a rat tailed file soaked in turpentine. A steel drill may be hardened when at red heat by dipping into any cool liquid.

Another metnod is to staturate commercial muriatic acid with zinc—do this in the open air. The drill should be ground before hardening. When at red heat dip in the solution to harden; or a spear shaped drill, heated to a red heat and hardened in mercury, and then sharpened on an oil stone, may be used. The drill is firmly rotated at the desired spot with an alternate motion, and lubricated with a saturated solution of camphor and spirits of turpentine. Diluted sulphuric acid may also be used as a lubricant.

Sources of Colors.

The sources of the beautiful artificial colors which add so much to the brightness and attractiveness of our surroundings are remarkably varied, as will be seen from the following facts extracted from an English decorating journal: The cochineal insects furnish a great many of the very fine colors. Among them are the gorgeous carmine, the crimson, scarlet carmine, aud purple lakes. The cuttlefish gives the sepia. It is the inky fluid which the fish discharges in order to render the water opaque when attacked. Indian yellow comes from the camel. Ivory chips produce the ivory black and bone black. The exquisite Prussian blue is made by fusing horses' hoofs and other refuse animal matter with impure potassium carbonate. This color was discovered accidentally. Various lakes are derived from roots, barks and gums. Blue black comes from the charcoal of the vine stalk. Lamp black is soot from certain resinous substances. Very little real ultramarine is found in the market. It is obtained from the precious lapis lazuli, and commands a fabulous price. Chinese white is zinc, scarlet is iodide of mercury, and native vermilion is from the quicksilver ore called cinnabar.

LABOR EXCHANGE.

Notices under this heading of reasonable length are inserted free of charge. Only those relating to employment are admitted. Write distinctly on one side of paper only, and do not use postal cards.

Original letters of reference should not be inclosed with replies to advertisements appearing in these columns, as they are frequently mislaid and lost. A copy of the reference will serve the purpose.

HELP WANTED.

Man familiar with stove trade to handle stove repairs as a side line on a salary basis for territory tributary to Chicago. Box 141, care *The Metal Worker,* 1205 Fisher Building, Chicago, Ill. Sept. 21

Have a good opening for an all around man; one who can do tin work, some plumbing, pump work, &c.; will pay such a man $2.25 per day the year around as long as he wants to remain; do not want a drinking man. Box 142, care *The Metal Worker,* 1205 Fisher Building, Chicago, Ill. Sept. 21

A FOREMAN for large cornice and skylight shop in Greater New York; only a man who is competent to handle 30 to 40 workmen and machine hands need apply; references required, also state wages desired and experience. "A. B. C.," care *The Metal Worker,* New York. Sept. 21

A young man of good family and some experience as BOOKKEEPER and SALESMAN in a well known manufacturing business; reference required. "R. H. C.," care *The Metal Worker,* New York. Sept. 21

First-class FURNACE SALESMAN; one thoroughly familiar with trade in the New England States; can commence business now or January 1; splendid opening for bright, energetic, capable man; permanent employment. "Heat," care *The Metal Worker,* New York. Sept. 21

In New England States, January 1, 1902, first-class STOVE SALESMAN; one having large acquaintance with the furniture trade preferred; references. "Cooking," care *The Metal Worker,* New York. Sept. 21

High grade TRAVELING SALESMAN; patented tool that joins lead pipes quicker and better than the plumbers wipe joints; big money to the right man. Bailey-Farrell Mfg. Company, Pittsburgh, Pa. Sept. 21

At once, an all around MECHANIC, PLUMBER, TINNER, GENERAL JOBBER; good wages year round; married man about 30 years preferred. Box 135, Port Henry, N. Y. Sept. 21

An up to date CORNICE MAN who understands laying out and making all kinds of work; general jobber for shop work; nice town, healthy climate; only sober men need apply. R. E. Hogan, Wilson, N. C. Sept. 21

A good, experienced TINSMITH; steady work for the right man. M. McFadden, 301 Burnett street, New Brunswick, N. J. Sept. 21

Three SHEET IRON WORKERS, good at riveted work; steady job; state wages, experience and where employed. "D. N.," Station A., Boston, Mass. Sept. 21

A good all around TIN and SHEET IRON WORKER; one who understands ordinary plumbing, fixing pumps, and work generally done in a country shop. Geo. H. Smith, Port Jefferson, L. I., N. Y. Sept. 21

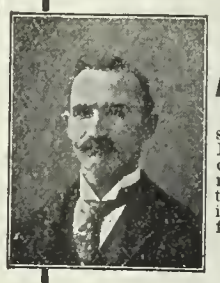
Our students succeed because they use I. C. S. Textbooks.

Sheet Metal Pattern Drafting

A course of instruction by mail for tinsmiths, coppersmiths, plumbers, sheet-iron workers, furnace workers, skylight makers and others that will enable a student to "strike out" working patterns for all kinds of sheet metal work. This is what a student says:



His Course More Than Paid for Itself

I am a tinsmith, and consider your course in Sheet Metal Pattern Drafting one of the best investments I ever made. Before I was half through I had realized from it more than the money paid for the whole course.

M. E. TOBIAS,
63 Fifteenth St.,
Wheeling, W. Va.

We teach by mail **Mechanical, Steam, Electrical, Civil and Mining Engineering; Shop and Foundry Practice; Mechanical Drawing; Architecture; Plumbing; Sheet Metal Work; Telephony; Telegraphy; Chemistry; Ornamental Design; Lettering; Book-keeping; Stenography; Teaching; English Branches; Locomotive Running; Electrotherapeutics.** When writing state subject in which interested.

taught by mail.

Dietz Monarch Lantern.

In its general "make-up" and constructive features the "Monarch" closely resembles the widely known and as widely appreciated "Victor" Lantern. Like it, this Lantern has tinned-steel oil pot; the strong, simple, positive acting device for raising the globe —to light or trim—and to hold its burner immovably in position. The principal difference lies in the substitution of a two-piece round tube for the square tube used in the "Victor" frame —a detail of construction that adds much to its attractive appearance.

All Dietz Lanterns are absolutely safe from taking fire or exploding.

The "Monarch" Lantern gives a strong, steady, copious light, and has 5/8-in. burner and No. 0 globe.

IF a Tinner loses a job to the Slater he naturally feels badly about it, and when he finds out that he could just as well have had the order he feels five times as bad—Cortright Metal Slates!

Cortright Metal Roofing Co.,
50 N. 23d St., Phila.

— PERPLEXING.—Bill (fishing in a leaky boat): "I say, old man, there must be a hole in the bottom of this boat."

Jill (rolling up his trousers): "Then why don't this water run out?"—*Yonkers Statesman.*

— CIRCUMSTANTIAL EVIDENCE.—Papa: "Where's my umbrella? I'm sure I put it in the hall stand with the others last evening.

Willie: "I guess Mabel's beau took it when he went home last night."

Mabel: "Why, Willie! The idea!"

Willie: "Well, when he was sayin' good-night to you I heard him say: 'I'm going to steal just one.'"—*Exchange.*

— "WHAT is an anecdote, Johnny?" asked the teacher.

"A short, funny tale," answered the little fellow.

"That's right," said the teacher. "Now, Johnny, you may write a sentence on the blackboard containing the word."

Johnny hesitated a moment, and then wrote this: "A rabbit has four legs and one anecdote."—*Exchange.*

DOVER PATENT NESTED STOVE PIPE.

NO TOOLS. (PATENTED SEPTEMBER 5, 1899.) NO MALLETING.

AMERICAN SEAL PAINT
MANUFACTURED BY
PLURIBUS UNUM
William Connors
TRADE MARK
TROY PAINT AND COLOR WORKS, TROY, N.Y.
ANY DESIRED SHADE OR COLOR

A UNIVERSAL REMEDY FOR LEAKY ROOFS.

The valuable qualities of a good roofing cement are firm adhesiveness and elasticity. These qualities the ***American Seal Builders' and Roofers' Elastic Oil Cement*** possesses. It will adhere firmly to Slate or Metal and will not crack or crumble. It is especially recommended for repairing leaks around chimneys, dormer windows, skylights, scuttles, firewalls and any place that requires fixing on a roof, either Slate, Tin or Shingle.

This Cement will answer to repair ***a roof*** when ***Solder*** cannot be used.

PUT UP In Barrels, about 800 lbs. In Tubs, about 112 lbs. In 25 and 50 lb. Pails. In 5, 10 and 15 lb. Pails.

Special Discount to Jobbers and Large Buyers.

COVINGTON, KY.

The New Metal Worker Pattern Book.

425 Pages. 744 Illustrations.
Size 10 x 13 Inches.

A new treatise on pattern cutting as applied to all branches of sheet metal work.

Cloth Bound, Price $5.

This work contains a collection of **218** problems and an elaborate explanation of the principles of pattern cutting, including Triangulation.

It embodies the problems of the former Metal Worker Pattern Book, all of which have been revised, and many of which have been entirely rewritten and solved by more approved methods. To these have been added **75** new problems and much other new material and explanatory matter, making this work a model of completeness in every respect.

ARRANGEMENT.

In point of arrangement the new work far surpasses the former one in that the problems are classified under three different heads, and simply indexed, and also that by means of a table of contents any required department of the work can be easily found.

CONTENTS.

While Chapter VI, comprising the greater part of the work, is devoted to the solution of problems, the five preceding chapters thoroughly explain the principles of pattern cutting, and place the student in possession of the preliminary information necessary to a thorough understanding of the subject.

SUMMARY OF CONTENTS.

I. Terms and Definitions—15 pages.
II. Drawing Instruments and Materials—13 pages.
III. Linear Drawing—6 pages.
IV. Geometrical Problems—35 pages.
V. PRINCIPLES OF PATTERN CUTTING—25 pages.
VI. PATTERN PROBLEMS (3 Sections)—325 pages.
1. MITER CUTTING.
2. FLARING WORK.
3. TRIANGULATION.

All Tinners, Cornice Makers and Sheet Metal Workers should be provided with a copy of

The New Metal Worker Pattern Book.

Price $5, post or expressage paid.

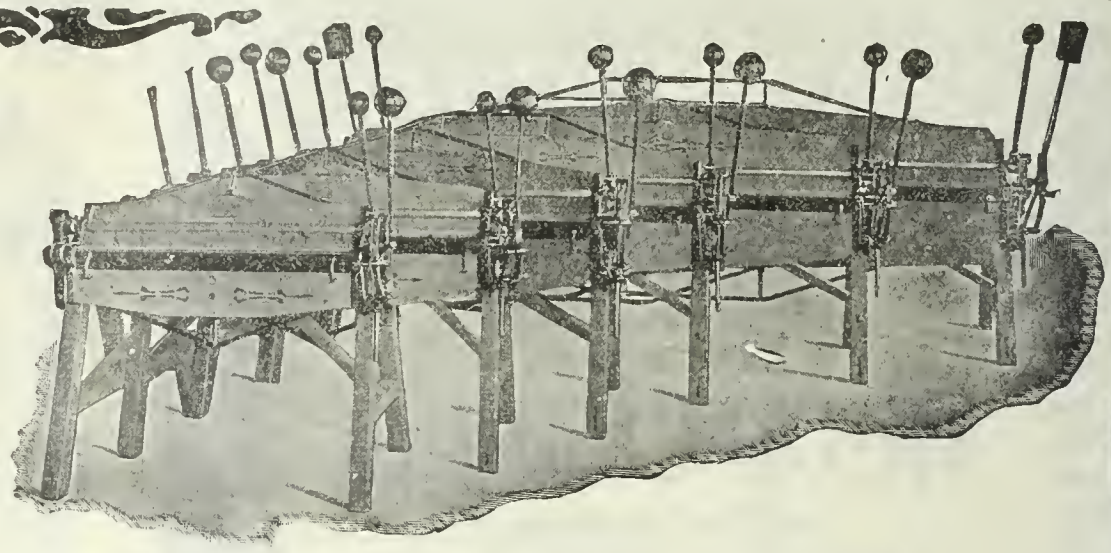
The Double Truss Cornice Brake.



All the different sizes in which we make this practical machine are herewith illustrated.

This brake costs only half as much as an all-metal brake.

It is made mostly of hard maple.

It is just as good as an iron brake in every respect—much better in some ways. Beside the 50% saved in the first cost our brake will save money in its use.

It is light and can easily be carried from place to place.

By shaping or bending work in the building where it is to be used all the trouble and expense of handling formed-up work is saved.

Write for prices.

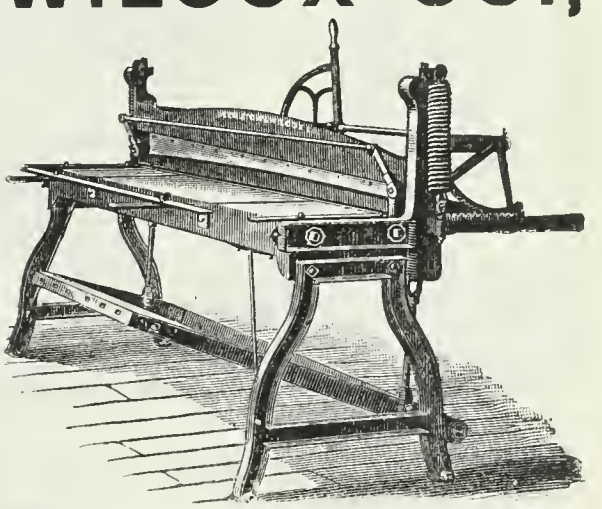
96 inches long.

Our *Improved Eureka Cornice Brake.* Will bend No 20 iron.

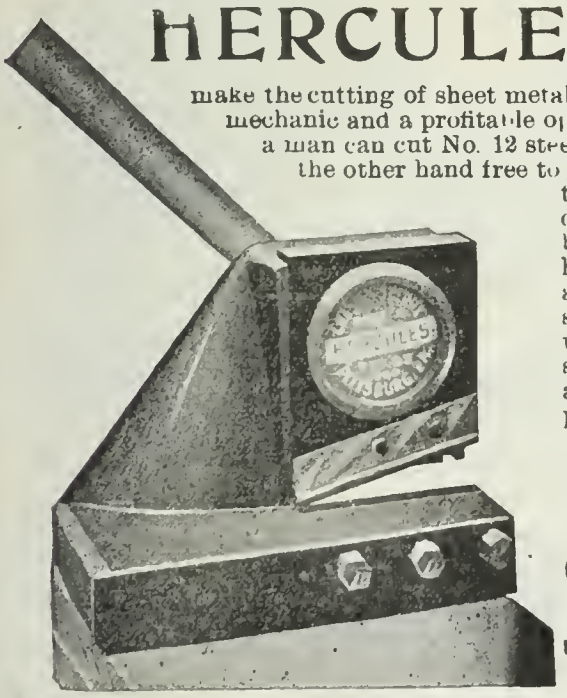
96 inches long.



CORNICE MAKERS' SQUARING SHEARS.

With Lever Arc, Automatic Gauge. Will cut No. 22 iron 97 inches long.

HERCULES SHEARS



make the cutting of sheet metal of heavy ganges an easy task for the mechanic and a profitable operation for the employer. With them a man can cut No. 12 steel with one hand of the lever leaving the other hand free to guide the stock while cutting elbows, ties and circles as small as 8 inch radius: this is done with out burring or buckling either piece, thus avoiding hammering and straightening which add to the cost of the product. The split sheets of any width or length up to No 12 gauge, cut wire or bar steel ⅛ inch thick, cut off and mitre angle iron ⅛ inch thick, and do it perfectly.

PRICE, - - $35.00.

Paragon Point No. 4.—BALL BEARING GRATE.

On the four larger sizes of the Paragon Furnace, the grate is placed on ball bearings. The steel balls used are a little over an inch in diameter, and are accurately ground to fit into their bearings. Even when the fire pot is full of fuel this grate can be easily shaken by means of the upright lever.

This point means that a child can manage the grate of the largest size Paragon Furnace, and that what is often a disagreeable task is rendered easy and pleasant.

ROUND OAK
Standard of America

Unsolicited Letter–Published by Permission.

Salt Lake City, Utah,
June 4, '01.

Heat and Ventilating Department

Estate of P. D. Beckwith,
Dowagiac, Michigan

Gentlemen:

We have just sold eight *Round Oak* Furnaces.

This makes eleven this week, which we think is pretty good work, considering the fact that the *Round Oak* is not a cheap furnace.

When we put in a *Round Oak* furnace, it is the same as selling a *Round Oak* stove: All the work we have is to make the sale, after that the owner does the rest.

We will forward specifications for ANOTHER CARLOAD of *Round Oak* furnaces in a few days.

Yours very truly,

Geo. H. Scott-Strevell Hardware Co.

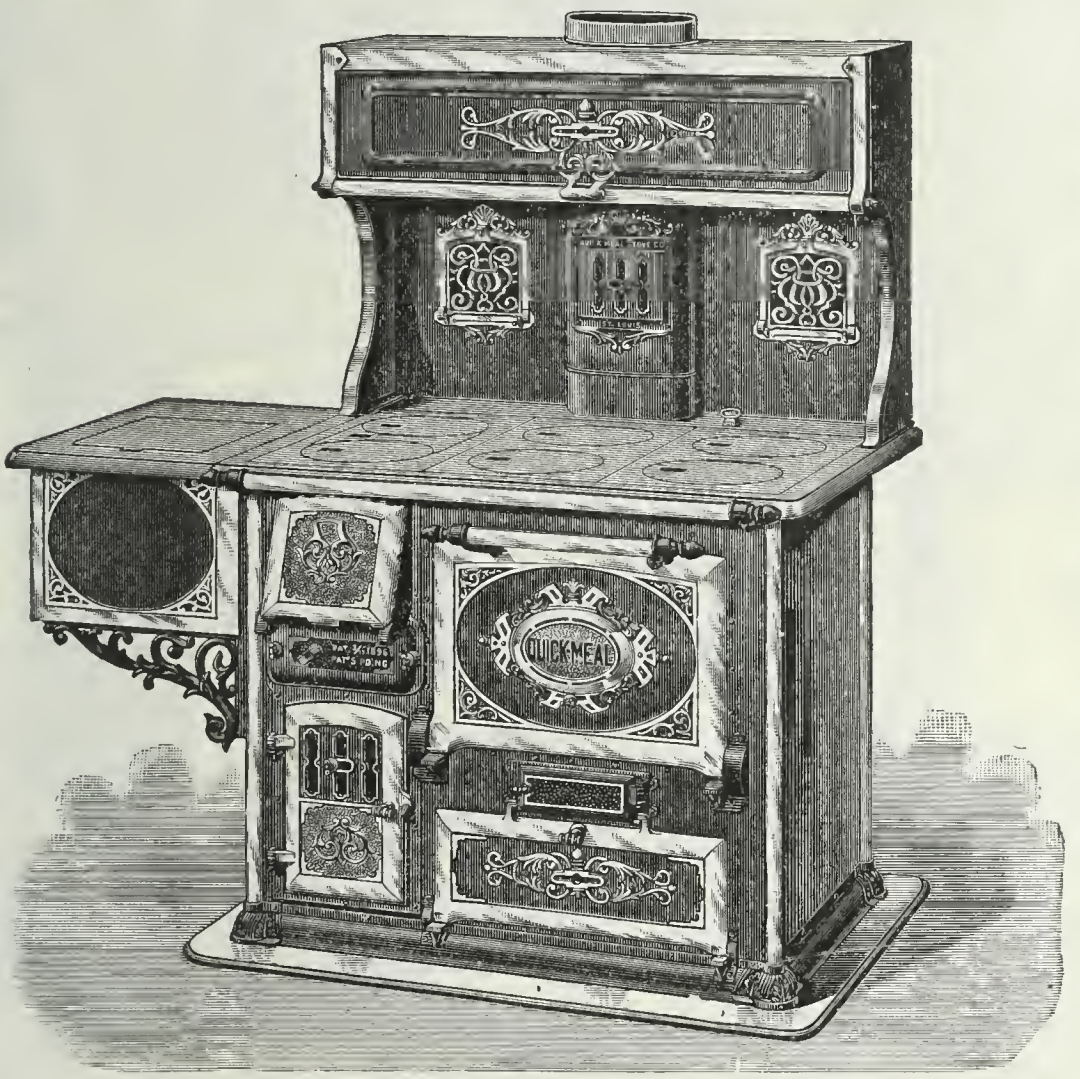
QUICK MEAL



"Quick Meal" Steel Ranges have been thoroughly tested and are a pronounced success.

Make a close examination of their heavy triple asbestos filled outside walls, the weight of the material used in the oven plates and the manner in which they are braced, which makes them absolutely warp proof; see the Reservoir used on the "**Quick Meal**" **Range**, and the way it is made without dampers and nothing to interfere with the working of either the Range or Reservoir; simple, durable and good looking. Look at the general construction of the "**Quick Meal**" **Steel Range**, its proportions, its materials, its design and the mechanism and taste used throughout in its make-up, and the dealer will see why it will pay him to make the "**Quick Meal**" **Steel Range his leader.**

The Fire Box is Oval in Shape and of Goodly Dimensions.

Either Duplex or Dockash Grates can be used. Grates removable through end door without removing any fire box linings.

Send for Illustrated Catalogue descriptive of our full line of Steel and Cast Ranges and Heaters.

GALUSHA STOVE CO., Makers, - ROCHESTER, N. Y.

THE SMOKELESS

HOT BLAST

OHIO STOVE CO.

PORTSMOUTH, O.

Is an entirely new production. It is constructed on modern designs, and is perfect in every particular.

It has a fire pot consisting of thirty sections, each section weighing three pounds, or ninety pounds for the fire pot complete. This fire pot can be removed in sections without dismantling the stove or removing a bolt. Owing to the peculiar construction of this fire pot we will guarantee that this stove will radiate as much heat, from the base of the stove, as the ordinary hot blast will from the top. This fire pot is so constructed that the air is taken in at the draft door, circulated around the fire pot and passed into the fire through the sections, coking the fuel toward the center of the fire pot, and consuming all the smoke and gas. The life of a heating stove is measured by the durability of the fire pot. We give you a fire bowl guaranteed for five years, and absolutely proof against fire crack.

The grate is large, anti-clinker and ball bearing.

The stove has a large ash pan. Is mounted in 14 gauge steel.

Will save 20 per cent. of the fuel and hold fire thirty-six hours.

We can especially recommend the stove for burning slack coal.

BRIGHTON AIR-TIGHT HOT BLAST.

Patent Applied for.

SOMETHING NEW!

THIS is not an every day "Air Tight Stove" that almost every stove foundry makes. While the general construction is the same, the principle is different.

This stove is furnished with a blow pipe fastened to inside of feed door and extends inside to the center of fire pot and is controlled by a screw register on outside of feed door.

DIRECTIONS FOR USING:

Close up all openings below feed door and regulate your fire entirely by screw register in the feed door.

By following these instructions you will produce more heat with this stove and consume less fuel than with any other stove made.

THE Mogul Furnace

Diameter of fire pot	19½ inches.
Height to top of elbow	56 "
Height to bottom of pipe collar	46 "
Diameter of ring where casing fits	31½ "
Weight	800 pounds.

It is made with regular furnace joints for cement from the bottom up; also provided with draw center anti-clinker grate, which can be taken out and replaced through the ash pit. The fire pot has fingers at the bottom on the inside to assist in grinding up the cinder and cleaning the fire. A heavy cast iron elbow and cast ring for casing and one cast iron water pan is sent with each furnace. The "Mogul" is cheaper to operate than a hard coal base burner and will heat the house. It is plain, heavy and will do the work of, and outlast many of the furnaces on the market costing twice the money. Get our prices.

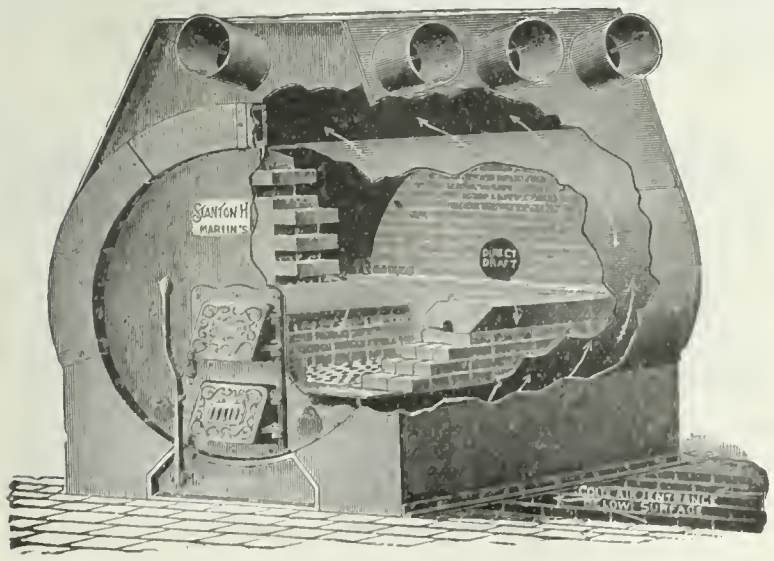
The Stanton Seamless Heater,

PORTABLE CASED.



LOUISVILLE, KY., Apl. 5th, 1901.

THE STANTON HEATER CO.,
Martin's Ferry, Ohio.

Gentlemen:—Your favor of the 3d inst. is received asking our experience with the Stanton Heater which you put in for us during the fall of 1899. In reply we will say that it gives us pleasure to express our entire satisfaction with this Furnace. While we have had no severe weather this winter there have been several quite cold snaps, but our offices have been very comfortably heated, and our coal bill (Pittsburgh coal) has been quite moderate compared with other Heaters we have used.

The satisfaction the Heater has given us can be best expressed by saying that we have not heard the Furnace mentioned once this winter. You can see, therefore, that we have had absolutely no cause for complaint.

Yours very truly

Furnace Heating.

A Practical and Comprehensive Treatise on Warming Buildings with Hot Air, by William G. Snow, with an Appendix on Furnace Fittings. 170 pages; size, 6 x 9 inches. Cloth bound. Price, **$1.50.**

This is the only book that has been brought out which presents a systematic and reliable treatment of the warm air furnace system of heating.

It deals with the various types of furnaces, their construction, proper location and setting, together with furnace fittings, and all matters pertaining to the installation of furnaces and to effective and economical heating by warm air. The subject is discussed for the first time by a competent author possessed of a scientific education and a practical training, who presents positive rules, based on a long experience, for guidance in designing furnace systems for dwellings and other buildings where this popular method is employed. The various details of furnace work are described simply and at such length that the volume will be valuable to all who are in any way interested in the subject. It is recommended to practical furnacemen, to architects, builders and house owners, and to tinners and plumbers in suburban sections who do furnace work. To all these it will prove a reliable text-book and guide.

PARTIAL SUMMARY OF CONTENTS BY CHAPTERS.

Chapter I.—Furnaces—Is devoted to Furnace Construction—The Relative Proportion of Furnace Parts—Secondary Heating Surface—Economy and Efficiency—Heating Capacity and Exposed Wall Surface—Manufacturers' Ratings of Their Own Productions, etc.

Chapter II.—House Heating—Compares Furnaces and other apparatus, and describes Method of Setting Brick and Portable Furnaces—Location and Area of Cold Air Supply—Cold Air Rooms and Air Filters—Return Ducts and Air Circulation—Size of Hot Air Pipes—Location of Registers, etc.

Chapter III.—The Combination System—Discusses Heating Distant Rooms with Radiators—Balancing the System—Location of Water Heater in Furnace—Capacity of Water Heaters—Size of Radiators, etc.

Chapter IV.—Air—Deals with the Necessity of Ventilation—Water Needed to Moisten Air—Expansion of Air—Velocity of Air in Tubes, etc.

Chapter V.—Heating and Ventilation of Buildings—Considers the Size of Furnaces Required—Fresh Air Room and Supply—Air Circulation—Size of Flues—Use of Stack Heaters—Size of Heating Coils in Vent Flues, etc.

Chapter VI.—Heating of Public Buildings, Churches and Stores—Is given to the Size of Furnaces Required—Grate Surface in Ventilated Buildings—Air Supply—Size of Heating and Ventilating Flues—Size of Stack Heater, etc.

Chapter VII.—Fan-Furnace Combination System—Is devoted to Positive Warm Currents from Fan Systems—Location of Fan and Driving Apparatus—How Good Furnaces are Aided by Fans—Types and Efficiency of Fans—Area of Ducts and Flues, etc.

Chapter VIII.—Temperature Control.

Chapter IX.—Estimate and Contract Blanks.

Chapter X.—Value of Fuels. The Proper Size for Furnace Chimneys—with tables.

APPENDIX.

Furnace Fittings.—A section of 45 pages dealing with the Making of Furnace Casings—Metal Cold Air Boxes—Making Furnace Bonnets and Collars—Making Pipe and Elbows—Register Boxes and Stack Shoes, etc.

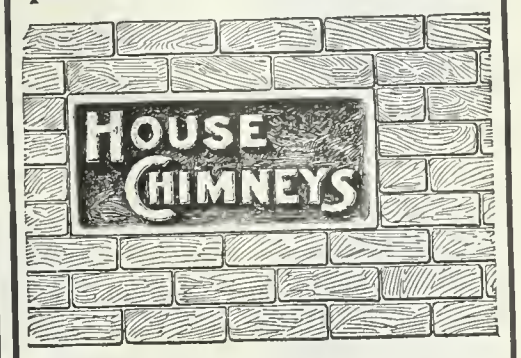
A 62-PAGE PAMPHLET

Comprising a Series of Articles and Letters on *Chimney Troubles and Their Remedies* published under the title



Contains a compilation from the columns of THE METAL WORKER, of articles and correspondence relating to house chimneys, defective flues, and kindred topics, comprising a source of information of the most practical and reliable nature, on overcoming difficulties which occur in the working of chimneys, flues, etc.

To all who are interested in flues and drafts, in their relation to stoves, furnaces and house heating apparatus, this book will prove instructive and helpful.

The Contents are as follows

Page.

POINTS ON CHIMNEYS - 7–32
An illustrated article by J. L. Bixby, Jr., describing many details in chimneys, which cause trouble, and giving remedies. An important table is presented, of the sizes of chimneys required in dwelling houses, based upon the amount of work to be done.

DEFECTIVE FLUES - - - 33–35
This article presents information resulting from a wide, practical experience of the writer, and gives sound advice on some of the details of chimney construction.

HOW TO IMPROVE A WEAK CHIMNEY - - - - - 36–40

VARIOUS FORMS OF VENTILATORS or CHIMNEY TOPS 41–45

CONDENSATION IN STOVE PIPES - - - - - - 46, 47

SMOKE PIPE FOR WOOD FURNACES - - - - 48

REMEDYING DOWN DRAFT IN CHIMNEY - - - - 49–51

CONNECTED FLUES DESTROY DRAFT - - - - - - 52–55

FAILS TO BAKE ON BOTTOM 56–62

40 good Illustrations help to make the Text clear.

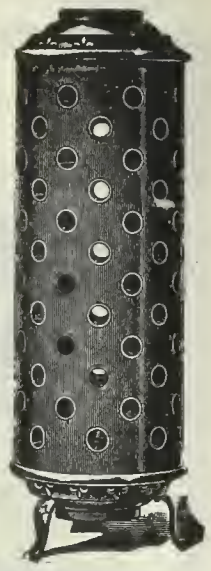
COUNT THE TUBES!

in the ROCHESTER RADIATOR. You will be *surprised* at the radiating surface and all over the hot current where it is six times as effective as if at the side. You will be *surprised* that they can be manufactured at the price. (A steam boiler this size would cost $100.) You will be *surprised* how they sell (having been extensively advertised for years in all the best magazines and family papers.) *We are surprised* that you are not handling them. Do not longer delay but address



ROCHESTER RADIATOR CO.,

100 Furnace St., ROCHESTER, N. Y.

WINCHESTER

How often success in man or goods is ascribed to "luck." We all know better. Intelligence, ability, diligence and merit make for success and not for failure. Do you suppose the "WINCHESTER" steam or water heater would have proved the success it has if it were merely "lucky"? Made by Smith & Thayer Co., Boston, Mass.

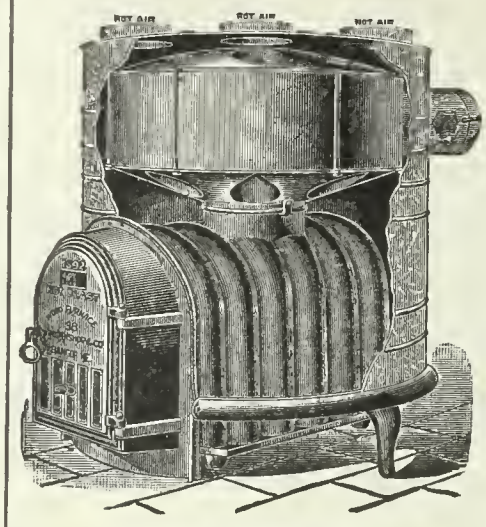
WOOD FURNACES.



THE HOT BLAST.

Established 1839. Incorporated 1894.

OUR IMPROVED MONITOR.

The most powerful heater made.

2 SIZES, PORTABLE OR BRICK SET.

No. 38 for 3 ft. wood. No. 50 for 4 ft. wood.

OUR LOW PRICED HOT BLAST.

The most practical, durable heater on the market at anywhere near its cost.

FIRE BOX BODY made in one piece, corrugated, is very heavy and cannot break or warp.

RADIATOR with heavy cast iron beads, heavy plate iron shell and hot air flues, has extra large radiating surface and is self cleaning. Every part of radiating surface is directly exposed to fire, allowing no possibility of creosote in the apparatus. No wood grate. Fuel burns on the ashes in the only practical, economical way.

3 SIZES, PORTABLE OR BRICK SET.

Nos. 36, 42 and 48, for 3, 3½ and 4 ft. wood.

Thousands in use in all sections of the country. Testimonials and full particulars sent on application to the manufacturers.

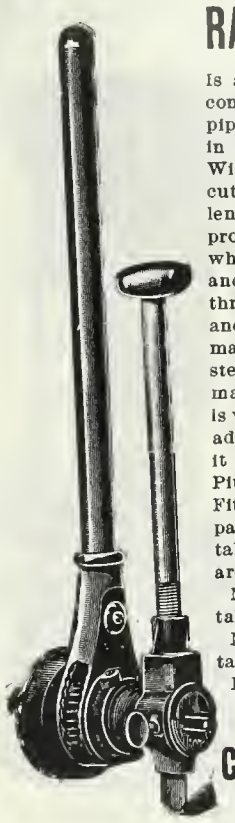
The Climax



RATCHET STOCK

Is an indispensable tool for conveniently threading iron pipe in ditches, under floors, in corners, over head, etc. With this tool threads can be cut without removing whole lengths of pipe. This tool is provided with a strong vise which securely grips the pipe and by means of the leading thread the die is forced on pipe and the thread is cut. It is made of malleable iron and steel, and while light in weight, making it convenient to carry, is very strong and rigid. The advantages of this tool make it absolutely indispensable to Plumbers, Steam and Gas Pipe Fitters, Gas and Water Companies, Machinists, etc. It takes standard size dies, which are extra if furnished.

No. 1 threads ¼ to 1 in. pipe, takes 2 or 2½ in. die, $10.00.
No. 2 threads 1 to 2 in. pipe, takes 2½, 3 and 4 in. die, $17.00.

BOILER FEEDER.

Our Booklet tells all about it.

F. W. FOSTER MFG. CO.,

12 Portland St., Boston.

There's only one Warm Air Generator.

THE KELSEY WARM AIR GENERATOR has been known by this name and so advertised for twelve years, and is manufactured solely by the Kelsey Furnace Company, Syracuse, N. Y.

The splendid results obtained with the "Kelsey" are becoming better known each year, and the demand for them has increased so rapidly that a certain firm or company, hoping to reap some of the benefits of the now famous "Kelsey," have used the term "Warm Air Generator" in connection with a heater they make.

The construction, however, of the Kelsey Warm Air Generator, being fully covered by patents, will be protected and cannot be successfully imitated.

The Kelsey Warm Air Generator will increase your business.
The Kelsey method of warming the air is the best method.

KELSEY FURNACE CO., SYRACUSE, N. Y.

Makers of the Kelsey Warm Air Generator.

Brilliant Enameled Steel Ware

This ware is now manufactured by our factory at Bellaire in the Brown Color only, same having been discontinued in all colors by our Portland, Conn. factory. Particular effort is being made to turn out a highly satisfactory and pleasing article, and all dealers are requested to order a sample lot to be convinced of the merit of this ware.

White and White Enameled Steel Ware

This ware will also be made by our Bellaire Factory only hereafter having been discontinued by the Portland Factory. A large line of hospital goods made in this ware Recommended where sanitary qualities are essential.

A Promising Outlook.

Soon after the beginning of the great strike in July the opinion was freely expressed by those best qualified to judge that the indications pointed to a repetition of the conditions which obtained last year as a result of the protracted closing of the tin plate, sheet and bar mills. This has been completely verified. The production in these lines was last year so heavily restricted that the stocks at the mills, in merchants' warehouses, in manufacturing consumers' hands, and of all finished products dependent on the output of these mills were very low. Therefore when they were started a conditlon of activity was prccipitated which continued without a break until the strike began this year. It was impossible during that time to accumulate any stocks of materials or of manufactured goods to form a reserve on which the consumers of the country might depend in case of any sudden interference with production. The strike of this year thus came upon a market which was practically almost bare, and has resulted in an even worse condition than that of last September, when the idle mills were started.

The strike of this year has been more widespread in its scope. It not only embraced the lines which were involved last year, but included wrought pipe and unmanufactured steel. The requirements of the country in the meantime have been very heavy, much exceeding those of last year. The mills which are starting are therefore confronted with a demand from all classes of buyers, which promises to sustain business in a very active condition far into the coming year. It will take many months to restore stocks of manufactured goods and of necessary materials for manufacture to their normal condition. The outlook in all business lines is bright, as the purchasing power of the people was never better. Especially true is this of iron and steel manufactures. A demand exists in every direction for building materials and for iron and steel products which enter into all classes of improvements. In view of existing conditions, it would not be surprising to find prices firm, in face of the fact that the production of iron and steel is increasing through the starting of new plants.

The Cost of the Strike.

When any great undertaking is completed it is of interest to count its cost, and similarly, when any serious disaster occurs, the losses incidental to it are carefully estimated for the information of the public at large. In connection with the great steel strike just ended, some attempts have been made to estimate the approximate cost to the workers and to the United States Steel Corporation. These are, however, for the most part merely guesswork. There was unquestionably a great loss to the thousands of workmen who were idle, but if there had been no strike at all it must be remembered most of them would have been idle part of the time on account of the usual midsummer repairs. Still, their loss in wages undoubtedly ran into the millions. On the other hand, the Steel Corporation suffered a serious diminution in the volume of its output, notably in the lines of tin plates, sheets and tubes. There is, however, a considerable difference between the losses in these two cases. A large number of the company's orders hold over and will be filled in the course of the next few months, the present losses being largely counterbalanced in time by increased production and consumption, so that the loss to the corporation is by no means absolute. Such, however, is not the case with the workers. They can no more make up any of the wages they have lost than the mill wheel can use the water that has passed. This fact is a telling commentary on the folly of the strike which has just closed so disastrously for the Amalgamated Association. In figuring the losses of the strike, however, it should be borne in mind that the workers are not the only sufferers. There are others who in a greater or lesser degree have shared in the losses. Consumers who from lack of material have been obliged to refuse orders, or who have been forced to buy the necessary material to enable them to fill their contracts at a price which in some instances precluded any profit, are also to be taken into the account. Moreover, the loss in wages to the workers has been keenly felt by a large number of the trades people with whom they deal. The enforced economies which have been practiced by the strikers and their families mean a large hole in the business of such dealers. These and other incidental damages must be taken into account in attempting to estimate the total loss caused by the strike. The lesson involved in this latest labor struggle will, it is hoped, impress itself strongly upon labor leaders throughout the country. If the sentiment expressed recently by a prominent British labor leader, who is also a member of the House of Commons, that "a strike is such a terrible weapon that, while I am a trade union leader, I will nover use it if I see the remotest chance of quiet negotiations succeeding," were generally acted upon by those in power in the labor organizations of this country, we should never again see such an unjustifiable strike as that which has just terminated.

Museums of Sanitation.

Considerable interest is caused by a proposition to erect a new building for the Parkes Museum of Sanitation in London. This proposal has called attention to the useful work of that institution. Although founded only twenty-five years ago, with the object of promoting sanitary science, this work has grown to have an important relation to matters of public health, not only in London, but throughout the United Kingdom, and some of its 2500 members are to be found in every quarter of

the globe. The museum contains a permanent exhibit of methods of construction, materials, water supply, sanitary plumbing, sewerage, heating, lighting and ventilation. It carries on special investigations into problems of sanitation, and maintains a library and reading room for purposes of original research. Moreover, it conducts courses of lectures for the instruction of sanitary inspectors and engineers, and also gives instructions to teachers, in order to enable them to impart to their pupils primary lessons in the science of hygiene and sanitation. The success of the Parkes Museum suggests the desirability of establishing similar institutions in the large cities of the United States. Any agency of the kind which works for the improvement of the public health is obviously of incalculable value.

German Heating and Ventilating Engineers.

The frequency with which the tables and data compiled by German engineers engaged in the construction of heating and ventilating apparatus are referred to and used by engineers in the same field in the United States will lend interest to the account of the meeting of the German Society of Heating and Ventilating Trades, held last month at Mannheim, Germany, which is presented on another page. Visits of heating engineers from the other side to the United States are not infrequent, and they are not confined to any one country. While it is natural that a number of English engineers should have visited us, they have not been by any means in the majority. The greater part of the visitors undoubtedly have come from the German speaking countries, and some of them have made a stay of several months, closely studying the details of the construction of American heating apparatus. In the accomplishment of prodigious work in the heating and ventilating field, the American engineer, beyond a question, stands in the front, but it is equally true that there has been little attempt to preserve data of these accomplishments, in the hurry for the completion of one big job in order to undertake another. To the German engineers must be accorded the position of the most careful students of the problems of their every day work. Of the highly interesting and important work in this line that is going on in the world the Germans seem to be alone in studying the methods and recording in detail the information gained and in formulating rules for the guidance of others engaged in the same field. This fact will lend increased interest to the papers read at the Mannheim meeting, which are said to contain information and data of value not only to the American engineer, but to all who are engaged in the work of constructing heating and ventilating systems.

In the current issue of the *World's Work*, Hon. Carroll D. Wright, chief of the Labor Bureau in Washington, discusses the industrial advance in America and gives some striking statistics illustrating the remarkable progress made by this country during the past decade. Mr. Wright says that the number of manufacturing establishments in this country in 1890 was 355,415, while the schedules of the census of 1900 show 653,000 manufacturing establishments in operation last year, making a net gain of nearly 300,000 establishments engaged in the manufacture of goods. The total value of products in 1890 was $9,372,437,283, while a very conservative estimate of the value of all products in 1900 places it at not less than $15,000,000,000. This is a magnificent statistical showing of industrial progress which cannot be paralleled by any country in the world.

So scarce is labor in some parts of the country, especially in the West, that it is becoming a serious problem with manufacturing and other industries in that section as to where to obtain the necessary supply of workmen. In a report recently submitted to the City Council of Dallas, Texas, it was stated that certain kinds of labor were so scarce in that city as to absolutely prevent, in some cases, the fulfillment of contracts within the specified time. It was stated that common laborers were receiving $2 a day and bricklayers as high as $8 a day, and yet a sufficient number of workers could not possibly be secured even by the attraction of such high wages.

Some idea of the wonderful extent of the petroleum development from the recent discoveries in the Beaumont region of Texas may be obtained when it is stated that the current output of oil from 30 wells at Beaumont amounts to about 1,500,000 barrels daily. The annual production for the whole country prior to the Texas discoveries aggregated only about 60,000,000 barrels a year. That is to say, the Beaumont gushers alone are yielding every 40 days as much oil as the whole outside country produces in the course of a year.

The present is one of those rare times when all branches of the heating trade are enjoying a heavy business. Stove manufacturers are pleased with the manner in which their products are selling, the furnace manufacturers have never had a larger demand than they are experiencing, and the makers of steam and hot water heating apparatus are simply overwhelmed with the orders which are rolling in on them from all sides. It has probably been fortunate for the last named that the supply of wrought pipe has been restricted by the strike in the tube works. This has interfered with the piping of many heating plants and has enabled the manufacturers of boilers and radiators to more nearly keep up with the demand for their products.

THE CONSOLIDATION OF HARDWARE JOBBING INTERESTS.

Manifold rumors and not a few detailed reports are current in regard to the attempt to effect a widespread and comprehensive consolidation of the interests of hardware jobbing houses throughout the country. While the thing is apparently largely in the air, there is no doubt that some prominent jobbing houses have been approached on the subject with a view to securing their identification with the scheme and obtaining options on their busines. Were it not for this fact the whole project is so visionary and impracticable, at least in the forms in which by common report it is presented, that it might be passed over as undeserving serious consideration.

The subject of jobbing consolidation is not a new one. It has been discussed by merchants of prominence and ability, who have maintained with much force that something in the direction of uniting the interests of competing jobbers on a larger or smaller scale would tend to diminish competition and correct some existing evils. The form in which the matter is presented in current discussions has, however, little in common with such moderate and reasonable views.

According to some enthusiastic advocates of the scheme, a consolidation of many of the jobbing houses scattered through the country, and thus covering all sections, would result in important advantages in power and prestige as well as economies in administration and distribution. The interests thus effected would be so potent, it is claimed by these extremists, that the consolidation would practically control the jobbing hardware business, being in a position to dictate to manufacturers and prevent them from supplying any jobbers who might be audacious enough to compete with them. Goods would be purchased at exceedingly advantageous prices in view of the great quantity handled, and at the same time there would be an important reduction in the expense of doing business, the force of traveling salesmen, for example, being cut down to a fraction of the present number. It is expected, too, that manufacturers will stand in awe of such a gigantic concern cover-

ing the whole trade, and will be proud to run their business for the benefit of the consolidated interests. This condition of things would naturally lead to the control of the production of many lines of hardware, and the profits of the manufacturers would be added to those of the distributers of hardware. The statement of such a project discredits it. But when building castles in the air why should imagination be restrained by the teaching of experience or the dictates of common sense?

It is unnecessary to point out the difficulties which lie in the way of the successful carrying out of such an enterprise. Even supposing that there is to be found the financial backing for the project, and that the stock would either be accepted by the houses who thus desire to get out of business, or be taken by a credulous public, this would only be the beginning of the obstacles in the way of the consolidation. The enterprise would certainly be weighed down by a liberal allowance for the good will purchased. The jobbing business may be far from satisfactory, but few houses whose identification with such a project would add to its strength would be willing to sell out without something of a fancy valuation.

It must be remembered also that any such aggregation of jobbing interests, putting great power in the hands of the corporation thus constituted, would be regarded with special disfavor and apprehension by the manufacturers. A condition of things giving such consolidation anything like a control of jobbing interests, or making it even a dominant force in the trade, would be antagonistic to the interests of manufacturers, and would necessarily be regarded by them with repugnance. Many of them have learned through bitter experience the folly of having only one or two houses through whom they have marketed their goods, and they generally recognize the safety there is in having a number of customers, and other things being even, the more the better. If it were necessary for them to tie up to one concern for the distribution of their products they would want to get out of business as quickly as possible. When the unwise advocates of such a scheme talk of the power of the consolidation in dictating to manufacturers they are but exploiting their own folly.

Perhaps even a graver obstacle would be found in the unpopularity with the trade at large of anything that might, justly or unjustly, be designated as a trust. The marketing of goods by jobbing houses outside of the consolidation or by manufacturers in direct dealing with the smaller trade would thus be materially facilitated, and any advantage that might be gained in the purchase of goods or in economies in their distribution would be counterbalanced.

The advantages of such a consolidation, on an exaggerated estimate of which the arguments in favor of the project are based, would certainly be more than offset by the disadvantages. There is, however, no need to consider the matter seriously. While there is a possibility of local consolidation or for a few jobbing houses to unite their interests, the manner in which the matter is presented in current discussions is fantastic and impracticable. Were a serious attempt made to carry it out on anything like the lines indicated it would be consolidation gone mad.—*The Iron Age.*

ANTHONY'S BULLETIN gives the following practical method of turning blue prints to a rich brown color: A piece of caustic soda about the size of a bean is dissolved in 5 ounces of water and the blue print immersed in it, in which it will take on an orange yellow color. When the blue has entirely left the print it should be washed thoroughly and immersed in a bath composed of 8 ounces of water, in which has been dissolved a heaping teaspoonful of tannic acid. The prints in this bath will assume a brown color that may be carried to almost any tone, after which they must again be thoroughly washed and allowed to dry.

The Emperor William of Germany has presented a costly porcelain vase, which will be offered as a prize for the most successful stationary engine burning alcohol. The prize will be awarded by the German Agricultural Society.

COUNTY FAIR EXHIBITS.

BY ENTERPRISE.

From the beginning of life, as children, we all desire to do what our neighbors find pleasure in doing, even though circumstances may not permit us to indulge our wishes as children and our finances may not allow it as business men. For a number of years I have carried on business in a town where my competitor was much better off financially than I was. The latter has always had some sort of an exhibit at the county fair, which is held in our town, with one of his men to attend to it, answer questions, distribute circulars and virtually enjoy himself. I have had no one that I could afford to spare from my regular business during the fair week, nor did I feel that I could go to the expense in time, material and labor that was necessary. I have hankered after the flesh pots of Egypt, however, and the continual hankering was the father or mother of a method of enjoying them which I have got to the full this year.

Every man who does business in a fair town knows that a large bulk of the people do not go to the fair or come away from it until they have been in the town proper on some special errand. In the realization of this fact lay the success of my scheme. I knew that anything I might do to attract visitors to my store during fair week would be a legitimate advertisement of my business. I secured a large muslin banner, on which I put the words, "My Fair Exhibit is in the Store," and I had a large hand point to the store. I used plenty of different colored bunting and flags and Chinese lanterns, trimmed up the front of my store and displayed showy goods to add to the attraction. As the weather was fine, I fitted up an ideal kitchen on the sidewalk in front of the store, and got the colored man who blacks my stoves and his wife to come and help him manipulate that kitchen so as to arouse the curiosity of the people. I give a great deal of credit to Sambo, on whose originality I was forced to depend. It is safe to say that the ordinary tinware, agate ware and kitchen articles, and the range that I have used for years as a leader, never attracted so much attention as they did for the days that the fair visitors were in town. There was a crowd there continually, and many orders were taken inside the store for eave trough, conductor pipe, flashings and roof repairs that would never have come my way if I had not had my "fair exhibit" a mile and a half from the fair grounds.

If you will pardon my egotism, I will suggest that if a comparison was made of the business done by my competitor and myself during fair week it would be found that my mother wit surpassed his moneybags. In closing I will only make the suggestion that if a stove dealer will think in the right direction and use a little exertion to carry the "think" into effect, he will make the stove and tin shop of the town as much talked of as the bargain sale dry goods house.

The *Bulletin* of the New York State Department of Labor for the quarter ended June 30, 1901, just issued, says that the returns from the labor organizations in New York for the months of April, May and June show that employment was better than it has been in any of these months for the past five years. Only 2.3 per cent. of unionists were idle in that quarter, as compared with 9.4 per cent. in 1900, and 3.7 in 1899. It was the lowest percentage hitherto recorded by the Bureau of Labor Statistics. The improvement in the condition of the labor market was very general, extending to nearly all industries except the printing business.

The International Correspondence Schools of Scranton, Pa., direct attention to the fact that instruction is given throughout the entire year, the vacations of the principals and instructors being arranged so that there is no interruption in the work of the schools. This affords an opportunity for mechanics and others who have dull seasons to take up a course by mail and make good use of what would otherwise be waste time.

THE WESTERN STOVE TRADE.

Western stove manufacturers are greatly pleased with the conditions prevailing in their section of the country. The demand for heating stoves is always affected by the weather during this month. The days have been sufficiently cool to cause stove buyers to seriously think of the necessity of providing artificial heat and the demand has therefore been decidedly stimulated. The orders now being received are keeping shipping departments busy and the prospects are bright for a continuance of the active trade. The reports received from various manufacturers indicate that thus far this year the business secured is considerably in excess of the corresponding time last year.

The scare caused by the long drought during the summer months operated to the advantage of the stove manufacturers located nearest to the districts affected. Dealers in those sections were naturally very conservative and were disposed not to place large orders for future delivery. Now that stoves are urgently needed, the dealers are to a considerable extent sending their orders to local manufacturers to secure delivery as speedily as possible. No complaint is heard about prices. Dealers are not making every effort, as they sometimes do, to secure lower prices, but are more concerned over the desirability of receiving their stoves quickly. The trade is further running into a larger proportion of the better class of goods. It is remarked in this connection that the trade in base burners shows distinct improvement as compared with preceding years. This is undoubtedly due to the good financial condition of the farmers and of all trades closely interwoven with their interests. The reports from the drought stricken sections show that the damage to the corn crop was not nearly so great as at first estimated. Instead of the crop being entirely destroyed, even the worst sections are now believed to have raised nearly if not quite half a crop, which is bringing double the price of the corn produced last year, and thus the agriculturists are receiving almost as much money as though they had raised a full crop. This explanation of the continued good demand coming from farmers is borne out by the experience of the hardware trade. The jobbers of hardware have found no falling off in the demand for their goods, and are looking forward to a heavier fall trade than ever before known. This is the view taken by even the jobbers in the Missouri Valley, who would be more seriously affected by a short corn crop than those of any other locality in the West.

The Philadelphia Stove Trade.

The stove trade in Philadelphia has developed considerable activity during the past few weeks. The fall trade has come in with a rush, and the various manufacturers and dealers are hard at work making deliveries. The delay in getting the different lines of goods into the construction of which sheet steel and sheet iron enter is very marked, but it is expected that this condition will rapidly adjust itself as the cause of the delay in the delivery of raw materials is removed. Trade during the past week is reported to be brisk and well distributed, cook stoves and ranges being in about equal demand with heating goods. The indications are favorable for a very prosperous season in stoves and heating goods.

The Kelsey Furnace Company, Syracuse, N. Y., are sending out a dainty little pamphlet entitled "Summer Heat," which they state is the best kind of heat one could have in the winter time, if such a thing were possible. They say "If we could take the fresh, pure air of a bright and brisk summer's day and bottle it up and lay it away to be distributed in the home during winter in proper quantities, it would be the ideal kind of warm heat to enjoy." While this is not practical the company state that the heat produced by the Kelsey Generator comes the nearest to a pure summer like atmosphere, and they refer to the fact that they have hundreds of good words to this effect from users of their heating apparatus.

THE CAUSE OF MANY STOVE TROUBLES.

No doubt many of our readers read the article in *The Metal Worker*, entitled "A Remedy for All Stove Troubles," which has induced a correspondent who has had a wide enough experience in the stove trade to win respect for his opinions, to contribute the following observations:

Feeling that many of the readers of *The Metal Worker* of September 21 will derive benefit by cutting out the article giving "A Remedy for All Stove Troubles," I desire to make a supplement to it. Too little attention has been paid by manufacturers to explaining why a stove pipe collar of a certain size is adopted for use in connection with certain stoves. In consequence, many stove dealers, stove jobbers and tinsmiths who have to get out the stove pipe for connecting stoves with chimneys look upon it with little respect, and some conclude that the size has been arrived at in some arbitrary manner, and that some other size would answer the purpose equally well. This has cost the whole stove trade a great deal of money. Experience has demonstrated in many instances that the size of the stove pipe collar might be smaller without inconvenience, but this is only true where the draft in the chimney is exceptionally strong. Where there is a weak draft the reduction in the size of the stove pipe, which has been customary, is sufficient to destroy the operation of the stove. In many sections of the country stove pipe is only made in the full inch sizes, and such pipe as 4½ and 5½ inch is not found; consequently, when a stove has a collar calling for a 6-inch pipe and the pipe is reduced to 5 inches, the reduction in the smoke carrying capacity is not as 6 is to 5, but as 36 is to 25, as circles are compared not according to the diameter, but according to their area. From this it will be readily seen that to reduce the pipe 1 inch in diameter is to reduce its smoke carrying capacity one-third. In the course of a number of years the use of full sized pipe called for by a pipe collar may cost a stove dealer as much as a few dollars, while the failure of one stove to operate will cost him in the loss of trade, loss of time, loss of prestige and loss of temper as much as several dollars.

In many cases where a chimney has a slow draft, benefit has been found by enlarging the smoke pipe, and where the stove has a 6-inch collar to flare it so that the upper end will accommodate a 7-inch pipe and carry a 7-inch pipe to the chimney. This allows a greater volume of the hot gases to enter the chimney and raises the temperature, and in the end creates a draft. The draft in a chimney is naturally due to the difference between the weight of a column of air inside of it and outside of it. Consequently, the sooner the chimney is heated up so that the air traveling through it is kept at a high temperature, the sooner the draft of a sluggish chimney will be improved. An illustration that has been used in connection with the reduction in size of a stove pipe collar on a stove is that a man can live if another man holds his thumb rather tight on his windpipe, and if the pressure was continued might live for years, but the comfort that attends the removal of the pressure only corresponds with the relief of the substitution of a full sized stove pipe for a reduced pipe. The workings of a chimney to many are a sealed book and difficult to understand; in consequence, it is best not to offer any impediments.

The following experiment may afford help to some unfortunate tradesman: A local dealer had connected an apparatus having a 12-inch pipe with a chimney having a flue 6 x 8 inches in size; in consequence it was impossible to raise steam in the apparatus, although the coal burned, and the owner thought that inasmuch as the coal was burned heat to make steam should be generated. A visiting engineer was informed of the trouble, which he immediately charged to the size of the flue, but expressed a willingness to visit the building and see if any remedy could be suggested. He found that the connection was made by running a 12-inch pipe into a 12-inch hole cut in the chimney base, leaving an opening for the entrance of smoke about 6 x 12 inches instead of 12 inches in size. This hindered the entrance

of the smoke at a point where it was supposed to enter and rise. He advised that the base of the chimney be cut out for a space of 18 inches high and 9 inches wide on the front and tapering to the back of the flue, then to fit a tapering sheet iron flue base to the opening thus made, with a 12-inch round collar for the smoke pipe. This was made of sheet iron and put in place, fastened to hold it securely and then cemented air tight. This experiment was made in order to save the expense of building a chimney, and inasmuch as the flue had a good natural draft, the device was effective to the extent that no difficulty was experienced in raising steam after the apparatus had been fired with the new connection, although the full efficiency of the boiler could not be derived with a flue of such small capacity.

TALES FROM THE WALDORF-ASTORIA.

BY JEEMS.

A short time ago several of the up-State stove manufacturers were in the Waldorf-Astoria *café* discussing the good cheer that "Oscar" provides for the poor and needy from that section. After they had sampled the goods and pronounced them perfect they called for the smokes and, forgetting all about stoves, plunged into such a real pleasant time as always ensues when the animals are properly fed and watered.

If you want to get the stove manufacturers into the right frame of mind and satisfied that life is worth living and prices must be maintained, feed 'em. There is nothing like a good stock of Waldorf or Squantum feed stowed under their jackets to produce it. The crowd is no good under Banting diet. Nothing ever came from it.

In this case wonderful tales were told, but, singular to relate, not one in which stoves were referred to. They were merely personal experiences of adventure, some of which were quite marvelous.

"Just to think of it, boys, I had the darndest thing happen to me last night," said a Rochester manufacturer. "I and my friend started for Weber and Fields'; went up to the box office and asked for two seats. They said the house was sold out; no seats, but told me I could get some from the speculators outside. So we went out and found a chap who said he could fix us up on the bald head row. He said he knew we had sporting blood in us. I said, 'how much?' 'Five dollars.' I pulled out my wad and paid him. We went into the show; were ushered right down to the finest seats in the house and were going to squat when the usher said: 'These tickets are no good; they are for next Saturday night.' You can imagine how I felt; all the chorus girls looking right down on me, taking me for a yap. We all sailed up the aisle. You bet I was mad, but what was the use of making a fuss. I knew I was buncoed.

"I got out on the sidewalk and if I didn't spot the galoot who sold me the tickets. Say, do you know that fellow was about 6 feet 6 and weighed about 400 pounds. But I walked square up to him and sang out: 'Cough up.' Do you know he just looked across the street. I waltzed around him and told him to 'cough up' again and he had the gall to ask me 'what for?' I was going to smash him; I was so mad, you know. The fellow actually denied that he sold me tickets and said he never saw me before! I was furious! 'Cough up,' I yelled, 'or stand there;' and I made a dive for a cop. Just then a sleek looking cove said: 'My friend, we don't want any trouble. I will pay it. Here's your five.' For two pins I would have smashed them both; I was so wrathy.

"Just as well you did not. You would have only got to court; those fellows would have said you pulled a razor on them," said a Utica furnaceman. "You were in luck. Think of me. I was on my way from Chicago last week. Coming home on the car I was accosted by a very pleasant gentleman, who asked me if I was going East. I said 'yes,' and he opened on me that he was bound that way, but he was $20 short, and asked me for the loan of it. I said I was short myself, 'but here is $10, if it is of any use to you.' He thanked me very kindly and was profuse in the matter; said that ten was no good; he needed $20. Well, he was such a nice sort of a fellow I thought the matter over and let him have $20. He was awfully nice about it, by gosh, and was very grateful.

"In the course of the evening I asked the conductor where my friend was. 'Oh, he done up two other gents and got off at the last station.'"

The Simpson Multiple Action Heater.

We present in the accompanying illustration a general view of what is known as the Simpson multiple action heating stove, just placed upon the market by the Simpson Stove & Mfg. Company of Twenty-sixth street and Liberty avenue, Pittsburgh, Pa. The heater derives this name from the fact that it combines three systems of heating—namely, radiation, reflection and hot air circulation. The object of this combination is to obtain the greatest amount of heat with a minimum consumption of fuel, which in this case is gas. The style of construction is what is generally known as "water tight." One of the most important features is the fire box, which is corrugated so as to give a greater heating surface. It is cast in one piece so as to prevent the gases mixing with the hot air and escaping into the room. The burner is so made that one part can be operated independently of the other, each part being provided with separate mixer

The Simpson Multiple Action Heater.

and controlled by separate valves. The burner is known as the Multiple, which is used with the company's Nos. 21 and 22 Simpson gas heater with gratifying success. The construction is such that each front grate bar constitutes a burner, which directs the flame against the gas fuel from the front, while the base burner directs the flame from the back, thus making, it is claimed, a much quicker heat than where the base burner alone is employed. The burners have drilled holes and can be regulated separately as circumstances may require.

All parts exposed to the flames or active heat are made extra heavy, so as to prevent warping or cracking, this being especially true of the fire box. Five tubes are used to carry the hot air away from the heated surface of the rectangular fire box, the center tube being 6 inches in diameter and is utilized as an air flue as well as a flue to carry off the products of combustion. The principle is similar to that of the Rochester radiating drum, one pipe being inside of the other. An examination of the engraving presented herewith will give an idea of the general scheme of decoration. The ornamental sides and back incasing the fire box in which the burner and gas fuel are placed is perforated, exposing a larger surface to the cold air than would be the case in a single jacketed stove. The manufacturers claim that the construction here shown is sufficiently powerful to heat two rooms for what it usually costs to heat one.

A Voice from California.

Frank Van Uxem, formerly of Richmond, Ind., and now eating the lotus on the balmy shores of the Pacific, writes us from Oakland, Cal., inclosing an extract from a letter to a friend in the town of Richmond, where for 30 years he was in the stove manufacturing business "enjoying," as he says, "the visits of *The Metal Worker* for the greater part of that time." Mr. Van Uxem is careful to explain that from the statement that he has "seen 90 May mornings," it is not to be inferred that he is that many years old. He believes that there are enough of his old business friends among our readers to make the publication of his letter worth while. It runs as follows:

"My Dear X.:

"I am in receipt of the clipping, and I am moved, I may say deeply moved, in reading the slip:

> WANTED.
>
> Young or middle aged man that understands stoves and furnaces, for salesman at the Peter Johnson Stove Store.

And has it come to this? 'How have the mighty fallen!' Those captains of industry in the stove business in Richmond—Underwood, Le Fevre, Potts, Bargis, Nordyke, Hoffman Nye, Starr, Peterson, Johnson, Leeds and the undersigned; all but two dead or removed, and their mantles fallen on hodge podge dealers in crockery, or tape and overalls. Oh, it's too bad! I don't wonder a MAN is wanted who 'understands stoves and furnaces' to restore the business to its former standing and dignity. Can he be found?

"I trust so; but not in the person of yours truly. Oh, no! He has had enough. Did he not for 30 years go in and out before the people offering his wares so 'scheap as never vas,' and though men may come and men may go, must he go on forever? Give him a rest; let the balmy airs of California still fan his brow. Seek not to entice him from a land that is six months June and six months October. No more call him on a zero morning to explain the advantages of the 'best refrigerator on earth,' or some sweltering summer afternoon telephone for a man to be sent at once to see about the furnace. If the roof don't bake or the cook stove leaks don't bother him.

"The *tile* is off his head; the *mantel* fallen from his shoulders, and *grate* things are no longer to be expected of him. While not exactly *stove* up he is on the shelf. Hardware has had its effect. He has seen more than 90 May mornings, and no longer looks forward to the approaching autumn as the season of heaters and stove pipe. The spring salesman cannot beguile him with stories of improved gasoline cookers; and the freezer man would only meet an icy stare upon opening up his wares.

"These things are left behind—bid adieu, not *au revoir*, to

Sympathetically yours,

"Frank Van Uxem."

Detroit Stove Works.

The catalogue which is being sent out by the Detroit Stove Works, Detroit, Mich., is a volume of 300 pages substantially bound in heavy board covers and illustrates their leading lines of Jewel stoves and ranges. It is known as No. 71, and covers the season of 1901-1902. The arrangement of the matter gives evidence of careful attention to the requirements of the trade, and the assortment of goods presented cannot fail to interest the enterprising and wide awake dealer. The company point out that while the statements concerning the goods illustrated are brief, they are complete and cover the actual facts. They say that when a stove is No. 8-20 it means that it has a 20-inch oven and not one measuring 19 or 18 inches, and that when they say a heating stove has a 14-inch fire pot it means that it is 14 inches full, inside measurement. The grades of iron used in the construction of Jewel stoves are carefully selected and chemically tested before being melted, and no stoves are offered for sale until they are thoroughly fire tested.

In the opening pages illustrations are given of the special features to be found in connection with the Jewel goods, the leading places being occupied by the Premier Jewel, Domestic Jewel and Leader Jewel steel ranges. One style of Jewel steel range is especially adapted for hotel use, having a number of ovens and fires, according to requirements. The cast goods embrace cooks and ranges of handsome exterior and occupy something over 140 pages of the catalogue. The remaining portion of the volume is given up to heaters which embrace many handsome constructions embodying the latest improvements and adapted to meet a wide range of requirements. Jewel gas ranges in extensive assortment, hotel ranges, gas radiators, broilers, hot plates, warm air furnaces and miscellaneous goods are also presented. Several pages at the close carry skeleton cuts of stoves and ranges for the purpose of facilitating the ordering of stove repairs by the dealer. A comprehensive index to the telegraphic code, alphabetically arranged, is an important feature of the volume.

Some New Gas Stoves and Ranges.

An attractive catalogue of 64 pages which has just been issued by the Reineke-Wilson Company, with offices and salesrooms at 13 to 19 Wood street and 242 to 254 First avenue, Pittsburgh, Pa., presents numerous illustrations of the leading lines of gas stoves, ranges, fire place heaters and natural gas appliances which they manufacture. This is the company's tenth annual fall catalogue and is known as No. 29. Especial attention is directed to their new lines of heating stoves for the season of 1901-1902, and particularly to the Century, Mystic and Keystone Reflex Heaters.

The Century stoves are made in four sizes with two different styles of finish, and in three varieties—the reflector, the asbestos back with base burner, and the gas fuel stoves. These are furnished with either open or closed fronts and are also made as fire place heaters. In all cases the cold air is taken in at both ends of the heating drum through openings in the side castings, thereby insuring a constant circulation of warm air. The fire place heaters offered under the name Century are handsomely ornamented and with the mica front make a brilliant appearance, especially when the coals within are all aglow.

The Mystic is a rather odd conception in the way of a heater and is intended for using natural or artificial gas. It is referred to as a stove which combines the important features of an atmospheric or blue flame burner with a reflecting surface. The body of the stove is of polished blue steel with nickel plated corner pieces, name plate and trimmings. The flames from a special Bunsen burner play against a cast iron deflecting dome and are thrown back by a highly polished copper reflector, thus presenting a most pleasing and novel effect. The flames are surrounded by a current of heated air at a very high temperature, which prevents the cooling of the flames, thus insuring an odorless stove, whether or not it is connected with the flue. A supply of cold air enters through a series of tubes at the back of the stove, passes into a heating drum and is discharged through perforations in the top of the stove. By this means a rapid circulation of air throughout the room is created and gives a well ventilated room without any cold corners.

The Keystone Reflex, also intended for natural or artificial gas, is a reflecting stove having a body of planished iron trimmed with nickel plated cast iron corners, front arch piece and other ornaments. The burner concealed in the top of the stove is made of a series of specially imported lava tips, and, it is claimed, will not corrode. The sides of the stove are lined with planished copper, the sloping reflector being planished copper corrugated, and all highly polished.

Attention is also given in the catalogue to the Star gas heaters. the Majestic blue flame radiators, fire place heaters, gas logs, audirons of several varieties, grate fronts, portable baskets, asbestos material, burners, lamps, wire guards, &c. A telegraphie code for gas stoves and heaters is not the least interesting feature of the publication.

ODD PLATES.

THE BUCKWALTER STOVE COMPANY, Royersford, Pa., are distributing among their friends in the trade a four-page folder carrying an illustrated description of the Highland Oak, an entirely new single and double heater intended for using hard coal, soft coal, coke, wood, or any other material of a combustible nature as a fuel. Special reference is made to the fuel gas generating device, which, it is claimed, contributes greatly to efficiency, economy, eleanliness and healthfulness. An air duct or tube encircles the top of the fire pot, admitting heated air in small jets into the fire chamber to mingle with the gases liberated from the fuel. This, it is claimed, results in the perfect combustion and actual consumption of the gases, thereby converting them into heat instead of allowing them to pass out unconsumed through the smoke pipe and chimney. The Highland Oak is offered in three sizes as a single heater, and three sizes as a double heater, and is furnished with the well-known Ransom duplex grate. The company state that they can also furuish plain grate, which is an improved form of the center discharge type.

THE FAVORITE STOVE & RANGE COMPANY, with main offiee and works at Piqua, Ohio, set forth the merits of the Buckeye Favorite Heating Stove in a four-page eirеular which they have issued. This Stove is made in three sizes and is intended for using soft coal as a fuel. The manufaeturers refer to its durability as well as to the fact that it will hold fire a long time and will operate most satisfactorily.

HAGEY'S KING HEATER is the subject of a four-page folder which is being distributed by the Hagey Stove Company of St. Louis, Mo. It is intended for burning wood as a fuel and is referred to as very economical. The circular gives directions for setting up the Stove in order to give the most satisfactory results in operation.

"THE Mystic Sunshine Ranges, made at the Sunshine Stove Shop," furnish the basis of an attractive folder which is being sent out in eard case form by the Reading Stove Works of Reading, Pa. Reference is made to the graceful shape and ornamental design of this Range, and to the important part which is played by the highly finished nickel ornamentation. The manufacturers state that it has been designed by master artists, and is made by the most careful workmen of the best material. It is constructed for people who want the best, and its sueeess "lies in the fact that it is made right—made of the right material and offered at the right price." In addition to all this they say that "as a master achievement attained through years of experience and well directed labors the Mystic Sunshine Range is a shining example." The folder is inclosed in an envelope, which is a *facsimile* of one of Uncle Sam's mail pouches.

THE MARCH-BROWNBACK STOVE COMPANY of Pottstown, Pa., are sending to Stove dealers handlling their speciailties a card which is in the nature of a guide to those using Oak Stoves and Heaters manufaetured by them. The card is provided with an eye for hanging up and carries reduced illustrations of 12 varieties of Oak Heating Stoves.

IN the jubilee number of the New York *Times*, issued in celebration of its fiftieth anniversary, J. Q. A. Butler is mentioned as one of the eitizens of New York who has been in business for 50 years or more. Mr. Butler is well known to the Stove trade and has an office at 117 Beekman street, where he makes a specialty of the Stoves and Furnaces of the Magee Furnace Company, Boston, Mass.

THE F. E. MEYER & BROTHER COMPANY of Peoria, Ill., are sending to the trade their Handy Furnace Estimate Book No. 10. This book is suitable for carrying in the pocket, and, in addition to being a catalogue of their Handy Furnaee Pipe and Fittings, has ou every other page a blank form for use by furnaeemen in making estimates of the cost of furnace heating plants. The book ineludes price-lists of Wall Stacks, Boots, Offsets, Elbows, Register Boxes, and a complete line of Round Pipe and Fittings; also Registers and Furnacemen's Supplies. It incloses circulars devoted to the Weir All Steel Air Blast Furnace for hard and soft coal, and a eircular devoted to Skylights, Finials and Weather Vanes.

THE CANTON STEEL ROOFING COMPANY, Canton, Ohio, report a very large trade on their Registers, much larger, in fact, than they have been able to take care of. This is partly due to the fact that their Register is a novelty. Their trade is mostly with retailers, who are ready to take all they can make.

THE Boston office of the Central Oil & Gas Stove Company, of which Harvey N. Brooks is manager, has been moved to new and fiuer quarters at 17 Washington street, that city.

A CARD which is beiug sent out by the Simpson Stove & Mfg. Company of Pittsburgh, Pa., calls attention to the Simpson Gas Heating Stoves, and states that "as a profit bringing proposition they were always hard to beat, but this year they are better than ever." Referenee is made to the one-piece cast iron fire box of the Multiple Action as being a new feature, and the statement is made that it prevents the poisonous gas products from gettiug into the room. The company request those dealers who are interested in good values made by quality and price to write at once for a copy of their new catalogue.

SOME circulars which are being distributed by the Walker & Pratt Mfg. Company of Boston, Mass., relate to the Charm Crawford range, the Crawford Oak and the Clover, an attraetive sheet iron cylinder surface burner made in four sizes. It has draw center grate, capacious ash pan, revertible back pipe with damper, elinker door and draft slide operated by a screw. The linings of the stove are carried up one course above the level of the door. The Crawford Oak is a new design of handsome exterior and is intended for using as a fuel "anything that will burn." The stove is carefully made and fitted, has a heavy steel body and can be furnished with a double fire pot when desired. Either a draw center or triangular grate ean be furnished, and any part may be renewod without the necessity of purchasing the whole grate. In regard to their New Style Home Crawford the company announce that it is always shipped with tea rail unless otherwise ordered. The new style mantel goes over the new steel tea rail, the latter being necessary in order to set up the mantel.

THE ROBINSON FURNACE COMPANY, 107 Lake street, Chicago, report the demand for their furnaces far surpassing anything in their experiencc. They are employiug double the force of men on their pay roll last year, and are compelled to keep them working at night in the eudeavor to fill orders now on their books. Every day briugs a fresh crop of orders, and the outlook is very favorable for the continuance of this heavy trade. The compauy were fortunate in having secured a large stock of tin plate and steel before the steel strike cut down the supply of these materials and caused the great advance in prices experienced sinco then.

THE WIRETON HEATING COMPANY, 40 Dearborn street, Chicago, have sold over 800 of their Wireton Time Regulators in the past two months. This Regulator, which is a cloek arrangemeut for opening drafts at a definite time, has been received with most gratifying favor by the heating trade. The Regulator is sold at such a low price that auy housekeeper can afford to purchase oue, and the novelty of the device has recommended it to all classes of people. The company are pleased at the results so far secured and are making arrangements to supply a much heavier demand, which they feel sure will be realized in the near future. They further report an exceptionally large trade in the Auer Side-wall Register, for which they are exelnsive sales agents in the States of Illinois, Wisconsin, Minnesota, Iowa and Missouri. Not only are these branches of their business in

fiue conditiou, but the demand for the Quaker Furnaces which they manufacture is so heavy as to keep their furnace department running to its full capacity.

The American Radiator Company, Chicago, have received from Robert C. Clarkson, the well-known heating engiueer of Philadelphia, a facetious letter relating to the company's catalogue recently issued. This letter very ingeniously interweaves the names of the principal officers of the company and the names of their various styles of radiators, making an extremely entertaining epistle. The letter would be published in *The Metal Worker* except for the extreme modesty of the officers whose names are mentioned. This is greatly regretted, as the trade would undoubtedly be delighted if they had the opportunity to read the letter.

The Duplex Mfg. Company, South Superior, Wis., advise us that they have purchased the plant formerly used by the South Superior Stove Works, together with all the patterns, material and manufactured goods. The company are manufacturers of Wind Mills, Feed Mills, Stock and Reservoir Tanks, Tank Heaters, Iron Pumps, &c., aud bought the stove plant principally to increase their facilities in the lines iu which they have been engaged. They state, however, that they will also engage in the manufacture of Stoves, probably commeucing by manufacturing somc of the best selling goods made by the old company, and expect to grow into the business as rapidly as the outcome will justify. The company needed additional room for their growing business, even if they had given the manufacture of stoves no consideration.

The Excelsior Steel Furnace Company, 38 West Monroe strcet, Chicago, report a phenomenal demand for Furnaces and Furnace Fittings. Not a week has passed since January 1 which has found them filling their current orders, the demand constantly running in excess of their ability to handle it. This demand has come from all over the country, and they have not only shipped Fittings but Furnaces to customers in New England and other localities along the Atlantic seaboard. This is their first year for the manufacture of Adjustable Elbows, and it has been a remarkably heavy one. They engaged in this brauch of business at a most auspicious time. They belleve that the heavy demand for their products will continue well up to the holiday seasou.

The branch of the Art Stove Compauy at 79 and 81 Jefferson street, Chicago, is enjoying a heavy trade. The company this year greatly enlarged their facilities in Chicago and added to their liue a number of patterns which have proved to be particularly well adapted to the requirements of the local trade. The company's business has been especially heavy iu Steel Ranges and Base Burners.

Thomas J. Hogan, secretary of the National Association of Stove Manufacturers, has returned to his headquarters ln Chicago after an absence of several weeks, duriug which time he traversed the country from Kentucky to New England, visiting numerous Stove manufacturers in the iutervening territory. Mr. Hogan reports that the mauufacturers of all districts visited are extremely busy and that the Stove trade has seldom been in better condition. Prices are well sustained, the shortage in steel having had quite an effect in stiffening the prices of those who have been in the habit of cutting under the regular rates prevailing in the trade.

The Wilke Glass Lined Refrigerator.

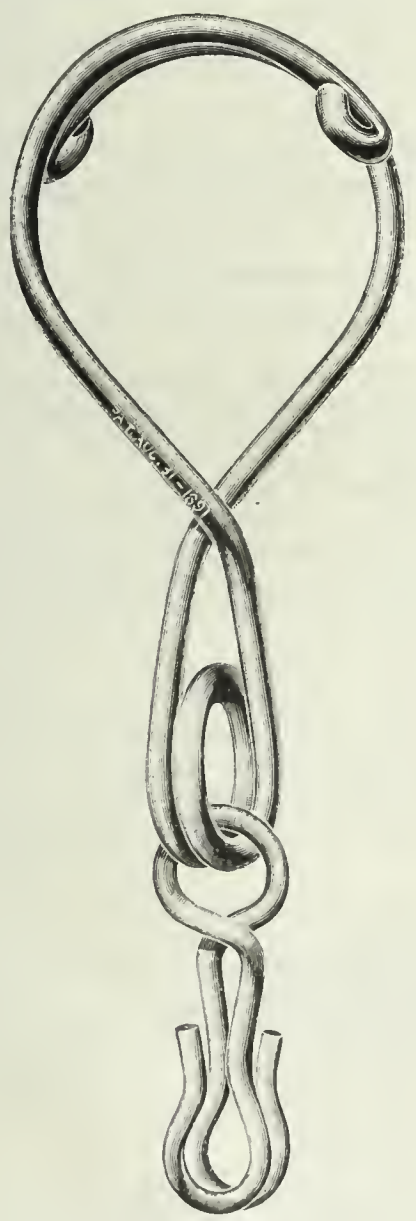
The Wilke Glass Lined Refrigerator.

The Wilke Mfg. Company, Anderson, Ind., have brought out refrigerators which are completely llned with glass, built with exteriors of porcelain or tile or of polished oak. An illustration is herewith given of one of the new refrigerators which conveys some impression of the attractiveness which the glass lining imparts. The glass used for the lining is regular plate glass ½ inch thick, taken as it comes from the kiln mouth, and is etched or opaqued by the refrigerator company. The color is a very light green, which ls suggestive of cool cleanlincss. The glass is assembled in forming the interior so that glass does not come in contact with glass, which would cause spalling or crumbling on the cdge. A special cement is used for this purpose, which has

been developed by the company after long experiment. The cement is non-odorous, water proof, antiseptic and hard settling, yet allows for the expansion and contraction due to varying temperatures. The entire top, bottom, sides, back, doors and front partitions are lined with glass in this way, so that no wood or metal is exposed to the action of the contents. The very smooth surface permits it to be easily cleaned. The provision shelves are coated with Purity cold water enamel of a brilliant white color. The company state that the glass lining is so strong that it will stand all reasonable use and some abuse. They have shipped several of these glass interiors long distances and thus far have not had a case of breakage in transit. They claim that the new refrigerator is the most sanitary as well as the most attractive refrigerator thus far brought out. Special attention has been given to insulation to secure economy in the consumption of ice. This line of refrigerators will be known as the Crystal line, will be furnished in all the usual sizes, and will be sold at the same prices as the company's tile lined refrigerators, which they will still continue to make. The glass lined models are an addition to their regular line.

Safety Ladder Hook.

The Taplin Mfg. Company, New Britain, Conn., and 90 Chambers street, New York, have just put on the market the safety ladder hook, here illustrated full size.



Safety Ladder Hook No. 0.

It is designed particularly for the use of painters, fruit pickers or any persons who need to suspend a can, pail or similar vessel by means of a wire bale. It is made of spring wire, the ½-inch space between the parallel wires at the top being sufficient to allow it to be pushed either side of rung of ladder or limb of tree, when a quarter turn locks it instantly. The device for holding the bale is also such that the can is securely held and easily released with a quarter turn of the bale.

Stove and Hardware Dealers.

The E. Z. Mfg. Company of Galesburg, Ill., have the somewhat unique distinction of employing a traveling saleswoman. The company are manufacturers of Mouse and Rat Traps. The lady in question recently went the round of the trade in New York City in the interest of her firm.

John T. Burriss, Anderson, S. C., is reported as having had an exceedingly busy summer in his Roofing, Tinning and Plumbing business. Mr. Burriss expects a large fall trade in Stoves and Tinware. He has arranged to hold on October 12 a baking contest between girls of 14 years of age and under, the prize for which will be a beautiful nickel plated Stove. The winner will be chosen by a jury of five disinterested ladies of Anderson. The plan bids fair to be a great success, and Mr. Burriss says that it is making things quite lively for his competitors.

Russell, Burdsall & Ward Bolt & Nut Company, Port Chester, N. Y., have just issued a handsomely printed illustrated catalogue (126 pages) of Bolts, Nuts, Rivets, Screws, Stove Rods, Turnbuckles and Washers. A great variety of the several classes is shown, especially of Bolts, Nuts and Screws. This company are the successors of Russell, Burdsall & Ward, established 55 years ago, and the Port Chester Bolt & Nut Company, whose existence measures a third of the time. Extensive additions are being made to their plant.

Hudson & Nuckols have succeeded Hudson & Co., dealers in Stoves, Tinware, &c., at Murfreesboro, Tenn.

Hammacher, Schlemmer & Co., who have been established at 209 Bowery, New York, for over 50 years, are distributing an attractively prepared catalogue illtrated in colors, showing their line of Tool Outfits for home use. The firm lay particular stress upon the quality of the goods they furnish. The outfits are not made of cheap wood working Tools to sell at a price, but are composed of absolutely high grade Tools, inclosed in thoroughly well made and well furnished cabinets, and are of real value as practical working Tools. The cabinets are offered in a variety of sizes and styles, and are priced from $5 to $100.

R. P. Viland, in the Hardware, Stove and Tinware business in Slater, Iowa, has admitted a partner and the style is now Viland & Skortman.

Tucker & Dorsey Mfg. Company, Indianapolis, Ind., have issued a catalogue illustrating their line of Hardware and Wooden Ware Specialties, including Slaw, Vegetable and Kraut Cutters, Towel Rollers, Phœnix Hat, Coat and Clothes Rack, Iron Hook Coat and Clothes Rack, Wood Pin Hat and Coat Racks, Towel Racks, Knife and Fork Trays, Lemon Squeezers, Columbia Mop Wringer and Combined Step Ladder and Chair. It also represents the Indianapolis Washing Machine, patents on which are pending.

Composition of Glass.

Glass, in a technical sense, is understood, says the *Glass Budget*, to be a silicate or a silicate mixture which at a high temperature is a thin fluid, and which as the temperature is reduced passes to a semifluid and then to a solid condition. It is ductile in its fluid and semifluid state, during which it is shaped into desirable form by blowing, pressing, casting and rolling, drawing, welding and spinning. Opaque when at a white or red heat in its molten condition, it passes, upon cooling, into translucence, transparence or pellucid crystalline form, according to the degree of purity in the materials of which it is composed. These are, in the main, silica or glass sand, which constitutes from 50 to 70 per cent. of the basis matter of all glass. Separately, silica is insoluble in attainable furnace heat, and therefore solvents are added in the form of potash, soda ash, lime, lead, niter, &c., and when colored glass is desired various metallic oxides are added, as oxide of tin or cryolite for milk white, the oxides of gold, copper or selenium for red or ruby, cobalt or zaffer for blue, carbon for amber, chrome for green, cadmium for yellow, &c.

Meeting of German Heating and Ventilating Engineers.

FROM A SPECIAL CORRESPONDENT.

The third meeting of the Society of German Heating and Ventilating Trades occurred at Mannheim, August 12 to 14, 1901. The sessions were held in the lavishly decorated hall in the City Park.

MONDAY, AUGUST 12.

The first meeting was called to order by Professor Hartmann of Berlin, who expressed his satisfaction in seeing so large a number present who had attended the first meeting in Berlin in 1896, and the second, in Munich, in 1898, as well as over the many new faces present, to all of whom he bid welcome. He explained the objects of the meetings as being for the mutual exchange of ideas and knowledge of the important subject of heating and ventilation.

Professor Hartmann dwelt on the great interest manifested in the doings of the society by the different Imperial and Royal State Ministries, as well as the many city administrations, who sent as representatives Government architects, inspectors and municipal heating engineers, those present coming from Russia, Austro-Hungary, Switzerland, Belgium, Holland, Denmark, Sweden and Norway, as well as from all the kingdoms and duchies of the German Empire. The attendance numbered 182. On behalf of the engineering branch he thanked the contracting (master fitters) branch for meeting with them.

Engineer Vetter of Berlin replied for the contracting branch, and said among other things: "We must work together. We cannot say, 'Here is the place for theory, and there for practice;' but we must strive mutually to reach the goal every serious heating and ventilating engineer is after. We meet the learned members, and try in practice to prove their theories. If we stop to think how greatly the business of heating and ventilation has grown, the large number of skilled workmen employed, how important a part the constantly rising price of fuel plays in our household economy, and how the matter of smoke and soot prevention is no less important to the health of our people, we, the representatives of this branch of the art, are also entitled to a 'place in the sun' of the technical and industrial world."

Dr. Strauss, the representative of the Grand Duke of Baden, bade the members welcome in the name of the Grand Duke, in a glowing speech, in which he expressed the royal as well as his own interest in the proceedings, and Burgermeister Martin welcomed all in the name of the city of Mannheim.

As the society has no permanent organization, the following were named as chairman and vice-chairman of the three meeting: First day, Director Ugé of Kaiserslautern and A. Sulzer-Grossmann of Winterthur, Switzerland. Second day, Inspector Foltz and Professor Meter, both of Vienna. Third day, Professor Rietchel and Professor Hartmann, both of Berlin.

Professor Ugé took the chair, and after a short expression of thanks, called on Professor Rietchel of the Royal Technical High School of Berlin, who read a long and interesting paper on "The Present State of the Science of Heating and Ventilation." This paper, though long, was intensely interesting and commanded the closest attention.

Engineer Vetter of Berlin then read a paper on "The Development and Value of the German Society of Heating and Ventilating Trades."

Prof. Dr. G. Recknagel of Augsburg read a highly scientific article on "The Cooling and Heating of Inclosed Spaces," based on exhaustive tests he had made.

The last paper of the day was by Prof. Edward Meter of the Imperial and Royal High School in Vienna, entitled "The Warming of the Imperial Court Library in Vienna for the Visit of the German Crown Prince." This article was full of interesting details and useful data.

The afternoon was spent in inspecting the heating and ventilating apparatus in the new Gymnasium, new Hotel Pfaelzer Hof and the new Stock Exchange, all of which are model jobs. To those who wished the opportunity was given to inspect the newly equipped cast iron boiler plant and foundry of Rud. Otto Meyer, as well as the radiator foundry and enameling works of the Mannheimer Eisengiesserei Actiengesellschaft. The hydraulic molding machines in the first named establishment excited much interest and favorable comment, as did the arrangement of the works generally. As is usual on occasions of this kind in Germany, there was ample provision, both solid and liquid, made by these firms for the inner man.

At night a grand banquet was served to all present in the large hall of the City Park Building.

TUESDAY, AUGUST 13.

The second meeting was called to order at 9 a. m. by Inspector Folz of Vienna.

The first paper was read by Chief Engineer Tichelmann of Dresden on "Central Station Hot Water Heating," in which he explained in detail a very extended system of this kind of his own design, and referred to some American systems.

Engineer Johannes Kelling of Vienna read a lengthy detailed article on "Ventilating and Heating of Hospitals," in which he gave much interesting and useful data as to sizes of pipes, ducts, &c.

Professor Junkers of the Royal Technical High School in Aix-la-Chapelle, read an elaborately illustrated paper with comparative tables, entitled "The Present State of Gas Heating."

Engineer Herm. Recknagel of Munich read the last paper of the day, on "The Removal of Dust in Factories."

The afternoon was spent in a trip through the wonderful harbor of Mannheim and a short trip in two steamers on the river Rhine, as the guests of the city of Mannheim, which was highly interesting as well as enjoyable.

WEDNESDAY, AUGUST 14.

The meeting was called to order by Professor Rietchel.

Director Ernst Schiele of Hamburg read a paper on "Cast Iron Boilers for Hot Water and Low Pressure Steam Heating," in which he demonstrated their superiority for these purposes.

G. A. Schultze of Berlin exhibited electrically regulated dampers, also thermometers, to show the room temperatures at a central plant. With these regulators the dampers in any part of a building can be set at any desired angle, from the engineer's room, with absolute certainty.

Engineer Vetter of Berlin then exhibited similar dampers regulated or set by water pressure, with which each stroke of a pump turned the damper one-sixth of the distance from full open to shut.

Civil Engineer O. H. Erich of Hamburg then read a paper on "The Ventilation of Residences and Business Buildings," in which he dwelt on the necessity of ventilation, &c.

After an executive session farewell speeches were made by Dr. Strauss for the Grand Duke of Baden, and Professor Rietchel for the society, which ended the business part of the programme.

The afternoon and evening were spent at Heidelberg Castle, the old ruin being beautifully illuminated for the occasion.

The next meeting of the society will probably be held in Hamburg in 1903.

BLAKE & ANDROS, 42 Oliver street, Boston, Mass., are sending to the trade a neat pamphlet in the interest of their Crescent Steam and Hot Water Heaters, which are shown by means of broken views so that their construction and operation are readily understood. The catalogue also shows the B. & A. Combination Union Elbow Valve and Special Hot Water Fittings. It is accompanied by a letter stating that the firm have a stock of all sizes of their Elbow Valves and Union Elbows, and also 150,000 Key and W. W. Air Valves, so that they are prepared to ship promptly. The letter also says that they are prepared to make special prices and invite application for discount sheets applying to the catalogue.

James Ahern.

The plumbing trade throughout the United States will learn with regret of the death of James Ahern at his residence, 192 Farmington avenue, Hartford, Conn., on Sunday, September 15, in the sixty-second year of his age. Mr. Ahern was born in Ireland and came to the United States, with his widowed mother, in his boyhood. He graduated from the Brown School at Hartford, after which he learned the plumbing trade with Thomas Birch of that city, being for several years foreman of his establishment. In November, 1868, he went into business for himself, and at the time of his death was the head of a large establishment at 280 Asylum street. He was prominent in the business life of Hartford and was looked upon as a successful tradesman. Mr. Ahern took an active interest in all matters relating to the plumbing trade and served as a member of the Executive Committee of the National Association of Master Plumbers, as National State vice-president for Connecticut, as president of the Connecticut State Association of Master Plumbers, and was for many terms president of the Hartford Master Plumbers' Association. Mr. Ahern gave a great deal of time to the study of plumbing in its sanitary aspects and was the author of a number of papers on the subject read before plumbing associations. He was a man of the strictest integrity, and was held in high esteem by the members of the trade. He frequently counseled conservatism when radical movements were being advocated. Although he had himself been ailing for several months he was deeply impressed by the assassination of the President and was eager to get the latest news of the President's condition up to the time of his death. He was married in 1863 to Miss Mary Sheedy, who, with seven daughters, survives him.

The Master Plumbers' Association of Hartford, Conn., held a meeting at the store of George Mahl on September 16, and a committee on resolutions on the death of James Ahern was chosen, consisting of George Mahl, Edward Mahl, James F. Duffy, John S. Craig and Thomas Langdon. The resolutions adopted are as follows:

Whereas, The Supreme Ruler has removed from our midst one of our most faithful and respected members, and

Whereas, While we submit with respect to the Divine decree, we lose a true friend, and his family a devoted husband and father; therefore, be it

Resolved, That we, the members of the Hartford Master Plumbers' Association, extend to the afflicted family our sincere sympathy in their sad bereavement, and further

Resolved, That a copy of these resolutions be drawn up and sent to the family and placed on the records of our association.

Similar action was taken the same day at a special meeting of the Hartford Business Men's Association, held for the purpose of paying a tribute to the memory of one of its oldest and most faithful members.

The Farnan Brass Goods.

An excellent reputation is enjoyed among the plumbers throughout the United States by the Farnan Brass Works of Cleveland, Ohio, for the superiority of the material and workmanship, which is a feature of the great variety of brass work which they make for the plumbing trade. It is pointed out by the house that their goods will operate in the most satisfactory manner for years, regardless of how high the pressure may be that is carried by the water works system on which they are used. Special attention is called to the quality of the Farnan stop and waste cocks for high pressure work. They are said not only to contain good brass, but the metal is properly distributed to give strength and symmetry. They also have an enlarged waste feature, which adds to their convenience and also enables them to prove serviceable without leaking. In view of the fact that so much attention is paid to the newer productions the company point out that their stop and waste cocks and hydrant cocks have been in constant use by the plumbing trade in different parts of the country for the past 17 years, which fact they look upon as a guarantee of the quality. In addition to the goods mentioned the house manufacture a variety of hose and bib cocks which are shown in a catalogue of their goods which can be secured on application.

A New Pipe Cutting Plant.

Crane Company, New York, a branch of Crane Company, Chicago, manufacturers of valves, fittings, pipe, &c., have added to their already large quarters a plant for the cutting, threading and flanging of large and small pipe and for pipe bending. It is located at 497 to 505 Cherry street, connecting in the rear with the pipe storage warehouse at 742 and 744 Water street, and being opposite the main warehouse at 490 to 502 Cherry street. Being directly on the East River and very easily accessible to lighters, it is in convenient location for handling heavy work. The building is 125 x 100 feet, the main shop being 110 x 63 feet and devoted to the cutting, threading and flanging of large pipe. The rear shop is devoted to the handling of small pipe and to pipe bending. The pipe is brought from the yard to the machine on trolleys with air lifts and, when ready, is loaded into the trucks in the same way. There are 13 pipe machines in the main shop and, in addition to these, there are machines for screwing up flanges of all sizes and facing lathes for refacing flanges after they are screwed on.

Fine Plumbing Goods.

New England has ever had a reputation for being the home of a class of workmen who find no difficulty in devising and turning out first-class articles in whatever line they are engaged. No better evidence of this claim can be found than in the handsome and attractive plumbing goods produced by Peck Brothers & Co. of New Haven, Conn. The concern not only have well equipped plants for the manufacture of brass goods, but for a number of years their workmen have been trained in the manufacture of fine plumbers' brass work, which can be seen in the showrooms of the company in New Haven, New York and Boston. For a few years back the company have devoted special attention to the manufacture of those goods which are most suitable for equipping the bathrooms of fine residences. They have not, however, confined their efforts to the bathroom alone, but have been equally enterprising in the production of fine goods for the lavatory, pantry and kitchen. The elegance of the supply and waste fixtures for the bathtub and the lavatory and of the bathroom proper are only equaled by the beauty of their sitz bath and shower bath apparatus. Their towel supports, sponge holders and variety of soap cups leave nothing to be desired by the most fastidious in making a selection. The same pleasing taste is displayed in the design and finish of their pantry sink fixtures, and also the cocks required for the kitchen sink and its equipment.

In the attention given to the appearance of their product and its finish nothing is omitted in the quality of the material used or the method of manufacturing that would detract in the slightest from the quality, the goods being not only made for superior operation, but also for long service. In addition to these attractive goods the company make a varied line of fixtures and fittings for use where they are seldom seen, and on their quality and excellence depends the satisfactory use of the more handsome goods. The handsome bathrooms which they show at their various salesrooms are open for the inspection of the plumbing trade, the architects and their customers, and a visit is invited from those who are so situated that a visit can be readily made. The company issue handsomely prepared printed matter descriptive of their various goods, which will be found of great assistance to prospective customers.

THE Pittsburgh sales offices of the National Tube Company, A. M. Lally, sales manager, have been removed from the Conestoga Building to the Empire Building, Pittsburgh.

American Radiators.

The American Radiator Compauy, Chicago, have just issued the third edition of their radiator catalogue, corrected to July, 1901. This catalogue is of poeket size, neatly and substantially bonud iu stiff linen eovers, and comprises 195 pages. It is beautifully illustrated, a large number of the engravings being reproduetions of photographs. The titles throughout the book, headings of tables and catch lines are printed in red ink. A page is devoted to a presentation of views of the company's seven faetories, of which two are located at Detroit, two at Buffalo, one at Titusville, Pa., one at St. Louis and one at Springfield, Ohio.

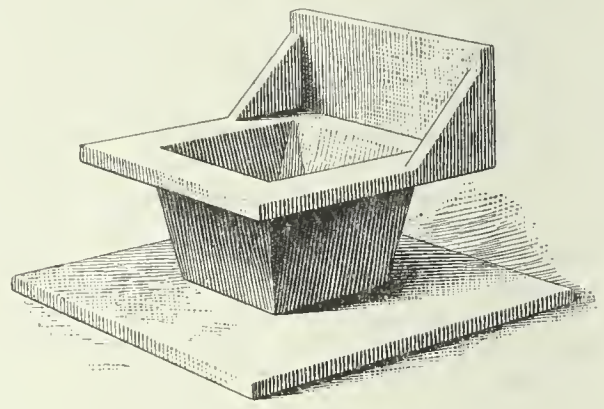
The introduetion to this catalogue ealls attention to the excellenee of design, high efficieney, superior quality aud unrivaled assortment of the eompany's radiators. They state that each style of radiator presented is eonstructed upou the elementary features of effieieney and compactness, economy aud eleanliness, graeefulness and artistic ornamentation, and with a view of its eomplete adaptability to the special requirements of the building to be heated, and the most convenient and available location thereiu for the radiators. The fact is emphasized that the sections of the American radiators eontain the full area of heating surface claimed. The internal area of the seetions and couueetion affords unobstrueted and large openings for the passage for steam and water, seeuring perfect eireulation, while the joints are absolutely tight and permanent. The company further state that immense stocks of radiators are regularly carried at their different faetories, also at their braneh es and warehouses located at so many of the prineipal business eenters, affording direet couneetion with every important transportation line iu America and with the highways of the world. This enables them to serve their eustomers at all times of the year with promptness and dispatch.

The leading plaee in the eatalogue is given to the Verona radiator, whieh is presented as the finest specimen of artistie molding iu the mauufacture of radiators. The Verona is unquestionably a work of art in iron. The other radiators shown iu the catalogue comprise the National Peerless, Buffalo Staudard, Zenith Narrow, St. Louis Standard, Perfeetion, Ideal, Favorite, Exeelsior, Roeoeo, Colonial, Italian aud Ætna. The styles shown are single eolumn, two, three and four eolumn wall radiators, curved radiators, box base radiators, direct-indireet radiators, coruer radiators, eireular radiators, stairway radiators and diuiug room radiators eontaining warming elosets. All these styles of radiators have an accompanying list of sizes, giving the heating surface of eaeh.

The bushing system, special tapping, pedestals, arrangement of legs, floor dampers aud eoucealed brackets are treated at eonsiderable length. The Perfection pin indirect steam or hot water radiators are shown in detail. Instructions are also given iu geometrical drawing, to aid the steam fitter in makiug aeeurate drawings to show an exact radius or augle within whieh a eurved or corner radiator is to be placed. Direetions for decorating will also be found useful to steam fitters. A eonvenient telegraph code is included in the eontents. This telegraph eode is quite extensive, covering praetically every matter likely to be ordered. A very full index eompletes the contents.

Hopper and Chute for Lead.

The vault under the sidewalk on the Twenty-fifth street side of the buildiug on Sixth avenue, New York, oecupied by the F. N. Du Bois Company is utilized for the storage of pigs of lead. The vault is covered with a concrete pavement. Over the center of the vault special girders for strengthening the roof have been plaeed so as to support a hopper and chute, to facilitate the receiving of a quantity of lead iu pigs of about 80 pouuds. Above the sidewalk the removable cast iron hopper shown in our illnstration is used. The casting averages about 1½ inches in thickness, is about 15 inches square, inside measure, at the top, and tapers to au opening about 9 inches across at the bottom. This openiug is made oetagonal in shape by the reinforeement of the corners of the hopper. The hopper stands something over 1 foot in hight, and on one side has a shield extending about 1 foot up above the top of the hopper. The dimensions and shape of the hopper are sueh that even should a pig of lead be awkwardly thrown it cannot readily eateh and choke the hopper. On the under side of the roof is a heavy flat easting with an opening about 1 foot square in the ceuter, so supported that it can be turned in different directions so that the heavy wrought iron ehute attaehed to it can be made to throw the pigs of lead in any part of the vault. The force of the fall of the pig lead from the delivery wagon is broken in the hopper, and as it passes throngh the ehute there is just sufficient force to earry the pig free of the end of the ehute. The



Hopper and Chute for Lead.

wrought iron ehute has a eurved baek conforming to the radii of a 30-ineh eircle and the chute is not over 3 feet in length, including the eurve.

Elliott Perry Gleason.

Elliott Perry Gleason, a well-known inventor and manufaeturer, died at his home in Brooklyn on Thursday in his eighty-first year. Mr. Gleason was born in Westmoreland, N. H. At the age of 15 he moved to Boston and afterward to Providence, where in 1851 he went into business under the firm name of Mooney & Gleason in the manufaeture of gas burners and similar supplies, whieh at that time was a new industry. Mr. Gleason perfeeted the Argand gas burner, whieh netted him a fortune. He also invented the two-hole or fish tail gas burner tip and numerous other valuable improvements.

In 1861 he established himself in New York City, where in 1871 he incorporated the E. P. Gleason Mfg. Company. He also owned the Gleason Knitting & Mfg. Company of Seneca Falls, and was the prineipal owner of the Gleason & Bailey Compauy, also of Seneea Falls. He was also president of the Gleason-Peters Air Pump Company, the Lawler Water Feed & Damper Regulator Company, and the Steam Boiler Equipment Company of New Yerk. In 1883 he began, in Brooklyn, the manufacture of glass ware for illuminating purposes.

Mr. Gleason was never married. He is survived by two sisters and a brother. His body will be buried in the family plot at Greenwood Cemetery on Sunday.

Sanitary Appliances for Large Buildings.

The Standard Sanitary Mfg. Company, Pittsburgh, Pa., are sending to the trade a pamphlet entitled "Modern Sanitary Appliances for Schools, Asylums, Publie Buildings, Institutions, Factories, &c.," which illustrates and describes in a eomprehensive manner their line of poreelain enameled syphon eduetion, wash out and syphon jet range closets, porcelain enameled publie urinals and marble and slate urinal stalls for work such as described in the above mentioned title. Particular attention should be given to the goods shown in this pamphlet, whieh are of the most improved aud sanitary patterns, the construction being based upon absolutely seientifie lines. Considerable time and thought, as well as monetary outlay, must have been expended in devising aud introducing various new features in goods of this

eharaeter, with the view of seeuring the greatest possible sanitary perfection and efficieney of operation. The fixtures shown in this pamphlet possess many valnable and original featnres, and their installation in publie work will make for the betterment of plumbing and sanitation generally.

Since the consolidation of the various plants of which this eompany are eomposed was effeeted many very valnable sanitary deviees have been put npon the market and a distinct advance in the quality of their wares is noticeable.

Water Heating.

BY BEN SCALDED.

After the primeval savage got too lazy to walk to the stream every time he wanted a drink he devised a skin reeeptaele to carry some along with him wherever he went. He also learned that on some occasions hot water was desirable, and his early produetions in earthen ware show his method of solving the problem of heating water. That was a long time ago; bnt the problem of heating water is still presented to his descendants. A little hot water snfficed for the savage, but our up to date civilization leads us to a want of oceans of hot water, so to speak, and in many instances it is asked for without any more intelligent idea of its cost than the savage had. Following the gymnasium came the swimming pool, and with the Turkish bath came the modern publie bath, all requiring, if not oeeans of hot water, at least an abundance of it and in short meter. Naturally the plumber and steam fitter who have furnished the apparatus for supplying hot water for domestie purposes and heating are looked to to meet this demand, and they are asked in simple confidence to furnish an apparatus to supply such an extraordinary qnantity of hot water as 20,000 gallons in an hour.

THE PLUMBER.

Always enjoying something that is worthy of their mettle, and not wishing to display any surprise at this demand, though they scent the fact that it is rather a big contract, the plumbers smile genially on the eustomer to impress him with the idea that it is only a matter of eourse. In eonsidering this problem the plumber naturally reekons on the amount of hot water furnished in a big hotel by plaeing a water baek which occupied three sides of the fire ehamber in three of the fires of the long hotel range, and eonclndes, after these rnminations in the field of thought and hot water heating, that, even if an ordinary water baek will heat a 30-gallon boiler in three-quarters of an hour it would not amount to a seale on the tail of this hot water fish, and that some special water heater must be used.

THE STEAM FITTER.

The steam fitter knows something of boilers furnishing hot water to the radiators of a house heating system and can make the last radiator on the line show hot water in 11 minntes after the fire is lit, even when a system eontains several hundred gallons of water. Bnt to furnish as mueh as 20,000 gallons of hot water in an hour rather stumps him and he is willing to reeeive adviee. This all goes to show that the cultnred eivilian, like the savage, needs to caleulate and tinker when it comes to heating water, partieularly sueh a qnantity as 20,000 gallons, even if more time is allowed to do it in than one hour. It is the custom to "euss" the "scientific feller," with his long calculations to find out how to do a little job, but when problems like this arise with which there is no experience to gnide them and they are willing to nse some other rule than the rule of thnmb, then they are glad to pay a fee to an engineer.

SOME THUMB RULES.

It is interesting to know the opinions held by different men on water heating. Only a short time sinee eatalogues were issned by the manufactnrers stating that their heaters would raise a given nnmber of gallons of water from 50 degrees to the boiling point per honr, when really the heaters wonld not raise one-quarter this amonnt if they were actually put to the test. Even now it is the custom to calculate that when small hot water heaters are used in eonnection with storage tanks they will heat 1.3 gallons of water for every square foot of radiation they will earry. This eonclusion has seemingly been proven eorrect from the fact that when boilers or heaters are eonneeted with storage tanks having a capaeity based on this theory, no complaint is heard. And even a better showing is made. This is dne to the faet that when the storage tank is once filled with hot water the heater will keep it snpplied with hot water in sufficient quantity to meet the reqnirements of the oceupants of the bnilding, even if it does not raise the qnantity of water which it is rated to heat from 50 to 160 or 180 degrees per honr.

Helped out in the same way, the rules used by some experienced men that a boiler will heat from one-half to two-thirds as many gallons of water per honr as it will carry square feet of radiation has seemingly proved eorrect.

A MORE SCIENTIFIC METHOD.

Where it is necessary for a contractor to earry ont exaetly what he is ealled upon to do it is safer to use a different method of figuring than either of the foregoing and to be morc scientifie in the method. If a eustomer requires 20,000 gallons of water heated, the first thing that it will be necessary to learn is the temperature at whieh the water is to be furnished. Assuming that it will eome from the street supply, ordinarily this will be about 50 degrees. If it is to be raised to a temperature of 180 degrees, eaeh ponnd of water must be raised 130 degrees, and as a gallon of water weighs 8.3 pounds, 20,000 gallons would weigh 166,000 ponnds. It is a basis of calculation that a heat unit is the amount of heat required to raise 1 pound of water 1 degree, and if 166,000 pounds are to be raised 130 degrees, this would reqnire 21,580,000 units of heat.

THE AMOUNT OF COAL.

Having found out the amount of heat required the next thing to determine is the apparatus that will be needed for the work. As the heat ordinarily is derived from coal, it must be determined how many pounds of coal it will be necessary to burn to generate the heat reqnired.

A high grade of eoal will give off as many as 14,000 nnits of heat if eonsumed under conditions of perfect eombustion, bnt in view of the wastc due to the loss of heat in the ehimney, unconsumed eoal in the ashes, unskilled handling by the fireman and the loss of heat due to imperfect construetion of the apparatus, it is not well to assume that more than 7000 units of heat will be utilized in heating water by burning a pound of eoal. In order, therefore, to determine the nnmber of pounds of coal required for heating 20,000 gallons of water, it is neeessary to divide the heat units neeessary by 7000, when it will be found that 3083 pounds of eoal will be necessary if the work is to be done in one hour.

SIZE OF GRATE REQUIRED.

Assuming that this would be burned in a boiler of good eonstruction, fired by a skillful fireman, it is probable that as mneh as 10 pounds of eoal an hour would be bnrned by 1 sqnare foot of grate snrfaee, and by dividing 3083 pounds of eoal by 10 it will be found that the grate surfaee required would be 308 square feet. If boilers of the east iron vertical sectional type were used it would require 20 boilers, each having a grate 3½ x 4½ feet in size, and such boilers are ordinarily rated to carry between 5000 and 6000 square feet of direet radiating surfaee.

MORE TIME, LESS PLANT AND COST.

When the prospective purchaser of sueh a hot water heating apparatus is confronted with the prlee of sneh a plant he usually is found willing to allow more time. As a matter of fact, it has been fonnd in gymnasiums, Turkish bath establishments and other plaees where large quantities of water are used, that ten hours can ordinarily be allowed for heating the water. If 3083 pounds of coal are needed to heat the water in one hour, it will readily be seen that if ten hours are allowed to the task it will be only neeessary to burn 308 pounds of eoal per hour. Owing to the fact that the firing nsually is not of the most intelligent character and the smaller cast iron

boilers ordinarily are not capable of burning as much as 10 pounds of coal per square foot of grate surface It would be better to calculate to burn 8 pounds of coal per square feet of grate surface. By dividing the 308 pounds of coal by 8 it is found that 38½ square feet of grate surface will be required for burning the coal uecesary to do the heating, aud that three boilers haviug 13 square feet of grate surfaee and rated to carry 5000 feet of radiation would be necessary for the work.

ANOTHER METHOD.

Another method of calculatiug the ability of cast iron water heaters for heating water iu quantities is as follows: It is assnmed that 1 square foot of direct hot water radiation at a temperature of 180 degrees gives off aiout 175 heat uuits per hour. A gallon of water weighs 8.3 pounds and to raise it from 50 to 180 degrees would require 1079 units of heat, so that the heat generated in a boiler capable of earryiug a square foot of radiation at a temperature of 180 degrees would only be capable of heatiug eontinuously 1-6 gallon of water from 50 degrees to 180 degrees. In other words, instead of the boiler being capable of heating one-half to two-thirds as many gallons of water as it would carry square feet of radiation, it would only be capable of eontinuously raisiug one-sixth as many gallons of water from 50 to 180 degrees as it would carry square feet of direct radiation.

Apparently, in calculating ou the apparatus required for heatiug water in large quantities, there is a great difference of opiuion amoug those who provide such plants, aud they ofteu take large chauces in the apparatus whieh they furnish. No doubt, in many iustances, the lack of knowledge of what is required is made up by forced firing to secure a better efficiency in the apparatus, or in using more time thau was specified, aud in other ways, and what is furnished is accepted as satisfactory, even if it does not come up to the demaud originally specified. Be that as it may, what has been said, if not generally aecepted, may be of use to those who may be called upon to heat large quantities of water, if they cannot submit their problem to a qualified eugiueer.

New York City Notes.

Trade still continues to be good in all lines, with nearly every master plumber busy and good journeymen very hard to get. Material in some lines still coutinues scarce, but there is not the delay in gettiug it that there was a short time ago.

* * *

After a great deal of speculatiou as to who would be the lueky plumber and much figuring by those who do that kind of work, the plumbing in the Hall of Records has been let by the general contractor direetly to a wholly outside party—namely, Lehrer & Co. of 930 Secoud avenue. Lehrer & Co. are to be eongratulated upou gettiug this job, the eost of which will approximate about $100,000. It is needless to say that only the best materials will be used in this building.

* * *

Among the busy plumbers are De Graw & Cully of Broadway and Eighty-fourth street, who, in addition to their regular trade, are plumbing a large store and office building on Fifty-ninth street, between Park and Madison aveuues. Chas. Heusle, while winding up most of his summer work, has just started the plumbing in an eight-story apartuent ou Fiftieth street, between Broadway and Eighth avenue. J. N. Knight & Son are very busy with jobbing and overhauliug and are also at work on a large 12-story apartmeut hotel on Forty-fourth street, between Fifth and Sixth avenues. Geo. W. Martin of Brook aveuue has just eompleted building aud plumbing two large apartmeut houses at 152d street and St. Nicholas avenue, aud has a large apartment well under way at 240½ West Forty-ninth street.

* * *

Owing to the great demand for journeymen at the present time a movement is under way among them for an increase of wages and a half holiday ou Saturday, the same to go into effeet about October 15. What the outcome of this will be, owing to the existence of the two rival organizations, and, if the increase is granted, how it will affect exlsting contraets, remains to be seeu.

Heating and Plumbing Notes.

A MEETING of the Board of Governors of the Amerieau Society of Heating and Veutilating Engineers is being held at the time we go to press at the offiee of the secretary, W. M. Mackay, in New York, for the purpose of fixiug the date for holding the annual meeting, the appoiutment of a nominating committee and to take action on a dozen or more applications for membership.

J. B. BEEGAN, New Haven, Conn., has the contract for installing three Howard furnaces iu residences In that city, aud is also making water connection in four houses.

A FIRE broke out last week iu the foundry aud brass shops of the N. O. Nelson Mfg. Company at Edwardsville, Ill. The damage was principally to the roof, although some loss occurred in the foundry department. The automatic sprinklers with whieh the building was equipped prevented the fire from spreading.

THE followiug story is told by "Vulcan" in the London *Ironmonger:* A certain English master plumber, haviug a suspieion that his men did not begin work at the proper time, thought he would go down early one morning to the shop and see for himself what was being done. Enteriug the yard, he caught sight of a plumber standing smokiug and his bag not eveu opened. Simply asking his uame, whieh he found to be Malcolm Campbell, he called him to the office and hauded him four days' pay, ordering him to leave at once. After seeing the man clear of the premises, he went to the foreman and explained that he had made an example of Malcolm Campbell by payiug him off for not starting work at the proper hour. "Good heavens, sir!" ejaculated the foreman, "that chap was only looking for a job."

W. G. HEATH & Co., Providence, R. I., have recently secured eontraets for the Installatiou of Boynton Steam Boilers made by the Boynton Furnace Company, in the residences of H. B. Wood, Clarence W. Hawkins, in Lakewood, and John O. Adams, in East Providence.

THE Board of Commissioners of Morgan County, Ind., invite sealed proposals at the Auditor's office in Martinsburg until October 7, 1901, for furnishing all materials and placing in position a low pressure gravity steam heating and ventilating apparatus for the Morgan County Court House. Plans and specifications are on file at the Auditor's offiee in Martinsburg.

THE BUCKINGHAM-ROUTH COMPANY, New Haven, Conn., are removing the old boilers and installing new Ideal Boilers made by the Amerieau Radiator Company in the residenee of A. McC. Matthewson, the parsonage of the Davenport Church, and Mrs. Wilhelmina H. Von Glahu. They are also heating and plumbing a new residence for Mrs. H. L. Wilbur.

THE master plumbers of North Hudson, N. J., have organized a protective association, with the following officers: Jacob Lang, president; H. L. Sebeske, seeretary; R. Reimenscheider, treasurer, and J. J. Cleary, sergeant-at-arms.

AT a meetiug of the Wisconsin State Board of Control, held at Hotel Pfister, Milwaukee, W. H. Halsey was engaged to supervise the plumbing work at the Home for the Feeble Minded at Chippewa Falls. The work is to be done without eontract, the board purchasing the material and employing the plumbers. Mr. Halsey is to be paid $10 a day for his services.

J. W. HUNT & Co., Provldence, R. I., have contracts for installiug a Glenwood Furnace in a residenee for Sullivan A. Brown aud a Glenwood Steam Boiler in the residence of William Osgood. They are doing the plumbing in a house for Gustave O. Miller and for Annie W. Chase.

THE new Tube plant which is being erected at Wheeling, W. Va., by the Wheeling Steel & Iron Company is progressing rapidly. It is stated that the company have invested $1,000,000 in the enterprise, and that the plant

will be one of the largest and most complete of its kind in the United States.

THE Plumbers' Union of Toronto, Canada, again won the cup for the most attractive turnout in the Labor Day parade in that city.

WM. H. WALKER, Clinton, Mass., has moved his plumbing business to a fine store in the Associate's Block on High street.

THE Commissioner of Indian Affairs at Washington, D. C., will receive bids until October 7 for steam heating and electric lighting systems for the school building at Chilocco, Okla.

WILLIAM PURDY, 222 Ninth avenue, New York, is making a specialty of the Purdy Pipe Clamp for repairing pipes of any character in emergencies. It consists of a wide sheet metal strap made in three sizes to fit all sizes of pipe, from ½ inch to 2½ inches in diameter. The strap is bent U shaped, and has holes cut in each end in which there is a nut for a set screw which is used to bring down a long iron bearing piece against a rubber gasket to stop a leak in a pipe. Some advantage is said to be gained by the use of red lead under the rubber gasket. It is pointed out that for making a quick repair to meet an emergency leak in a gas, water or steam pipe, this pipe clamp is well adapted, as it only requires a wrench of some sort to tighten the set screw to make it effective.

D. M NESBITT of the firm of Ashwell & Nesbitt, Limited, heating and ventilating engineers and contractors, of London, England, has informed some of his friends in the United States that he will sail for New York on the steamer "Teutonic," from Liverpool, on October 9.

JOHN C. FISHER, a well-known plumber of Wilkinsburg, Pa., died of dropsy on Thursday morning, September 19, at his residence, 305 West street. He is survived by a wife and one child.

THOMAS W. CONNOLLY, 88 Charlotte street, Rochester, N. Y., has been appointed assistant plumbing inspector by Commissioner Casey of the Department of Public Safety. Mr. Connolly had a rating of 97.2 on the Civil Service eligible list.

JEREMIAH T. CAHILL died at his home, 33 Vernon street, Worcester, Mass., on September 20. He had been in the plumbing business in that city for 25 years, and was the head of the plumbing firm of J. T. Cahill & Son at 18 Pleasant street. He is survived by a wife, three sons and two daughters.

THE Maryland State Plumbing Board is taking steps to prevent plumbers working in the city of Baltimore without having a certificate of competency and registering.

THE plumbers of Des Moines, Iowa, are protesting against a proposed amendment in the ordinance governing the making of connections to water mains. The proposition is to allow several buildings to be supplied from one tap in the main. That has been found an objectionable practice and it is prohibited by the regulations in many cities.

A DAINTILY printed pamphlet of eight pages and of a size convenient to carry in the pocket is being sent out by the Gurney Foundry Company, Limited, of Toronto, Canada. In it attention is called to the Gurney Oxford hot water heaters and boilers, which are recommended as solving the problem of how to keep warm.

THE ROBERTS MFG. COMPANY, 1213-1215 Market street, Philadelphia, Pa., manufacturers of Roberts' Natural Germ Proof Filters, are circularizing the trade and calling attention to their Filters, which they claim are unequaled for promoting health and comfort. The Filters are made of what is claimed to be the only perfect filtering medium known—natural stone. They are simple in construction, will not get out of order, and it is said will last a lifetime. They can be easily, quickly and perfectly cleaned, and will fit any faucet, large or small, threaded or plain.

PHELPS BROTHERS, 284 and 286 Pearl street, New York, have been appointed wholesale selling agents by the Norristown Covering Company, Limited, of Norristown, Pa., manufacturers of Steam Pipe and Boiler Coverings, Asbestos Cements, Mineral Wool, Hair Felt, Cold Water Pipe Covering, Asbestos Paper, Asbestos Millboard and Hot Air Pipe Covering. Phelps Brothers do no construction work, and sell to the trade only. They carry a full line and large stocks, and can make prompt shipments of any orders placed with them for execution.

THE PAGE COMPANY, Norwich, Conn., are sending out a little pamphlet devoted to their new Steam and Hot Water Heaters. Half-tone engravings are presented of their New Era Boiler, which is made in five sizes, with grates 12, 15, 18, 21 and 24 inches in diameter rated to carry 150, 200, 300, 450 and 600 square feet of direct steam radiation. The construction provides for a central circulation of the water and for an indirect passage of the products of combustion to insure economy and efficiency. The pamphlet also gives notice that two sizes of Page's New Century Boiler will be ready in October. It shows Page's Radiator Holders, one designed to be fastened with screws to the baseboard to support one leg of the radiator, while the other supports the outer leg. It is pointed out that where they are used it is only necessary to push in at the top to release the pressure on the carpet and the carpet can be removed for cleaning and relaid without the assistance of a steam fitter.

ROBERT B. SCOLLAY, brother of the late John A. Scollay and uncle of Ulysses G. Scollay, with whom he had been in the plumbers' supply business on Myrtle aveuue, Brooklyn, N. Y., for the past 20 years, died at his home, 236 Halsey street, Tuesday, of Bright's disease. He was born in Dundee, Scotland, in 1843, and came to this country when a lad. He was first in the produce commission business, but later went with his brother. He was unmarried.

WILLIAM WILD'S SONS, Northport, L. I., are installing a Hitchins Hot Water Apparatus in the greenhouse of Fred. Kiefer, and an Ontario Hot Water Heater made by the Pierce, Butler & Pierce Mfg. Company in the residence of W. R. Kissams in that town.

New Firms and Changes.

G. W. WASHBURN, who conducted a plumbing and heating business in Danbury, Coun., for eight years, and who was lately with the Thatcher Furnace Company, at 240 Water street, New York, has opened a plumbing and heating shop at 29 Orawaupum street, White Plains, N. Y. He proposes to do a high class of sanitary plumbing and heating, and will also conduct a tinsmithing business and a retail business in Stoves and Ranges. Mr. Washburn will be pleased to receive catalogues from manufacturers of goods in the lines which he represents.

DANIEL NEWMAN, who has been connected with the plumbing firm of Newman & Cronin, New London, Coun., for the past 31 years, has retired, and is succeeded by Daniel T. Newman. The firm name will not be changed, and the business will be continued as formerly.

THE MANSFIELD PLUMBING COMPANY of 230 Washington place, Passaic, N. J., have been incorporated, with a capital of $20,000, by Robert J. Culleu, S. William Burnett, Robert W. Burrell and Thomas Nolan.

THE JENKINS GAS BURNER COMPANY of Washingtou, D. C., have been incorporated with a capital of $100,000 to manufacture all kinds of Burners.

THE HILTON BRASS WORKS have been incorporated in Brooklyn, N. Y., with a capital of $20,000 to manufacture Gas Fixtures, Chandeliers, &c.

A great deal has been printed this summer about the experiments in New Jersey and elsewhere for getting rid of mosquitoes by means of petroleum. In this connection a communication to the New York *Sun* from a correspondent at Beaumont, Texas, is of some interest. The correspondent in question asserts that at the center of the now famous oil district, known as Spindle Top Hights, mosquitoes are as thick as in any place in Staten Island or New Jersey, although the air is laden with the fumes of oil, and the ground is soaked with it for many acres around.

PAINTING TIN ROOFS.

A few months ago the Congdon & Carpenter Company, Providence, R. I., sent out a large number of circular letters to manufacturers of tin plates, architects and roofers in which the three following questions were asked:

First.—How soon after a roof is covered with best Roofing Tin do you think it should be painted?

Second.—Would you care to guarantee a roof if it were not painted?

Third.—Would you care to guarantee a roof if it were not painted, and if part of it were under water?

Replies were received giving many valuable expressions of opinion. These have been carefully tabulated for easy reference and will doubtless prove of interest to the trade.

THE FIRST QUESTION.

The first question, *How soon after a roof is covered with best roofing tin do you think it should be painted?* brought out quite a difference of opinion.

Manufacturers practically agreed in their answers, which advised that roofs be painted immediately or as soon as possible after being laid.

The architects showed a considerable difference in opinion. Below are given some of their replies:

"After first rain."
"After tin loses greasy surface."
"Before it shows any sign of rust."
"From four to six weeks."
"Soon as possible after laying."
"Four weeks."
"When the oil is off and just before rusting begins."
"After not more than one or two rains. Certainly before it begins to rust."
"Immediately after put on."
"Within two weeks."
"It depends upon where the tin is located; 30 to 90 days."
"The sooner the better."
"At once."
"Immediately after putting on."
"After first good rain."
"Just before the tin wears off."

The tinsmiths and roofers also show a wide difference of opinion. A few replies are as follows:

"Paint immediately."
"Three weeks."
"After six months."
"Soon as possible."
"At once."
"After two or three rains."
"Immediately."
"Three or four days."
"Soon as possible."
"One night; sooner the better."
"After second rain."
"Two weeks."
"After first rain."
"Painted at once."
"Sooner the better."
"Two weeks."
"Nine days."
"Quicker the better."
"When it begins to rust."
"Soon as it shows sign of rust."
"Four weeks."
"After first rain."
"Immediately."
"One year."
"Immediately."
"After one wetting."
"Four or five weeks."

THE SECOND QUESTION.

Would you care to guarantee a roof if it were not painted?

To this the manufacturers practically agree in the answer "No," stating that the best roofing tin in any climate needs paint as an additional protection. The architects make the same reply.

Most of the tinners state that they will not guarantee an unpainted tin roof, although a few are willing to do so for the lengths of time below stated, which, it will be noticed, vary greatly:

"Six months." "Four or five weeks." "One year." "Five years." "Five to seven years." "Not longer than one year." "Three seasons." "Three years." "Five years." "One year if not painted." "Will guarantee a roof five years if not painted."

THE THIRD QUESTION.

The manufacturers and architects agree absolutely in making the reply of "Certainly not" to the third question, *Would you care to guarantee a roof if it were not painted, and if part of it were under water?*

The tinners and roofers in nearly all cases say "No." Some of the other answers are of interest, as they show a vast variance in opinion:

"Not within 25 miles of Providence." "No man with ordinary intelligence would ask such a question, because it could not be given." "Five years." "Two seasons." "Two years." "Three years." "One month." "Roof under water not painted will last about four years."

DEDUCTIONS

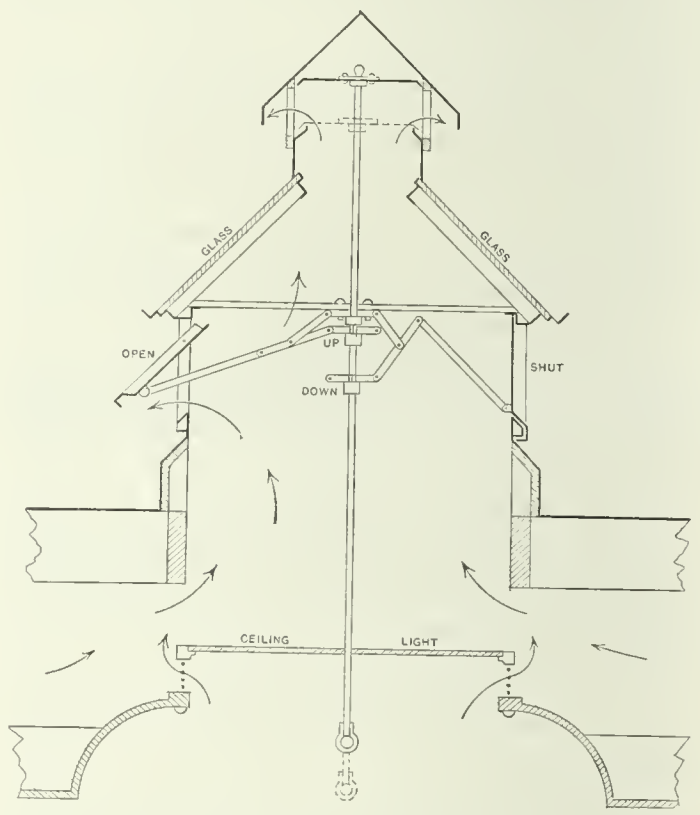
The Congdon & Carpenter Company say that after getting the answers from the best authority in the country, and from people in their own State, they have come to the following conclusions:

First.—Any roof covered with roofing tin should be painted immediately after the roof is covered.

Second and Third.—No manufacturer will guarantee roofing tin if it is not painted at once after the roof is covered, as the best roofing tin in any climate needs paint as an additional protection.

The Valve Light Ventilator.

In the accompanying illustration is shown an elevation of the valve light ventilator which is being manufactured, under patents granted to H. W. Waldmire, by



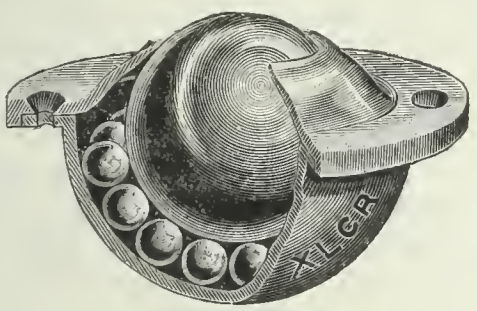
The Valve Light Ventilator.

the Meade Roofing & Cornice Company, 3717-3721 Filbert street, Philadelphia. The valve light ventilator is designed to afford both light and ventilation. It is made square in shape, with a valve on each of the four sides and a valve in the top vent, and is constructed so as to be operated by a center rod which in rising opens the valves and dropping down closes them. The center rod may be operated either by means of a pole and hook or by a continuous cord or chain running over a pulley in the top of the vent, the chain being connected with eyes in the rod at both the top and bottom. Its construction provides that the valves have a greater area for the passage of air than the base of the ventilator proper. The ventilators are made in various sizes, from 30 inches to 60 inches square, inside measurement, with an allowance of 3 inches all around for the curb. No solder is required in the construction to make the ventilator water proof and to hold the parts together, the connections being effected by means of lugs and joints which also make it fire proof. Another feature of the ventilator is that the valves can be regulated to a large or small opening, as may be desirable. When closed they are said to be absolutely storm proof. The illustration also shows

that this ventilator and light valve may be used to draw the air from the space between the ceiling and the roof, as well as from the room, while at the same time the ceiling light enables it to give light to the building. The ventilators are made complete with the movement ready for attaching to a building, leaving the glass only to be put in place.

The X L C R Ball Bearing Caster.

In the accompanying illustration we show the X L C R ball bearing caster, which has recently been patented and is now being manufactured by the Excelsior Tool & Machine Works, St. Louis, Mo. The house make a specialty of designing and building tools and machines for steel range manufacturers and have learned of the labor expended in the handling of the large sheets from which the ranges are made. It is customary to have tables or racks adjacent to the machines on which the sheets rest while being punched, and the friction when the sheets must be drawn along after punching one hole to punch another has made the work very laborious. In order to overcome this friction the X L C R ball bearing casters have been produced. A number of these casters can be readily let into the tables or racks, fitted on trestles, or fastened to parts of the machine where the sheets being worked naturally find a bearing. It is pointed out that where they are used the sheets can be shifted or moved



The X L C R Ball Bearing Caster.

easily in any direction, free from the friction and resistance that have made the work so hard under the old methods, or where ordinary casters have been used for the purpose. It is claimed that by the use of the X L C R casters the feeding of large sheets to a punching press with a throat 20 inches deep is a simple matter and readily accomplished by a single workman. The casters are made in a substantial manner, well adapting them for this purpose. From their strength and quality they are adapted for many other purposes where a strong caster, permitting a true and frictionless movement in any direction, is desired. The company state that samples of the casters have been used in some range shops with such satisfaction that already orders are beginning to come in, and they look forward to a good trade for their new production.

Herringbone Lath.

The International Metal Lath Company, Niles, Ohio, are offering metal lath, as herewith illustrated. The plain lath shown in Fig. 1 is designed for use on side

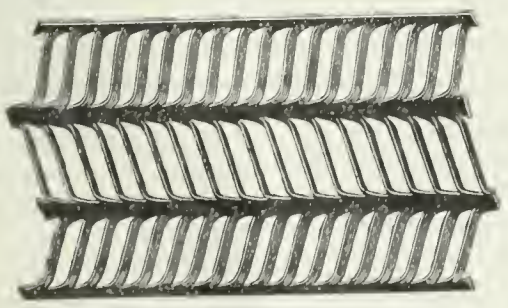


Fig. 1.—Plain Herringbone Lath.

walls, and the flat lath, Fig. 2, for ceilings. The following points of excellence are mentioned by the manufacturers: That the lath is extremely rigid; that it does not buckle, so that there is no time lost in stretching sheets before fastening; that the edges are uniform and even, necessitating no overlapping and consequent waste; that its application is comparatively cheap, because of its uniform character, and that the lath is self

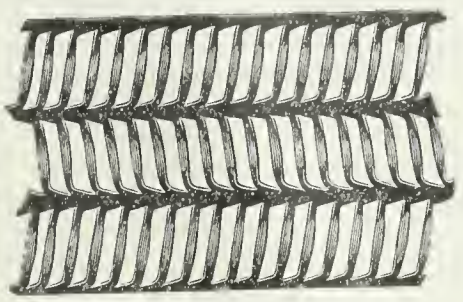

Fig. 2.—Flat Herringbone Lath.

furring, the ribs making it so. The lath is made in sheets 14 x 96 inches in size.

FLASHINGS.

The McClary Mfg. Company of London, Ontario, who are among the largest producers of Enameled Ware in Canada, have recently installed what they claim to be the largest drawing press in America. The press, which was manufactured at Goppinger, Germany, weighs 90,000 pounds, and is mounted on a concrete foundation 21 feet square and 8 feet deep, the whole foundation being 12 feet below the surface. The machine is used for drawing into shape the flat metal blanks before receiving the enameling coat. The press will form everything that is manufactured in the Enameled Ware trade, from a small cup 2½ inches in diameter to a Tub 2 feet in diameter, and will draw Sheet Steel ranging from 25 gauge to 10 gauge, the latter being required for Sinks and other heavy articles.

The Sharon Steel Company of Sharon, Pa., will build a large galvanizing plant in connection with the ten Sheet mills they now have in the course of construction. The galvanizing plant, it is said, will cost in the neighborhood of $200,000.

The American Sheet Steel Company's plant at Struthers, Ohio, resumed operations on Monday in all departments, the former employees being reinstated. It is reported that the company will build an addition to the Struthers plant which will increase its capacity one-third.

The American Tin Plate Company are preparing to start their plant at Chester, W. Va., as soon as possible. The Chester Sheet plant was purchased from the American Sheet Steel Company and converted into a Tin Plate mill.

The newly organized Conneaut Can Company, Conneaut, Ohio, will begin to erect the necessary buildings for their factory immediately. At a meeting of the directors of the new concern, held last week, it was announced that the plant will be running by January 1. The company have a capital of $50,000.

A notice has been posted at the Great Western plant of the American Tin Plate Company at Joliet, Ill., advising the men to secure employment elsewhere, as the plant will not be operated this winter. It is rumored that the Joliet works will probably be dismantled and the machinery removed to some other location.

The plant of the American Tin Can Company, at Toledo, Ohio, was destroyed by fire on the afternoon of September 21. The loss is reported to be about $300,000, on which there was an insurance of $188,000. The plant was a large four story brick structure and gave employment to 500 men. The cause of the fire has not been discovered.

The Fred. J. Swaine Company, St. Louis, Mo., report the market for special machinery in a most satisfactory state. Their business has shown a steady growth each month during the past year. This has necessitated the enlargement of their works, and during that time they have expended over $4000 in new apparatus, with prospects of a much larger expansion in the future should their business continue as it has in the past.

Their work is now much handicapped through the non-delivery of many new tools ordered. Ordinarily this firm have been able to carry a large stock of their special machines, but at the present time they have sold more than they can make. They have been busy of late rebuilding and overhauling the machinery of the Hemp & Co.'s Sheet Metal working plant, recently destroyed by fire. They have on hand now a large contract with Kingau & Co., Indianapolis, Ind., for special machinery to be used in their Tin Can factory.

William Vogel & Brothers, 37-47 South Ninth street, Brooklyn, N. Y., advise us that while they have disposed of their Tin Can and Package manufacturing business to the American Can Company, they are still manufacturing at their plant everything else in the line of Sheet Metal and Tinware, making a specialty of stamped and drawn work. They are also turning out a regular line of Oilers, Sheet Metal Screws and Tinners' Trimmings.

The Cleveland Punch & Shear Works Company, Cleveland, Ohio, say this has been the best September in the history of their business. They have caught up considerably on the delays caused by their machinists' strike, and are now running only two evenings a week. The Cleveland Punch & Shear Works Company are getting out an elaborate catalogue describing their complete line of Tools, and it will be mailed early next month.

The Sharon Tin Plate Company have decided to build 75 more houses at South Sharon, Pa., for the accommodation of their employees. It is said the Sharon Steel Company and Sharon Tin Plate Company now own about 500 houses in which their employees live.

The Chartiers Works of the American Sheet Steel Company, at Carnegie, near Pittsburgh, have practically been dismantled. The mills have been taken to Vandergrift, and John Henry, the former manager of the plant, will go to the Apollo Mills of the American Sheet Steel Company.

Practically the entire plant of the W. Dewees Wood Works of the American Sheet Steel Company, at McKeesport, Pa., is in full operation. This plant was idle nearly three months, and during that time the equipment was overhauled and a good deal of new machinery was added. The plant is in better physical shape now than for a long time.

James E. Kelley & Son, New Haven, Conn., have taken contracts for roofing the buildings of the New Haven Chair Company, the Whitlock Coil Pipe Company, Elmwood; James Boyle's block in New Britain and a building in Ansonia for C. Y. Woodruff.

The Niagara Machine & Tool Works of Buffalo, N. Y., have been incorporated with a capital stock of $200,000 by Julius W. Gerger, Adam E. Heinz, Otto J. Lautz, George A. Lautz, and George R. Munschauer, all of Buffalo.

TERMS OF STRIKE SETTLEMENT.

Theodore J. Shaffer, the president of the Amalgamated Association, issued this week his promised statement to the members of the association covering the history of the steel strike from its inception up to the final settlement. After giving an account of the conferences leading up to the settlement, the result of the last conference, held in New York September 14, is detailed. At this conference the following terms of settlement were agreed to:

AMERICAN TIN PLATE.

1. Scale shall be the price agreed upon at Cleveland and found in scale book.

2. This contract is between the Amalgamated Association and the American Tin Plate Company, the latter being a distinct and separate company in themselves.

3. The company reserve their right to discharge any employee who shall, by interference, abuse or constraint, prevent another from peaceably following his vocation, without reference to connection with labor organizations.

4. Nonunion mills shall be represented as such—no attempts made to organize, no charters granted; old charters retained by men if they desire.

5. Individual agreements shall be made for mills of improved character until they are developed, when scales shall be made to govern them.

6. Scale signed for mills named below: Elwood, Ind.; Middletown, Ind.; Anderson, Ind.; Atanta, Ind.; Lisbon, Canonsburg, Ellwood City, Falcon, Joliet, Connellsville, Johnstown, La Belle, Laughlin, Gas City, New Kensington (two mills), New Castle (two mills), Muskegon, Canal Dover.

7. Agreed that the company shall not hold prejudice against the employes by reason of their membership in the Amalgamated Association.

8. This agreement is to remain in force three years from July 1, 1901, but terminable at 90 days' notice from either party on or after October 1, 1902.

This last clause is to be voted upon by the tin lodges and answer given immediately. If you agree to a three-year scale with 90 days' notification, vote yes. If you prefer the yearly scale, vote no. Do this at once or the above will become law by default.

Note.—This agreement is only for the scale year, ending June 30, 1902.

SHEET STEEL COMPANY.

Scale as printed is signed for mills of last year, but Hyde Park and Canal Dover.

STEEL HOOP COMPANY.

Scale as printed signed for mills signed for last year.

Mr. Shaffer ends his statement by saying he is willing to resign if the members think he is inefficient and incapable and his resignation will aid the cause.

New Publication.

The Roofing, Cornice and Skylight Manual. Published by the David Williams Company, 232-238 William street, New York. Price $1.50. Size 6 x 9½ inches; 175 pages; 170 illustrations and 10 plates.

As suggested by the title, the book consists of three articles. That on tin roofing, which has been prepared by an expert, treats the subject in detail, including flat and standing seam roofing, with instructions for flashing around chimneys, connecting roofs with wall flashing, and covering parapet walls and bulkheads. It also gives information on putting in valleys and on shingle flashing. An important table is presented from which the quantity of tin required for a roof can be determined, with directions for its use. The second portion of the book is devoted to cornice making. An important feature is a description of a shop equipment such as can be readily purchased or made and adapted to the country shop. This section of the book also dwells on the method of developing the patterns for much of the simpler work, as well as for cutting cornice miters, attaching molded gutters to brick walls, the attachment of eave trough to roofs of different kinds, the manufacture of round and square leaders, and the making of simpler ornaments.

The articles on skylight construction consist of two prize essays reproduced from *The Metal Worker*, which have been in considerable demand, as they are designed to cover the instruction needed for the production of skylights of all sizes, the development of hip bars and miters, also curb and side bars. Some of the illustrations are so large that special folding plate pages are used. One of the articles describes a skylight without a ventilator and the other with a ventilator in the top. The illustrations show the method of supporting glass, and also the method of catching the condensation which is experienced with the use of all skylights. The book is one that all sheet metal workers will find of value for reference, either section covering the subject discussed in a thorough and practical manner.

The six most lofty structures in Europe are the towers of Cologne Cathedral, now 516 feet 9 inches high; the towers of Rouen Cathedral, 491 feet 8 inches; the tower of St. Nicholas, at Hamburg, 473 feet 1 inch; tower of Anvers Cathedral, 472 feet; cupola of St. Peter's, Rome, 469 feet 2 inches, and the cathedral spire at Strasburg, 465 feet 2 inches.

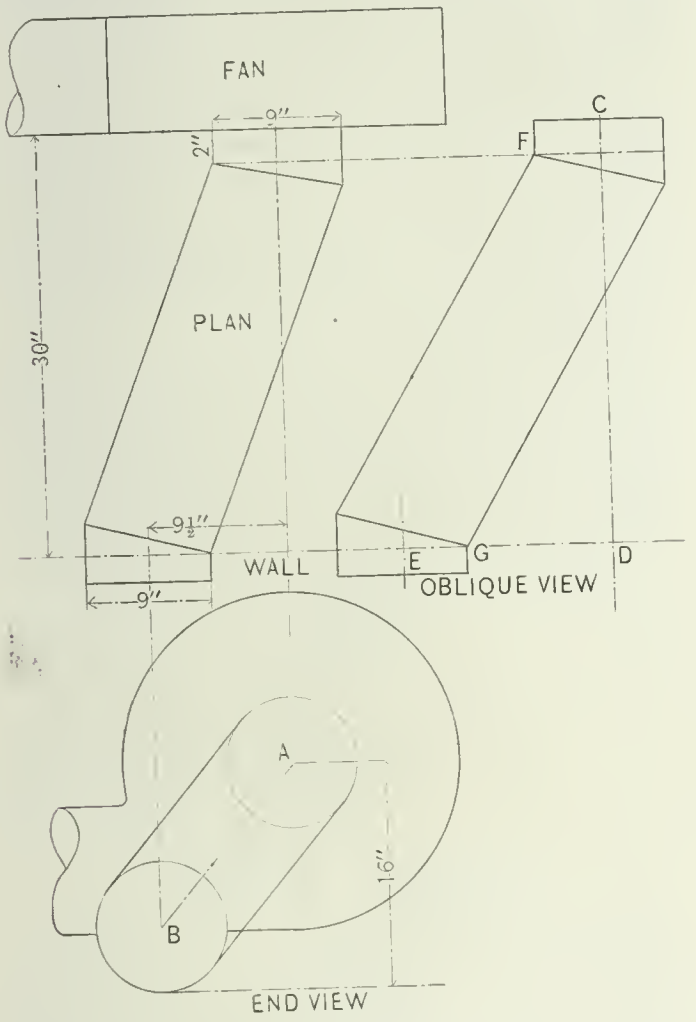
THE LETTER BOX.

Inquiries in regard to practical questions of general interest are invited, in reply to which we shall be glad to receive suggestions and information from our readers.

Correspondents are requested in all cases to give their names and addresses, which will not, however, be published or disclosed without their consent.

OBTAINING CORRECT ANGLES OF SPECIAL ELBOWS.

From H. J., Milwaukee, Wis.—I would like to have you publish in *The Metal Worker* the way to get the correct angle of the elbows shown in the inclosed sketch. The lower side of the pipe where it enters the wall is 16 inches below the center of the opening in the fan, while



Obtaining Correct Angles of Special Elbows.—Reproduction of Correspondent's Sketch, with Correct Diagram of Oblique Pipe.

it is also 9½ inches to the left, as measured between centers. The diameter of the pipe is 9 inches, and the side of the fan is 30 inches from the wall.

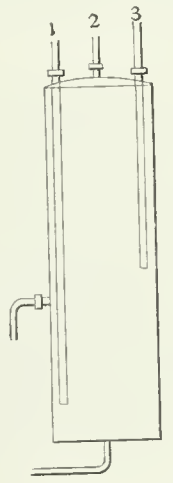
Answer.—The plan and end view of the accompanying diagrams are taken from our correspondent's sketch, and show the relation of the parts as he has described them. The drawing also shows a 2-inch collar projecting from the side of the fan, and he seems to be desirous of bringing the throats of his elbows exactly to the collar at one end and to the wall at the other. As neither the plan nor a side elevation would give the correct amount of deviation in a pipe to unite the two openings, an oblique view must be constructed. This can most easily be done by first extending the lines of the side of the fan and of the wall, as shown to the right, and crossing the same by any vertical line, as C D. From D set off on the wall line the distance A B of the end view, being the true distance between centers of the two openings, as shown by D E. From C and E set off each way one-half the diameter of the pipe, and draw short lines parallel to C D, as shown, and set off the projection of the collar below C, as shown by the dotted line. If it is desirable to have the throats of the elbows come exactly to the end of the collar and to the wall as before mentioned, this can be accomplished in the following manner: Set the dividers to the diameter of the pipe (9 inches), and placing one foot at the points F and G, describe short arcs toward the opposite sides of the pipe, as shown. Now draw one side of the oblique pipe from F tangent to the arc drawn from G, and the other side of the pipe from G tangent to the arc from F, and draw the miter lines from F and G, respectively, to the points of intersection opposite, which will give the correct angle of the oblique pipe.

The solution of a somewhat more intricate problem of this nature was published in *The Metal Worker* of December 16, 1899, from which our correspondent may obtain desirable information. In the article referred to, which is on page 53 of that issue, two or three typographical errors, however, occurred, which we take this opportunity to correct. The last word at the bottom of the first column (not) should be omitted, when the sentence would read, "Since the point *a* does rise," &c. In Fig. 2 of the engravings the letter *c* at the crossing of the dotted line A^2 A^3 with B B^2 should have been a capital C, as well as the *c* at the extreme right end of the line A^2 A^3, which would then read C^1.

QUESTIONS ON BOILER CONNECTIONS.

From B. & M., Northboro, Mass.—A question in boiler piping for hot water service has come up as to the proper way to make the connections with the boiler, and we hope that *The Metal Worker* will settle it for us. The boiler has three openings on the top, and we should like to know which should receive the supply from the tank and where the tubes should be used; also where the relief pipe should be connected.

Note.—Three openings in the top of a boiler are used only in a few sections of the country. Ordinarily the opening on the outer side of the boiler receives the longest tube and the connection from the cold water supply, whether it be from the tank or the street main. This long tube delivers the cold water below the side con-



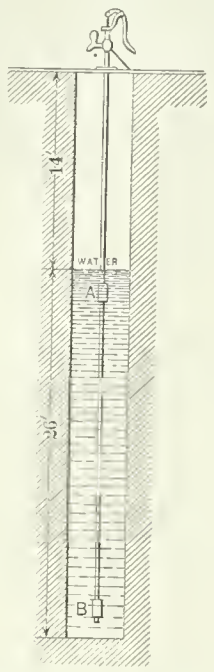
Questions on Boiler Connections.

nection from the water back so that the inflow of cold water does not chill the hot water coming from the water back. The long delivery tube should have a hole about ⅛ inch in diameter in it as near to the top of the boiler on the inside as possible. This is to prevent siphonage when the piping is so arranged that it might be possible, and particularly when the supply is taken from the street. The central opening is used for the hot water service connection, it being assumed that the hottest water in the boiler would be at the top and in the center. A small pipe is often carried up from this hot water service pipe to the top of the tank and the end turned down over it. This allows steam to escape from the boiler, and also air from the piping system in case it should accumulate or find entrance or be trapped as the plumbing system is filled with water. The other opening, with a short tube, is generally used for the connection of a return circulating pipe. The circulating pipe connects with the hot water supply pipe at the fixtures and is brought back to the boiler. This water, after making the circuit through the pipes, naturally is not as hot as when it left and enters the boiler through

the tube which delivers it down in the boiler, so that it will not reduce the temperature of the hottest water at the top of the boiler. The circulation pipe is used in order that hot water may be drawn at the fixtures as soon as the faucet is opened.

LOCATION OF PUMP CYLINDER.

From K. & S., Walcott, N. Y.—We have a well 40 feet deep in which the water rises to within 14 feet of the top, as shown in the sketch herewith. What will be the difference whether the pump cylinder is put down



Location of Pump Cylinder.

at the bottom of the well or only just below the water level, the pipe extending to the bottom of the well in both cases? In argument it has been stated that the pump will work just as easy with the cylinder in one place as in the other.

Answer.—Should the water in the well ever fall so that it would be 32 feet below the top it would be impossible to raise water with an ordinary lift pump. If the cylinder was put at the bottom of the well at B and a piston connected with it, a force would always have to be exerted necessary to lift the entire body of water in the pipe above the valve. If the water never falls below 20 feet from the top of the well and the valves was placed at that point, a smaller body of water would have to be lifted from A in the operating pump, consequently it would work easier. If the valve is located at this point an ordinary lift pump depending on atmospheric pressure could be used. If the cylinder is located at the bottom of the well a more expensive pump would be necessary.

TROUBLE WITH BRASS WATER HEATER.

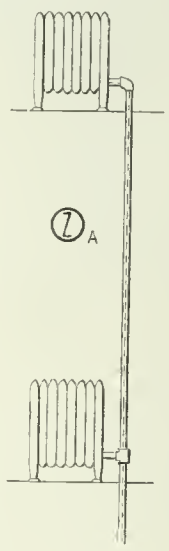
From P. W., P. O. Box No. 992.—I have been making experiments with a gas water heater, composed of drawn brass pipes and cast brass return bands. This water heater before being exposed to the heat of the burner was tested under pressure and no leak was discovered. Everything possible has been done to make the joints tight. After the burner gets into action, the water heater seems to leak at the joints, and, being tested again cold, the leaks developed during the exposure to the fire had become permanent. The one way that I can explain this is that the ratios of expansion in the drawn brass and the cast brass are different. Can I trespass on your kindness to give this matter your attention, and let me know your opinion as to the probable difficulty, and whether or not the ratios of expansion of the drawn and the cast metal are different?

Answer.—There is not enough difference in the expansion of cast and drawn brass to cause the leakage as stated. There is not more than 1-1000 inch difference per degree of temperature in 100 feet in length for the two kinds of brass. The trouble is in imperfect threads and slack screwing of the joints, with possibly no paint or cement in the threads. For perfect joints the threads should be tinned and screwed together hot, while the tin is melted. Such joints will never give out.

A SUGGESTION IN RADIATOR CONNECTION.

From A. H. F., New York.—Force of habit in people is hard to control, otherwise, in my opinion, good fitters would not advise "I. R.," whose inquiry appears in *The Metal Worker* of August 10, to run so many pipes and fittings to do a small piece of work. Why not use but one pipe one size larger than either of the two pipes that would ordinarily be used, and insert inside the single pipe a piece of sheet iron bent back on the edges, as shown in the sketch, so as to keep a sheet metal diaphragm in the center of the pipe at all times. The hot water flow would rise to one side of the sheet iron diaphragm and the cold water return or descend on the other side. With this method of fitting "I. R." would have many less threads to cut and much less pipe to handle, and his job would look much better. It is not difficult on a vertical run of piping to get circulation. It would be interesting to learn the results that would be obtained on a one-pipe vertical circuit built in the way recommended. The methods of piping recommended to "I. R." present from 4 to 14 right angles, while this method would cause but two.

Note.—It is probable that many of our readers would be glad to have further information as to how the hot water would get into the first-floor radiator, and how it would be shut off or regulated at either radiator. While benefit is frequently derived from pure suggestions, it is probable that recommendations made by this correspondent for the arrangement of piping would be of



A Suggestion in Radiator Connections.

greater value if they had been tested in practice. However, should "I. R." see fit to experiment, we hope that he will report the result not only for the benefit of "A. J. F.," but for all who do hot water heating. The diaphragm suggested has been used in hot water piping by the different experimenters in the past, and the fact that the use is not general might lead to the conclusion that it left something to be desired.

WANTS ROUND GLASS BALLS.

From W. T., Peterboro, N. H.—I shall be glad if some reader of *The Metal Worker* will inform me where I can buy perfectly round balls 1 inch to 1¼ inches in diameter, made of glass or stone. I have been buying glass agates, the same as boys play marbles with, but find they are not perfectly round.

COPPER LEADER PIPE HANGERS.

From Roy, Kingston, N. Y.—Where can I get wrought copper leader pipe hangers which will hold square leader several inches from the wall?

Answer.—It is not probable that such hangers will be found on the market. Our correspondent can readily have them made to order by any coppersmith.

TRADE REPORT.

MARKET SUMMARY.

Pig Tin has dropped about ¾c.

Copper prices are weak and nominal; demand is light and market unsettled.

Pig Lead is very quiet and unchanged in price.

Spelter is firm in price and in fair demand.

Antimony is unchanged.

Nickel remains firm and in good demand.

Tin Plates are still strong in price; Coke Tins scarce and high; Charcoals and Ternes 25c. to 50c. a box lower.

Black Sheets remain in scarce supply with prices strong.

Galvanized Sheets, while scarce, are quoted lower.

Scrap Iron is in better demand and stiffer in price.

Old Metals are quiet and unchanged.

Sheet Copper remains firm in price and is in good demand.

Pig Iron is stronger; Southern Foundry Iron has been advanced 50 cents per ton.

Hardware is moving in excellent volume and prices in general are unchanged.

Plumbers' Supplies continue in good demand, with prices strong in most lines.

Wrought Iron Pipe has undergone a decline in price, but smaller sizes are still scarce.

Plumbers' Brass Goods are unchanged in price and demand is active.

Wire Nails are steady in price and in better supply.

Cut Nails are less scarce; retail prices still show some variation.

Wire is still in large demand, with prices firm and unchanged.

White Lead is stiffer and in larger demand.

Linseed Oil prices are firmly held.

Spirits Turpentine is ¼c. lower.

METAL MARKET.

NEW YORK, September 27, 1901.

Pig Tin.—A fair business in futures was done during the week under review. Spot business is exceedingly light. Prices declined slightly from day to day, and were soft until the end of the week, when a slight improvement in London served to restore confidence to some extent in this market. Prices at the close were about ¾c. below those quoted in our last report, Straits Pig in small lots being quoted at 25¾c. to 26c.

Copper.—The Copper market is in an extremely unsettled condition. Rumors have been flying thick and fast, and the impression that the article is in a very unsound position is now universal. To add to the excitement prevailing in the Copper market, the course of the stock market relative to the great Copper company has occasioned much comment and increased the depressing effect. One of the wildest rumors of the week was circulated to-day in financial centers to the effect that on Saturday the United Metals Selling Company would issue a circular announcing a cut in the price to 13½c. While certain parties in the trade believe that under present conditions anything is likely to happen, the more conservative merchants doubt the rumor and hold that the pursuance of such a course would be most distressing to the company making it, as well as the trade in general. As for facts, none indicating future developments can be obtained at this time. In support of the argument that a cut of 3c. would be inadvisable at this time, it is held that the outside producers have been selling their product pretty well ahead, and would not be particularly affected by such a cut, as the price would still enable them to produce at a profit. The other faction of the market argues that something is bound to happen, as so far this year we have shipped 50,000 tons less than last year, and imported 15,000 more than last year. It is shown that the production this year has been the same as last year, and it is argued that the consumption has not been greater. Therefore, 65,000 tons must be somewhere, and as at present figures this represents something like $20,000,000, it is feared that the accumulation can no longer be allowed to continue. The market is entirely nominal, there being no demand whatever. Small lots of Lake Ingot are still quoted at 17¼c. to 17½c. per pound, and Casting Copper at 16¾c. to 17c.

Sheet Copper.—The demand for Sheet Copper is referred to as being of satisfactory volume, while prices are without change on the basis of 21c. per pound from store.

Pig Lead.—This metal is very quiet, and prices here are without change. Small lots of American Pig are quoted at 4.60c. to 4.62½c. per pound. St. Louis advices indicate no change in the conditions in that market.

Spelter.—A fair demand exists for this metal and prices are firm at the figures quoted last week—viz., 4.45c. to 4.50c. per pound for good Western brands in small lots. St. Louis advices report a very decided increase in the demand for Spelter in that market. The feeling seems to be that this better condition will hold and that prices will work higher.

Sheet Zinc.—The demand for Sheet Zinc is of ordinary proportions. Prices are without change, jobbers quoting 600-pound cask lots at 6¾c. per pound, and smaller quantities at 7c.

Antimony—Is unchanged. Hallett's in small parcels is quoted at 8½c. to 9¼c. per pound, and Cookson's at 10½c. to 11c.

Nickel.—There is no change in this market. Prices are firm, small lots being quoted at 60c. to 65c. per pound.

Aluminum.—A continued active demand prevails for Aluminum in all its forms, prices being the same as ruling for some time past. No. 1 Ingot, guaranteed over 99 per cent. pure, is quoted in small lots at 37c. per pound, and in 100-pound lots at 35c.

Tin Plates.—There is nothing new to report in connection with this market. The demand for spot Plates is of very small proportions, and the scarcity is still as pronounced as ever, especially in the line of Coke Tins, some sizes of which are practically out of the market. While the American Tin Plate Company have made no change in their quotations, purchasers who are obliged to buy Plates still have to pay a premium of $2 per box or more over the officially quoted rates. Bright Charcoal Plates and Terne Plates are relatively less strong than Cokes and rule from 25c. to 50c. a box lower than the price quoted by jobbers a week or two ago. The starting of the mills of the American Tin Plate Company has created an easier feeling in the market, although there is no prospect of any material relief from the present scarcity of Plates for some weeks to come. It is understood that the American Tin Plate Company are accepting orders for delivery only at convenience. The mills are booked up for about the whole of their output for the balance of the year. While no absolute prices can be made, $7 to $7.15 a box is probably a fair quotation for moderate sized lots of American Bessemer Coke Plates, IC, 14 x 20, at New York and Eastern points. A decline of 3 pence per box in the price of Welsh Coke Plates is reported from London.

Sheets.—Nearly all the Sheet mills of the American Sheet Steel Company made idle by the strike have been started and the output of Sheets is consequently materially increased. It will, however, take the mills two or three months to catch up with their back orders. Considerable scarcity still prevails in Eastern markets and

prices remain very strong, particularly on Black Sheets. There has been some cutting of prices on Galvanized Sheets, although the stocks of this material are still as light as at any time. Jobbers are now quoting Galvanized Sheets at 60 and 5 per cent. to 62½ per cent. off the list, while No. 27, One Pass, Cold Rolled Soft Steel Sheets are quoted at 4.15c. to 4.20c.

Chicago advices are as follows: The supply of Sheets from the mills is a little better, but it is much below the requirements of the trade. Manufacturing consumers are still greatly embarrassed for the lack of sufficient stock of Sheets and jobbers are steadily finding a strong demand for quick shipments from stocks. Manufacturers are promising deliveries of Light Sheets in five to six weeks, but this is not soon enough to meet the necessities of manufacturers of seasonable goods. Small lots are quoted at 4c. for No. 27 Black Sheets and 60 and 5 to 65 off for Galvanized Sheets.

Old Metals.—There is a better demand for Scrap Iron and prices are firmer. Old Metals of other descriptions are moving rather slowly and show no change in price. Dealers are paying about the following prices for moderate sized lots, delivered at New York or corresponding points:

Heavy Copper	per lb. 14½c.
Light and Tinued Copper	per lb. 12½c.
Heavy Brass	per lb. 9 c.
Light Brass	per lb. 7½c.
Lead	per lb. 4 c.
Tea Lead	per lb. 3¼c.
Zinc	per lb. 2¾c.
No. 1 Pewter	per lb. 18½c.
No. 2 Pewter	per lb. 9 c.
Tin Plate Scrap, per gross tou	$8.00
Wrought Iron Scrap, per gross tou	$10.50 to 11.00
Heavy Cast Scrap, per gross tou	10.25 to 10.50
Stove Plate Scrap, per gross ton	7.25 to 7.50
Burnt Iron, per gross ton	5.00 to 5.50

THE PIG IRON MARKET.

New York.—The event of the week has been the announcement to-day on the part of the leading Southern interests, acting in concert, of an advance of 50c. a ton on all grades of Iron, effective at once. This makes the price of No. 2 Foundry at Birmingham $11. We understand that sales have been quite up to production lately and have been very widely distributed. We quote: Lehigh, Schuylkill and Virginia Irons, No. 1, $16 to $17.50; No. 2 X, $14.75 to $15.75; No. 2 Plain, $14 to $14.50; Tennessee and Alabama brands, No. 1 Foundry, $15 to $15.50; No. 2 Foundry, $14.75 to $15; No. 1 Soft, $14.75 to $15; No. 2 Soft, $14.50 to $14.75; No. 3 Foundry, $13.75 to $14; No. 4 Foundry, $13.50 to $13.75.

Chicago.—Business is increasing in volume. The transactions for the past week are reported to have considerably exceeded in tonnage the business taken during the preceding week. No very large contracts are reported; the buying is general. Prices are stiffening and will increase the buying movement. Southern furnace companies are notifying their agents that they are no longer able to promise shipments in October or November, and the lowest sellers are advancing their prices from 25c. to 50c. per ton. It is believed that very few opportunities are now open to purchase No. 2 Southern Foundry Pig Iron at less than $14.40, Chicago. We quote as follows:

Lake Superior Charcoal	$17.00 to $18.00
Local Coke Foundry, No. 1	15.50 to 16.00
Local Coke Foundry, No. 2	15.00 to 15.50
Local Coke Foundry, No. 3	14.50 to 15.00
Local Scotch, No. 1	15.75 to 16.25
Ohio Strong Softeners, No. 1	16.00 to 16.50
Southern Silvery, according to Silicon	14.90 to 15.15
Southern Coke, No. 1	14.65 to 14.90
Southern Coke, No. 2	14.15 to 14.40
Southern Coke, No. 3	13.65 to 13.90
Southern Coke, No. 1 Soft	14.90 to 15.15
Southern Coke, No. 2 Soft	14.15 to 14.40

Philadelphia.—The market has a very strong undertone. Some of the large interests are considering whether the time is not favorable for making a slight advance in prices. Stocks are extremely light and sales during the month have been so heavy that the output for the remainder of the year is practically all under control. Under these conditions producers feel themselves in a position to be very independent, and as a rule they require full prices or turn down the offers. For the present firm prices may be expected, but it is doubtful if any permanent advance could be maintained. Sales during the week included all grades of Iron and were practically at last week's figures. Prices for city and nearby deliveries were about as follows, and from 25c. to 50c. less at points within a radius of 100 miles south or west: No. 1 X Foundry, $15.50 to $16; No. 2 X Foundry, $14.85 to $15.25; No. 2 Plain, $14.35 to $14.75.

Pittsburgh.—The United States Steel Corporation have bought 40,000 tons of Standard Bessemer Iron, which has practically cleaned up all the available Iron for October shipment. The market is naturally very strong. Foundry Iron is firmer and Southern furnaces are asking higher prices. We quote No. 1 Foundry at $14.50 to $14.75; No. 2 Foundry, $14 to $14.25, and No. 3, $13.75 to $14.

Cincinnati.—The Pig Iron market is in a very satisfactory condition. While the amount of business which has been transacted during the past week has not been extremely large, yet it has shown a steady increase over the preceding week, and has all the earmarks of health. Quite a number of 1000-ton orders have been closed and a large number for smaller amounts, the tonnage on the whole being quite good. The feature of the situation is perhaps the scarcity of Foundry Iron for delivery this year, most of the tonnage placed being for next year. The fact of the scarcity of immediate delivery stock is one of the chief factors in the strength of the market to-day. Prices have advanced fully 20c. per ton, and there is a striking unanimity of opinion as to values. We quote, f.o.b. Cincinnati:

Southern Coke, No. 1	$13.75 to $14.00
Southern Coke, No. 2	13.25 to 13.50
Southern Coke, No. 3	12.75 to 13.00
Southern Coke, No. 4	12.25 to 12.50
Southern Coke, No. 1 Soft	13.75 to 14.00
Southern Coke, No. 2 Soft	13.25 to 13.50
Southern Coke, Gray Forge	12.25 to 12.50
Southern Coke, Mottled	12.25 to 12.50
Ohio Silvery, No. 1	14.60 to 15.00
Ohio Silvery, No. 2	14.10 to 14.60
Lake Superior Coke, No. 1	15.10 to 15.35
Lake Superior Coke, No. 2	14.60 to 15.10
Lake Superior Coke, No. 3	14.10 to 14.60

St. Louis.—The Pig Iron market is about in the same condition as a week ago, a very cheerful feeling being prevalent. A large volume of sales ranging in quantity up to 500 tons, together with some larger orders, are held to be a most healthy indication of the quality of the buying power in the market. The buying and inquiries are from the best sources and go to prove the absence of any speculation. We quote as follows for cash, f.o.b. St. Louis:

Southern, No. 1 Foundry	$14.25 to $14.50
Southern, No. 2 Foundry	13.50 to 13.75
Southern, No. 3 Foundry	13.00 to 13.25
Southern, No. 4 Foundry	12.50 to 12.75
No. 1 Soft	14.00 to 14.25
No. 2 Soft	13.50 to 13.75

CHICAGO REPORT.

Scrap Iron and Steel.—Everything in the line of Old Iron and Steel is in better demand, Wrought Scrap being the only class of material disposed to lag behind. Dealers quote the following buying prices, in carload lots, Chicago delivery:

	Per net ton.
Country Wrought Scrap	$11.00 to $12.00
Machinery Cast	10.50 to 11.00
Malleable Cast	10.00 to 11.00
Stove Plate (free from burnt)	.... to 8.00
Burnt Iron and Grate Bars	5.50 to 6.00
Sheet Iron and Hoops	6.00 to 7.00
Plow Steel	.... to 10.00
Breaking Stock	9.00 to 10.00
No. 2, such as Shovels, Hoes, &c	.... to 7.00
Old Boilers—whole (Iron)	6.00 to 7.00
Old Boilers (Iron) cut in single Sheets and Rings	9.50 to 10.00
Old Gas Pipe and Boiler Tubes	11.00 to 11.50
Cast Borings	4.25 to 4.50
Turnings	9.50 to 10.00
Horseshoes	.... to 13.00

Old Metals.—The market is steady, with a fair demand. Dealers quote buying prices on small lots as follows:

	Per lb.
Copper Wire and Heavy	14¾c.
Copper Bottoms	13¼c.
Copper Clips	14¼c.
Red Brass	13⅜c.
Yellow Brass	9½c.
Red Brass Borings	11½c.
Yellow Brass Borings	8¾c.
Light Brass	7¾c.
Pipe Lead	4 c.
Tea Lead	3½c.

Zinc	2⅝c.
Tin Foil	22 c.
Pewter, No. 1	19 c.
Pewter, No. 2	10 c.

Old Rubber.—The demand is moderate. Dealers' buying prices are as follows:

	Per net ton.	Per lb.
Garden Hose	$23.00	.....
Air Brake Hose	42.00	.....
Rubber Shoes	....	7½c.
Rubber Car Springs	....	4¾c.
Inside Bicycle Tubing	....	21 c.
Outside Tubing	....	7¼c.
Black Rubber	....	4¼c.
White Rubber	....	8½c.

Rags.—Buying price of good country Mixed Rags, Chicago delivery, is 70c. to 80c. per 100 lbs., in any quantities.

Anthracite Coal.—The heavy demand has greatly reduced local stocks and the Eastern mining companies advise their agents that the supply cannot be materially increased. Higher prices are expected. The schedule for carload lots is as follows:

	Grate.	Egg and Stove.
Chicago	$5.75	$6.00
Milwaukee, Wis.	5.75	6.00
St. Louis	6.20	6.45
Kansas City, Mo.	8.25	8.50

THE HARDWARE TRADE.

The past week has witnessed comparatively few important changes in the situation. Trade continues in excellent volume. Both jobbers and manufacturers report good orders from the retail trade, indicating a prosperous condition of things. Prices are without important change. On the whole the tone of the market is good, but in several lines the element of uncertainty is having some effect on business. Thus, Nails and Wire, while prices are well maintained in spite of the growing and aggressive competition, are commodities which the trade are purchasing with reserve in view of the possibility of a reduction sooner or later in price. Notwithstanding the continuance of the association prices on Shovels, there is a feeling that an important break must before very long occur in this line. A material reduction has been effected in the price of Scythes, but this will probably encourage the trade to purchase more freely than they did at the extremely high prices which have prevailed. The Steel Goods market, too, is an open one, and buyers are holding off. These and other illustrations which might be given are, however, exceptions to the general rule, and any existing weakness is accounted for by the special circumstances of the case. On the other hand, many lines are exceedingly firm, and even higher, on account of scarcity. Prominent among these are Tin Plates and Sheets and the various kinds of goods in the manufacture of which they are used.

NOTES ON PRICES.

Wrought Iron Pipe.—The situation in the Wrought Iron Pipe market has changed since last issue. The artificial prices made and maintained by the jobbers of Steam and Hot Water Supplies have undergone a decline and the classification has again been adjusted to suit the new conditions and prices. All sizes of Pipe are still more or less scarce, the ¾, 1 and 1¼ inch sizes being practically entirely out of the market. These are the sizes most in demand just now, and as the winter is coming on the probability is that they will continue scarce for the remainder of this year. The reclassification of sizes puts all Pipe from ⅛ to ½ inch under one discount and all the other sizes from ¾ to 12 inch inclusive under another discount. The National Tube Company, under date of September 21, issued a statement to the effect that all of their mills were in full operation and that they were prepared to accept business at regular prices, but the shipments would be subject to their convenience. At no time during the strike has the mill price of Pipe changed, and there is no likelihood of any change taking place this year. Prices on Pipe are now quoted for prompt acceptance and shipment by the jobbing trade as follows:

	Black.	Galv.
⅛ to ½ inch, inclusive	50%	40%
¾ to 12 inch, inclusive	60%	45%

Plumbers' Brass Goods.—The demand for Plumbers' and Steam Fitters' Brass Goods continues in good volume, and prices are well maintained so far. There is an impression, however, that the unsettled condition of the Copper market may have a depressing effect upon the price of Brass, in case prices for the raw material should recede materially.

Wire Nails.—The demand for Wire Nails is not quite so pressing, and the mills are making shipments more promptly. At competitive points some concessions in prices are said to be made. The probable difficulty of obtaining Steel for some time to come, however, is alluded to as likely to keep the Wire Nail market fairly steady. Small lots from store are quoted at $2.60 per keg.

Cut Nails.—The demand for Cut Nails continues in fair proportions. The advance in price is not held to in all cases for Nails from store, small lots being quoted in New York at $2.18 to $2.30 per keg.

Wire.—There has been a material increase in the output of Plain Wire recently, and the mills are now able to make shipments as fast as wanted by the trade. The volume of business is heavy, and the market is strong. Plain Wire in small lots is quoted at 2.60 cents, and Galvanized at 3 cents.

White Lead.—No change has been made in the price of White Lead in Oil as a result of the advance in the price of Linseed Oil, although it has had the effect of stiffening the market. Less is heard of irregularities in Lead prices. The demand shows some increase, and quotations are firm at former figures.

Linseed Oil.—The demand for prompt shipment of Linseed Oil is less urgent. It is understood that large consumers made contracts during the recent slump in prices, covering their requirements for the balance of the year. Spot Oil is scarce and quotations are still held up to. According to reports the Flax Seed crop, while it will probably be large enough to meet requirements, will not be in excess of the increasing domestic demand. Those well informed see no reason for abnormally low prices for Oil in the near future. The retail price of Raw Oil is 66 to 67 cents per gallon; Boiled Oil is 2 cents per gallon advance on Raw.

Spirits Turpentine.—The Turpentine market remains firm and prices steady. Large consumers are holding off for lower prices. The demand is confined to small lots, which are quoted at about 37½ to 38 cents per gallon.

TRADE NOTES.

Baker & Co., Platinum refiners, of Newark, N. J., with New York office at 120 Liberty street, are distributing an attractive little pamphlet on the "Alchemistic Symbols," giving a brief account of their origin and meaning.

The Scarborough Mfg. Company of Camden, N. J., have been incorporated with a capital stock of $100,000, to manufacture Water Filters. George Searborough, John H. Scarborough and George W. Perkins are the incorporators.

Charles A. Leppents, lately associated with John Davies & Son, and previously with Howell & Saxton, has established himself in the foundry business at 128-136 Second avenue, Brooklyn, N. Y., for the purpose of manufacturing Cast Iron Columns and General Structural Cast Iron Work.

L. & R. Wister & Co., 672 Bullitt Building, Philadelphia, have opened offices in the Fitzsimmons Building, 331 Fourth avenue, Pittsburgh, with Stuart B. Marshall resident manager. The L. & R. Wister Company are sales agents of American Sheet Iron Company; Dunbar Foundry, Forge and Basic Pig; for Saxton Furnace Company's Foundry and Forge Iron; Consolidated Iron & Steel Company's Bar, Band and Hoop Iron. The concern also deal in Scrap material.

An International Aluminum Association.

It has been announced from Germany that negotiations are proceeding between the Neuhausen Aluminum Company, the big Swiss producer, and the Pittsburgh Aluminum Company, who are said to dominate the American market, with a view to the establishment of a convention "for the improvement of the industry," which is a euphemism for raising prices. According to *Engineering*, the negotiations promise to be successful, and if they should turn out so no secret is made of the intention to put up values immediately. Nothing is said about the inclusion of the English company, or about the French and the other Swiss producers, but no doubt one and all will give at least moral support to any efforts toward the end designed. The production of aluminum being limited, and in the hands of a very few individuals a scheme to regulate prices is easy, given active or passive sympathy on the part of the components, the more especially as the demand is about up to the output. Authoritative figures for last year are not yet available, but the compilations of the Metal Gesellschaft of Frankfort show that for 1899 the aggregate was 5,748,380 kg., of which the United States furnished 2,948,380 kg., Switzerland 1,300,000 kg., France about 1,000,000 kg. and England about 500,000 kg. The Swiss figures include the production of the Rheinfelden Works, as well as of the Neuhausen, but not that of the Lead-Gestein, which had then been but a short time in operation. It would be interesting to know if anything has been done to secure the adhesion of the Rheinfelden and the Lead-Gestein as members of the convention. In that case and assuming that the Pittsburgh Company really do dominate the American market, control is assured, irrespective of the rest, who, as we have already said, will probably support the movement. If the rate of increase of previous years was maintained in 1900, the total production must have exceeded 7,000,000 kg. Certainly the producers have done their best hitherto to keep pace with the demand. In 1898, 4,033,704 kg. were reported; in 1897, 3,394,400 kg.; in 1896, 1,659,676 kg.; in 1890, 175,388 kg. and in 1895, 13,292 kg. Germany is the largest consumer, drawing most of its supplies from Switzerland and smaller measure from France. It imported 922,000 kg. in 1899. The American industry has made the most striking progress. In 1893 only 141,336 kg. were produced. By 1896 the quantity had increased to 589,676 kg.; by 1897 to 1,814,400 kg. and by 1899 to 2,948,380 kg. Switzerland has advanced with more deliberation from 650,000 kg. in 1895 to 800,000 kg. in 1898 and 1,300,000 kg. in 1899.

The Louisiana Purchase Exposition.

The Louisiana Purchase Exposition, to be held in St. Louis in 1903, will have no director-general, such as former expositions have had, to be the executive head of all departments and to have the direct supervision.

It will have four director-generals, or directors-in-chief. That plan of organization has been practically determined upon. Two of the four have been selected so far as the Organization and Executive committees are concerned. The four men will divide the duties of the director-general, and with co-ordinate powers, and will be responsible directly to the president and Executive Committee of the company. Isaac S. Taylor takes the position of Director-General or Director-in-Chief of Construction and Maintenance, and Frederick J. V. Skiff the position of Director-General or Director-in-Chief of Exhibits.

The letting of contracts aggregating about $11,000,000 for construction work on the buildings and grounds of the Louisiana Purchase Exposition will begin about December 1. It is planned to apply about $7,000,000 of this amount on the buildings and about $4,000,000 on the grounds. The letting will begin with the contracts for four big exhibit buildings, which, with their surroundings, will, it is estimated, cost about $4,000,000. The main buildings will be larger than those of any previous exposition in Europe or America. Some will exceed similar buildings at former expositions by over 25 per cent.

The site has been selected to embrace the unfinished half of one of the largest public parks on earth—Forest Park. The part of the park to be used contains 668 acres, and about 300 acres of surrounding property will be added to bring the entire area of the site up to about 1000 acres.

An advance bulletin issued by the United States Census Bureau on the manufactures of the State of Iowa shows a large increase in all the features covered by the census. The number of manufacturing establishments in Iowa has almost doubled in the past ten years and the amount of capital invested has increased about one-third. The following is a brief statement of the results of the census in Iowa:

	1900.	1890.	Increase. Per cent.
Number of establishments..	14,819	7,440	99.2
Capital	$102,733,103	$77,513,097	32.5
Wage earners, average number	58,553	51,037	14.7
Total wages.....	$23,931,680	$20,429,620	17.1
Miscellaneous expenses....	7,988,767	5,732,206	39.4
Cost of material used.....	101,170,357	79,292,407	27.6
Value of products, including custom work and repairing	164,617,877	125,049,183	31.6

PERFORATED METALS

STEEL, IRON, COPPER, ZINC, BRASS, TIN, and all other metals PERFORATED AS REQUIRED for

Grain Cleaning and Mining Machinery, Woolen, Cotton, Paper and Pulp Mills, Rice, Flour and Cotton Seed Oil Mills, Sugar and Malt Houses, Distilleries, Filter Presses, Stone, Coal and Ore Screens, Brick and Tile Works, Filters, Spark Arresters, Gas and Water Works, Oil, Gas and Vapor Stoves, Coffee Machinery, &c., &c.

Standard Sizes Perforated Tin and Brass Always in Stock.

The Harrington & King Perforating Co.,

Eastern Office, 284 Pearl St., NEW YORK. 217 North Union St., CHICAGO, ILLS., U.S.A.

CLASSIFIED LIST OF ADVERTISERS.

Acetylene Gas Burners.
Carroll, J. B., Chicago, Ill.

Acetylene Gas Generators.
International Heater Co., Utica, N. Y.

Agricultural Furnaces.
Giblin & Co., Utica, N. Y.

Aluminum Ingots.
Janney, Steinmetz & Co., Phila., Pa.

Aluminum Scrap Buyers.
Janney, Steinmetz & Co., Phila., Pa.

Aluminum Sheets.
Janney, Steinmetz & Co., Phila., Pa.

Architectural Ornaments.
Friedley & Voshardt, Chicago, Ill.

Ball Cocks
Foster, F. W. Mfg. Co., Boston, Mass.

Black Plates.
American Tin Plate Co., New York.

Boilers, Range.
Koven, L. O. & Bro., 50 Cliff St., N. Y.
Wolff, L. Mfg. Co., Chicago, Ill.

Brass Goods
Jenkins Bros., 71 John St., N. Y.
Zero Valve & Brass Mfg. Co., Buffalo, N. Y.

Brass Sheets, Rolls, &c.
Hungerford, U. T. Brass & Copper Co., 121 Worth St., N.Y.

Burners, Acetylene.
Carroll, J. B., Chicago, Ill.

Can Makers' Tools and Machines.
Bliss, E. W. Co., Brooklyn, N. Y.
Gordon, W. J., Phila., Pa.

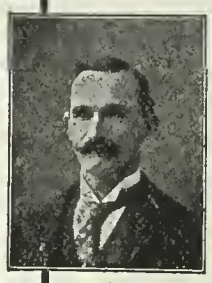
Our students succeed because they use I. C. S. Textbooks.

Sheet Metal Pattern Drafting

A course of instruction by mail for tinsmiths, coppersmiths, plumbers, sheet-iron workers, furnace workers, skylight makers and others that will enable a student to "strike out" working patterns for all kinds of sheet metal work. This is what a student says:



His Course More Than Paid for Itself

I am a tinsmith, and consider your course in Sheet Metal Pattern Drafting one of the best investments I ever made. Before I was half through I had realized from it more than the money paid for the whole course.

M. E. TOBIAS,
63 Fifteenth St.,
Wheeling, W. Va.

We teach by mail **Mechanical, Steam, Electrical, Civil and Mining Engineering; Shop and Foundry Practice; Mechanical Drawing; Architecture; Plumbing; Sheet Metal Work; Telephony; Telegraphy; Chemistry; Ornamental Design; Lettering; Book-keeping; Stenography; Teaching; English Branches; Locomotive Running; Electrotherapeutics.** When writing state subject in which interested.

taught by mail.

ELASTIC PAINT OIL. . . { Actually more durable than Linseed for Roof Painting. Will not peel blister or crack. 45c. per gal.

RUBBER ROOF CEMENT. { Always elastic. Very adhesive. Never gets hard in packages. Never brittle on roof. *Sticks to wet roof.*

PIPE JOINT CEMENT . . { Makes unleakable joints, but admits of easy separation. Prevents all rusting. Is actually cheaper than red lead and better.

SOLDERING FLUID. . . . { Non-corrosive. Non poisonous. No fumes to give headaches. Keeps the soldering iron tinned. No black streak on joint.

SEND FOR CIRCULARS AND OUR DESK BLOTTERS.

GEO. CALLAHAN & CO.,

Mfrs. Machinery and Cylinder Oils, Belt Dressing Greases, &c. Plumbers' and Tinners' Sundries. Our Cutting Oil at 60c. per gal. is equal to best Lard Oil. Our Ajax Cutting Oil at 40c. gal is better than most cutting oil sold.

A Few Points About
The Dover Elbow:

No unsightly seams or corrugations standing out to give it a bunched appearance.
The outside can be polished, as it presents a smooth, even appearance.
The seams are folded on the inside.
No corrugations to reduce diameter and collect soot.
No seams to corrode and rust.
It is made on a scientific principle. It is the same diameter as the pipe
It is handsome. It is strong. It is the best elbow on the market.

A Plain Talk About Metal Ceilings.

THE MATTER OF PRICE.

It costs more to get up artistic designs than to produce those that anyone could lay out with a straight edge and a pair of dividers.

It costs more to clearly and perfectly stamp a design than to merely give the plate "a lick and a promise."

It costs more to produce deep stamped material than to produce shallow stampings.

The question is not merely what you pay but what you get for the money.

We stand ready to give our customers the right kind of service, both as to quality of goods and price.

Some rooms require more elaborate or bolder or deeper stamped designs than others. We are prepared to meet all these requirements; our stamping is done right in either case

Almost anyone will, in the long run, be best satisfied with an artistic Classified Design. We sell them at a reasonable price; but if something cheaper is wanted, we can furnish a neat miscellaneous design, and at as low a price as any good metal ceiling can be had for.

Don't be fooled—quality for quality, no one can give more advantageous prices than we can. Try us and see.

Galesburg Cornice Works,

GALESBURG, ILLS.

The New Metal Worker Pattern Book.

425 Pages. 744 Illustrations.
Size 10 x 13 Inches.

A new treatise on pattern cutting as applied to all branches of sheet metal work.

Cloth Bound, Price $5.

This work contains a collection of **218** problems and an elaborate explanation of the principles of pattern cutting, including Triangulation.

It embodies the problems of the former Metal Worker Pattern Book, all of which have been revised, and many of which have been entirely rewritten and solved by more approved methods. To these have been added **75** new problems and much other new material and explanatory matter, making this work a model of completeness in every respect.

ARRANGEMENT.

In point of arrangement the new work far surpasses the former one in that the problems are classified under three different heads, and simply indexed, and also that by means of a table of contents any required department of the work can be easily found.

CONTENTS.

While Chapter VI, comprising the greater part of the work, is devoted to the solution of problems, the five preceding chapters thoroughly explain the principles of pattern cutting, and place the student in possession of the preliminary information necessary to a thorough understanding of the subject.

SUMMARY OF CONTENTS.

I. Terms and Definitions—15 pages.
II. Drawing Instruments and Materials—13 pages.
III. Linear Drawing—6 pages.
IV. Geometrical Problems—35 pages.
V. PRINCIPLES OF PATTERN CUTTING—25 pages.
VI. PATTERN PROBLEMS (3 Sections)—325 pages.
1. MITER CUTTING.
2. FLARING WORK.
3. TRIANGULATION.

All Tinners, Cornice Makers and Sheet Metal Workers should be provided with a copy of

The New Metal Worker Pattern Book.

Price $5, post or expressage paid.

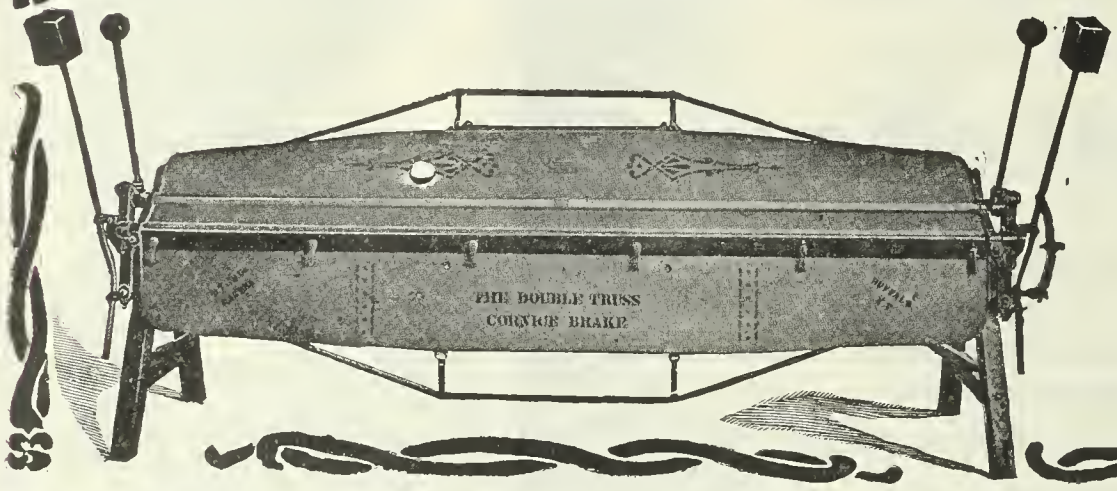
THE DOUBLE TRUSS CORNICE BRAKE.

This is the most practical brake on the market.
It is the most practical because, in the first place, it is lower in price than any other Cornice brake that will do perfect work.
Secondly, because its practical construction enables you to use it to the most profitable advantage.
When you hear about a good thing in your line of business, investigate it. Turn on it the light of reason and consider its money-making possibilities.



Let us send you information regarding our double edge on front leaf, for making fine members and corrugations.

The Double Truss Cornice Brake Co.,

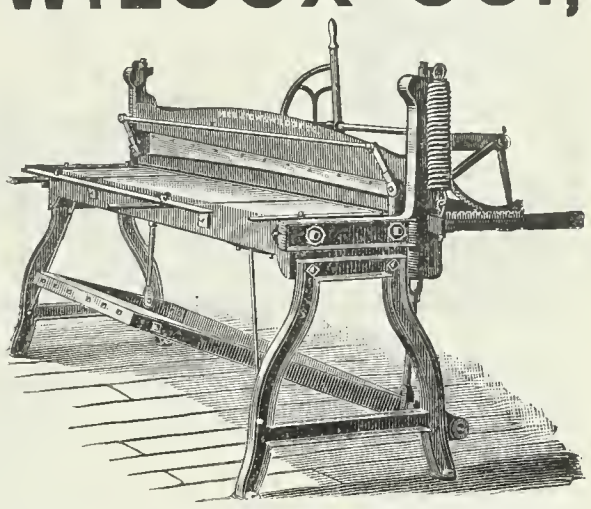
Our *Improved Eureka Cornice Brake.* Will bend No. 20 iron.

96 inches long.



CORNICE MAKERS' SQUARING SHEARS.

With Lever Arc, Automatic Gauge. Will cut No. 22 iron

97 inches long.

HERCULES SHEARS

make the cutting of sheet metal of heavy gauges an easy task for the mechanic and a profitable operation for the employer. With them a man can cut No. 12 steel with one hand on the lever, leaving the other hand free to guide the stock while cutting elbows, ties and circles, as small as 8 inch radius; this is done without burring or buckling either piece, thus avoiding hammering and straightening, which add to the cost of the product. They split sheets of any width or length up to No 12 gauge, cut wire or bar-steel ⅛ inch thick, cut off and mitre angle iron ⅛ inch thick, and do it perfectly.

PRICE, - - $35.00.

W. A. WHEELER, Indianapolis, Ind.

—DIDN'T MATCH.—"When I came of age," said Mr. Softleigh, "I promised mother that I'd never marry until I found the right girl."

"Indeed!" exclaimed Miss Sharpe.

"Yes, and—er—you're the right girl."

"That's too bad, for you're the wrong man."—*Philadelphia Press.*

THE NEW

MODEL GRAND

Is the 20th Century success in range architecture—the very *acme* of Range excellence. In it are embodied more practical "talking" points than any other range on the market. Write us and let us tell you about it.
